# Academic Calendars 2010 - 2011

## All Programs (except English Language Preparatory Program)

### Autumn Semester
- **03 - 04 and 06 - 07 Required “Introduction to Academic Life Program” for all students entering in 2010**
- **8 September 2010** Announcement of COPE 2 results (12:00)
- **13 September 2010** Announcement of registration/enrollment records to first year students from web (16:00)
- **14 - 15 September 2010** Online course registration for continuing students
- **16 September 2010** Classes begin
- **27 September 2010** Last day for adding / dropping courses
- **28 - 29 October 2010** Republic Day, (classes finish at 12:30 on Thursday)
- **10 November 2010** Commemoration of Atatürk
- **15 - 19 November 2010** Holiday
- **17 December 2010** Last day to withdraw from courses
- **31 December 2010** Last day of classes
- **3 January 2011** Beginning of final examinations
- **10 January 2011** End of final examinations
- **15 January 2011** Last day to withdraw from courses
- **13 May 2011** Last day of classes
- **16 May 2011** Beginning of final examinations
- **19 May 2011** National holiday
- **27 May 2011** Last day of final examinations
- **1 June 2011** Last day for submission of semester grades

### Spring Semester
- **26 January 2011** Announcement of COPE (Stage 2) results (18:00)
- **27 - 28 January 2011** Online course registration
- **31 January 2011** Classes begin
- **7 February 2011** Last day for adding/dropping courses
- **11 - 15 April 2011** Spring recess
- **13 May 2011** Last day to withdraw from courses
- **13 May 2011** Last day of classes
- **16 May 2011** Beginning of final examinations
- **19 May 2011** National holiday
- **27 May 2011** Last day of final examinations
- **1 June 2011** Last day for submission of semester grades

### Summer School
- **2 - 3 June 2011** Online course registration
- **6 June 2011** Classes begin
- **8 June 2011** Last day for dropping courses
- **10 June 2011** Last day for adding courses
- **22 July 2011** Last day of classes
- **25 - 28 July 2011** Final examinations
- **2 August 2011** Last day for submission of course grades
ENGLISH LANGUAGE PREPARATORY PROGRAM

23 - 31 August 2010  Summer School (Part II)
1 September 2010    BUSEL Exemption Exam Stage 1 (10:00)
1 September 2010    BUSEL Exemption Exam Stage 1 results announced (21:00)
2 September 2010    BUSEL Exemption Exam Stage 2 (COPE) (11:00)
8 September 2010    BUSEL Exemption Exam Stage 2 (COPE) results announced (12:00)
6 - 7 September 2010 Registration for continuing students

Autumn Semester
14 September 2010    Course 1 classes start
27 September 2010    Last day for late registration
28 - 29 October 2010 Republic Days (classes finish at 12:30 on Thursday)
10 November 2010    Commemoration of Atatürk
12 - 26 November 2010 Course 1 exams
15 - 19 November 2010 Holidays
29 November 2010    Course 2 classes start
24 December 2010    No classes
20 - 28 January 2011 Course 2 exams
20 January 2011    Semester 1 COPE (11:00)
26 January 2011    COPE results announced (18:00)
28 January 2011    End of semester
31 Jan. - 4 February 2011 Semester break

Spring Semester
8 February 2011    Announcement of Class Lists (18:30)
9 February 2011    Course 3 classes start
5 - 8 April 2011    Course 3 exams
11 - 15 April 2011 Break
20 April 2011    Course 4 classes start
19 May 2011    National holiday
13 - 17 June 2011 Course 4 exams
17 June 2011    Semester 2 COPE (11:00)
24 June 2011    Semester 2 COPE results announced (18:00)
24 June 2011    End of semester

Summer School
20 June 2011    Summer School part I starts
HISTORICAL BACKGROUND

Bilkent University was founded on October 20, 1984 by İhsan Doğramacı (1915-2010) through the joint resolution of the İhsan Doğramacı Education Foundation, the İhsan Doğramacı Science and Research Foundation, and the İhsan Doğramacı Health Foundation. The aim was to create a center of excellence in higher education and research. The name "Bilkent" exemplifies the founder's aim, since it is an acronym of **bilim kenti**, Turkish for "city of science and knowledge." The university is located in Turkey's capital city of Ankara.

The founder, himself an academic, had earlier contributed to the establishment of numerous public institutions of higher learning and served as rector of Ankara University, as chairman of the Board of Trustees of Middle East Technical University and as founder and first rector of Hacettepe University. It had long been his objective to establish a private, non-profit university distinguished by its high-quality education and research. During the time he spent at Harvard and Washington universities in the United States he had observed the advantages of independently endowed non-profit research universities that serve the public through higher education. With these in mind he advocated for decades for the Turkish legal system to allow such institutions, and when this dream finally materialized, he established Bilkent University along the same lines.

Preparations for Bilkent University had begun as early as 1967, with the purchase of a large tract of land to the west of Ankara. In the late 1970s and early 1980s the above-mentioned foundations began construction of the buildings which now house administrative offices, the Faculty of Engineering, and the library. Construction of residences for academic staff, cafeterias, student dormitories, the Student Union building, and various academic buildings followed in rapid succession.

Bilkent University was officially founded in 1984 and in October 1986 admitted its first students. That year there were 386 undergraduate and graduate students. Currently there are over 12,000 students in nine faculties, two four-year applied schools, three two-year vocational schools, including the School of English Language, and five graduate schools. Among them are international students from 46 countries. With funds from the endowments provided by the founder, each year the university awards full scholarships to about 3,000 students and support and merit scholarships to about 800 students of high academic achievement.

From the outset, the design of the university structure provided for student union representatives to be voting members of the administrative committees of various schools, as well as of the University Senate. Beginning in the second year of instruction, the practice of student evaluation of courses and instructors, at the time not a common practice in Turkey, was instituted.

To promote the enrichment of teaching and research programs, Bilkent University has entered into collaborative projects and exchange programs with many universities; the complete list being provided at: [http://exchange.bilkent.edu.tr/exchange_partners.html](http://exchange.bilkent.edu.tr/exchange_partners.html)

Bilkent also has a communications office in the Empire State Building in New York City, which is equipped with interactive video conferencing capabilities. A number of courses and conferences are delivered to Bilkent students through this office via satellite connection.

To meet the expanding needs of the university, construction has continued throughout the years since the admission of the first students. New buildings and facilities include two gymnasiums; the faculties of Humanities and Letters; Economics, Administrative and Social Sciences; Art, Design and Architecture; Science; and Music and Performing Arts; the Computer Center, the department of Electrical and Electronics Engineering, a concert hall for the Bilkent Academic Symphony Orchestra; the Odeon outdoor auditorium, which hosts 4,000 people; a secondary school, a preschool and nursery; new dining facilities; a new building housing lecture halls, two health centers, dormitories, and faculty housing.

Each year, more than 1.5 million high school graduates take a national examination to enter the 104 state and 62 private universities in Turkey. Bilkent is preferred by many of the very best of these students.
The faculty is comprised of academic staff from 40 different countries. Most of them were working in prominent universities in North America and Europe when they received offers from Bilkent University. According to ISI Citation Indexes, Bilkent continually ranks first among universities in Turkey in the number of published papers per faculty member and ranks high internationally by the same measure.

In 2010, Bilkent University was listed by Times Higher Education as one of the top 200 universities in the world and the best university in Turkey. Bilkent ranked 112th worldwide and 32nd in Europe.

NON-DISCRIMINATION STATEMENT

Bilkent University hires academic and administrative staff and admits students without regard to gender identity, race, color, age, national or ethnic origin or sexual orientation, to all the rights, privileges, programs, and activities generally accorded or made available to staff and students at the university. It does not discriminate on the basis of gender identity, race, color, age, national or ethnic origin in administration of its educational policies, admissions policies, scholarship and loan programs, or athletic and other university-administered programs.

DEGREE PROGRAMS

Academic Year
Each academic year consists of two 16-week semesters, Fall and Spring, including the final examination period. In addition, an eight-week summer semester is offered each year. The academic calendar for 2010-2011 is given at the beginning of this catalog.

Undergraduate Programs
The bachelor's degree is awarded to students who successfully complete an eight-semester course of study (approximately 120 credit units or at least 240 ECTS).

Students must fulfill all the degree requirements determined by their departments; at graduation their cumulative grade point average must be 2.00 or higher on a scale of 4.00.

The undergraduate programs are organized in departments within nine faculties, two schools and three vocational schools offering two-year programs. These faculties and schools are as follows:

- Faculty of Art, Design, and Architecture
- Faculty of Business Administration
- Faculty of Economics, Administrative, and Social Sciences
- Faculty of Education
- Faculty of Engineering
- Faculty of Humanities and Letters
- Faculty of Law
- Faculty of Music and Performing Arts
- Faculty of Science
- School of Applied Languages
- School of Applied Technology and Management
- School of English Language (Vocational Program in Translation)
- Vocational School of Computer Technology and Office Management
- Vocational School of Tourism and Hotel Services
Study in the vocational schools leads to an Associate of Arts or Associate of Science vocational degree.

Graduate Schools
Students who have obtained a B.A. or B.S., an M.A. or M.S., or an equivalent degree from an accredited university are eligible to commence studies in the master or doctoral programs.

Graduate programs are administered through the:

- Graduate School of Economics and Social Sciences
- Graduate School of Education
- Graduate School of Engineering and Science
- Graduate School of Fine Arts
- Graduate School of Music and Performing Arts

Each graduate school coordinates the curricula for its respective departments. Information on the graduate programs is provided in this catalog under the headings of the related departments.

ADMISSION, FEES, AND ACADEMIC REQUIREMENTS

ADMISSION, TRANSFER STUDENTS, AND REGISTRATION

Language Proficiency
English is the language of teaching at Bilkent University. Applicants are required to provide proof of their proficiency in English. Students whose level of English is insufficient to follow courses are required to enroll in the School of English Language. Those accepted to the Translation and Interpretation department must take, in addition, a Proficiency Examination in French, and those whose level of French is insufficient are required to follow the language program in the Basic French Section of the School of Applied Languages.

Undergraduate Admissions
To begin undergraduate studies at Bilkent, all Turkish applicants to the faculties of Engineering; Science; Economics, Administrative, and Social Sciences; Business Administration; Humanities and Letters; Law; Art; Design, and Architecture (Department of Interior Architecture and Environmental Design, Department of Urban Design and Department of Communication and Design) must take the entrance examinations YGS and LYS, administered by the national Student Selection and Placement Center (OSYM). Applicants to the Faculty of Education (Department of Computer and Instructional Technology Teacher Education), School of Applied Languages and the School of Tourism and Hotel Management take the YGS only. Based on the results of this exam, OSYM places students according to their preferences.

Applicants to the faculties of Art, Design and Architecture (Department of Graphic Design and Department of Fine Arts) and to Music and Performing Arts must pass the YGS examination. Admission is then granted on the basis of aptitude tests administered by the respective faculty.

All international students who want to apply to Bilkent University for a full-time undergraduate program have to go through an admission procedure. Various national exams and diplomas are used in evaluating the candidates.

In absence of these documents, the high school graduation score can also be evaluated for admission. The high school diploma and transcript along with an explanation of the high school's grading system will be needed.
Bilkent University admission requirements can be found at 
http://bilkent.edu.tr/bilkent/academic/international/apply.html

Students who want to apply for the departments of Graphic Design, Fine Arts, and Music must take
an aptitude test administered by the related faculties in August.

An online application form can be found at: https://stars.bilkent.edu.tr/intapp

Graduate Admissions
The following are some of the general graduate admission requirements for all departments:

- All Turkish applicants are required to take the ALES (Akademik Personel ve Lisansüstü Eğitimi
  Giriş Sınavı - Academic Personnel and Postgraduate Education Entrance Exam) given by
  ÖSYM every year.
- Submission of GRE (Graduate Record Examination) or GMAT (Graduate Management Ad-
  mission Test) scores is required of international applicants and may be required for domestic
  applicants in some programs.
- Fluency in written and oral English.

In addition, each department establishes its own criteria for admission; departmental
listings include more detailed information. Applications are accepted via the internet at
https://stars.bilkent.edu.tr/gradapp

Transfer Students
Applicants may transfer to Bilkent University from an accredited university under the following con-
ditions:

- The applicant must have successfully completed at least one full year (two semesters) at an
  accredited university. No transfers are allowed for the freshman year. The academic standards
  and the course structure of the university must be equivalent to those of Bilkent University.
- Transfer applications submitted to the Registrar’s Office must be completed by mid August.
  Each department individually determines the number of transfer students it will accept.
- Credits earned at another university are taken into consideration when determining a transfer
  student’s requirements for graduation from Bilkent. However, in order to graduate from Bilkent,
  the student must have completed at least his/her final two semesters at Bilkent.

As English is the language of teaching at Bilkent University, applicants are required to provide proof
of their proficiency in English. Students whose level of English is insufficient are required to enroll
in the School of English Language.

Application forms and the list of required documents can be obtained either from the Registrar's
Office or through the Internet at http://bilkent.edu.tr/bilkent/admission/transfer.html

Exchange Programs
Bilkent University has exchange programs with several major universities in Europe and around the
world. The Student Exchange Program gives Turkish students the opportunity to study abroad while
experiencing a different culture. It also exposes visiting students to the culture, art, and history of
Turkey.

The principle of reciprocity inherent in the exchange programs makes it possible to send Bilkent
University students to the partner universities provided that students from those universities come to
Bilkent. Program participants pay the regular tuition fees to their home institution for the semester,
and are responsible for additional travel, housing, food, and incidental costs as well as insurance
expenses and other minor fees while at the host university. A number of outgoing Erasmus students are granted a monthly stipend from EU funds. Detailed information about Erasmus and other exchange programs may be found at exchange.bilkent.edu.tr

Semester Registration
Students are required to register for courses at the beginning of each semester within the time limits announced by the University. Tuition must be paid prior to registration. Students with acceptable excuses for late registration may register up to the final date for adding courses.

FEES

Fees and Expenses
Fees and expenses for the 2010-2011 academic year are as follows:

Tuition:
Turkish citizens 17,900 TL (8% VAT included)
International Students $13,700 (U.S.) (8% VAT included)

Tuition fees are payable in two installments, before the registration dates of the fall and spring semesters. All fees are subject to adjustment each year according to changes in the cost of living.

Campus Housing:
There are Quadruple, Triple, Double, Single and Special (single room with private bath and shared kitchen) rooms available within the dormitories each having different rates. More information about the accommodation alternatives, application process, and prices can be found at http://bilkent.edu.tr/dormitory

COURSE PROGRAMS, GRADING, AND GRADE POINT AVERAGE

GE 100 Introduction to Academic Life Program
All incoming students are required to take the “GE 100” one-credit course before starting their first semester. This course is designed to adapt students to the university’s academic and social environment. Students learn the responsibilities of studying at a university, receive information on the facilities and services available to them, and are introduced to their new surroundings.

GE 250 and GE 251: Collegiate Activities I and II
GE 250 / GE 251 is a two-semester course that entails a diverse set of activities and endeavors outside one’s coursework. It is not particularly an academic course yet it seeks to enrich the lives of Bilkent students. GE 250 is a non-credit pass/fail course, while GE 251 is a one-credit course. GE 250 is the prerequisite for GE 251.

Academic Advisor
At Bilkent University each student is assigned to an academic advisor. The advisor offers counseling services to the student on academic matters, takes an interest in the student’s selection of courses and academic progress, and may assist him/her towards satisfactory job placement.

Course Load
For each associate and undergraduate program, there exists a semester “normal course load interval” defined by the relevant department and approved by the Faculty or School Board. The normal course load interval consists of a lower and an upper limit. Upon recommendation of the academic advisor and with the approval of the department chair, the maximum course load of a student in one semester can be at most two more courses over the upper limit of the normal course load of the
program. For those students who are in their final semester for graduation, one more course may be added to the maximum course load. More information can be found in Article 2.3 of the “Regulations Related to Teaching, Examinations and Assessment”.

Attendance
Students must attend all lecture, laboratory, and practical sessions, take all examinations, and participate in any activities that the teaching staff may consider appropriate.

Examinations and Assessment
Apart from work conducted throughout the semester, students must take a final examination at the end of each semester and at least one midterm examination for each course. If a staff member considers it appropriate, practical laboratory work or other such assignments may be assessed as midterm examinations.

Grades are finalized when they are announced via the internet on the date specified in the Academic Calendar. Semester grades for practical studies and other non-lecture courses are determined by an evaluation of the student’s overall work and performance throughout the semester.

Grades
Bilkent University’s official grading system uses letter grades with pluses and minuses. Passing grades range from A+ to D; F, FX is failing. The quality-point equivalents of the grades are:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Equivalent</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.00</td>
</tr>
<tr>
<td>A</td>
<td>4.00</td>
</tr>
<tr>
<td>A-</td>
<td>3.70</td>
</tr>
<tr>
<td>B+</td>
<td>3.30</td>
</tr>
<tr>
<td>B</td>
<td>3.00</td>
</tr>
<tr>
<td>B-</td>
<td>2.70</td>
</tr>
<tr>
<td>C+</td>
<td>2.30</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>
</tr>
<tr>
<td>C-</td>
<td>1.70</td>
</tr>
<tr>
<td>D</td>
<td>1.30</td>
</tr>
<tr>
<td>D+</td>
<td>1.30</td>
</tr>
<tr>
<td>F</td>
<td>0.00</td>
</tr>
<tr>
<td>FX</td>
<td>0.00</td>
</tr>
</tbody>
</table>

Other grades used are S (Satisfactory), U (Unsatisfactory), I (Incomplete), P (In Progress), T (Transfer), and W (Withdraw). These grades do not have quality-point equivalents.

S : accorded to students who are successful in non-credit courses.
U : accorded to students who are unsuccessful in non-credit courses.
I : accorded to students who, although otherwise successful, have failed to complete the required assignments for a course due to illness or some other valid reason. Proof of illness or other reason for non-completion must be submitted to the department chair within three days of the date of the final exam. A student receiving an incomplete grade for any course must make up for the deficiencies within 15 days after the final exam in order to obtain a grade. Otherwise, the grade I automatically becomes FX. At the discretion of the department chair, the period specified above may be extended until the beginning of the following semester.
P : given at the end of the first semester of a year-long course.
T : reflects approved transferred courses from other universities or from an exchange program. A student with a grade of T is exempted from an equivalent number of credits on the condition that the courses are accepted by the department on the recommendation of the department chair and with the approval of the board of the faculty/school. This grade may provide an exemption for a particular course at the program.
W : student has withdrawn from the course before the end of the semester.

A student with extraordinary performance in a course may be granted an A+ grade. However, the number of A+ grades in a given course is limited based on class size: If the class size is less than 25 students, no A+ grades may be given; if the class size is between 25 and 74 students, only one A+ grade may be given; if the class size is between 75 and 124 students, two A+ grades may be given; if the class size is between 125 and 174 students, three A+ grades may be given; if the class
size is between 175 and 225 students, four A+ grades may be given; if the class size is more than 225 students, five A+ grades may be given. (The letter grade A+ was instituted beginning with the 2010-2011 academic year.)

An undergraduate student who receives a grade of C or higher in a course (or S in a non-credit course) is considered to have satisfactorily completed that course.

A student who receives a grade of C-, D+, or D in a course can only be considered to have completed that course if his/her Cumulative Grade Point Average (CGPA) is 2.00 or higher.

A student receiving either F, FX, or U in a course is considered to be unsuccessful in that course. See Articles 2.8 and 2.9 of the "Regulations Related to Teaching, Examinations and Assessment".

Students who have not participated in classes or the evaluation activities (midterm exams, final exam, term project, etc.) to the degree expected by the teacher are given an FX grade; otherwise a grade of FX is equivalent to an F.

A graduate student is considered to have satisfactorily completed a course when he/she receives a grade of C or higher in an M.A or M.S. program, and a B or higher in a Ph.D. program. A graduate student receiving any other grade (except for S, T, P, or I) is considered to have been unsuccessful in completing that course.

**Grade Point Average (GPA) and Cumulative Grade Point Average (CGPA)**

A student's academic performance is determined at the end of each semester by computing an average of the grades he/she has received during that semester. For each course, the grade point equivalent of the letter grade received by the student is multiplied by the credit units for that course; the sum of these products is then divided by the total credit units taken in that semester to yield the Grade Point Average (GPA) for that semester. The Cumulative Grade Point Average (CGPA) is calculated by multiplying the grade point equivalent of the letter grade by the credit units for each course and then dividing the total sum by the total credit units taken in the program.

**ACADEMIC STANDING**

(applicable to undergraduate students only)

Please see Article 2.8 of the "Regulations Related to Teaching, Examinations and Assessment".

**Honor and High Honor**

Students achieving distinction by obtaining a semester GPA of 3.00 to 3.49 while carrying a course load no less than one course below the lower limit of the normal course load and having a CGPA of 2.00 or higher are designated "Honor" students on the transcript for that semester. Those achieving a GPA of 3.50 or above under the same conditions are designated "High Honor" students.

**Satisfactory**

Students maintaining a CGPA of 2.00 or higher at the end of a semester are considered to have "Satisfactory" academic standing.

**Probation**

Students having a CGPA of 1.80 to 1.99 at the end of a semester are placed on academic "Probation." Students on probation are required to retake courses of their choice from among the courses in which they previously received a grade of C-, D+, D, F, FX, or U.

**Unsatisfactory**

A student having a CGPA of below 1.80 at the end of a semester is considered to have an "Unsatisfactory" academic standing. These students are required to retake courses of their choice from among the courses in which they previously received a grade of C-, D+, D, F, FX, or U.
Article 2.9 and its clauses of the "Regulations Related to Teaching, Examinations and Assessment" are applicable to students who are considered to have a "Probation" and "Unsatisfactory" academic standing such as:

During course registrations at the beginning of each semester, all courses not taken by a student in previous semesters are considered to be "new courses" for that student. As their current CGPA's are below 2.00 or 1.80, such students can only register for a limited number of new courses.

Students on probation are required to take courses in which they received any of the grades F, FX, U, and W in previous semesters. They can also register for new courses with a maximum total number of credit hours that does not exceed 60% of the Nominal Credit Load. Such students can retake courses that they will select among those courses in which they received C-, D+, or D for the purpose of improving their CGPA. If a student on probation is registering for courses in the second semester of the curriculum of a program, he/she may register for new courses with a maximum total number of credit hours that does not exceed 85% of the Nominal Credit Load.

Unsatisfactory students can not register for any new courses except for non-credit courses. Such students must retake courses for which they have received F, FX, U or W grades, and are also expected to retake any of the courses they wish for which they have previously received C, D+, or D, for the purpose of improving their CGPA. If an Unsatisfactory student is registering for courses in the second semester of the curriculum of a program, he/she may register for new courses with a maximum total number of credit hours that does not exceed 70% of the Nominal Credit Load.

Repeating a Course
Students receiving a grade of F, FX, W or U in a course must repeat that course within two semesters. Students receiving a grade below a C in ENG 101 or ELS 104, or an F, FX in ENG 102 must repeat the course the next time it is offered. To improve their CGPA, students with an academic standing of "Satisfactory" may elect to repeat any course previously taken in which they received a grade of C- or lower within two semesters.

When a course is repeated, the new letter grade replaces the previous letter grade in the CGPA calculation. If a course to be repeated is an elective course or has been discontinued, an equivalent course approved by the department may be taken; in this case, only the replacing course is included in the CGPA calculation. All grades, whether included in the CGPA calculation or not, will appear on the transcript.

Duration of Study
The normal period for completion of undergraduate studies at Bilkent University is four academic years. Students in four-year programs must complete the requirements of their programs within at most seven academic years (excluding studies in the School of English Language). Students who fail to graduate within that period or who will be unable to qualify for such graduation are dismissed from the University. Students in two-year vocational schools must complete the requirements of their programs within four academic years (excluding studies in the School of English Language).

DIPLOMAS AND AWARDS

The bachelor's degree is awarded to students completing an eight-semester course of study which complies with the Section "Course Programs" of this catalog. To be eligible for a bachelor's degree, students must have a cumulative GPA of 2.00 or higher on completion of all the degree requirements. The diploma indicates the department from which the student has graduated.

Students transferring to Bilkent University from another institution of higher education must study at Bilkent University for at least their final two semesters to be eligible for graduation.
The vocational schools award associate degrees upon the completion of their requirements.

For the criteria regarding graduate degrees, please refer to the graduate programs listed in this catalog under the respective departments.

**LEAVE AND WITHDRAWAL**

**Leave of Absence**

Students may be granted permission to leave the University temporarily. Applications detailing valid and reasonable grounds for request of such permission are made to the respective Dean or School Director. If a decision to grant leave is taken by the Executive Board of the related Faculty or School, notice is given to the Registrar’s Office. Leave may not exceed two consecutive semesters at a time, or a total of four semesters for a student's entire study period. Periods that elapse during the course of such leave are not counted as part of the study period. Applications for leave should be submitted in writing at the beginning of the semester. Applications for leave for health reasons must be properly authenticated by medical certificates.

**Withdrawal from the University**

Students may withdraw from the University by applying to the Registrar's Office. Tuition fees in that case can be refundable on the approval of the University Senate.
The Bilkent Computer Center (BCC) provides a variety of computing resources and services to meet the administrative, educational and research computing requirements in the university community. These services include providing computational, networking, and internetworking equipment, their hardware and software maintenance, maintenance of software resources such as compilers, utilities and application programs. Additionally, BCC develops in-house application software for the university itself including the academic information system, student information system, library information system and others.

**Hardware Resources**

*Workstation and PC Laboratories*

There are approximately 4,000 personal computers distributed in offices and laboratories throughout the campus and around 3,000 student computers in the dormitories; all connected to BILNET. BCC maintains 15 general purpose computer labs, populated with around 600 computers in total, for student and staff use. All users have access to laser printers and to the Internet. In addition to the BCC labs, many departments, schools and institutes maintain their individual educational and research labs.

*Networking Capabilities*

The campus network is built on a Gigabit Ethernet backbone. This star topology backbone connects all the faculties to the central switch via fiber-optic cables. Wireless network access points are scattered around the campus providing hot spots for the mobile users.

All students and faculty are authorized to have accounts for their e-mail and their access to the resources in the labs.

*Dorm Net*

Bilkent University’s networking facilities are extended to the dormitories as well. All campus dormitory rooms are wired for the Ethernet and students living in the dormitories can connect their own computers to BILNET and the Internet.

**Software Resources**

BCC provides and maintains a wide variety of scientific tools at the users’ disposal. These include statistical, mathematical, simulation libraries and packages together with various VLSI and graphics design tools and imaging tools. All modern and classical programming languages and development tools are available in various hardware platforms. State-of-the-art word processors, spreadsheets, database application software and presentation graphics software are available in most of the labs.

Some software developed in-house are also available to faculty, students and staff. The most widely used one being BLISS (Bilkent Library Information Services System), which enables readers to browse the Bilkent Library catalogs on terminals or WEB pages on the Internet. AIRS (Academic Information Review System), SRS (Student Review System), and DAIS (Department Academic Information System) are the valuable tools to help the faculty and students in planning their course loads and academic preferences. ORS (Online Registration System) enables students to see and register to offered courses.
UNIVERSITY LIBRARY

David E. Thornton, Ph.D., Library Director
Ebru Kaya, Associate Director

Bilkent University Library is a lending and research library where open stacks permit free access to the entire collection, except the rare book collections. The main library, housed in its own four-story building at the center of the Main Campus, is open from 8:30 to 23:30 weekdays; from 9:00 to 23:30 weekends. The East Campus branch library, located on the top floor of the Catering Center, is open from 8:30 (weekends from 9:00) to 23:20, Monday-Thursday and closes at 17:00 on Friday and weekends. Summer hours are announced.

Bilkent Library was the first Turkish university library to offer its readers automated services through an integrated computer system. It provides the use of an online public access catalog to all readers with access to computer terminals both in the libraries and elsewhere on campus as well as to researchers, any place in the world, with access to the internet. There are also 32 computers with internet access in the Reference and Current Periodicals Rooms for the purpose of searching e-resources and browsing the internet. Circulation of the collection is also automated. Internet access is available in both libraries.

The collection contains over 900,000 items. The book collection, over 400,000 volumes, increases by approximately 20,000 annually. The library subscribes to 2,000 print journals from the USA and Europe and provides electronic access to over 160,000. Over $3 million is spent each year on databases, books, journals and other resources, including video and audio cassettes, DVDs and VCDs, maps, microforms, CD-ROMs, music scores and sound recordings. The library makes over 130 databases available on-line, which provide access to both citations and the fulltexts of journal articles, conference proceedings and papers and research material. Working papers and technical reports are received from leading research centers in Europe, the USA and Japan.

The Turkish Plastic Arts Archive makes available a file of over 50,000 newspaper clippings, magazine articles and exhibition materials (invitations, posters, catalogs). The collection has been catalogued and is accessible on the Internet.

Bilkent University Library has been designated by the Library of Congress to receive U.S. Government documents and makes them available in the combined Government Documents Room and EUI Centre. The Bilkent University European Union Information Centre opened in 2001 with the status of a full EUI serving as a depository for European Commission publications and World Bank regional publications.

Materials of special interest to students include the “easy reading” section. The newspaper collection includes leading foreign newspapers. Daily newspapers and popular magazines can be read in the “Newspaper and Magazine Reading Room” which contains comfortable chairs. Photocopying is available in the library.

Reciprocal lending-borrowing agreements with a number of Ankara area universities make it possible for Bilkent graduate students and faculty to borrow books from those libraries as well. Orientation tours of the Bilkent University Library are conducted on request in English and Turkish. Wireless Network Service is available in both the Main and East Campus Libraries. The Main Library also houses an Art Gallery, with exhibitions running throughout the semester, and where regular musical performances and academic lectures are held. In order to make studying and research pleasant there is a cafe at the entrance of Main Library.

Further information about the Library and its collection can be found at: www.library.bilkent.edu.tr.
OFFICE OF THE DEAN OF STUDENTS

Jale Gürzumar, Dean

Office of the Dean of Students intends to help and support students throughout their college life, assisting their development from their first to the very last day of their time in Bilkent. The Office coordinates a wide spectrum of activities from the student government and clubs and associations to psychological counseling and career coaching. From orientation to post-graduate career advancement, the Office is actively engaged in all steps of the personal development of Bilkent students. In this capacity, our primary objective is to develop Bilkenters into agents of change and progress in their lives and the communities they belong to and it is in fulfilling this task that our work gets its form and meaning.

Student Activities
The variety of activities offered on campus add a social component to students’ academic life. The Student Union organizes students’ social and cultural activities. Student representatives are elected by the student body; they are responsible for managing the Student Union and creating a program of activities. Located in the center of the Main Campus, the Student Union building houses cafeteria, multifunctional rooms, offices, and a small conference hall. All the clubs are established to cater to students’ various interests and needs are coordinated by the Student Union. Some of these clubs are:

- Aviation Club
- Bridge Club
- Cinema Club
- Debate Society
- Engineering Society
- Diving Club
- Engineering Society
- MBA Club
- Management-Economics Club
- Music Club
- Operational Research
- Outdoor Sports Society
- Photography Club
- Theater Club
- Turkish Society

In addition, meetings, seminars, debates and trips are regularly organized allowing students to participate in various activities with many facets.

Student Union Coordination Office
The Student Union Coordination Office provides the necessary liaison between the university administration and the Student Union. In addition, the office offers students advisory services about their personal or institutional representation in domestic or international activities. The Coordinator’s office is located in the Student Union building for a better accessibility. Working closely with the Student Union, the Student Union Coordinator also provides guidance when needed for clubs and extracurricular activities.

Radio Bilkent
Radio Bilkent is a voluntary student radio station which is broadcasting on FM frequency 96.6 to the campus and citywide. Radyo Bilkent provides an opportunity for Bilkent University students to gain social and professional experiences as well as adds value to the social and cultural life of Ankara with its organizations and programmes. Radio may be listened live through internet at “www.radyobilkent.com”. Bilkent University students can follow the recent news about the station from the university newspaper, Bilkent News, and also from the radio’s web site. Radio Bilkent’s main studio is located in the Engineering Building top floor, and the second studio “Radyo Bilkent Orçun Göl”, is located in the food court on main campus.

Career Center
The Career Center provides career related services for Bilkent students throughout their university years. To prepare them for entering the business world, the Center offers workshop/seminars which focus on employment-seeking skills such as résumé writing, interviewing techniques, and career
activities. Various companies, international organizations and government agencies refer to the Center to recruit graduates.

**Psychological Counseling and Development Center**

Psychological Counseling and Development Center guides Bilkent students through their self-development journey. Helping them to develop awareness about their potential and how to apply this information into their academic, professional, social and intimate lives is the main focus of the center personal. In other words, the attending students are professionally supported to develop their unique personalities and creating a satisfactory life style.

The services offered by the center are individual and group counseling for the immediate purposes and seminars, workshops and self help materials for preventive purposes. Stress management; examination and performance anxiety; interpersonal communication; concentration and study skills; time management; realistic self-evaluation; intimate relations; problem solving; effective presentation skills, enhancing cognitive skills in learning; developmental stages of life and importance of identity in personality development are some the topics covered in the preventive facilities.

The center also conducts survey type studies to explore the expectations and needs of the students. The outcome of these studies contributes to the ongoing program flow and the future plannings.

**Social Responsibility Center**

Social Responsibility Center involves enterprises and activities that are created, organized, led and completed on a volunteer basis by the students of the University with the support of the Dean’s Office and in cooperation with nongovernmental organizations. Ongoing projects are:

- Social Responsibility Projects [www.tdp.bilkent.edu.tr](http://www.tdp.bilkent.edu.tr)
- Center for Students with Special Needs [www.engelsizkampus.bilkent.edu.tr](http://www.engelsizkampus.bilkent.edu.tr)
- Aid Campaigns [www.bilkent.edu.tr/bilkent-tr/admin-unit/dos/ssm/yardim.html](http://www.bilkent.edu.tr/bilkent-tr/admin-unit/dos/ssm/yardim.html)

**ALUMNI CENTER**

Ayşe Tuğcu, Coordinator

The Bilkent Alumni Center has been established to provide the highest level of service to Bilkent University graduates, who are very important to our institution.

The primary objective of the Alumni Center is to facilitate communication among Bilkent graduates while strengthening their ties with the University. Therefore we always provide up-to-date information about our graduates and activities (panel discussions, Graduates Welcome Home Festivals and Graduation Balls) organized by the Center. Also, we keep our graduates informed about career opportunities in partnership with the Career Center.

Since the establishment of Bilkent University, we have graduated a total of 29,824 students, and we are able to reach most of them both in Turkey and abroad. We trust we will be able to reach graduates in the near feature with the support of our alumni.

**HEALTH CENTER**

Ülker Türksoy, M.D., Director (Main Campus)

Jale Erten, M.D., Director (East Campus)

The Health Centers, located on the Main and East Campuses, provide health services to students and personnel. The services are provided all Bilkent University students.

The Health Centers offer the services of a public health specialist, a pediatrics, a neurologist, six general practitioners, two gynecologists, two ophthalmologists, two psychiatrists, a dermatologist, an orthopedist, a dentist, a radiologist, an ENT specialist, and seven nurses, two emergency medical
technicians and one paramedic. The Centers have two in-house laboratories for immediate medical analysis such as blood count, urine analysis, blood chemistry and a unit for X-Ray and ultrasonographic examinations. Medicines are available on prescription at the Main Campus pharmacy and the pharmacies at Bilkent 2, in Ankuva Bilkent Center, on Tunus street. A physician and a nurse are both on duty at the Health Centers in the Main and East Campuses 24 hours a day, including weekends. In case of emergencies, there is an ambulance accompanied by Health Center’s doctors, on duty 24 hours a day to take patients, to hospitals in Ankara.

**Services Provided**

- Prevention against contagious diseases
- Medical examinations and first aid treatment
- Referral of patients to a specialist or hospital, if necessary
- Supervision of patients’ recovery in certain cases and provision of relevant medical services
- Conducting research into the environmental health conditions on campus and reporting the results to the university administration
- Health education programs to students and staff on general medical and health issues and first aid (providing certificates for the first aid education by the government health authorities),
- General check-up for students, if necessary.

**Applying to the Health Center**
The Health Center is the first place that students contact in the event of illness or injury. Initial treatment or first aid would be carried out at the Health Center and, if necessary, the patient may be referred to a specialist or hospital which has an agreement with the University.

**The Health Mutual Aid Fund**
Every student registered at Bilkent becomes a member of the Health Mutual Aid Fund, is supported financially by the Health Center. The Fund pays for routine medical services for students, such as check up (if necessary), consultations, medical tests, medicine (80% is free of charge), emergency hospital costs, etc. However, costs incurred by long-term illness such as tuberculosis, chronic kidney diseases, autoimmune diseases, chronic congestive heart failure, rheumatoid arthritis, rheumatic heart disease, diabetes mellitus, diabetes insipidus, chronic neurologic diseases, glaucoma, cataract, chronic diseases of the thyroid, chronic diseases of the parathyroid, chronic intestinal diseases, or chronic liver disease are not covered by the Fund.

In the event of relapse of previously diagnosed diseases, the Fund will provide for a maximum of 10 days of therapy.

**Hospitals and Specialists Outside the Health Center**
The Fund has reciprocal agreements with a number of private physicians in various specialized fields and with State and University hospitals in Ankara. The names and addresses of these doctors and hospitals are listed in a booklet available at the Health Centers.

A student who wants an examination by a specialist, who has an agreement with Bilkent Health Center, should see the doctors in the Health Center first. If the doctor in the Health Center decides for a specialist’s examination, the doctor will give the students a referral letter which is to be taken to the specialist or hospital along with the student’s ID.

The medical documents (medical report, prescription) given to the student after medical treatment must be submitted to the Health Center for approval within three days. Approved medical documents are given to the Fund’s accounting office for payment.

All medical reports given from hospitals or doctors must be approved by the doctors at the Health Center in order to be eligible for coverage. If a student is treated in a hospital or by a doctor not affiliated with Bilkent University, the charges must be paid by the student.
Costs Not Covered
The following expenses are not paid by the Fund:

- Treatment of diseases listed in the paragraph on the Health Mutual Aid Fund
- Tests or treatment outside Ankara or in foreign countries
- Tests or treatments conducted by hospitals, institutions or doctors having no agreement with the Center
- Dental check-up, tests, and treatments outside the Health Center
- Glasses and frames, hearing aid, dentures
- Any medical expenses for a member's relatives
- Hospitalization stage.
- MR
- Tomography
- Surgery

PHYSICAL EDUCATION AND SPORTS CENTER

Hayri Özkan, Ed.D., Director

The sports programs, activities and facilities of the University are expanding constantly to keep pace with the growing needs of the large student body. The facilities include three gymnasiums, three outdoor tennis courts, one indoor tennis court, several outdoor volleyball and basketball courts, four mini football fields, several aerobic/step studios, fitness/conditioning room and multi-purpose rooms, a regulation size grass football field on Main Campus. In addition, a modern seven thousand square meter multi-purpose sports complex (with a large state of the art fitness center, basketball, volleyball, three squash courts, aerobic/step and program studios and an indoor running-walking track) on Main Campus is used by hundreds of students every day.

On-campus activities like courses, training sessions, tournaments and competitions are available in the following sports: Aerobic/step, aikido, American football, badminton, ballroom dancing, basketball, capoeira, fencing, fitness/conditioning, football (soccer), mountaineering, squash, table tennis, taekwondo, tennis, Turkish folk dancing, volleyball, yoga, and others. The students can also take many of the sports courses mentioned above as elective-credit courses every semester (see page 545 for details).

STUDENT HOUSING

Bilkent University offers graduate and undergraduate student housing on campus, in twenty-six dormitories accommodating over 4,000 students. Advice and information about accommodation in dormitories can be obtained from the Dormitories Administration Office, Bilkent University, 06800 Ankara, Turkey. Admission to the university does not automatically guarantee a space in the dormitories. Applications for housing must be submitted to the Dormitories Administration Office according to the time table announced each year.

To be considered for a space in the dormitories, or other Bilkent University identified housing after the dormitories are filled, students must meet all payment commitments (tuition and housing) on time. Dormitory openings will be assigned as they occur.

The dormitories are within walking distance of academic buildings and provide a good environment where friendships can be made and social needs met. Students learn the value of collective living
and the need to develop self-discipline. They are ultimately responsible for their individual conduct, but a resident supervisor and assistant live in each dormitory in order to provide on-hand support to students.

Rooms are arranged for single, double, triple and quadruple occupancies. Facilities within the dormitory complexes include central heating, social and study areas, laundry and ironing rooms, kitchens and bathing facilities.

All rooms are furnished and equipped with telephones and ethernet connection. General cleaning service is provided in each dormitory, but students are responsible for keeping their rooms tidy. Lavatories and showers are located on each floor. Students are required to provide their own towels. Food may be purchased from campus grocery stores or meals may be purchased at any of the restaurants or cafeterias on campus. There are parking lots at the dormitories.

Students who bring in their own computers are able to attach their hardware directly into the university campus network from their dormitory rooms and have access to all network facilities.

Regularly scheduled activities are conducted within each dorm to round out academic programs and to familiarize students with one another and the Bilkent campus and staff. Activities include speakers, group presentations, picnics, charity fund-raisers and team sports.
ORGANIZATION OF THE UNIVERSITY

BOARD OF TRUSTEES
Ali Doğramaci, Chairman of the Board of Trustees and President of the University

Members
Ilker Baybars  Turgay Coşkun  Yener Dinçmen  Gülsev Kale  Ahmet Nalbur
Erşin Özince  Sencan Özne  Muhsin Saroğlu  M. Lütfü Sel  Ergün Teğrol
Ergül Tunçbilek  Z. Boğaç Üner
Abdullah Atalar (ex-officio)

Vice Presidents
Adnan Akay, Orhan Baysal, Phyllis L. Erdoğan

CENTRAL ADMINISTRATION
Abdullah Atalar, Rector (Chancellor)
Metin Heper, Vice Rector - Provost
Kürşat Aydoğan, Vice Rector
Orhan Aytür, Vice Rector
Cemal Yalabık, Associate Provost
Cevdet Aykanat, Associate Provost
Nesim Erkip, Associate Provost

DEANS OF FACULTIES
Mehmet Baray (Acting), Faculty of Education
Erdal Erel, Faculty of Business Administration
Hasan N. Erten, Faculty of Science
Osman B. Gürzumar, Faculty of Law
Talat S. Halman, Faculty of Humanities and Letters
Levent Onural, Faculty of Engineering
Dilek Önkal, Faculty of Economics, Administrative, and Social Sciences
Bülent Özgüç, Faculty of Art, Design, and Architecture

DIRECTORS OF SCHOOLS
Tanju Inal, School of Applied Languages
John O’Dwyer, School of English Language
Kamer Rodoplu, School of Applied Technology and Management; Vocational School of Computer Technology and Office Management; Vocational School of Tourism and Hotel Services

DIRECTORS OF GRADUATE SCHOOLS
Erdal Erel, Graduate School of Economics and Social Sciences
İşın Metin, Graduate School of Music and Performing Arts
Levent Onural, Graduate School of Engineering and Science
Bülent Özgüç, Graduate School of Fine Arts
Margaret K. Sands, Graduate School of Education - Ankara
Arif Çağılar, Graduate School of Education - Erzurum

DIRECTORS OF INSTITUTES
Salim Çiraci, Institute for Material Science and Nanotechnology
Orhan Güvenen, Institute of World Systems, Economics, and Strategic Research

The Faculty of Art, Design, and Architecture comprises five academic departments:

- Communication and Design
- Fine Arts
- Graphic Design
- Interior Architecture and Environmental Design
- Urban Design and Landscape Architecture

These departments offer undergraduate programs that lead to Bachelor of Fine Arts (B.F.A.) and Bachelor of Arts (B.A.) degrees. The graduate programs of the Faculty include Master of Fine Arts (M.F.A.) degree programs in the areas of Graphic Design, Interior Architecture and Environmental Design, Painting and Printmaking, Master of Arts (M.A.) degree in the area of Media and Visual Studies, and an interdisciplinary doctoral program in Art, Design and Architecture.

The educational principles of the faculty are based upon the fact that the creative process in art and design relies on a broad body of knowledge for direction and inspiration. Guided by this principle, the degree programs aim to train highly competent research, design and performance oriented artists having a deep understanding of basic concepts, modern design and performance methods. The international and multidisciplinary composition of the academic staff allows the provision of interdisciplinary programs, as well as particular courses of study to meet individual educational needs.

ACADEMIC STAFF

**Yasemin Afacan**, Instructor  

**Yusuf Akçura**, Instructor  
B.A., French Language and Literature, Faculty of Letters, Department of Western Languages and Literatures, Ankara University, 1985.

**Jülide Aksiyote**, Instructor  

**Burçak Altay**, Instructor  

**Deniz Altay**, Instructor  

**Serpil Altay**, Instructor  
M.S., Urban and Regional Planning, London School of Economics, 1972.

**Orhan Anafarta**, Instructor  

**Genevieve Appleton**, Assistant Professor  
M.F.A., Graduate Film and Video Program, York University, 2003.

**Kumru Arapkırlıoğlu**, Instructor  
Ph.D., Public Administration and Political Sciences, Ankara University, 2003. Environmental Planning and Administration.

**Süle Aybar**, Instructor  

**İnci Başa**, Assistant Professor  
Ph.D., Architecture, Middle East Technical University, 2000. Architectural theory/history; architectural discourse analysis.
Herbert Bassler, Instructor  

Bülent Batuman, Instructor  

Marek Brzozowski, Assistant Professor  

Nilgün Çamgöz Olguntürk, Assistant Professor  

Birsu Semra Çeltek, Instructor  

Gaye Çulcuoğlu, Instructor  

Halime Demirkan, Professor  

Mehmet Hakan Erdog, Instructor  
B.S., Science Education, Middle East Technical University, 1989.

Feyzan Erkip, Associate Professor  
Ph.D., City and Regional Planning, Middle East Technical University, 1993. Environmental analysis and design.

Anita M. Gob, Visiting Instructor  

Ahmet Gürata, Visiting Assistant Professor  
Ph.D., Cultural Studies and Humanities, University of London, 2003.

Meltem Gürel, Assistant Professor  
Ph.D., Architecture, University of Illinois at Urbana-Champaign, 2007. Architectural theory/history/criticism, cross-cultural histories of modernism, gender and space, interior design/architecture education.

Cengiz Gürer, Instructor  

Murad Gürzumar, Instructor  

Orhan İktu, Instructor  

Çağrı İmamoğlu, Assistant Professor  

Fulya İnce, Instructor  

Hatice Karaca, Instructor  

Dilek Kaya-Mutlu, Assistant Professor  
Ph.D., Graphic Design, Bilkent University, 2002. Film Studies, Cultural Studies, Media Reception.

Turhan Kayasü, Instructor  
M.Arch., Architecture, Bilkent University, 1976.

Atıl Kurttken, Instructor  
Alper Küçük, Instructor
Ph.D., Architecture, Middle East Technical University, 2007.

Hayati Mısman, Visiting Professor
Higher Diploma in Art, Printmaking, Gazi University, 1984.

Oktan Nalbantoğlu, Instructor

Kağan Olguntürk, Instructor
Competency in Art, Film Directing and Visual Techniques, Marmara University, 2004.

Ufuk Önen, Instructor
M.A., Media and Visual Studies, Bilkent University, 2008.

Serpil Özaloğlu, Instructor
Ph.D., Architecture, Middle East Technical University, 2006.

Özlem Özkal, Instructor
Ph.D., Graphic Design, Bilkent University, 1998.

Ahmet Özsalar, Assistant Professor

Maya Öztürk, Instructor
Ph.D., Architecture, Middle East Technical University, 1999.

Adam Pekalski, Visiting Instructor

Mustafa Pultar, Adjunct Professor
Ph.D., Princeton University, 1965. Structural design, architectural science, environmental analysis and design.

Ercan Sağlam, Assistant Professor
Higher Diploma in Art, Sculpture, Hacettepe University, 2001.

Çağla Nezihat Saraç, Instructor

Özlem Savaş, Instructor
Ph.D., Design History and Theory, University of Applied Arts Vienna, 2008.

Mariusz Sladczyk, Instructor

Tijen Sonkan Türkkan, Instructor

Agnieszka Srokosz, Instructor

Burcu Şenyapılı Özcan, Assistant Professor
Ph.D., Interior Architecture and Environmental Design, Bilkent University, 1998. Computer aided design, design education

Şule Taşlı Pektaş, Assistant Professor

Sedvan Teber, Instructor

Dominique Tezgör-Kassab, Associate Professor
Ph.D., (State Doctorate), History of Civilization and Archaeology, University of Human Sciences of Dijon, 1993.

Saadet Ayşegül Tokol, Instructor
Ph.D., Architecture, Middle East Technical University, 1997. Urban morphology, space syntax, urban theory.
Elif Erdemir Türkkan, Instructor  

Sibel Ertez Ural, Instructor  
Ph.D., Architecture, Karadeniz Technical University, 1995.

Tomris Yardımcı, Instructor  
M.Arch., Restoration, Middle East Technical University, 1975.

Semiha Yılmazer, Assistant Professor  

Mehmet Hakan Yurdadoğan, Instructor  
M.Arch., Architecture, Middle East technical University, 1982.

Beata Zalewska-Sladczyk, Instructor  

PART-TIME ACADEMIC STAFF

Aykan Alemdaroğlu, M.A., Latin Languages and Literature, Istanbul University, 2001.

Mükremin Barut  
Bülent Çaplı, Ph.D., Communication, Istanbul University, 1990.

Dural KADIOGLU, Ph.D., Department of Anatomy, Faculty of Medicine, Liverpool University, 1973.

Rosie Kaynak, B.A., Hons French & Spanish Language and Literature, Manchester Metropolitan University, 1990.

DEPARTMENT OF COMMUNICATION AND DESIGN

Modern media of communication are a leading force in the contemporary process of globalization. The department of Communication and Design aims to educate media professionals, with a special emphasis on visual communication and visual technologies, specifically in the fields of advertising, journalism, visual design, video and TV production and new media. Students are provided with a wide range of courses in media studies, theories and practice, like interpersonal communication and individual presentation, forms and techniques of public and mass communication, visual design and visual studies, advertising, marketing and public relations, basic computer and Internet knowledge.

The visual design and communication courses in practical fields such as photography, television, computer and video are conducted in computer labs with the most developed visual design programs, photography studios and a very well equipped digital video production studio. Since the department's philosophy is to educate both creative and responsible media professionals, it also includes several must and elective courses on the ethical, legal and social problems related with mass communication.

### DEPARTMENT OF COMMUNICATION AND DESIGN

#### GRADUATE PROGRAM

**Master of Arts (M.A.) in Media and Visual Studies**

The Department of Communication and Design offers Master of Arts program in Media and Visual Studies. The M.A. program aims to prepare students for careers in the media and communications sector as well as academic careers. It provides students with a sophisticated conceptual framework and analytical skills to enable them to make original contributions to media, visual and cultural studies by specializing in a particular aspect of Turkish or international media such as film, television, Internet or printed medium. The program encourages free and creative thinking, emphasizing research, analysis, interpretation, and criticism. Aiming at improving the standards of Turkish media, visual and cultural studies, the program encourages theoretical, interdisciplinary, and comparative approaches.

**Admission:** Applicants are required to have a Bachelor's degree. In addition to the general requirements set forth by the university, admittance to the graduate program is determined by the results of an entrance examination that includes a portfolio presentation and an interview. The date and place of the examination are announced each year by the University. During the interview applicants should present a body of well-defined original work as well as slides, videotapes or photographs of previous work.

**Degree Requirements:** After the completion of at least 24 units of course work in two successive terms, the candidates must take two seminars in their area of interest and prepare and submit a thesis. The duration of program is four semesters.

COURSE DESCRIPTIONS
UNDERGRADUATE COURSES

COMD 100  Basic Design
An elementary introduction to the principles of visual design and communication. Concepts of form, pattern, color, composition and function. Examination of design problems and development of problem-solving skills in visual design. Various theories of design. Credit units: 6 ECTS Credit Units: 12.

COMD 101  Introduction to Visual Communication Design I
An elementary introduction to the principles of visual design and communication. Concepts of form, pattern, color, composition and function. Basic problem solving strategies in two-dimensional design. Development of visual awareness and visual literacy. Theories of perception, Gestalt and design dynamics. Credit units: 4 ECTS Credit Units: 7. Prerequisite: COMD 101. J. Aksiyote

COMD 102  Introduction to Visual Communication Design II
Traditional media approaches and contemporary digital applications incorporated to solve problems within the visual arts. Advanced uses of form, pattern, color, composition and function to solve both two-dimensional and three-dimensional problems. Usage of different visual forms through photography, illustration, typography and graphic design. Credit units: 4 ECTS Credit Units: 7. Prerequisite: COMD 101. J. Aksiyote

COMD 103  Introduction to Communication Studies I
Communication as a process: Code, message, sign, medium and context. Theories and models of communication: Linguistics, semiotics and engineering models. Encoding and decoding, analog and digital codes. Convention and use. Literal, symbolic and metaphorical communication; visual metaphors. Credit units: 3 ECTS Credit Units: 6. Prerequisite: COMD 103. C. Kennedy-Karpat

COMD 104  Introduction to Communication Studies II
Various forms and modes of communication. Modern media of communication. The impact of technology on communication, especially mass communication. Visual and verbal aspects: narrative, technology and spectatorship. Credit units: 3 ECTS Credit Units: 6. Prerequisite: COMD 103. C. Kennedy-Karpat

COMD 105  Basic Photography
An introductory course in photography. Taking photographs: interior/exterior, knowledge of composition and film developing, and basic laboratory practices. Credit units: 3 ECTS Credit Units: 6. Prerequisite: COMD 102. K. Olguntürk

COMD 106  Introduction to Digital Cinematography
An introductory course in digital cinematography for moving image production in various kinds of media formats. Students are expected to learn basic professional video camera operation and cinematographic skills such as camera movement, framing, composition, and lighting for video through practical exercises and assignments. Credit units: 3 ECTS Credit Units: 6. Prerequisite: COMD 105. Y. Akcura

COMD 210  Introduction to Screenwriting
This course introduces basic notions of classical narrative scriptwriting such as character, structure, plot, dialogue, genre, and theme, as well as the textual elements of other audio-visual forms such as documentary, experimental and multimedia presentations. Students acquire experience in the correct formatting of scripts, writing dialogue rich with subtext, pitching their ideas, and proposal writing. By the end of the course, students will have completed a short script using classical narrative tools and a proposal for a second audio-visual project of any type or genre. Credit units: 3 ECTS Credit Units: 6. Prerequisite: COMD 209. G. Appleton, F. Larlar

COMD 212  Principles of Visual Communication Design
Introduction to the history, theory and principles of communicating visually through art, illustration, photography, design, typography, video and other visual forms. Credit units: 3 ECTS Credit Units: 6.

COMD 221  Visual Communication and Perception
Basic principles of visual communication and several competing theories of visual perception. The role of frames and conventions in visual communication. The impact of cultural and other factors in perception. Development of visual awareness and visual literacy. Learning from misperceptions and illusions as positive errors. Gestalt and information processing theories on the simulation of human perception. Credit units: 3 ECTS Credit Units: 6.
COMD 290  Summer Practice I
This summer training is intended to give the students an experience in the organization, structure and working of an advertising agency, graphic design studio, multimedia studio, public relations office or bureau, newspaper, television and television production. The minimum time of this practice is 4 weeks. Credit units: None ECTS Credit Units: None, Prerequisite: COMD 204. Aut (K. Olguntürk) Spr (K. Olguntürk)

COMD 305  Digital Video Production I
Through various kinds of digital video projects students will have the chance to develop their teamwork skills and learn the professional production process including pre-production, principal photography, and post-production, as well as production planning, shooting and editing, basic sound recording and design, and preparing a digital portfolio. Students will be guided to take on various new tasks. Credit units: 3 ECTS Credit Units: 6, Prerequisite: COMD 206. Aut (Y. Akcura, U. Önen) Spr (K. Olguntürk)

COMD 306  Digital Video Production II
This course is a continuation of COMD 305 and will help students to advance their video production and directing skills. The course emphasizes time management and project design. Students will be enabled to improve their computer and technology skills in digital video post-production through more complex projects. Credit units: 3 ECTS Credit Units: 6, Prerequisite: COMD 305. Spr (K. Olguntürk, U. Önen)

COMD 310  Screenwriting
An introduction to the art of story-telling and examination of the ways people communicate experiences to each other. It aims to encourage students to recognize the significance of memory, observation and interpersonal relationships from their own experience, in the construction of narrative from the screen. It examines the ways in which an audience can be manipulated through the use of language, particularly the spoken word. It seeks to illustrate "universal" or shared themes with stories drawn from experience and to introduce students to the conventions, problems and possibilities of screenwriting from. It is complementary to video production. Credit units: 3 ECTS Credit Units: 6.

COMD 321  Analysis of Moving Image
This course introduces students to basic grammar of cinematic language, which has become the basis for making meaning in a variety of visual media. Topics to be covered include mise-en-scene, cinematography, editing, sound-image relationships, narrative forms, and non-narrative forms (documentary and experimental). Attention is given to both dominant practices (e.g., Classical Hollywood Cinema) and alternatives. Attention is also paid to how and why different media (cinema, video, broadcast television) make different uses of this shared grammar. Credit units: 3 ECTS Credit Units: 6, Prerequisite: COMD 204. Aut (A. Gürata)

COMD 322  Film Theory
This course aims to introduce the key debates in film theory. Some of the topics and concepts that will be covered are "realism," "formalism," "avant-garde cinema," "auteur theory," "film language," "genre theory," "film, subjectivity and ideology," and "reception theory." These topics will be discussed in relation to the basic elements of film such as narrative, mise-en-scene, camera use, sound, and editing. Credit units: 3 ECTS Credit Units: 6. Spr (A. Gürata)

COMD 331  News Reporting and Writing
News reporting and production techniques of radio and television. Gathering information, editing and writing under strict deadlines in order to prepare the student for a professional position. News values, and responsibilities. Basic news writing and style principles, interviewing techniques. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

COMD 333  News and Society
The function and nature of news in contemporary society and its role and impact on social and political affairs. The theories that will be covered are: the concept of information and its role in the modern world; news and story-telling, news as genre of writing and discourse: news values; agenda-setting; construction of reality; news and propaganda; journalistic ethics. Credit units: 3 ECTS Credit Units: 6. Aut (R. Kaynak)

COMD 341  Media and Society
The media as a major social institution, the relationship between media and society. The production and reception of media content, the impact of media over other institutions, society and culture as well as the effects over individual behavior. Questions of control and ownership, public and private media. Mass culture and popular culture. Different forms and genres of media, fictional and news material. Propaganda and ideological influence. The impact of new technologies of communication. Credit units: 3 ECTS Credit Units: 6. Aut (C. Kennedy-Karpat)

COMD 342  Popular Culture
This course aims to give the students an awareness of how popular culture operates in specific ways. Popular narrative and entertainment forms will be examined in contrast with "higher" forms of culture. The course will focus on the impact of cultural forms on the audiences and offer a critical study of the existing theories on the subject. Significant cases from literature, press, film and TV will be discussed in the class. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Savas)
COMD 344 Visual Technologies and Visual Narratives

COMD 345 Interpersonal Communication
Main principles and issues of interpersonal communication and self-presentation in everyday life. The interplay of verbal and non-verbal language which operate in face-to-face encounters. The impact of context, the interaction of language and social setting. Performance of self-regulation and self-presentation in everyday communication. Credit units: 3 ECTS Credit Units: 6.

COMD 346 Introduction to Advertising
This course provides an introduction to the basics of advertising: the functions of advertising; planning, execution and production of advertisements; its role in marketing communications mix; economics and social influence; advertising institutions and media; campaigns and appropriations; retail and business-to-business aspects; social and ethical aspects of advertising. Credit units: 3 ECTS Credit Units: 6. Spr (K. Öztürk)

COMD 352 Internet Technologies and Electronic Commerce
The course will cover the technological infrastructure that enables electronic commerce. Issues included are Internet, Intranets, Extranets, search facilities and engines, security, authentication, and privacy, electronic payment systems and electronic commerce services. Organizational challenges on developing appropriate business models are discussed with respect to the simultaneous response and online threats to the existing models. Credit units: 3 ECTS Credit Units: 6.

COMD 354 Interactive Media Design and Development
This course introduces the students to both the practical and theoretical fundamentals of design and implementation of interactive multimedia systems. Topics covered include: Principles of Human Computer Interaction, Interaction Design, Camera-based Interaction, Interactive Games, Live Audio and Video Processing, Motion Detection, Gesture Recognition, Tangible Media, Interactive Spaces. Credit units: 3 ECTS Credit Units: 6. Spr (M. Erdog)

COMD 361 Sound Design I
A introductory course designed to create and improve students' awareness of and respect for audio in relation to visual media. Students are introduced to basic audio production and post-production techniques for video and film. Emphasizes given to skill development in sound recording in studio and on location, signal processing, digital audio editing and mixing. Credit units: 3 ECTS Credit Units: 6. Aut (U. Önen)

COMD 362 Sound Design II
Continuation of Sound Design I. This course provides the students with advanced audio post-production techniques for video and film and also explores the constituents and creative potential of sound design for better communication of ideas through artistic and expressive uses of sound. Credit units: 3 ECTS Credit Units: 6. Prerequisite: COMD 361. Spr (U. Önen)

COMD 371 Media International Relations and Public Diplomacy
This course examines the interaction between foreign policy-making and non-governmental audiences in other countries, combining attention to the way news media and their staff work in practice on international affairs, some case histories from the recent past, and the rise of new institutions and ways of addressing cross-national audiences in order to win support for particular policies in the contemporary world, both for large and middle-sized powers. It also looks problems of convergence and conflict in the international system in the twenty first century. Credit units: 3 ECTS Credit Units: 6.

COMD 390 Summer Practice II
In this summer training, students are expected to participate actively audiovisual media productions, such as television, multimedia, public relations, and advertisement. Students are also expected to make detailed observations in planning, media integration, and production techniques and tools, as well as to get an understanding of teamwork, team relations, and production/client relations. The minimum time for the practice is 4 weeks. Credit units: None ECTS Credit Units: None. Prerequisite: COMD 306. Aut (Y. Akcura) Spr (Y. Akcura)

COMD 422 Advanced Issues in Communication Studies
This course is designed to introduce students to advanced issues in communication studies and recent research. Topics to be covered may include: revisiting the communication process; audience groups and different interpretations of media messages; ratings system; media practice and democracy; issues of identification, image and visibility; internet, cyberspace and the impact of recent technologies; digital cinema and digital television; interactive media and media art. Credit units: 3 ECTS Credit Units: 6.
COMD 424  Media Theory and Methods
Examination of various methods of studying media at an advanced senior level: semiotic and content analysis, theories of identification, audience studies and ethnographies, economics of media. Students are supposed to design and conduct their own research and write research and write research papers in media studies. Credit units: 3 ECTS Credit Units: 6. Spr (Ö. Savas)

COMD 431  Global Communications
The course will focus international communication system and global news media and television such as CNN and BBC; global media and entertainment industries such as Hollywood or MTV. Global ideologies and paradigms: Orientalism, global information inequality, local reception of global media production. Global vs local or national media. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Kaynak)

COMD 432  Principles of Journalism
A survey of the journalism profession, including the history and study of various media. Emphasis is placed upon journalistic principles, writing, editing, and make up, journalistic values. Credit units: 3 ECTS Credit Units: 6.

COMD 433  Gender and Media
Representations of masculinity and femininity in the media. Gender bias and stereotypes in the portrayal of gender in film, television, internet and print media. Gendered audiences and gender differences in media reception. Issues of pornography and censorship, in the use of women’s images in advertising and marketing. The role of media transforming as well as perpetuating gender roles gender inequality. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Savas)

COMD 434  Special Topics in Journalism
Study of selected advanced topics in journalism with the purpose of depending a critical understanding of their profession for would-be journalists. Among the possible topics are: a critical focus on the complicated nature of concepts such fact, truth and evidence as well as the context in which journalism takes places; issues of privacy and publicity; journalistic ethics; the setting of the news agenda; the impact technological change and varieties of journalism such as science journalism, art and culture journalism, investigative journalism, investigate journalism, political journalism and business and economic journalism. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

COMD 442  Special Topics in Visual Studies
Study of selected advanced topics in visual media and technologies. The modern concept of technology and the concepts of image, visual language. The new media and digital language and signs. The role and power of visual technology and media in the shaping of culture, language, subjectivity and society. Credit units: 3 ECTS Credit Units: 6.

COMD 461  Public Relations and Communication Campaigns
Theory and practice of public relations and public communication. PR and opinion research, communication process and building effective campaign strategy. Case studies in PR and public communication, commercial and political advertising, humanitarian campaigns. Ethical considerations and impact on society. Credit units: 3 ECTS Credit Units: 6.

COMD 462  Special Topics in Advertising
Study of selected advanced topics in advertisement production and research focusing on various media application and future developments. Creativity and diversity, advertising research and planning of campaigns, generating ideas and strategy, copywriting for television, radio and direct marketing. Credit units: 3 ECTS Credit Units: 6. Spr (T. P. Moran)

COMD 471  Media Ethics and Responsibility
A survey of the current ethical problems and issues in reporting, editing and broadcasting moral principles, legal regulations and their application to these problems. Examination of case studies with special emphasis on questions of privacy and freedom of information. Credit units: 3 ECTS Credit Units: 6. Aut (T. P. Moran)

COMD 481  Visual Communication Project I
Introduction to planning, media integration, and production techniques and tools of interactive multimedia. Through practical exercises. The course will expose students to major component media including computer text, graphics, photography, animation, speech, sound, and video. Technical and human interface issues also are covered. Credit units: 4 ECTS Credit Units: 6. Prerequisite: COMD 306. Aut (G. Appleton, K. Olgun, U. Önen) Spr (G. Appleton)

COMD 482  Visual Communication Project II
Introduction to planning, media integration, and production techniques and tools of interactive multimedia. Through practical exercises. The course will expose students to major component media including computer text, graphic, photography, animation, speech, sound, and video. Technical and human interface issues also are covered. Credit units: 4 ECTS Credit Units: 6. Prerequisite: COMD 481. Spr (Y. Akcura, G. Appleton, U. Önen)
GRADUATE COURSES

COMD 511 Theory and Method in Media Visual and Cultural Studies
This course is designed to introduce the student to major theories and methods in media, visual and cultural studies: mass culture theory, empirical effect studies, ethnography, Frankfurt School, semiotics and structuralism, cultural studies, psychoanalysis and post-structuralism. Various issues and aspects of modern media and culture will come under consideration such as effects and affectivity, signs and signification, image and power, issues of class, race and gender, the ways of studying media as text, institution, audiences and subcultures. Credit units: 3 ECTS Credit Units: 7.5. Aut (D. Kaya-Mutlu)

COMD 513 Film and Genre
This course aims to investigate the key terms of film theory such as narrative, mise-en-scene, subjectivity, the gaze, the voice, spectatorship, sexual difference, suture and so forth in relation to the question of “genre.” Selections from various film genres will be examined. Credit units: 3 ECTS Credit Units: 7.5. Aut (A. Gürata)

COMD 514 Identity Space and Image
This course will introduce students to debates on “identity” and “subjectivity” in contemporary visual and cultural studies. Drawing upon various theoretical and methodological sources, the course places the emphasis on how identity and subjectivity can be conceived in relation to the concepts of space, memory, belonging, hybridity and migrancy in contemporary global culture. Credit units: 3 ECTS Credit Units: 7.5. Spr (Ö. Savas)

COMD 515 Media Reception
Drawing upon different theoretical and methodological approaches to the study of media reception, this course explores the relationship between media texts and their audiences. A variety of media and media genres including films, TV serials, comics and popular literature are discussed together with topics such as media effects, active audience theory, ethnography, fandom, gender, nation, and ethnicity. Credit units: 3 ECTS Credit Units: 7.5. Spr (D. Kaya-Mutlu)

COMD 516 Turkish Cinema and Modernity
This course aims to discuss Turkish cinema in relation to the question of “modernity.” Making a critical analysis of the historical development of Turkish cinema in the context of Turkey’s experience of modernity, the course will investigate the debates around “Yeşilçam cinema,” “national cinema,” “social realism,” “Third world cinema,” “women’s films,” “art cinema,” and “the new Turkish cinema.” Credit units: 3 ECTS Credit Units: 7.5. Spr (A. Gürata)

COMD 521 Body Movement and Vision in Immersive and Interactive Media I
This course examines the role of body, movement and vision in art and traditional and digital media including literature, cinema, computer and video games, multimedia and online systems and the Internet. Topics covered include: historical development of digital art and culture; cybernetics and systems theory; digital avant-garde; concepts of virtual and virtuality; theories of immersive and interaction in literature, visual and digital media; perception, attention and memory; conscious and unconscious information processing; design of interactive and immersive systems and user interfaces; computer vision; aesthetics of digital media, information and interactive arts. Credit units: 3 ECTS Credit Units: 7.5.

COMD 522 Body Movement and Vision in Immersive and Interactive Media II
This course extends and applies the ideas studied in “Body, Movement and Vision in Immersive and Interactive Media I” to a wide range of contemporary art works that use computer and other forms of high technology. The focus is on critical examination and evaluation of artworks that have been created in the past ten years, however, earlier computer aided artworks are also studied. The course explores the ways in which art, science and technology are converging in the twenty-first century and how they might be integrated in the future. Emerging patterns of integration between art and various scientific disciplines and technologies are studied, but particular emphasis is put on the role of computers in visual arts. Concepts, methods and terminology derived from critical and media theory, philosophy, science and engineering are introduced to analyse emerging forms of “Hi-Tech” or “Information Art.” Credit units: 3 ECTS Credit Units: 7.5.

COMD 531 Science and Media
The Science and the Media course will introduce students to the history and current state of science reporting in various media and their specific journalistic forms. Students will also get to know different methodological alternatives for studying trends in science reporting as well as increase their abilities in media-oriented writing through practical journalistic exercises. Credit units: 3 ECTS Credit Units: 7.5.

COMD 541 Writing for Media
This course introduces students to writing for various media. Methods of teaching involve creative brainstorming, concept selection, development, and refinement through writing workshops, as well as research projects and seminars on topics related to media writing. For their projects, students may focus on their area of interest such as writing fictional, documentary, or experimental film scripts, or writing for magazines, newspapers, or digital media. Credit units: 3 ECTS Credit Units: 7.5. Aut (G. Appleton)
Documentary has a long and rich tradition of theory and practice. Today digital technologies once again revitalize documentary productions. In this course students will be presented with an overview of central documentary issues. They will develop an understanding of the fundamental aesthetic tools of documentary production through lectures, screenings, exercises and individual short projects. **Credit units:** 3 ECTS **Credit Units:** 7.5. DEPARTMENT OF FINE ARTS

Part-time: D. Kadioğlu.

The Fine Arts Department has a distinctive structure and curriculum that contrast with other art schools in Turkey. The Department offers a flexible program that unites studio practice and art theory, combining art disciplines such as painting, printmaking, sculpture, installation, and ceramics with courses in theory and criticism. The aim of the curriculum is to equip future artists with a capacity for studio work and an understanding of artistic production as well as the theoretical dimensions of art. The well-equipped etching, lithography, silk screen, ceramics, and sculpture studios offer students excellent opportunities to explore new horizons.

UNDERGRADUATE PROGRAM

The interdisciplinary program of the Department integrates theory and practice. The aim is to enhance the students in various fields of fine arts. The students are expected to go through the phases of research, recognition, experience, and production of original works of art. They are continuously encouraged to develop their own artistic and critical formation.

The undergraduate curriculum of the Department of Fine Arts offers two program options, Studio Arts and Theory and Criticism.

In the Studio Arts Program, students experiment with various fields of arts such as painting, printmaking, sculpture, ceramics, and multi-media and are encouraged to conceive and produce creative original works and modes of thought. In the Theory and Criticism Program, critical and theoretical thinking on art is promoted. Both programs follow the same curriculum during the first two academic years. The student is then expected to specialize in one of the programs according to his/her own interest and ability.

**GRADUATE PROGRAM**

Master of Fine Arts in Painting and Printmaking

The M.F.A. program of the Department of Fine Arts offers the students options to concentrate on two studio areas and/or to concentrate on a theoretical study in art theory. The studio areas are painting and printmaking. The program encourages freedom of expression within a framework of regularly scheduled critiques and open studio classes, and centers around the individual student's work in progress. Both painting and printmaking today encompasses virtually any medium and students are motivated to explore the boundaries of their art making. Students are encouraged to view their profession as an innovative path. They are advised to embrace the inevitable changes which occur in direction and destination as they seek and progress.

Graduate students are offered large studio space. Well recognized artists visit the faculty and offer seminars to graduate students. Twenty-four hour access to the facilities supports personal growth of the students. Emphasis is placed on twentieth and twenty-first century theory in both lecture and studio classes.

**Admission:** Applicants are required to have a Bachelor's degree. In addition to the general requirements set forth by the university, admittance to the graduate program is determined by the results of an entrance examination that includes a portfolio presentation and an interview. The date and place of the examination are announced each year by the University. During the interview the applicants should present a body of well-defined original work as well as slides, videotapes or photographs of previous work. All applicants must have a proof of their English proficiency.

**Degree Requirements:** After the completion of at least 24 units of course work in two successive terms, the candidates must take two seminar courses in their area of interest and prepare and submit a thesis. The maximum duration of the program is five semesters.

Doctor of Philosophy in Art, Design and Architecture

Aims and Objectives: The Ph.D. program in Art, Design and Architecture is basically an interdisci-
plinary research program open to all candidates holding a Master's Degree in fine arts, design, architecture or a related field. The research done is expected to be either a novel contribution to art and science, or the introduction of a new method, or a completely innovative application of a widely known method to the selected area. The program aims at inquiring into various issues of art, design and architecture, both in theoretical and practical fields by encouraging the students to carry out research in unexplored topics. By investigating pertinent past and current developments in the world and in Turkey within a cross-cultural framework, various aspects of processes in design, implementation, performance and evaluation are examined by students to achieve the objective of producing work, demonstrating competence in research, interpretation and assessment.

Admission Requirements: Applicants are required to have a Master's degree in a relevant field. In addition to the general requirements set forth by the university, admittance is through an interview given before the beginning of each academic year. The date and place of the interview is announced each year by the university. All applicants must have a proof of their English proficiency.

Degree Requirements: The minimum course load for the Ph.D. program is 24 credit units. After completion of the courses, the Ph.D. candidate must take a qualifying examination and make a presentation related to his/her thesis and submit a thesis proposal which will be evaluated by a jury composed of well-known scholars and/or artists in the relevant field. Upon a favorable evaluation by the jury, the candidate will qualify for work towards a Ph.D. thesis. At the completion of the thesis, a similar jury will examine the thesis and the candidate for a final decision on the degree. The maximum duration allowed for the completion of degree requirements is nine semesters.
Typical course of study involves the completion of required course work during the first year of the program. The course selection is subject to the approval of the Academic Committee. In the subsequent years, Ph.D. candidates register in ADA 690 Advanced Research Topics (0 Credit / 6 ECTS) and/or ADA 699 Ph.D. Dissertation (0 Credit / 6 ECTS) for completion of the seminar and thesis requirements.

COURSE DESCRIPTIONS
UNDERGRADUATE COURSES

FA 101 Basic Design I
Introduces basic design concepts of form, pattern, color, composition, texture, and shade, as well as the principles of two and three dimensional design without emphasizing function as a determinant. Problem solving skills in design are developed. Credit units: 6 ECTS Credit Units: 10. Aut (B. Altay, O. Anafarta, İ. Basa, B. Batuman, H. Demirkan, H. Karaca, M. Sladczyk, B. Şenypılı Özcan, S. Teber, E. E. Türkkan, S. E. Ural) Spr (S. E. Ural)

FA 102 Basic Design II
Continues to explore the concepts introduced in FA 101. More emphasis is given to problems in three dimensional design. Function is introduced. Theories of design will be further discussed. Credit units: 6 ECTS Credit Units: 10, Prerequisite: FA 101. Spr (B. Altay, O. Anafarta, İ. Basa, B. Batuman, N. Camgöz Olguntürk, H. Demirkan, H. Karaca, M. Sladczyk, B. Şenypılı Özcan, S. Teber, E. E. Türkkan)

FA 103 Drawing I
Exploration of the human figure, its parts and its form as far as structure and functions are concerned. Drawing fundamentals in figurative expression, proportions and compositional expressions by working directly from the model in various media. Credit units: 3 ECTS Credit Units: 4. Aut (B. S. Çeltek, C. Gürer, D. Kadıoğlu, H. Misman, A. Srokosz)

FA 131 Technical Drawing and Lettering I
Introduction of technical drawing materials. Drawing plans, sections and elevations on various scales. Principles of perspective in three dimensional drawing. Perspective drawings with one, two or three vanishing points. Credit units: 3 ECTS Credit Units: 4, Prerequisite: FA 131. Spr (H. Karaca, A. Kurttekin, A. Küçük, S. Teber, S. E. Ural)

FA 132 Technical Drawing and Lettering II

FA 171 Introduction to Art and Culture I
Introduces concepts related to art and culture. A variety of topics such as painting, sculpture, drama, music, literature and architecture are discussed within a socioeconomic and political perspective; to give the student a general understanding of a particular time and place in history. Credit units: 3 ECTS Credit Units: 5. Aut (A. M. Göb, D. Kaya-Mutlu, Ç. N. Sarac, M. H. Yurdadoğan) Spr (Ç. N. Sarac)

FA 172 Introduction to Art and Culture II
Continues to develop an understanding of the relation of culture and philosophy to the arts and their effect on the creation of artistic activity and design through the analyses of the accumulated art work of human history. Credit units: 3 ECTS Credit Units: 5, Spr (D. Kaya-Mutlu, Ç. N. Sarac, D. Tezgör-Kassab, M. H. Yurdadoğan)

FA 190 Summer Practice I
The aim of this summer practice is to give the students first hand experience in drawing sculpture, bust-relief etc. at archaeological museums. The minimum time for this practice is 6 weeks. Credit units: None ECTS Credit Units: None. Aut (E. Sağlam) Spr (E. Sağlam)

FA 201 Art Studio I
An introductory course on visual arts. Basic concepts and information on different fields such as painting, printmaking, sculpture, ceramics, etc. The possibilities of diverse media are introduced within the frame of studio studies. Credit units: 6 ECTS Credit Units: 10, Prerequisite: FA 102. Aut (A. Srokosz)

FA 202 Art Studio II
A continuation of FA 201. Development of concepts towards the transformation of basic design criteria to artwork with contribution of fantasy and imagination. Credit units: 6 ECTS Credit Units: 10, Prerequisite: FA 201. Spr (A. Srokosz)
FA 203 Drawing III
Study of the figure to improve drawing skills and knowledge. Fast sketching, figural expression, transformation, drawing materials and techniques. Credit units: 3 ECTS Credit Units: 4, Prerequisite: FA 104. Aut (M. Brzozowski, A. Özsalar)

FA 204 Drawing IV
Examining the human body in terms of form, color and color values. Studies leading to individual expression in model drawing based on the basic principles of art. Credit units: 3 ECTS Credit Units: 4, Prerequisite: FA 203. Spr (M. Brzozowski, A. Özsalar)

FA 205 Figure Drawing I
Initial studies on the basic principles of drawing; the perception of the proportions of the human body. Studies of the model with various materials. (non-FA majors only) Credit units: 3 ECTS Credit Units: 6.

FA 206 Figure Drawing II
Developing drawing skills and knowledge through studying the human body. Examining action, contour, modeling (shaping) and composition. Credit units: 3 ECTS Credit Units: 6, Prerequisite: FA 205 or approval of the FA Department.

FA 207 Artistic Anatomy
Aim is to unveil the extraordinary construction of the human body and celebrate its continuing prominence in Art today. This course is designed for those who wish to gain the ability to catch the perfection of form and moves of human body in space by creating techniques and attitudes in observing and drawing the skeleton, head, ribcage, pelvis, hands and feet. Credit units: 3 ECTS Credit Units: None.

FA 208 Anatomical Figure Drawing
The main objective of this course is to further the Artistic and Anatomical approach to figure drawing by critical interpretation and detailed study of the works of Renaissance Great Masters means of studio sessions. Credit units: 3 ECTS Credit Units: 6. Spr (D. Kadoğlu)

FA 211 Introduction to Painting I
Building basic technical skills. Experiments with the use of paint. Conceptual and practical experiments on color mixing. Examining the creative processes through these experiments. (non-FA majors only). Credit units: 3 ECTS Credit Units: 6.

FA 213 Introduction to Printmaking I
The course aims to give basic techniques of printmaking with compositional and color values. (non-FA majors only.) Credit units: 3 ECTS Credit Units: 6. Aut (H. Misman) Spr (H. Misman)

FA 215 Introduction to Sculpture I
An introductory studio course on the basic concepts, materials and processes of sculpture, with an emphasis on the understanding of perception and representation of three dimensional objects for students from other disciplines. (non-FA majors only.) Credit units: 3 ECTS Credit Units: 6. Aut (E. Sağlam) Spr (E. Sağlam)

FA 217 Introduction to Ceramics I
Forming functional and three dimensional objects using basic ceramic techniques. White, red and colored clays are used. Techniques of colored clay combination are introduced. Creation of texture with an understanding of design principles is emphasized. (non-FA majors only) Credit units: 3 ECTS Credit Units: 6. Aut (A. Özsalar) Spr (A. Özsalar)

FA 218 Introduction to Ceramics II
Creation of form using red, white and colored clay on the potters’ wheel. Decoration techniques using glaze in accordance with design principles is emphasized. Molding by plaster and/or polyester as a process of duplicating already created work is introduced. Credit units: 3 ECTS Credit Units: 6, Prerequisite: FA 217 or approval of the FA Department.

FA 219 Ancient Techniques and New Technology in Ceramics
This is an experimental course, combining the current techniques and the new technology in ceramics such as using ceramic colours on fired tiles. During the course the students will search for new ways of expression in colour. Using the clay as the Canvas. Credit units: 3 ECTS Credit Units: 6. Aut (A. Özsalar) Spr (A. Özsalar)

FA 223 Visual Perception and Color
Examination of subjects such as psychology of visual perception, seeing the color and perception of color-form, concepts and theories of color. Credit units: 3 ECTS Credit Units: 4. Aut (E. Sağlam)

FA 262 Fine Arts Seminar
Critical assessment of selected national and international artist's works and their ideas and approaches. Credit units: 3 ECTS Credit Units: 4. Spr (E. Sağlam)
FA 271 History of Art I
A chronological survey of the history of art from the Stone Age to the Byzantine World. Credit units: 3 ECTS
Credit Units: 5. Aut (Ç. N. Sarac, D. Tezgör-Kassab)

FA 272 History of Art II
A chronological survey of the history of art from the Early Medieval age to the Early Renaissance period. Comparative material from art of the non-western world, especially that of Anatolia, is also introduced. Credit units: 3 ECTS Credit Units: 5. Spr (D. Tezgör-Kassab)

FA 290 Summer Practice II
The aim of this summer practice is to give the students experience in copying from original works of art at various museums; to examine figure-sculpture relations within spaces; to practice and to study ceramics; to examine art collections. The minimum time for this practice is 6 weeks. Credit units: None ECTS Credit Units: None. Aut (E. Sağlam) Spr (E. Sağlam)

FA 301 Art Studio III
Studio work in one of the selected fields of fine arts such as painting, printmaking, sculpture, ceramics, etc. Students are expected to apply controlled experimentation on visual schemes. Credit units: 6 ECTS Credit Units: 10, Prerequisite: FA 202. Aut (A. Özsalar)

FA 302 Art Studio IV
Continuation of FA 301. With emphasis on the development of individual vision and personal expression. Credit units: 6 ECTS Credit Units: 10, Prerequisite: FA 301. Spr (E. Sağlam)

FA 304 Special Problems in Drawing
Studies of the human body concerning form, color and value. Exploration of individual expression by using models to build up thought and imagery. Contemporary figural expressions. Credit units: 3 ECTS Credit Units: 4. Prerequisite: FA 204. Spr (A. Özsalar)

FA 305 Advanced Drawing I
Figural studies to develop skills and knowledge of drawing beyond the scope of the course series FA 205 and FA 206. Different ways of expression and interpretation of the figure drawing with emphasis on drawing techniques and materials. Credit units: 3 ECTS Credit Units: 6.

FA 306 Advanced Drawing II
Examination of the human body in form, color and value by line and paint. Developing individual expression, artistic thought and imagination based on live model studies. Credit units: 3 ECTS Credit Units: 6, Prerequisite: FA 305 or approval of the FA Department.

FA 307 Composition in Drawing I
An advanced drawing course to help students transform the initial academic experience into the artistic expression. Credit units: 3 ECTS Credit Units: 6.

FA 308 Composition in Drawing II
An advanced course, developing the abilities of using drawing as a tool of visual thinking and a language of the visual communication, based on previous academic experiences. Credit units: 3 ECTS Credit Units: 6.

FA 331 Technology of Art
Introduction to technical materials used in various visual arts and technical, physical and chemical characteristics of the natural and synthetic materials used in sculpture, painting, printmaking and ceramics. Credit units: 3 ECTS Credit Units: 4. Aut (A. Kurttekin)

FA 332 Art and Technology
Art has been deeply interconnected with changes in technology, it has either responded to it or has changed with it leading to redefinitions in the making of art as well as changes in how it is viewed. This course examines symptomatological positions of interaction in the history, and discusses the contemporary situation with emphasis on recent changes. Credit units: 3 ECTS Credit Units: 6.

FA 361 Philosophy of Art I
This course examines philosophical issues that arise concerning the creation, interpretation and viewing of art since Plato and Aristotle. Topics to be discussed include: what is “mimesis”: who is the best judge of art; is art beautiful and good; should art be viewed dis-interestedly; what is it to get at the meaning of a work of art; how does technology affect the meaning and experience of art? Credit units: 3 ECTS Credit Units: 6. Aut (A. Alemdaroğlu)

FA 362 Philosophy of Art II
In this course, will be examined a number of ways that philosophy and modern art have come into dialogue with each other. These dialogues have taken many different forms: philosophers have written about artists and their works, and sometimes artists have appropriated the ideas of philosophers and created works that are inspired by their readings of philosophers. Within this matrix also is investigated what constitutes a work of art, artistic
representation, the nature of aesthetic qualities, and the relevance of artist's intentions to the evaluation of works of art. Credit units: 3 ECTS Credit Units: 6. Prerequisite: FA 361. Spr (A. Alemdaroğlu)

**FA 371  History of Art III**
A chronological survey of the history of art from the Renaissance to the end of late Baroque and Rococo. Comparative material on the art of non-western lands, especially that of the Ottoman Empire is also discussed. Credit units: 3 ECTS Credit Units: 4. Aut (A. M. Gob)

**FA 372  History of Art IV**
A chronological survey of the history of art from the French Revolution to the end of the twentieth century. Comparative material on the art of non-western lands, especially that of Anatolia and Turkey is also discussed. Credit units: 3 ECTS Credit Units: 4. Spr (D. Tezgör-Kassab)

**FA 390  Summer Practice III**
The aim of this summer practice is to give the students experience in making art in a studio or in a professional art environment. The minimum time for this practice is 6 weeks. Credit units: None ECTS Credit Units: None. Aut (E. Sağlam) Spr (E. Sağlam)

**FA 401  Art Studio V**
Studio work related to the student's preference of thematic possibilities in the selected field of fine arts. The course focuses on the individual formative process. Credit units: 6 ECTS Credit Units: 10. Prerequisite: FA 302. Aut (E. Sağlam)

**FA 402  Art Studio VI - Degree Project**
Individual work geared to the completion of the degree program. The student is expected to come up with a coherent body of work in his/her field of concentration. This degree study reflects the student's personal direction and can be selected from one of the fields of painting, printmaking, sculpture, ceramic, multi-media (studio). Credit units: 9 ECTS Credit Units: 16. Prerequisite: FA 401. Aut (E. Sağlam)

**FA 421  Analysis of Art Work I**
This course aims to introduce students to critical analysis of works of art by concentrating on the theoretical debates developed around various issues on art theory since the 19th c. Also will be to put into question our understanding of art by traversing certain changes that have taken place in our perception of art and the world through various genres such as painting, photography, and cinema. Credit units: 3 ECTS Credit Units: 4. Aut (A. Alemdaroğlu)

**FA 422  Analysis of Art Work II**
Having dealt with the nature of painting, photography and cinema in the first part of this course, we shall be studying various postmodern approaches to art - such as semiotic, psychoanalytic, social and political approaches in order to foreground the impact of the postmodern theory on arts. What happens to the spectacle from the 1970's on? How have the computers and multimedia changed our conception of art? Credit units: 3 ECTS Credit Units: 4. Prerequisite: FA 421. Spr (A. Alemdaroğlu)

**FA 461  Philosophy of Art**
Specific works of art, visual images and objects are examined through diverse philosophical view points. There are discussions on the production of meaning with resource to philosophical approaches. Does art have a philosophy, and if so, what kind of philosophy is it? Where and what are the crossovers between philosophy and art? Specific cases where there have been intimate relations between philosophers and artists are studied. Credit units: 3 ECTS Credit Units: 4.

**FA 462  Senior Seminar**
Students work together as critics and artists on projects that require collaboration and interdisciplinary dialogue. They discuss and experiment in finding alternative ways and language of communication with the public. Projects may be real or imaginary. Credit units: 3 ECTS Credit Units: 4.

**FA 467  Curatorial Studies I**
An introduction to the critical development of museum studies as an emerging academic discipline. The course will be a basis in the study of museum education and curatoship. Historical development of the art institutions and their relation to the society today is discussed and evaluated in an analytical and critical way of thinking. Credit units: 3 ECTS Credit Units: 6. Aut (Ç. N. Saracş)

**FA 468  Curatorial Studies II**
A continuation of FA 467. The course will be based on the works of well-known curators throughout the world. Students are encouraged to experiment the exhibition techniques within a contextual approach. Credit units: 3 ECTS Credit Units: 6. Prerequisite: FA 467.

**FA 473  Contemporary Turkish Art**
Analysis of the general features of various movements in Modern Turkish Art. Painting, sculpture and ceramics in Turkey from the late nineteenth century to the present. Its evaluation in comparison with European and other modern art movements. Credit units: 3 ECTS Credit Units: 6.

ADA 511: This course aims to develop a critical perspective on theory and practice in art with the intention of clarifying problematical positions maintained due to appropriation of a conception of art which presents itself with a clear-cut distinction of theory and practice. In this sense, this is a project-based course with a stress on “project’s intermediary position between theory and practice. Credit units: 3 ECTS Credit Units: None.

ADA 512: This is the second part of a two term course in which students are encouraged to develop a critical perspective on theory and practice in art. In relationship with the first part of the course, the second term lays a special stress on such conditioning that pertain to the hypostatizations of the separatedness of theory and practice. With the intention of finding a way out of this situation, the readings for the course will focus on Spinoza, Leibniz, and Deleuze. Since, going through stages of a work-shop, the course aims to end up in finalizing student projects in an exhibition, the first part of the course will be counted as prerequisite for the second part. Credit units: 3 ECTS Credit Units: None.

DEPARTMENT OF GRAPHIC DESIGN

Part-time: A. Alemdaroğlu.

Turkey, in recent years, has witnessed an explosion in advertising and communication that has resulted in the emergence of an aesthetic awareness in both the public and the private domain. There is a growing demand for well-educated designers in all aspects of visual design and communication.

The Department of Graphic Design strives to promote visual literacy, and the production of visual language to communicate messages through illustration, typography, photography, advertising, computer graphics, packaging, and contemporary media. To this aim, students are encouraged to utilize and experiment with contemporary production technologies.

The educational philosophy of the Department of Graphic Design is to question well-worn graphic trends, emphasize critical and theoretical thinking, and contribute innovative and individual proposals to the field.

UNDERGRADUATE PROGRAM

A broad based curriculum during the first year exposes students to fundamental art and language education as well as courses in Art History, Art and Culture and foundation studio art classes. The second year is made up of intensive studio classes in Visual Communications, Illustration, Typography, Photography, and Computer Graphics. The third year consists of more advanced topics aiming to increase students' knowledge in design and awareness to contemporary design issues. A variety of elective courses are also offered beginning with the third year for students to improve themselves further in specific fields of visual design. In-depth theoretical courses such as Analysis of Artwork and Philosophy are offered in addition to a comprehensive array of electives which support and enhance the core curriculum. The fourth year aims to prepare students for professional practice. It encourages students to find their individual voice and approach in design which is finalized with a senior project and a graduation exhibition.

The Master of Fine Arts program in Media and Design is a joint program offered by the Department of Graphic Design and the Department of Communication and Design. The M.F.A. program aims to prepare students primarily for careers in the media and graphic design sectors and secondarily in the academia. Integrating practical, theoretical, interdisciplinary, and comparative approaches, the program provides students with a sophisticated theoretical and practical framework to enable them to make original contributions to both Turkish and international media and design production. The program encourages free and creative thinking, emphasizing research, analysis, interpretation, practice and constructive criticism.

**Admission:** Applicants are required to have a four-year undergraduate degree. In addition to the general requirements set forth by the university, admittance to the program is determined by the results of an interview and the evaluation of the portfolios consisting of media and design works that have been done before (fiction writing, drawings, illustrations, graphic designs, scripts, storyboards, slides, photographs, web designs, animation projects, and/or videos). The date and place of the interview are announced each year by the University.

**Degree Requirements:** After the completion of at least 24 units of course work in two successive terms, the candidates must take two research seminars in their area of interest and prepare and submit a thesis project of media and design that also contains a written component. The duration of the program is four semesters.

**COURSE DESCRIPTIONS**

### UNDERGRADUATE COURSES

**GRA 131 Design Tools and Techniques**
This course aims to lay the foundations for the visualization tools and techniques used in graphic design. Drawing tools and materials including both traditional and digital media, drafting, study of 2-D and 3-D forms, basics of line drawing and representation will be among the subjects covered. Besides helping students acquire the necessary technical skills, the course aims to improve the ability in visual thinking and prepare students for more advanced studies in visual communication. **Credit units: 3** ECTS **Credit Units: 4. Aut (M. Sladczyk)**

**GRA 132 Lettering and Introduction to Typography**
This course introduces students to history, evolution and principles of typography. Focusing on letterform drawings, it investigates the anatomy of letterform, typeface identification, and compositional hierarchy with typographic elements. **Credit units: 3** ECTS **Credit Units: 4. Spr (A. Kurttekin)**

**GRA 201 Graphic Design I**
Work on advanced theoretical and technical knowledge in the area of graphic design. Design systems, determining design issues and criteria, their visual forms, functions and solutions to these problems. Design media and materials. **Credit units: 6** ECTS **Credit Units: 8. Prerequisite: FA 102. Aut (M. Brzozowski, A. Pekalski)**

**GRA 202 Graphic Design II**
The technical and artistic problems of graphic design, methods of realization, two and three dimensional layout techniques, posters, brochures, book covers, etc; work with portfolio subjects. The visual concepts and functional problems during synthesis of graphical design elements. **Credit units: 6** ECTS **Credit Units: 8. Prerequisite: GRA 201. Spr (M. Brzozowski, A. Pekalski)**

**GRA 205 Rendering for Graphic Design I**
This studio course involves black and white visual presentation techniques of 2-D visual materials by means of pencil and marker. The course aims to give information to the students about rapid visualization. **Credit units: 3** ECTS **Credit Units: 6. Aut (B. Çetek)**

**GRA 206 Rendering for Graphic Design II**
This course consists of black and white and color presentation techniques of 3-D real objects by means of marker, watercolor and mixed media. The continuation of GRA 205 with emphasis on more advanced visualization. **Credit units: 3** ECTS **Credit Units: 6.**
GRA 207 Conceptual Design
An investigation of the application of abstract concepts to concrete design products, i.e., packaging, advertising and printed material, as a vehicle to create specific moods and associations in design. Credit units: 3 ECTS Credit Units: 6. Aut (J. Akşiyote)

GRA 208 Graphic Design Concepts
A seminar course with an emphasis on group based concept development to be implemented in everyday graphic design products, i.e., packaging, advertising and printed material. Credit units: 3 ECTS Credit Units: 6. Spr (J. Akşiyote)

GRA 210 Multimedia and Web Design
A study of graphic design principles as they apply to the development of multimedia projects. The course integrates graphics, color, images, icons, text, animation, sound, multimedia authoring and web design software to teach the student relevant technology as it applies to multimedia design. Students apply graphic design principles in developing a variety of multimedia instructional products working individually and in teams. Credit units: 3 ECTS Credit Units: 6. Aut (A. Kurttekin) Spr (A. Kurttekin)

GRA 211 Typography I
Typographic design systems, the aesthetic functional and conceptual use of lettering for printing, typographic uses of various visual media and technical methods. Credit units: 3 ECTS Credit Units: 6. Aut (F. Çince)

GRA 212 Typography II
The artistic and technical problems of typographic design, typographic layout techniques, letterform design, portfolio studies on logos and signs. Credit units: 3 ECTS Credit Units: 6. Prerequisite: GRA 211. Spr (F. Çince)

GRA 213 Computers in Graphic Design I
An introduction to the graphic capabilities of a sophisticated full color computer graphics system. Using advanced “user-friendly” software designed primarily for artists and graphic designers, students will learn to create art on the computer. Subjects covered will include computer graphics terminology, saving and recalling images on disk, digitizing a photographic image, and producing “hard copy” (35 mm. slides) with a film recorder. Credit units: 3 ECTS Credit Units: 6. Aut (M. Sladczyk)

GRA 214 Computers in Graphic Design II
A continuation of GRA 213 with emphasis on more advanced computer techniques. Development of two dimensional graphics. Animation and three dimensional graphics. Credit units: 3 ECTS Credit Units: 6. Spr (M. Sladczyk)

GRA 215 Animation and Film/Television Graphics I
Main principles of visual images and movement. Making images move. Continuity, lighting, filming and linking. Credit units: 3 ECTS Credit Units: 6. Aut (O. İktu)

GRA 216 Animation and Film/Television Graphics II
Methods of animation, preparation of sketch board and storyboard. Studies with application of various graphic elements in motion. Credit units: 3 ECTS Credit Units: 6. Spr (O. İktu)

GRA 217 Motion Graphics
This course introduces students to time-based graphics through animation. The focus of the course will be on developing a beginner-to-intermediate vector and bitmap animation for film, animation, video, digital media, and the web delivery and related presentation applications. Students will learn to design effective timeline sequences incorporating vector-drawing techniques, tweening, frame-by-frame animation procedures, bitmap imagery, typographic techniques and basic scripting. Design theory for interactive media is coupled with hands-on experience for creating visually rich animations, broadcast and presentations. This course is intended for students who desire intermediate-level study in animation and time-based motion graphics. Credit units: 3 ECTS Credit Units: 6. Aut (O. İktu) Spr (O. İktu)

GRA 223 Photographic Image Processing I
A course on the processing techniques of digitized still images, including digital darkroom methods, color manipulation, collage and the like by using related computer software. Credit units: 3 ECTS Credit Units: 6. Aut (M. Gürzumar)

GRA 224 Photographic Image Processing II
A continuation of GRA 223. The students are expected to develop the projects of their interest by using a variety of possible sources for still images like printed media and video. Credit units: 3 ECTS Credit Units: 6. Spr (M. Gürzumar)

GRA 225 Introduction to Visual Techniques I
An introductory course on vector and raster based graphic fundamentals and their applications to various 2-D graphic design items. Credit units: 3 ECTS Credit Units: 6. Aut (A. Kurttekin) Spr (M. Gürzumar)
GRA 226 Introduction to Visual Techniques II
An introductory course on analog and digital imaging techniques. Students are expected to acquire basic knowledge of dark room and light room techniques and processes. Credit units: 3 ECTS Credit Units: 6. Aut (A. Kurttekín) Spr (M. Gürzuman)

GRA 290 Summer Practice I
This summer training is intended to give the student a hands-on experience in an offset printing facility. The minimum time for this practice is 4 weeks. Credit units: None ECTS Credit Units: None. Aut (C. Gürer) Spr (C. Gürer)

GRA 301 Graphic Design III
Color, stylization of form and spots, demonstration and composition in graphics. Finding slogans for graphic work and expressing them in graphic terms. Preparing projects for different subjects in graphics. Credit units: 6 ECTS Credit Units: 8. Prerequisite: GRA 202. Aut (F. Çince, Ö. Özkal)

GRA 302 Graphic Design IV
Preparing a portfolio for communication media using one or all of the techniques of illustration, photography, typography. Studies on realization of graphic projects. Credit units: 6 ECTS Credit Units: 8. Prerequisite: GRA 301. Spr (F. Çince, Ö. Özkal)

GRA 313 Typographic Design and Theories
Typographic Design and Theories is a course which aims to promote students' practice and knowledge in the field of typography, thus instill an awareness in the dynamics and the creative potential of this discipline. Serving as a studio course, Typographic Design and Theories concentrates on typography based projects assisted by visual lectures and theoretical discussions, and it encourages students to explore new forms of visual expressions by using the typographical grammar. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Özkal) Spr (Ö. Özkal)

GRA 324 Photographic Practice
This course is for non-majors only. An introductory course in the techniques of photography. Taking photographs: Interior/exterior, information about composition, film developing and basic laboratory practices. Credit units: 3 ECTS Credit Units: 6. Aut (M. Gürzuman) Spr (M. Gürzuman)

GRA 333 Packaging I
Projects on various subjects of publication graphics. Methods of realizing these projects with various graphics media. Use of airbrush and reproduction camera. Credit units: 3 ECTS Credit Units: 6. Aut (C. Gürer)

GRA 334 Packaging II
Realization and preparation of graphics projects on mass communication media. Credit units: 3 ECTS Credit Units: 6. Spr (C. Gürer)

GRA 341 History of Graphic Art
The evolution of graphic communications from prehistoric times until the invention of movable typography. The origins of printing and typography in Europe. The impact of industrial technology upon visual communications. The growth and development of modern graphic design. History of Turkish graphic art. Credit units: 3 ECTS Credit Units: 4. Aut (D. Tezgör-Kassab)

GRA 344 Psychology of Advertisement
An introduction to the psychological aspects of the current consumer market. Its relation to cultural and socio-logical phenomena as an aid in determining an effective policy in advertising. Credit units: 3 ECTS Credit Units: 4. Spr (K. Özen)

GRA 351 Introduction to Video Production Techniques I
Attending the course, students are expected to acquire basic video production skills such as pre-production planning, lighting for video, shooting with a video camera and sound recording. Credit units: 3 ECTS Credit Units: 6.

GRA 352 Introduction to Video Production Techniques II
Students attending the course will gain insight about video post-production concepts such as sound mixing and editing. Credit units: 3 ECTS Credit Units: 6. Prerequisite: GRA 351.

GRA 353 Design: Image and Text I
The nature of "image" will be discussed from various points of view. Specific and cultural codes involved in designing and understanding an image, communicative processes. Psychoanalytical approaches to the subject matter will also be examined. Credit units: 3 ECTS Credit Units: 6. Aut (O. Anafarta)

GRA 354 Design: Image and Text II
The text and image relationship. Discursive analysis of text and image. Narrative forms, i.e. novel, theatre, film, etc. Adaptations. Written text as a "sign" of image. Bridging text and image: scriptwriting. Students will be expected to write screenplays of various forms. Credit units: 3 ECTS Credit Units: 6. Spr (O. Anafarta)
GRA 390 Summer Practice II
The aim of this summer practice is to give the student experience in the organization and working of an advertising agency/graphic design studio/photographic studio. The minimum time for the practice is 4 weeks. Credit units: None ECTS Credit Units: None. Aut (C. Gürer) Spr (C. Gürer)

GRA 401 Graphic Design V
Subjects such as tourism, health training, education, environmental health. Preparation of design projects using mass media for banks, clothing firms, industrial products, press organizations, and publishing organizations. Credit units: 6 ECTS Credit Units: 8, Prerequisite: GRA 302. Aut (B. S. Çeltek, C. Gürer)

GRA 402 Graphic Design VI
Using different types of media to prepare, realize and print design projects. Acquisition of knowledge about advanced contemporary graphic products. Credit units: 8 ECTS Credit Units: 14, Prerequisite: GRA 401. Spr (C. Gürer)

GRA 421 Illustration I
Ways of interpreting a subject through pictures. Black and white and color illustrations. Interpretation of graphic subjects through pictures. Credit units: 3 ECTS Credit Units: 6. Aut (A. Pekalski)

GRA 422 Illustration II

GRADUATE COURSES

GRA 501 Graduate Studio I
Graduate Studio I examines and practices with visual communication and design problems within the framework of contemporary culture. It emphasizes a critical approach to existing solutions and encourages students to develop fresh perspectives through new concepts, alternative forms and relations parallel with the changing dynamics of the society. The students will be expected to exercise their own observations and interpretations around suggested topics and to communicate their concepts in design language with their desired media. The topics will cover real-life and/or fictional design scenarios and aim to motivate research, conceptual and visual experimentation, and a sophisticated integration of form and content towards a design solution. Credit units: 3 ECTS Credit Units: 7.5. Aut (Ö. Özkal)

GRA 502 Graduate Studio II
This course allows students to produce a media project in any fictional or semi-fictional time-and-motion-based medium or form. From traditional dramas or comedies to experimental, animated, or interactive projects or multimedia installations, students will carefully develop and design their own media concept and bring it to fruition, culminating in an exhibition at the end of term. The emphasis of the course will be on form expressing function. Credit units: 3 ECTS Credit Units: 7.5. Spr (G. Appleton)

GRA 503 Illustration I
Illustration is creating and using pictures to communicate a subject. This course aims to educate illustrator-artists for various fields of visual communication. Studies of different techniques and media; character generation; illustration for children’s literature, fiction, and technical books as well as artistic illustration will be among the topics which will be determined depending on the students’ talents and interests. Credit units: 3 ECTS Credit Units: 7.5. Spr (M. Brzozowski)

GRA 511 Typography I
Typography is a means to make the written language visible. This class focuses on the issues of typographic form -readability, syntax, expression; typographic communication; image-type relationships; and the historical components in relation to technology and contemporary trends. The class will consist of lectures, critiques, research assignments and studio work which will aim the exploration of the typographic vocabulary, rethinking of the conventions, experimentation with new ideas and forms, and consequently the refinement of the typographic knowledge and skills. Credit units: 3 ECTS Credit Units: 7.5. Spr (Ö. Özkal)

GRA 512 Typography II
This studio course deals with advanced problems of typographic design and communication. The dynamics of letterform, word and text type, and their complex possibilities for visualizing the verbal language will be explored. The studio will serve as an open space that invites individual interests to study and experiment with a wide array of topics from “type as image” to “theories on language;” “type design” to “kinetic” and “computational typography.” Credit units: 3 ECTS Credit Units: 7.5.

GRA 517 Image Time and Motion I
Through digital technology, our moving image culture is being redefined. The computer enables the mixture of images captured through many different means (cinema, stills, and drawings), and enables new levels of representation. Video gave the birth to simultaneity; the computer extends simultaneity to multiplicity. “Cinema becomes therefore a particular branch of painting - painting in time. No longer a kine-eye, but a kine-brush.” Will this shift through technology change the way we organize time and space to create forms of narrative, or are we
developing new kinds of vertical narratives? This course will engage students to make meaningful generalizations
for interpreting or evaluating local experiences and practices in digital media, art and communication. Credit
units: 3 ECTS Credit Units: 7.5.

GRA 518  Image Time and Motion II
A continuation from “Image, Time and Motion I.” The course is an extended attempt to think about popular
developments of time-based media in digital environments. The focus as on the critical discourse created
through the works of digital artisans, net artists and cyber entrepreneurs as well as the theoretical and analytical
localization of current trends. Credit units: 3 ECTS Credit Units: 7.5.

GRA 519  Critical Approaches to Advertising Consumer Culture
This course introduces students to the critical scholarship on advertising and the economic, social, and cultural
context in which modern advertising has emerged, a context often called “consumerism” or “consumer culture.”
While some emphasis is placed on the semiotics of advertising, more is placed on the ways in which advertising
has become a crucial component in the “complex whole” of contemporary culture both informing and informed
by that culture. Significant attention is thus given to the historical development of modern advertising; to the
Cultural/ideological power of advertising, with regard to both form and content; and to the implications of the
material/economic power of advertising as an industry that supports other cultural industries and forms. Credit
units: 3 ECTS Credit Units: 7.5.

GRA 520  Critical Approaches to Popular Culture
The aim of this course is to introduce students to a range of theoretical and methodological approaches to the
study of popular culture. Particular emphasis is placed on current critical-cultural approaches arising out of
cultural studies, postmodern theory, and feminism; attention is also given, however, to traditional communication
theories, as well as to semiotic and sociological approaches. Credit units: 3 ECTS Credit Units: 7.5.

GRA 521  Animation I
Contemporary techniques for animated cartoons, movie and TV titles with emphasis on animation with computer
imaging techniques, and the aesthetic issues of the medium and its relation to traditional visual arts and film.
Credit units: 3 ECTS Credit Units: 7.5.

GRA 541  Graphic and Visual Representation
The aim of this course is to make the students familiar with both conventional and recent theories, issues, and
debates in the fields of graphic and visual arts. The course will begin with a discussion of the “origins” of graphic
and pictorial representation in early human cultures. Then, the notion of “representation” with a special emphasis
on its aesthetic and visual aspects will be examined. The course will particularly focus on the relations between
perception, image, language and subjectivity, and will examine several theories of visuality and image such as
semiotics, psychoanalysis and postmodern approaches. Credit units: 3 ECTS Credit Units: 7.5.

GRA 542  Mass Media and Visual Technologies
This course aims to present the recent developments in the field of visual media and technologies. It begins
with an overview of the transformation of vision since Renaissance and examines the specificity of modern mass
media as social institution and visual technology. Several theories of media and approaches to technology are
discussed and a particular emphasis is given to recent technologies such as television, computers and virtual
reality as well as urban space as a visual and technological environment. Credit units: 3 ECTS Credit Units: 7.5.

GRA 555  On Critical Reasoning and Artwork
The aim of this course is to give the basic concepts to analyze how critical reasoning and transformation of the
world and the object has been articulated with the artistic creativity. The course also aims to shed a light on the
ontological problematic of the artistic work within this context. Credit units: 3 ECTS Credit Units: 7.5.

GRA 556  What is Contemporary?
In today’s world “contemporary” plays a leading role not only as an art(istic) concept, but as a wholistic one, that
determines even the art(istic) production. After the impact of modernism at the beginning of the century, visual
arts and many related fields continue on finding answers to the question, what is contemporary? The aim of
the course is to give the students a basic and paradigmatic approach to the debate. At the end it is expected
that the students will acquire the essential sensibility in defining and differentiating the contemporary art(istic)
production. Credit units: 3 ECTS Credit Units: 7.5.

GRA 558  Visual Communication Approach to Artistic Thinking
This course focuses on the process of artistic thinking and creation understood in terms of visual communication
and visual arts. The ways in which artistic thinking is shaped at the perceptual, conceptual and semiotic level
of processing information will be explored. At the conceptual and semiotic levels the focus will be on the ways
in which social, political and cultural factors generate patterns of visual communication. Examples from graphic
art, painting, sculpture and architecture will be analyzed. The course will have a seminar format, combining
lectures with student research on specific topics, which will be presented in class and discussed. The student
presentation will be developed into term papers. Credit units: 3 ECTS Credit Units: 7.5.
GRA 561 Philosophy of Modern Art
In-depth descriptions of contemporary art, and the concepts underlying it in the international community. Analyses and evaluations of recent developments and new movements in fine arts during the 20th century. Discussion of the relationships between contemporary art and philosophy. **Credit units:** 3 ECTS **Credit Units:** 7.5.

GRA 562 Current Perspectives within Post-Modernity
Specific works of art, images and objects are examined through diverse philosophical perspectives within post-modernity. In-depth investigations within post-modern condition in consideration of emerging visions and conception. **Credit units:** 3 ECTS **Credit Units:** 7.5.

GRA 565 Photography as a Contemporary Medium I
A theoretical course on photography in general, with emphasis on the history of the medium as a means of artistic expression and its counterpart in the commercial area, as well as the recent theories on interpretation of photography. **Credit units:** 3 ECTS **Credit Units:** 7.5.

GRA 566 Photography as a Contemporary Medium II
A continuation of GRA 565, focusing on the outcome of photographically produced imagery in artistic and commercial fields and the use of this imagery in electronic media such as video and computer graphics. **Credit units:** 3 ECTS **Credit Units:** 7.5.

GRA 567 Semiotics and the Work of Art I
An examination of related terms and concepts such as sign, signification. Art as a signifying practice. First semiotics: linguistics and the emphasis on text. Second semiotics: the introduction of psychoanalysis and the role of the receiver. Current trends in semiotics and diverse approaches to art within a cultural context. **Credit units:** 3 ECTS **Credit Units:** 7.5.

GRA 568 Semiotics and the Work of Art II
A continuation of Semiotics and the Work of Art I. This course offers a critical look into the classical notions of semiotics and the discussions it raised. It also places more emphasis on the relationship between theory and analysis. There is a focus on the nature of the critical discourse and examples of critical work are examined. Students are expected to produce written work on the analysis of works of art. **Credit units:** 3 ECTS **Credit Units:** 7.5.

GRA 590 Research Topics
**Credit units:** None **ECTS Credit Units:** 6. **Aut (D. Kaya-Mutlu) Spr (D. Kaya-Mutlu)**

GRA 599 Master's Thesis
**Credit units:** None **ECTS Credit Units:** 24. **Aut (D. Kaya-Mutlu) Spr (D. Kaya-Mutlu)**
DEPARTMENT OF INTERIOR ARCHITECTURE AND ENVIRONMENTAL DESIGN

Part-time: M. Barut, M. Özdamar.

The curriculum combines the arts with technical and scientific studies in order to give students a well-rounded education. As the department is cognizant of modern trends in interior architecture and the implications of new technologies, it aims at providing a balanced education between the artistic, technological and humane aspects of the profession.

UNDERGRADUATE PROGRAM

The curriculum is organized around studios which prepare the novice designer to deal progressively with larger and more complex interiors and greater technical detail. The studios enable students to synthesize knowledge from parallel courses in history, art, technology, drawing and principles of design. The first two years are intended to develop an understanding of different concepts of design in form, material, space, composition, and introduce the fundamentals of total interior space planning and design. The third and fourth years provide the opportunity to specialize in different interest areas such as: computers, new materials and technologies, humanities, social sciences, safety, special needs of the handicapped, and elderly etc. Computers and CADD (Computer Aided Design and Drafting) are also integrated into different levels of education.

GRADUATE PROGRAM
Master of Fine Arts in Interior Architecture and Environmental Design

The M.F.A. program is structured to provide specialization in various areas that require expertise in the Interior Architecture and Environmental Design discipline in addition to scholarly inquiry and research skills. Students are guided through an intensive, concentrated program that is based primarily on established educational objectives that the students have selected for themselves. The courses are chosen according to the areas of interest related to issues of interior and architectural design. Graduate students are expected to be highly motivated, technically competent and prepared to deal with ideas at a professional level.

Admission: Applicants are required to have a Bachelors degree in a relevant field of design. In addition to the general requirements set forth by the university, admittance to the program is through an interview as well as a portfolio evaluation. The portfolio should represent work done during undergraduate years and contain those pieces of work the applicants consider their best efforts. All students are expected to be fluent in written and oral English in order to be admitted to the program.

Degree Requirements: After the completion of at least 24 units of course work in two successive terms, the candidates must take two seminar courses in their area of interest and prepare and submit a thesis. The duration of program is four semesters.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

IAED 112 Computers and Geometry
Credit units: 3 ECTS Credit Units: 4

IAED 201 Interior Design Studio I
Three dimensional problem solving techniques are used to relate the elements and principles which shape interior space to the functional and aesthetic factors which affect individual space requirements. Credit units: 6
ECTS Credit Units: 10, Prerequisite: FA 102, Aut (Y. Afacan, S. Altay, H. Bassler, M. Gürel, M. Özdamar, T. Sonkan Türkkan) Spr (H. Bassler)

IAED 202 Interior Design Studio II
Basic concepts and design methods for residential interiors and structures. Individual and group needs in relation to personal, family and institutional living. Credit units: 6 ECTS Credit Units: 10, Prerequisite: IAED 201. Spr (Y. Afacan, S. Altay, M. Gürel, M. Özdamar, T. Sonkan Türkkan)

IAED 211 Computer Aided Design
Credit units: 3 ECTS Credit Units: 5

IAED 221 Human Factors
Investigation of human factors and dimensions as a determinant in the design of interior environments. Credit units: 3 ECTS Credit Units: 4, Aut (B. Altay) Spr (B. Altay)

IAED 231 Advanced Design Graphics
Study of presentation techniques employing various media. Students are expected to employ appropriate light, shade, textural and color effects to communicate interior design concepts. Credit units: 3 ECTS Credit Units: 4, Aut (I. Basa, M. Özdamar, S. E. Ural)

IAED 244 Building Performance: Physical Factors
Lighting, color and thermal comfort in the interiors of buildings. Credit units: 3 ECTS Credit Units: 4, Spr (N. Çamgil Ozgülkür)

IAED 251 Construction and Materials I
The basic elements of building (such as furniture, cabinetry, etc.) construction. Credit units: 4 ECTS Credit Units: 6, Prerequisite: FA 132, Aut (Ş. Aybar, T. Kayasü)

IAED 252 Construction and Materials II
Properties of basic groups of building materials are reviewed, investigated and evaluated together with an overall knowledge of their typical traditional and current applications and the criteria for their selection. Credit units: 4 ECTS Credit Units: 6, Prerequisite: IAED 251, Spr (Ş. Aybar, M. Barut)

IAED 263 History of Built Environment I
Concepts of “history” and “continuity” as surveyed through selected examples from the built environment, from prehistory to the end of the Byzantine era, with particular emphasis on the interior space. Neolithic, Mesopotamian, Egyptian, Greco-Roman, Romanesque, Gothic and Byzantine periods in the West, and classical Islam, Ommiad, Abbasid and Seljuk civilizations in the East are particular areas of study. Credit units: 3 ECTS Credit Units: 5, Aut (H. Bassler, S. Özalıoğlu)

IAED 264 History of Built Environment II
A comparative analysis of monuments in Eastern and Western civilizations from the 15th century to the present, with particular emphasis on interior space. The Renaissance, Baroque and Neoclassicism versus the Ottomans. The Safavids and the Moguls till the 19th century, 19th and 20th century developments such as the industrial revolution and the effects on the built environment, Internationalism, Regionalism, Modernism and Post Modernism. Credit units: 3 ECTS Credit Units: 5, Spr (H. Bassler, S. Özalıoğlu)

IAED 290 Summer Practice I
The aim of this summer training is to give the student experience on site and/or in production techniques. The minimum time for this practice is 4 weeks. Credit units: None ECTS Credit Units: None, Aut (M. Gürel) Spr (M. Gürel)
IAED 301  Interior Design Studio III  
Special consideration is given to office planning. Space planning, tenant development, interior design and documentation for a humane working environment. Corporate structure, management theory, humanistic ideals, and building systems and components in relation to office design. Credit units: 6 ECTS  Credit Units: 10, Prerequisite: IAED 202. Aut (N. Camgöz Ölgün artículo, T. Kayasü, A. Köçük, T. Yarımcı, S. Yılmazer, M. H. Yurdadoğan) Spr (H. Bassler)

IAED 302  Interior Design Studio IV  
Design of large office complexes, public use interiors, service and care facilities. Individual activity, group interaction, cultural relationships, handicapped requirements, health, safety, comfort and technological factors for space design. CADD is introduced to support extensive design and drafting activity. Credit units: 6 ECTS  Credit Units: 10, Prerequisite: IAED 301. Spr (A. Köçük, T. Yarımcı, S. Yılmazer, M. H. Yurdadoğan)

IAED 315  Computerized Presentation Techniques  
Advanced usage of computerized programs for representation of the student projects by integrating classical and computer media. Credit units: 3 ECTS  Credit Units: 6.

IAED 316  Computer Applications  
Introduction to an efficient use of information and data management. Creating simple screen macros. Working with various application programs. Credit units: 3 ECTS  Credit Units: 6, Prerequisite: IAED 301. Spr (A. Köçük, T. Yarımcı, S. Yılmazer, M. H. Yurdadoğan)

IAED 322  People and Environment  
Human behavior and its relation to the design of environments. Concepts such as private and public space, territoriality, perception and cognition of spaces, and spatial experience are explored. Credit units: 3 ECTS  Credit Units: 5, Prerequisite: IAED 322. Aut (F. Erkip, Ç. İmamoğlu) Spr (F. Erkip, Ç. İmamoğlu)

IAED 341  Building Performance: Codes  
Acoustics, noise control and fire prevention in buildings. Credit units: 3 ECTS  Credit Units: 5. Aut (S. Yılmazer)

IAED 342  Building Performance: Services  
Creation of a basic understanding of issues related to mechanical and electrical equipment and services in building; the requirements related to the installation, operation and maintenance of such equipment. Technical drawing of such systems. Credit units: 3 ECTS  Credit Units: 5, Spr (Y. Atalan)

IAED 351  Detailing Studio  
An overall assessment of the knowledge of building construction and material science is sought with emphasis on conceptual and detail drawings related to interior architecture problems. Credit units: 3 ECTS  Credit Units: 4, Prerequisite: IAED 351. Aut (T. Yarımcı)

IAED 365  Places/Memories  
The course approaches histories and identities of places in the contexts of precedence/obsolescence/continuance. Memory here refers to traditions, origins and roots. Place relates to sites of remembering/forgetting, fragments and traces of the past either appearing or disappearing in the present environment constitute the basic upon which the themes of temporality and spatiality will be discussed. Selected readings on the city, on history and memory will be used to analyze different aspects of the subject. Credit units: 3 ECTS  Credit Units: 6.

IAED 381  Product Detailing  
Detailing problems of products such as the detailing of furniture, cabinetry, upholstery, fixtures, etc. Problems related to the nature of materials and production methods. Credit units: 3 ECTS  Credit Units: 4, Prerequisite: IAED 351. Spr (S. Altay)

IAED 390  Summer Practice II  
The aim of this summer practice is to give the student experience in the organization and working of an architecture/interior architecture/design office. The student is expected to make observations on the project developing order, project application and designer/client relationships in a private or institutional design office. The minimum time for this practice is 4 weeks. Credit units: None ECTS  Credit Units: None, Spr (M. Gürel)

IAED 391  Special Topics in Interior Design I  
An investigation and research in depth of a topic related to interior design. A course that encourages the student's self conduct and research capabilities in theoretical issues to justify proposed design solutions. Credit units: 3 ECTS  Credit Units: 6, Spr (E. E. Türkkan)

IAED 392  Special Topics in Interior Design II  
A specialized course designed to deliver topics of special interest for the students. The course aims at taking advantage of expertise within the faculty and possibly invited guest lecturers. Credit units: 3 ECTS  Credit Units: 6.
IAED 393 Visionary and Future Environments
A global perspective and investigation of the means to conceptualize, plan, and design visionary and futuristic environments will be researched. Futuristic technology, fantasy, illusionistic, and utopian environments will be explored with an emphasis on innovative, alternative, and divergent conceptual problem-solving. Credit units: 3 ECTS Credit Units: 6. Spr (H. Demirkar)

IAED 394 TV Set Design
The aim is to teach the basic principles of TV set design. A term project is assigned to each student that is supported by a series of lectures. The term project covers each phase of design process starting from planning to model making. Developing conceptual alternatives, concept boards, use of material, choice of finishings, use of camera and light are the basic issues that are emphasized within the course. Credit units: 3 ECTS Credit Units: 6.

IAED 397 Color Theory and Applications
Titles as color theories and systems; color vision and perception; color interactions; symbolic color and preferences; spatial perception and color illusion are discussed within the scope of architectural applications. Credit units: 3 ECTS Credit Units: 6.

IAED 401 Interior Design Studio V
Exploration of design concepts for commercial enterprises. Adaptive re-use of existing spaces, prototype solutions, interior arrangement systems, exhibition and graphic modes. Credit units: 6 ECTS Credit Units: 10. Prerequisite: IAED 302. Aut (Ş. Aybar, Ç. İmamoğlu, S. Özalnlık, M. Öztürk, Ş. Taşlı Pektas)

IAED 402 Interior Design Studio VI
Public space: programming, schematic design, and design development for a public, historic, or special interior environment in the community. Credit units: 9 ECTS Credit Units: 14. Prerequisite: IAED 401. Spr (Ş. Aybar, Ç. İmamoğlu, S. Özalnlık, M. Öztürk, Ş. Taşlı Pektas)

IAED 415 Advanced Detailing Studio
Systems research for the interior environment: furniture technology and materials. Students will be required to complete a project at the working drawing level. Credit units: 3 ECTS Credit Units: 4. Prerequisite: IAED 351. Aut (S. Altay)

IAED 418 Interior Design: Professional Practice
Information on the administration of a major interior design project is given. Client and trade relations, codes, government and legal requirements are emphasized. Credit units: 3 ECTS Credit Units: 4. Spr (T. Yardmıcı)

IAED 424 Experience of Space and Place
Human experience of spaces and places are explored through psycho-spatial approaches. Spatial factors which influence human perception and resultant behavior at both the individual and societal level are discussed. Credit units: 3 ECTS Credit Units: 6. Aut (F. Erkip) Spr (F. Erkip)

IAED 426 Leisure Practices and Spaces
This course is planned to provide a comprehensive understanding of leisure issues, which constitute one of the major practices in contemporary societies. With the global cultural influences, leisure patterns and spaces have been transforming rapidly and significantly in every society. Leisure turns out to be a part of the daily life and leisure spaces are merged into spaces used for other daily practices like shopping, recreation, relaxation. In this course, the transformation in the definition and practices of leisure will be discussed to develop a basis for the critical analysis of new leisure spaces. Students are expected to participate in the discussions through extensive reading and observation on relevant sites. Credit units: 3 ECTS Credit Units: 6.

IAED 461 Environmental Management
An introduction to the issues in environmental administration and economics. Economic and organizational dimensions of environmental decisions. Evaluation of economic approaches. Relations between environmental organizations and various interest groups. The role of the design professional in environmental decision-making process. Basic concepts of building economics. Credit units: 3 ECTS Credit Units: 6.

IAED 462 Contemporary Architecture
An introduction to the roots of Modern Architecture, its formation through Bauhaus and evolution into International Style, Late Modernism and Post Modernism. Understanding movements of post 1980’s such as New Expression, High Tech, Deconstruction and others. Credit units: 3 ECTS Credit Units: 6.

IAED 463 History of Furniture
A course dealing with historical evolution of furniture within a chronological spectrum. Students are asked to prepare portfolios and give seminar presentations. Credit units: 3 ECTS Credit Units: 6. Aut (E. E. Türkkan) Spr (E. E. Türkkan)
IAED 471  Interior Analysis Systems
The course will cover the analysis of interior systems and the assessment of interior elements to reveal the basic facets of interior design and its relation to environment in general. Interpretation of qualitative and quantitative spatial analysis; perceptions and deceptions for space qualities through design systems scope the course. Credit units: 3 ECTS Credit Units: 6.

IAED 485  Design Methodology
Increasing degree of complexity of problem situations in contemporary living requires more objective scientific tools, methods or techniques which this course aims to develop an understanding of; while demonstrating the conceptual framework, a retrospective analysis of the contributions to the field, and technical base needed to relate theoretical issues to relevant contexts via methodology. Credit units: 3 ECTS Credit Units: 6.

IAED 491  Current Issues in Interior Design I
Investigating existing innovative planning, design issues in interior design to give more insight to the students for the development of their design skills. Credit units: 3 ECTS Credit Units: 6.

IAED 492  Current Issues in Interior Design II
Introduction to specialized issues related to contemporary techniques and materials in differing complexity and combinations for special interior design problem solving. Credit units: 3 ECTS Credit Units: 6. Aut (M. Öztürk) Spr (M. Öztürk)

IAED 495  Public Interiors
Introduction to issues pertaining to image formation and public functions of cultural and business interiors as evaluation and design sources. The course work is based on study of current approaches to design through analysis of projects, realizations and experienced spaces, as well as readings and discussions of essential topics. Credit units: 3 ECTS Credit Units: 6. Aut (M. Öztürk) Spr (M. Öztürk)

GRADUATE COURSES

IAED 501  Graduate Studio I
An analytical approach to critical issues in interior design. The studio is planned to provide the necessary knowledge and skills to deal with specific interior design problems, particularly related to the understanding of space, materials and detailing, through lectures, site trips and studio work. Credit units: 3 ECTS Credit Units: 7.5. Aut (H. Demirkan)

IAED 502  Graduate Studio II
The students are expected to conduct their own research in the studio under the supervision of the instructors where they are to analyze, test, and criticize particular case studies. These studies may be structured around different theoretical concepts or typologies. Credit units: 3 ECTS Credit Units: 7.5, Prerequisite: IAED 501. Spr (M. Gürel, B. Şenyapılı Öзcan)

IAED 511  Research Methods I
A foundation course which deals with system and methods regarding information acquisition, verification of sources, theory of interpretation and hypothesis formulation for developing a critical ability to understand and study the issues related to interiors. Credit units: 3 ECTS Credit Units: 7.5. Aut (M. Pultar)

IAED 512  Statistical Analysis
The principles of statistical analysis methods, concepts of data collection and structuring are discussed with the aim of providing the student with the necessary tools to deal with large amounts of data and to draw conclusions from such data. Credit units: 3 ECTS Credit Units: 7.5.

IAED 514  Research Methods II
This is a tutorial course involving the conduct of an actual research project in interior and/or environmental design. The students shall be responsible, individually and in group work, for initiating, designing and conducting a research project under the guidance of the instructor. The work will include gathering and analyzing data, drawing conclusions and preparing a research report. Credit units: 3 ECTS Credit Units: 7.5, Prerequisite: IAED 511.

IAED 524  Construction of Design as a Social Practice
The interpretation of nature, urban life and city form in various theories will be explored. Each interpretation will be discussed as a different “way of looking” at the environment. The emphasis will be on design activity, design culture, and social practice of design. “Knowledge” will be explored as a major theme in the professionalization of design. Credit units: 3 ECTS Credit Units: 7.5.

IAED 531  Axiology and Ethics of Building
IAED 542  Environmental Factors
Topics such as heat, bioclimatic comfort, heating, cooling and ventilating, energy efficiency of buildings, and condensation are covered. Physics of sound, acoustics and noise control are also discussed. Credit units: 3 ECTS Credit Units: 7.5.

IAED 543  Environmental Analysis I
An interdisciplinary course designed to develop cognitive skills and sensitivity for the evaluation of the built environment. Investigation of techniques and methods pertaining to analysis, synthesis and physical, social aspects of spatial formations will be dealt. Students are expected to participate in seminars and work on case studies in the studio. Credit units: 3 ECTS Credit Units: 7.5. Aut (F. Erkip)

IAED 544  Environmental Analysis II
The methodology of environmental research and measurement technique for various aspects of environmental attitudes and user responses/behaviors are the major topics in this course. The students are expected to carry out empirical analyses for the measurement of any aspect in the field. IAED 543 is recommended as a preliminary. Credit units: 3 ECTS Credit Units: 7.5. Spr (F. Erkip)

IAED 561  History of Theory and Criticism
The specific intent of the course is to explore the relevance of the history and theory of criticism in the evaluation, interpretation and development of an interior environment. Credit units: 3 ECTS Credit Units: 7.5. Spr (M. Gürel)

IAED 571  Lighting and Color
Importance of light and color as design factors, physics of light, light and vision, light sources and lighting methods, symbolic and functional color, color in interiors. Credit units: 3 ECTS Credit Units: 7.5.

IAED 572  Building Safety
Fire and fire-safe design parameters, accidents in buildings and accident prevention measures and design for handicapped are the main topics of this course. After theoretical study, buildings will be evaluated as case studies. Credit units: 3 ECTS Credit Units: 7.5.

IAED 573  Computer Programming
Introduction to computers, computer applications and programming. Starting with the Disk Operating System, some word processing applications will be used to describe programming logic and high level language constructs. Credit units: 3 ECTS Credit Units: 7.5.

IAED 574  Art, Science and Technology
A seminar-based course to investigate the characteristics of various disciplines that relate to art, science and technology and correlate to the unity of mankind. Credit units: 3 ECTS Credit Units: 7.5. Spr (M. Pultar)

IAED 578  Computer Modeling in Design
The use of computers as media in developing and communicating design ideas is discussed. Models of computation, how software can be understood in terms of computational models and how models relate to the process and products of design will be studied. Credit units: 3 ECTS Credit Units: 7.5.

IAED 583  Design Principles and Theories
The aim of the course is to develop a critical understanding of theories of architecture and principles of design. Course will explore, question and discuss classical, modern and contemporary theories of architecture, the works of some well known architects as well as works of the students. The course will be on a mixture of lectures, seminars and applied studies. The students are expected to do regular reading and to take active part in seminar preparations and discussions. Credit units: 3 ECTS Credit Units: 7.5.

IAED 587  Spatial Practices
Today, spatial practices (i.e., the relationship between bodies, spaces and the socio-cultural context) constitute the focus of a broad range of disciplines not necessarily confined to architecture, interior architecture and planning. Subjectivity and space are studied as part of a web of complex entanglements including issues of representation, identity and power mechanism. The aim of this course is twofold: On one hand it provides familiarity with recent
theoretical developments regarding subject/space relationships. On the other hand, it provides the tools for interpretive explanations of concrete practices with particular focus on the materiality of space. Students are expected to do regular reading and to participate and share their individual research findings in class discussions.

Credit units: 3 ECTS Credit Units: 7.5.

**IAED 590 Research Topics**
Credit units: None ECTS Credit Units: 6. Aut (M. Gürsel) Spr (Staff)

**IAED 599 Master’s Thesis**
Credit units: None ECTS Credit Units: 24. Aut (M. Gürsel) Spr (Staff)
DEPARTMENT OF URBAN DESIGN AND LANDSCAPE ARCHITECTURE

The design of urban environments requires the skills of conceptualization at different scales, proposing solutions, and their implementation. Another requirement is developing familiarity with such issues as heterogeneous human populations, dense building stocks, natural and environmental assets, a specialized labor force and a shared urban identity, as well as building an ability to address these issues in design. Finally, it is necessary to master the appropriate use of natural and artificial materials.

Urban projects, of which landscape design is an integral part, have constituted the most intriguing design products in the world during the last two decades. These projects and their implementation have opened discussions leading to contemporary design theories, indicating that the integration of landscape architecture and urban design will further prosper in the future. Addressing the issues of urban context with those of landscape architecture, the department is the first to offer an undergraduate degree. The growing number of academic staff includes faculty who come from various disciplinary backgrounds including landscape architecture, city planning, architecture and anthropology.

UNDERGRADUATE PROGRAM

Unlike other programs of landscape architecture, the Department of Urban Design and Landscape Architecture at Bilkent University is affiliated with a design faculty focusing on studios. The design studios and the technical and theoretical courses that make up the curriculum are supported by field trips in order to study various urban contexts as their project sites. These trips range from intra-city daily tours to international summer programs.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

LAUD 190  Summer Practice I
This first part of summer training aims to give students basic knowledge about surveying methods, grading techniques and the basic skills of map reading and recognizing topographic symbols. Measurements pertaining to topography and landforms are demonstrated. This part of the summer training will have both field surveying and drawing components. The second part aims to provide basic computer literacy to help students throughout their education for processing data, word processing and researching through the Internet. Credit units: None
ECTS Credit Units: None. Aut (G. Çulcuoğlu) Spr (G. Çulcuoğlu)

LAUD 201  Design Studio I
A studio of an interdisciplinary nature that tends to investigate the role of nature and environmental factors on the built environment. Analytical work supplemented with lectures, followed by elementary designs to practice the design process involved in environmental design. Credit units: 6 ECTS Credit Units: 10, Prerequisite: FA 102. Aut (K. Arapkirlioğlu, G. Çulcuoğlu)

LAUD 202  Design Studio II
Small scale site planning and design problems that integrate landscape and urban design issues. Preparation of base plans, analysis of spaces, volumetric evaluations and project brief writing exercised as integral phases of a design problem. Frequent presentations and studio critiques will develop oral and graphic skills and techniques. Credit units: 6 ECTS Credit Units: 10, Prerequisite: LAUD 201. Spr (G. Çulcuoğlu, O. Nalbantoğlu)

LAUD 212  Computers and Geometry
Introduction of basic hardware and software concepts and the command language relevant to the operating system. A fully covered text processor. Basic geometric concepts related to two and three dimensional design are introduced through various software systems. Credit units: 3 ECTS Credit Units: 5. Spr (B. Batuman)

LAUD 221  Introduction to Urban Concepts
This introductory course, consisting of lectures and fieldwork, aims to provide a foundation for the concepts and issues related to urban environment. The cultural, social and economical factors that influence the urban context are discussed, and the students are expected to do fieldwork using the techniques introduced in the course. Credit units: 3 ECTS Credit Units: 4. Aut (D. Altay)

LAUD 241  Plant Material I
This beginning level lecture and field study course is the first one of a series of courses on plants. The aim here is to introduce basic plants that are used in landscape architecture, with an emphasis on their visual characteristics, ecological requirements and their use in design. The course also involves term projects for building a general framework to familiarize the students with the variety of Turkey's regional flora. Credit units: 3 ECTS Credit Units: 5. Aut (G. Çulcuoğlu)

LAUD 242  Plant Material II
A lecture and studio/field course studying the design characteristics and landscape use of plant materials available in Turkey. This includes the principles of planting design, the aesthetic and functional use of plant material and the preparation of planting plans and plant schedules. Students are expected to prepare a plant manual. Credit units: 3 ECTS Credit Units: 4. Spr (G. Çulcuoğlu)

LAUD 251  Techniques and Materials of Landscape and Urban Environment I
In this first course of a series of courses on technical aspects, the natural environment and its resources are introduced as basic elements of site design. Climatic factors, topography, soil, water and vegetation are discussed to provide a foundation on which to build further knowledge on site development and construction. Credit units: 3 ECTS Credit Units: 5. Aut (H. Karaca)

LAUD 252  Techniques and Materials of Landscape and Urban Environment II
A lecture and studio/field course, investigating the variety of hard materials available and suitable for landscape and urban construction. The emphasis is on appearance, physical properties and behavior and cost effectiveness. The principles of designing construction details are investigated. Credit units: 3 ECTS Credit Units: 5. Spr (O. Nalbantoğlu)
LAUD 261  History of Landscape and Urban Environment I
A survey of selected examples from the built environment covering the Antiquity and Middle Ages with particular emphasis on the landscape and urban formations. Credit units: 3 ECTS Credit Units: 5. Aut (S. A. Tokol)

LAUD 262  History of Landscape and Urban Environment II
Analysis of elements of the built environment starting from the Renaissance until today. Examples are investigated to demonstrate the historic background of the evolution of the exterior spaces with respect to the landscape and urban context. Credit units: 3 ECTS Credit Units: 5. Spr (S. A. Tokol)

LAUD 290  Summer Practice II
The second summer practice that focuses on plant material aims to build a familiarity with plant material, to learn their physical properties, to develop a basic understanding about their propagation techniques, design principles, application and maintenance techniques. This summer practice is done in nurseries for a minimum period of 4 weeks. Credit units: None ECTS Credit Units: None. Aut (G. Çulcuoğlu) Spr (G. Çulcuoğlu)

LAUD 300  Design Studio III
Medium scale projects that involve planning and architectural consideration, including aspects of settlement design and townscape. Appreciation of building and site relationships and evaluation of indoor-outdoor spaces. Emphasis is also given to design levels (phases) and effects of land form. Credit units: 6 ECTS Credit Units: 10. Prerequisite: LAUD 202. Aut (D. Altay)

LAUD 302  Design Studio IV
Emphasis on hard and soft details while dealing with small and medium scaled projects. Construction details, material specifications, planting plans and schedules, irrigation layouts are prepared. Considerations related to landform and leveling, climatic factors and social influences are integrated. Credit units: 6 ECTS Credit Units: 10. Prerequisite: LAUD 301. Spr (S. A. Tokol)

LAUD 311  Computer Aided Design
Matrix representations of the homogeneous coordinate system and transformations are introduced. Concepts such as symmetry, pattern, shape and graph theory are covered. Two and three dimensional design concepts are demonstrated through a CADD system. Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAUD 212. Aut (B. Batuman)

LAUD 312  Advanced Modelling Techniques in C.A.D.
This course aims to strengthen and improve the students' CAD abilities, especially in 3-dimensions. Surface modelling and solid modelling techniques are focused, with a particular emphasis on photorealistic images obtained through these models. Although the course is taught using AutoCAD software, it is possible to work in other CAD programs using the techniques mastered here. Credit units: 3 ECTS Credit Units: 6, Prerequisite: LAUD 311.

LAUD 314  Presentation Techniques
The course aims at improving presentation skills in design process through various techniques by means of visual and verbal presentations and illustrations. The course is preceded by series of lectures and discussions including basics of presentation techniques, elements and concepts of design process. Students will be assigned projects and will start to create their own portfolios for their professional and academic life. Credit units: 3 ECTS Credit Units: 6.

LAUD 316  People and Environment
Human behavior and its relation to design of environments. Concepts such as private and public space, territoriality, perception and cognition of spaces, and spatial experience are explored. Credit units: 3 ECTS Credit Units: 5. Spr (K. Arapkıranlıoğlu)

LAUD 322  Morphology and Typology of Urban Spaces
This elective course discusses and analyzes the physical principles, functions, relationships, and physical elements of urban spaces (buildings, landform levels, and plants). The course presents various techniques/methods to make a typological and morphological study of urban spaces to prepare a morphic language and an elementary lexicon. Credit units: 3 ECTS Credit Units: 6.

LAUD 324  Morphology and Typology of Urban Spaces
This elective course discusses and analyzes the physical principles, functions, relationships, and physical elements of urban spaces (buildings, landform levels, and plants). The course presents various techniques/methods to make a typological and morphological study of urban spaces to prepare a morphic language and an elementary lexicon. Credit units: 3 ECTS Credit Units: 6.

LAUD 342  Planting Design
This course focuses on the identification and study of plant materials as landscape design elements. Theoretical aspects of planting design is studied to provide a basis for plant selection and arrangement in landscape projects of various scales and contexts. Credit units: 3 ECTS Credit Units: 4. Spr (H. Karaca)

LAUD 351  Techniques and Materials of Landscape and Urban Environment III
A lecture and studio/field course investigating the methods of installation of hard materials in landscape and urban construction with emphasis on structural concepts and practical requirements of implementation. Issues of infrastructure, soil types and irrigation are also introduced. This involves the preparation of construction details, setting-out drawings and writing simple specifications. Credit units: 3 ECTS Credit Units: 5. Aut (O. Naibantoğlu)
LAUD 362  Making of Urban Landscape
A field study oriented elective course dealing with arranged structures on urban land and shaped spaces in between. The aim is to reveal the “spirit of the place”, to make places which enhance everyday life. Survey, analysis, diagnosis and design/reshaping of the city’s components to see the relations between these pieces and to assess their condition, to understand the city’s element, their working form and consequent appearance. Related issues will be linked to architecture, engineering, landscape architecture, city planning and visual arts. The subject area is concerned with public open spaces, squares, clusters of houses, transport amenities, cultural and educational complexes, malls and plazas, parking areas, recreational areas, etc. Credit units: 3 ECTS Credit Units: 6. Spr (S. Teber)

LAUD 371  Analysis of Urban Environment I
Elements of form in cities, buildings and spatial analysis of the built environment. The historic and contemporary examples are investigated. Credit units: 3 ECTS Credit Units: 4. Aut (D. Altay)

LAUD 372  Analysis of Urban Environment II
Analysis of the physical and cultural factors that shape residential communities in urban settings. Credit units: 3 ECTS Credit Units: 5. Spr (D. Altay)

LAUD 374  History of the Gardens
The course focused on the concept of garden according to the civilizations through the History, such as the Hanging Gardens of Babylon, the Ottoman gardens, the Baroque and Impressionist French gardens, the traditional Japanese gardens or the British Landscape gardens. The course consists of lectures, research presentation to feedback discussions, and videos. Credit units: 3 ECTS Credit Units: 6.

LAUD 381  Conservation Planning and Design
This course aims to introduce the students with urban and archaeological conservation as well as renewal planning and policy issues. Principles of conservation are focused and urban design examples in urban historic sites both in Turkey and abroad are studied. Within this context, legal and institutional framework of urban and archaeological site conservation, governmental policies, sustainable conservation policies, survey and planning methods and materials will be dealt with. Credit units: 3 ECTS Credit Units: 6.

LAUD 390  Summer Practice III
The third summer practice has two stages. The first stage focuses on the application of soft material where planting techniques, plant composition, maintenance process are dealt with. The second stage focuses on the application of hard material, dealing with the process and techniques of production of hard material, the technical properties of materials, in addition to the preparation of bills of quantity and tender documents. Each stage lasts 3 weeks, a total duration of 6 weeks. Credit units: None ECTS Credit Units: None. Aut (G. Çulcuoğlu) Spr (G. Çulcuoğlu)

LAUD 401  Design Studio V
A studio course designed to equip the students with knowledge pertaining to other design disciplines and professions that take part in the formation of the built environment. Issues related to urban planning and design, architecture, landscape architecture and interior architecture are handled in varying scales of the built environment. Site visits, supplementary lectures and multidisciplinary team work are encouraged. Credit units: 6 ECTS Credit Units: 10, Prerequisite: LAUD 302. Aut (O. Nalbantoğlu, S. A. Tokol)

LAUD 402  Senior Design Studio
A multi-scale project which requires submission of drawings that illustrate all aspects of the design process together with appropriate documentation. Individual effort is evaluated with respect to competence in all aspects of the professional practice. Credit units: 6 ECTS Credit Units: 10, Prerequisite: LAUD 401. Spr (D. Altay, K. Arapkirlioğlu)

LAUD 404  Senior Design Research
This intensive research and writing course is organized in seminar format. It aims on the one hand to provide a knowledge basis for the Senior Design Studio, while on the other, to help prepare students for a variety of professional careers. This preparation includes enhancing skills of critical and analytical thinking and creative problem solving, while developing a sensitivity and responsibility to social problems. Credit units: 3 ECTS Credit Units: 4, Prerequisite: LAUD 401. Spr (S. A. Tokol)

LAUD 417  Contract Documents
A lecture/studio course studying the technical and practical aspects of organizing the components of a full set of contract documents for a landscape and urban design project. All working drawings, bills of quantity, organization of the specifications and relationship of these components to the conditions of tender and contract are prepared and compiled in a portfolio. Credit units: 3 ECTS Credit Units: 4. Aut (O. Nalbantoğlu)

LAUD 418  Professional Practice
A lecture/seminar course studying the practical aspects of professional practice, social, legal, technical, ethical and financial factors. The relations between the designer, contractor and client, office management and organi-
The course aims to assist the landscape architecture students of final year(s) in utilizing their accumulated knowledge on the morphologic specifications of plant typologies in various open space applications. Each student completes a set of detailed construction documents for planting implementations. The course primarily focuses on visual presentations of plant typologies and planting design practices.

**LAUD 432 Structuring and Infrastructuring in Urban Zones**

This course aims to examine contemporary aspects and problems related to urban structures and infrastructures, at the scale of both metropolitan cities and medium-size settlements. Topics to be covered include urban management and development, structuring and infrastructuring, alliance between physical and socio-cultural context, transportation, structuring in disaster zones and historic preservation. The course incorporates lectures and site visits for in situ examination of cases. Students will be exposed to different case studies.

**LAUD 441 Planting Plans**

The course aims to assist the landscape architecture students of final year(s) in utilizing their accumulated knowledge on the morphologic specifications of plant typologies in various open space applications. Each student completes a set of detailed construction documents for planting implementations. The course primarily focuses on visual presentations of plant typologies and planting design practices.

**LAUD 442 Interior Planting Design**

This course focuses on interior plants and their environmental and physical requirements, design principles and considerations about using interior plants with other landscape and architectural elements, preparation of base and construction plans, and maintenance requirements and techniques.

**LAUD 461 Occupancy in Urban Areas**

This course focuses on the relationship between people and the physical settings, particularly urban public spaces. Lectures on various aspects of occupancy in urban areas and field studies conducted to analyze cases are different contexts constitute the course work. The content and the format make the course an appropriate one for joint arrangements with other universities at home and abroad.

**LAUD 462 Contemporary History of Landscape Architecture**

This course aims to examine changing aspects of landscape architecture in 20th century and early 21st century by discussing the issue through the newly emerging urban concepts. Besides conceptual discussions, in order to understand the significance of landscape in the definition of contemporary cities, various urban projects that were developed in the world and also in Turkish cities will be analyzed and discussed in the scope of the course.

**LAUD 463 Design Scenarios for Everyday Spaces**

The main objective of the course is to raise the questions of and the differences between “what is designed?” and “what is appropriated?” in the city. The focus of attention will be on the design processes rather than the finished products. During the course, students will reconsider the meanings, use, and designs of everyday spaces in our cities and learn to develop new ‘design scenarios’ for them. Particularly, the course will deal with facilities like urban vegetation and street furniture; built-forms like walls, facades, billboards, barriers, and gates opening onto public spaces; and a milieu of public spaces like small alleys, cul-de-sacs, streets, squares, pocket parks, abandoned spots, pedestrian bridges and passages.

**LAUD 465 Cities as Informationscapes**

In regards to the information they contain or may generate, we call our living or working environments (i.e. cities) as “informationscapes”. While this course will focus on the specific urban contexts, we will investigate how cities as informationscapes are populated not only by static elements of information such as “buildings and physical objects”, but also “new media forms”, dynamic elements such as people, living organism, or artifacts for the input and display of information. The aim of the course will be to produce the representation and communication of ideas and concepts related to our perceptions of these aspects of cities, as well as the different interactions and the labyrinthine narratives within the city.

**LAUD 471 Urban Sociology**

The nature, causes and consequences of urbanization are studied, examining the social and demographic characteristics of urban populations and their spatial distributions in both developed and developing countries to demonstrate the relationship between the design of settlements and their social organization.
LAUD 472 Recent Issues in Human Geography
The relations between society, space and social science in a changing world are studied. Recent approaches in analyzing the relationships between society and space in different time and space contexts are discussed with an emphasis on time-space geography, agency and structure relationships, local/global dynamics, images and symbols in different cultural contexts. Credit units: 3 ECTS Credit Units: 6.

LAUD 474 Space, Culture and Identity
This course emphasizes that the success of urban design and planning depends on the extent to which users' cultural and spatial values are acknowledged. The interrelation between users' cultural identity and location (who you are and where you are) is focused on. The objectives of the course are: (1) To provide theoretical background, (2) to study cultural meanings/uses attributed to space through a research project, and (3) to conclude policy implication from these projects. Credit units: 3 ECTS Credit Units: 6. Aut (B. Batuman)

LAUD 475 Cinema and Space
The course dwells upon multiple readings of interior and exterior spaces within the framework of the theory of cinematic montage and cinematic imagery. Understanding and interpreting space concept requires a construction of an interdisciplinary vocabulary and a dialogical situation. Therefore, using and designing a space includes cognitive, moral and aesthetic judgments, and collective, personal and even popular representations. The assumption is that it is possible to form an analogy between cinema and space design, and between the eye and the camera in an urban milieu. If design is understood as a cinematographic process, it is seen that both creative acts are organized in time through space and perceived through time in space. Respectively, the notion of architectural and urban spaces, their syntactic characteristics, and analytical simulations form a common analogy with cinema in terms of their production and consumption. Credit units: 3 ECTS Credit Units: 6. Aut (S. A. Tokrol)

LAUD 476 Visual Politics of Space
Credit units: 3 ECTS Credit Units: None. Spr (B. Batuman)

LAUD 481 Landscape Ecology
The objective is to explore the combination of ecosystems, its structure, function and changes. The course focuses on the distribution patterns of landscape elements of ecosystems, and the ecological changes in the landscape over time. The course consists of lectures, discussions, videos and site visits. Credit units: 3 ECTS Credit Units: 6.

LAUD 482 Nature Conservation and Tourism
Classification of natural areas, national parks and equivalent reserves are discussed emphasizing outdoor recreation, concepts of soft tourism, green tourism, alternative tourism, ecotourism, and sustainable tourism; symbiotic relationships between nature conservation and tourism; holiday villages and campgrounds; nature-based outdoor recreation and tourism activities. Credit units: 3 ECTS Credit Units: 6. Aut (K. Arapkılıçlıoğlu)

LAUD 483 Environment Philosophy and Ethics
This course aims to restructure the meaning of environment and question human attitude towards nature and other living things. Related environmental topics and issues will be discussed in the light of environmental philosophy and its historical progress. The course will also discuss environmental ethics that deals with relations of human beings to environment and the conflicts that arise, as well as the role of ethics in guiding human behavior. The course aims to embrace students from a variety of disciplines to build a certain level of consciousness, responsibility and skills to understand and resolve environmental conflicts. This will be established through the review of selected case studies related to each student's disciplinary background. Credit units: 3 ECTS Credit Units: 6. Aut (K. Arapkılıçlıoğlu)

LAUD 484 New Approaches and the Quest for Nature Conservation
This new course aims to identify problems related to the protection of natural areas to the people who live nearby. By understanding what motivates the society and related actors, the course will try to attempt finding new effective environmental policies and propose solutions. The course will focus on nature protection, conservation and ecological processes, also asking questions on the economy of the society, existing legal foundation, participation, policy management and new techniques for solutions. The main objective is to work on a real life case that is under the stress of any type of urban development i.e. industry, mining, mass housing. The students will try to propose solutions to that specific case that balances protection vs. local use which benefits nature and people in mutual basis. The case study process will include a field trip to the site, collection of data, working with local citizens and governments to provide a unique solution for each case. A jury will be held with local people and interested parties at the end of the semester to share the students’ proposals. By working on a real life case, the course also aims find solutions to bridge the gap between theory-science-university and practice-policy-society. Students, who are interested in involving in the policy management and project development for an environmentally sensitive case, are potential candidates for this course. Credit units: 3 ECTS Credit Units: None. Spr (K. Arapkılıçlıoğlu)
FACULTY OF BUSINESS ADMINISTRATION

Erdal Erel, Ph.D., Dean
Levent Akdeniz, Ph.D., Assoc. Dean
Süheyla Özyildirim, Ph.D., Assoc. Dean

The Department offers undergraduate and graduate programs leading to B.S., M.B.A., M.S. and Ph.D. degrees.

The main concern of the programs is to develop the skills required to confront the challenges of a changing world. The successful managers of the future should be able to cope with the complexities of change and an economic environment which is best characterized by keen competition. Thus contemporary business education does not only include teaching the techniques of the profession, but aims at developing a vision, flexibility and adaptability to new situations.

The programs’ emphasis is on analytical methods and problem solving rather than a mere description of existing practices. Participative learning is emphasized through case analyses, term projects, simulation and classroom discussions. Computer applications, quantitative analysis and behavioral sciences are integrated into the programs to provide for quantitative and qualitative aspects of management with an emphasis on the former. The graduates are equipped with knowledge, skills and analytical thinking necessary to enhance the effectiveness and efficiency of the enterprises that they will serve.

ACADEMIC STAFF

Levent Akdeniz, Associate Professor
Ph.D., Economics, University of Houston, 1996. Corporate finance, computational economics, numerical methods.

Nazlı Akman, Adjunct Instructor

Aslıhan Altay-Salih, Associate Professor
Ph.D., Finance, University of Massachusetts, Amherst, 1995. Investments, asset allocation, futures and options markets, risk management.

Kürşat Aydoğan, Professor
Ph.D., Finance, Syracuse University, 1986. Investments, corporate finance, international finance.

Zahide Aygün Karakıtapoğlu, Assistant Professor

Emre Berk, Associate Professor

Ümit Berkman, Professor
Ph.D., Public Administration, Syracuse University, 1975. Organization and management theory, comparative administrative systems, organization development.

Jacques Couvas, Senior Lecturer

Nejat Çapar, Assistant Professor

Nagihan Çömez, Assistant Professor
Ph.D., Operations Management, The University of Texas at Dallas, 2007. Inventory sharing management, coordinated pricing and inventory decisions, supply chain scheduling, new product development.
Ahmet Ekici, Assistant Professor
Ph.D., Marketing, University of Nebraska, 2002. Public policy and marketing, relationship marketing, advertising.

Erdal Erel, Professor
Ph.D., Industrial Engineering and Operations Research, Virginia Polytechnic Institute and State University, 1987. Production control and planning, scheduling, design of manufacturing systems.

Güliz Ger, Professor
Ph.D., Marketing, Northwestern University, 1985. Consumer behavior, culture and consumption.

Celile Itır Göğüş, Assistant Professor
Ph.D., Texas A&M University, 2006. Organizational behavior/human resource management.

Canan Güneş, Assistant Professor

Destan Kandemir, Assistant Professor
Ph.D., Michigan State University, 2005. Marketing research, marketing strategy, marketing management and global marketing.

Ayşe Kocabıyıkolu, Assistant Professor
Ph.D., Decision Sciences, INSEAD, 2005. Risk management, decision analysis, revenue management.

Olga Kravets, Visiting Assistant Professor

Zeynep Önder, Associate Professor

Dilek Önal, Professor

Örson Örge, Visiting Assistant Professor
Ph.D., Organizational behavior, University of Kansas, 2005. Process-oriented and relational approaches to organization, spacing and organization, organizational and strategic change.

Süheyla Özylidrim, Associate Professor

Marco Protano, Adjunct Lecturer

Özlem Sandikci, Assistant Professor
Ph.D., Marketing, Pennsylvania State University, 1999. Consumer behavior, marketing management, advertising.

Kadire Zeynep Sayım, Assistant Professor

Doğan Serel, Assistant Professor
Ph.D., Management Science, Purdue University, 1998. Production/operations management.

Banu Sultanoğlu, Instructor
M.S., Accounting and Finance, Başkent University, 2008. Accounting, auditing.

Ayşe Başak Tanyeri, Assistant Professor

Lale Tomruk, Instructor
Mehmet Seçük Uslu, Senior Lecturer
Ph.D., Accounting, Ankara Academy of Economic and Commercial Sciences, 1973. Accounting, cost analysis and management

Frederick Woolley, Senior Lecturer

Cemal Deniz Yenigün, Visiting Assistant Professor

PART-TIME ACADEMIC STAFF

Metin Akman, B.A., Middle East Technical University, 1989.
Behice Özlem Gökakın, Ph.D., Bilkent University, 2010.
Fulya İnal, Ph.D., Civil Engineering, Organization and Management, University of Zagreb, 2005.
Jonas Prager, Ph.D., Columbia University, 1964.
Ece Ungan, Ph.D., Finance, Bilkent University, 2008.
Emin Veral, M.S., Cornell University, 1956.
DEPARTMENT OF MANAGEMENT

The aim of the Department of Management is to prepare managers for the global business arena with emphasis on computer-based analytical problem solving techniques for decision making and a strong quantitative approach for managing resources.

UNDERGRADUATE PROGRAM

The undergraduate curriculum exposes the student to basic social sciences through courses in economics, psychology, sociology and history. Courses in mathematics and statistics are included to provide the background necessary for technical skills. Basic courses in the functional areas of business are offered in first, second, and third years. In addition, the curriculum provides elective courses in those functional areas so that students can focus on an area of their choice. Majors will provide students with guidance in selecting MAN electives, and will be declared at the beginning of Term 2 of Year 3. Doing a major will enable the students to get specialized in one of the below subjects: Entrepreneurship and Family Business, Finance and Quantitative Analysis, Global Business Rules, Marketing and Innovation Management, Value Chain Management, Business and Management.

GRADUATE PROGRAM

Master of Business Administration (M.B.A.) Program

The MBA program aims to foster the education of proficient managers and executives who can effectively recognize and "manage" the challenges presented by a continuously changing business environment. The goal is to provide a strong foundation of administrative and conceptual skills to prospective managers who may assume responsibilities of planning, organizing, directing and controlling the operations of public and private organizations. The MBA degree can be viewed as extending and enhancing a wide variety of undergraduate experiences, including but not limited to the programs in engineering, economics and social sciences as well as in business. The program's emphasis is on analytical methods and problem solving rather than a mere description of existing practices. Participative learning is emphasized through case analyses, term projects, simulation, and classroom discussions. Computer applications, quantitative analysis and behavioral sciences are integrated into the program to provide for quantitative and qualitative aspects of management. The graduates are equipped with the knowledge, skills and analytical thinking necessary to enhance the effectiveness and efficiency of the enterprises they will join.

Admission: Applicants to the program should have a Bachelor’s degree (B.S. or B.A.) and should be proficient in English. Applicants are evaluated on the basis of their GMAT scores, academic records, ALES (Akademik Personel ve Lisansüstü Eğitimi Girişimi Sınavı - Academic Personnel and Postgraduate Education Entrance Examination) scores (required from all Turkish students with a GMAT less than 550), letters of recommendation, career goals and an interview.

Degree Requirements: Students admitted to the program will be required to complete a minimum of 60 credit hours of course with a minimum cumulative grade point average of 3.00/4.00.

Executive MBA Program

Executive MBA programs are specially designed programs for the working middle and top-level managers. Chicago University has been the first to offer this program in 1940; these programs are now inherent parts of all major business schools around the world. The major reason that makes these programs popular is the necessity to refresh the skills and knowledge obtained during the undergraduate and graduate studies of the managers. The limited (and typically short) shelf-life of the knowledge, the demanding managerial responsibilities and intense working hours of these managers have motivated to design these programs in accordance with the special needs of these managers.

Participants of the Bilkent Executive MBA program will be exposed to a wide variety of courses including management, marketing, economics, accounting, finance, operations and decision making, law and information technologies. The program is designed to provide maximum flexibility to the participants; classes will be given on Friday and Saturday of every other week. Participants will meet 86 days with a total of 468 contact hours in 20 months.

Admission: Applicants to the program are required to have a bachelors degree (BS or BA), managerial experience for at least three years, and proficiency in English sufficient to follow the course material. Applicants should have strong communication and social skills, entrepreneurial and leadership qualities and aim to be top-level executives. All applicants are required to submit ALES scores (this requirement is waived if the GMAT score is 550 or above).

Degree Requirements: Participants admitted to the program will be required to complete a minimum of 41 credit hours of course with a minimum cumulative grade point average of 3.00/4.00.

MASTER OF SCIENCE and Ph.D. PROGRAMS

The Faculty of Business Administration at Bilkent University offers the Masters of Science and the Doctor of Philosophy degrees for those interested in advanced study of the theory and practice of management in three areas Finance, Marketing, and DROM (Decision, Risk and Operations Management.)

The mission of the Bilkent MS/PhD Program in Business Administration is to prepare individuals for research and teaching careers. A high faculty-to-student ratio and active involvement in research throughout the program foster close interaction between students and faculty and accelerate the transition from students to academic. Programs of study designed for the particular needs and research interests of each individual enable the students to master the behavioral, social, economic...
and mathematical sciences through courses from various departments in Bilkent University. An active exchange program with universities abroad provides additional opportunities for coursework and collaborative research. Visiting scholars and graduate students from abroad add to the diversity of our community.

The research conducted by our faculty covers a broad range of areas of expertise and we welcome graduate students with degrees in a wide range of fields (anthropology, business administration, computing science, economics, engineering, ethnography, mathematics, physics, psychology, statistics etc.).

The MS in Business Administration degree is designed to prepare students for doctoral study. The PhD in Business Administration degree is designed to prepare students for a career in research and teaching. Qualified applicants without a graduate degree are encouraged to apply for the MS degree.

**Master of Science**

**Admission:** Applicants must have a bachelor's degree in business administration, economics, engineering or a related field. They must be fluent in written and oral English, and possess strong quantitative and qualitative skills. All applicants are required to submit GMAT or GRE scores and provide recommendation letters. ALES scores are needed as well for Turkish applicants. Proficiency in written and oral English must also be documented. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements and www.man.bilkent.edu.tr for the particular requirements of the Master of Science programs in business administration.)

**Requirements:** Students have to complete a minimum of 27 credit hours of course work, as tentatively indicated below, write and defend a master's thesis and maintain a cumulative GPA of at least 3.00/4.00. The maximum duration of M.S. study is four semesters.

Prior to starting the program in the Autumn semester of the first year, students may take a deficiency program during the summer. The courses they take during the summer depend on their background.

**Doctor of Philosophy**

**Admission:** Applicants must be fluent in written and oral English, and possess strong quantitative and qualitative skills. Candidates should submit GMAT or GRE scores and provide recommendation letters. ALES scores are needed as well for Turkish applicants. Proficiency in written and oral English must also be documented. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements and www.man.bilkent.edu.tr for the particular requirements of the Ph.D. program in business administration.)

**Requirements:** The Ph.D. program consists of a course work of at least 24 credit hours, as tentatively indicated below, a major field examination, preparation and defense of a dissertation based on original research. The student should maintain a cumulative GPA of 3.00/4.00 throughout the period of study. Course work is tailored according to the field chosen and the specific research needs of the student. No matter what the chosen field of study is, every Ph.D. student should complete a graduate course in each functional area; namely, finance, marketing, accounting, production/operations management, and organization theory/behavior. An M.B.A. degree usually satisfies this requirement.

M.S. and Ph.D. degrees are offered in the following three tracks: Finance, Marketing, and Decision, Risk and Operations Management.

MAN 607 Philosophy and Epistemology of Scientific Inquiry ........ 3 / 6

Spring Semester
GE 590 Academic Practices ............................................. 3 / 6
MAN 599 Master's Thesis Project ......................................... 3 / 22

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

MAN 101 Introduction to Business I
This course introduces students to business education. Students will learn about the functional areas of business and how they fit together. The emphasis will be divided between computer skills (primarily VBA) and soft skills (e.g. teamwork). The course will consist of two parts: in-class and computer labs. The in-class part will feature case discussions and guest speakers who will share their experiences with students. Much of the learning will occur in the labs where students will work on cases and assignments. The course features a group project where students will prepare and present a business plan (Part 1). Topics to be covered include exploratory data analysis, group skills, time management, research, ethics, web page design, cost analysis (sink, fixed, and variable costs), discounting of cash flows, and technological forecasting. The course will use technology extensively (e.g. real-time modeling, extensive course web, computer assignments, and on-line exams). Credit units: 3 ECTS Credit Units: 6. Aut (C. Aydoğmuş, N. Çapar, M. Özsoy, K. Z. Sayım, L. Tomruk, S. Uğurlubilek) Spr (N. Çapar)

MAN 102 Introduction to Business II
This course introduces students to business education. Students will learn about the functional areas of business and how they fit together. The emphasis will be divided between computer skills (primarily VBA) and soft skills (e.g. presentation). The course will consist of two parts: in-class and computer labs. The in-class part will feature case discussions and guest speakers who will share their experiences with students. Much of the learning will occur in the labs where students will work on cases and assignments. The course features a group project where students will prepare and present a business plan (Part 2). Topics to be covered include presentation skills and visual displays, stock market, relational databases, distribution planning, production planning, decision analysis, and leadership skills. The course will use technology extensively (e.g. real-time modeling, extensive course web, computer assignments, and on-line exams). Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 101. Spr (C. Aydoğmuş, T. Baycan, N. Çapar, İ. Kalender, M. Özsoy, K. Z. Sayım, L. Tomruk)

MAN 213 Principles of Financial Accounting
An introductory accounting course, that covers the accounting environment, basic mechanics of record keeping and reporting of financial statement information. Specifically, the topics covered include the generally accepted accounting principles, the accounting cycle, preparation and reporting of financial statements (balance sheet, income statement, cash flow statement, and statement of shareholders’ equity) together with the discussion of
individual accounts that are included in those financial statements (i.e. current assets; long-term assets and accounting for depreciation; liabilities and shareholders’ equity). Credit units: 4 ECTS Credit Units: 6. Aut (N. Akman, B. Sultanoğlu) Spr (M. S. Uslu)

MAN 216 Elements of Finance
An introductory course on the building blocks of financial decision making. Topics include financial system, its functions, institutions and instruments, risk and return, time value of money, valuation of securities, and elements of international finance. Credit units: 3 ECTS Credit Units: 6. Spr (E. Ungan, M. S. Uslu)

MAN 256 Introduction to Management Science
A general overview of operations research with selected applications from management systems and interdisciplinary areas. The methodology of mathematical modeling and its relation to problems in industrial, commercial and public systems. Introduction to linear programming: the simplex method, duality, sensitivity analysis and related topics. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MATH 227. Aut (D. Serel) Spr (A. Kocabıyıköglu, D. Serel)

MAN 262 Organizational Behavior
Individual behavior, interpersonal relationships and intergroup relations in organizational settings; conceptual tools for analyzing and understanding behavior; improvement of individual, group and organizational performance and the manager’s role. Credit units: 3 ECTS Credit Units: 6. Spr (Z. Aygün Karakıtapoğlu, F. Woolley)

MAN 300 Business Law
An introduction to the legal environment of business including contracts, negotiable instruments, organization, real and personal property. Emphasis is on fundamental legal principles, terminology and analysis of the legal process. Legal problems pertaining to contracts and related topics, business association and the impact of law on economic enterprise are reviewed. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 102. Aut (Staff)

MAN 302 Business Forecasting
This course aims to provide the concepts and principles of a variety of forecasting models. Main emphasis is on the establishment of a process for effective forecasting. Within this framework, various smoothing techniques, regression analysis, ARIMA models, and judgmental forecasting issues are discussed in detail. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 216. Aut (N. Akman, B. Sultanoğlu) Spr (C. D. Yenigün)

MAN 303 Business Ethics and Social Responsibility
The course examines issues in business ethics within the context of society, government and business where different stakeholders pursue their interests. In this dynamic environment managers and firms have to consider the social responsibility of business and have to face ethical issues, complexities and dilemmas in making the “right” (sometimes the “more right”) decisions and implementing them. Furthermore, the course aims to increase the ethical awareness of students and to provide them with knowledge, skills and tools to manage ethical problems within the organization and with the stakeholders in the environment. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 101 or MAN 102 or MAN 262.

MAN 305 Business Dynamics in Family Context
Family businesses are the most prevalent form of organization in the world today, comprising more than 90% of all businesses. Given the dominance of the family business model in today’s global economy it is important that for all to understand the unique culture, values and perspective that family ownership brings to business, relationships, partnerships and strategic alliances. This course examines the key business, personal, and interpersonal issues relevant to the management and continuity of these firms. Among the topics covered are nature, importance and uniqueness of family businesses, trust and ownership issues, succession and continuity of family businesses, strategy and professionalism of and recent trends and issues in the world as they relate to family businesses. This course is aimed at students who will enter into the management of family businesses, either their own family’s or someone else’s, and/or students who will do business with family firms, consult to them, and work with them in banking, outsourcing, etc. Credit units: 3 ECTS Credit Units: 6.

MAN 306 Market Research
Regardless of the type of the organization, managers in all functions and at all levels need systematic and dependable information about their operations. More specifically, managers need information about their employees, customers, suppliers, competitors, and macro variables of their environment. In an ever changing and volatile business environment, the task of market research is to provide managers with accurate, reliable, relevant, valid and timely information. In this course, the students will be expose to various research methods that are currently being used in the industry in order to find solutions for problems that various organizations are facing. By the completion of this course, the students should be able to understand the organizational value and context of information gathering, know when to collect primary and secondary data, determine the appropriate data analysis technique, and persuasively communicate/report research results. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 222 and MAN 262. Spr (D. Kandemir)

MAN 307 Financial Management
An intermediate level course on the theory and practice of corporate finance. After taking this course the students will possess an understanding of the fundamental concepts of the modern theory of finance. More specifically
they will understand the challenges related to the investment, financing and reorganization decisions faced by the corporate financial managers. The topics include, capital budgeting, capital structure, dividend policy, the process of going public, mergers and acquisitions. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 321. Spr (A. B. Tanyeri)

MAN 312 Managerial Accounting
The aim of the course is to introduce the students to the main issues in management accounting. Special emphasis will be put on decision making at different levels of management, and on data and reports to facilitate the decision making process. Topics covered include: cost volume profit analysis, cost behavior, costing systems, budgeting, unit cost calculations, pricing, variance analysis, responsibility accounting and performance evaluation. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 213. Spr (B. Sultanoğlu, M. S. Uslu)

MAN 321 Corporate Finance
An introductory course in business finance with emphasis on investment and financing decisions of the firm. Topics include ratio analysis, profit planning, capital budgeting, capital structure, cost of capital, dividend policy, working capital management and international finance. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 102 and MAN 213. Aut (A. Altay-Salih, Z. Önder) Spr (A. B. Tanyeri)

MAN 322 Money and Banking
Explanation of the nature and functions of money and credit. An analysis of the structure and operations of the commercial and central banking systems. Formation, execution and effectiveness of monetary policy. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 102 and ECON 222.

MAN 332 Marketing Strategy
Investigation of marketing strategy formulation and decision making. Cases are used to assess the marketing strategies and practices of private or public organizations and to apply the concepts being examined. The focus is on analyses of market forces and opportunities, and determination and integration of marketing objectives, strategies and plans. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335.

MAN 333 Marketing Principles
An analytical study of marketing as a major business function, a consumer orientation throughout the organization, as well as integrated communications. Topics include an overview of the marketing system, the marketing concept, market research, market analysis, marketing strategies (segmentation, targeting, positioning), and marketing programs. An examination of how effective marketing strategy and program decisions is based on an analysis of buyer behavior, market structure and competition. The emphasis is on marketing programs as integrated marketing communications. Credit units: 3 ECTS Credit Units: 6, Aut (M. Protano) Spr (Staff)

MAN 335 Fundamentals of Marketing
The course introduces the students to the fundamental concepts, tools and activities that comprise the marketing function. It overviews the development of marketing thought as well as contemporary issues in marketing. Topics include the marketing concept and orientation, segmentation and positioning, buyer behavior analysis, and marketing mix-product, price, promotion, distribution-decisions. Credit units: 3 ECTS Credit Units: 6, Prerequisite: (ECON 101 and ECON 102 and ENG 206) or (ECON 207). Aut (A. Ekici)

MAN 336 Marketing Management
Building on the fundamentals of marketing, the course addresses effective management of the challenges facing marketing managers in contemporary world. By focusing on topics such as product development, quality management, symbolic communication, and consumer analysis, the objective of the course is to develop students' analytical and creative skills for designing and implementing the best combination of marketing actions. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335.

MAN 341 Production Management
Examination of the nature and content of methods of quantitative analysis employed in production management decision making; design of production systems; plant location and layout; scheduling of operations; inventory systems; quality control techniques. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 256. Aut (N. Çömez, D. Serel)

MAN 342 Operations Management II
This course focuses on tactical and operational level production management decisions. Tentative topic list includes: aggregate production planning, planning for mass production, planning and control of batch production, deterministic and stochastic inventory models, Materials Requirements Planning, Supply Chain Management, scheduling and sequencing, maintenance and manpower planning, project management, and waiting lines/queueing. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 341. Spr (E. Berk)

MAN 352 Management Information Systems
Information requirements of business organizations; principles, concepts, design for managerial purposes; use and implications of computer technology for management decisions and processes. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 101.
MAN 361 Organization Theory
Introduction to organization theory; the concept of organization, types of organizations, the functions and role of the manager within business organizations. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: MAN 262. Aut (C. I. Göğüş)

MAN 401 Managerial Economics
Applications of the basic concepts of micro-economic theory in the solution of business problems. The study of demand, production, cost and pricing are emphasized. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: senior standing. Aut (S. Özildirim)

MAN 403 International Business
International Business differs in important ways from business conducted within national borders. It presents additional critical challenges for managers interested in trade or investments in foreign countries, but it also offers new opportunities in foreign markets. This course emphasizes the use of analytical tools and develops a framework for analyzing the decisions that must be made by organizations interested in doing business internationally. In turn, this framework provides the basis for formulating strategies, structures, and processes that will enable such organizations to succeed in the international business environment. Concepts and knowledge from strategy, international finance, international trade and investment, cross-cultural issues, international politics and law, marketing, human resource management, and other related areas will be combined and focused on how to succeed international business. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: senior standing. Aut (F. Woolley)

MAN 404 Investment Analysis
Conceptual and analytical frameworks for formulating investment policies and security analysis. Development of portfolio theory and construction of portfolio strategies for individuals and institutions. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: IE 342 or MAN 321. Spr (Z. Önder)

MAN 405 Independent Study
Independent research or study under the guidance of a faculty member. Credit units: 3 ECTS. Credit Units: 6.

MAN 406 Business Strategy
This course focuses on firms' strategies in today's highly competitive environment. In a complex world of rapid technological changes, constantly changing markets, increasing demand for social responsibility and ethics, companies are forced to adopt and implement new business strategies. Strategic management is viewed as a basic skill for all managers rather than the speciality of a particular function or organizational level. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: MAN 321 and MAN 341 and MAN 335. Aut (N. Çapar) Spr (Ö. Örge)

MAN 407 Business Plan Development
This course focuses on business plans as a necessary element of starting a business and also prepares the students to participate in business planning in large institutions. The course will go through the process of preparing successful business plans including determining the contents of a plan and reviewing an actual plan. The course will be designed to help the students to incorporate the contents of the core management courses. Upon the completion of the course the students are expected to analyze and prepare the components of a business plan. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: MAN 321 and MAN 335. Spr (F. İnal)

MAN 408 Fundamentals of Entrepreneurship Management
As a field of activity that involves creation of new business entities, entrepreneurship plays a key role in providing dynamism and growth to local, regional and national economies. Serving as an introduction to entrepreneurship, this course provides a comprehensive survey of the nature and dynamics of a wide spectrum of entrepreneurial activities at the individual and firm levels. Among these activities are marketplace opportunity recognition, business vision creation, resource acquisition and configuration, and start-up foundation and management for sustainable value creation and delivery. By taking this course, students will both gain knowledge of contemporary theoretical advances made in entrepreneurship research and use this scholarly body of work to approach and analyze actual entrepreneurial practice. As a result, students will be able to recognize and conceptualize entrepreneurship as distinct economic activity; identify and evaluate various phases and activities in entrepreneurial process; and, be able to envision and prepare a plan of action for launching entrepreneurial initiatives. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: (MAN 321 and MAN 335) or IE262. Aut (Ö. Örge)

MAN 410 Innovation Management
Despite the increasing importance of innovation to competitive advantage of organizations in today's world, few companies master the ability to identify, create and exploit opportunities for innovation on a systematic basis. In this course, all aspects of managing innovation; from recognizing the need and desire to be creative and innovative, using imagination to add value, developing structures, systems and incentives that encourage and implement innovation, will be discussed. The course will center on three themes: ideation/creativity generation techniques, innovation (models, dimensions, degrees and sources of innovation) and strategic management of innovation. In line with these topics, real company cases will be presented and discussed so that students will
better understand the significance of leadership and corporate entrepreneurship in managing innovation. Credit units: 3 ECTS Credit Units: 6. Spr (L. Tomruk)

MAN 414 Auditing
The primary objective of the course is to distinguish between accounting and auditing through familiarizing the students with the basic auditing concepts. Topics such as types of audits and auditors, audit reports for financial statements, professional ethics, evidence accumulation and verification procedures, internal control and auditing engagements are discussed. Credit units: 3 ECTS Credit Units: 6. Prerequisite: IE 342 or MAN 213.

MAN 415 Intermediate Accounting
This course is the first professional level course for undergraduate students who want to prepare for a career in accounting or financial management. It covers concepts, requirements, and standards of external financial reporting, and methods of presentation. The focus is on international concepts of external financial accountability and not the specific standards of any specific country. Students must have had a previous course in financial reporting with a grade of at least a C, or equivalent. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 213. Aut (N. Akman)

MAN 416 Financial Statement Analysis
This course aims to develop an ability to analyze financial information as an aid to financial decision making. The emphasis will be on the usefulness of information for various groups, such as investor's of the firm, security analysts and creditors. Basic financial statement analysis tools, such as ratio analysis, cross-sectional and time-series analysis, statistical forecasting models will be covered. Part of this course will be devoted to the research and empirical evidence on the impact of financial statement information on asset pricing, efficiency of the capital markets, debt ratings and corporate restructuring. Credit units: 3 ECTS Credit Units: 6. Prerequisite: (ECON 222 and MAN 321) or (IE 342 and MATH 260). Spr (N. Akman)

MAN 417 Entrepreneurial Marketing
Entrepreneurial Marketing (EM) integrates critical aspects of marketing and entrepreneurship into an effective approach to marketing for small resource-constrained businesses and entrepreneurial ventures operating in emergent markets. The course focuses on marketing strategies that would enable resource leveraging (doing more with less), proactive orientation and customer value creation. In turn, this focus requires a non-formulaic way of thinking and acting, thus EM differs from conventional marketing as it returns to the disciplines roots as a creative pursuit. The imagination, vision, cleverness, and originality associated with entrepreneurial behavior lie at the core of this approach to marketing and these attributes are applied to the full range of marketing activities, from segmentation to the management of the marketing mix. The course brings together theoretical perspectives and practical sensibilities with the goal of developing your skills in conception, development, and execution of a marketing strategy under conditions of severe resource limitations. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 333 or MAN 335. Spr (M. Protano)

MAN 419 Marketing Strategy and Innovation
Marketing Strategy and Innovation integrates critical aspects of marketing and innovation, and presents marketing as a strategic process driven by value creation for customers. The course focuses on the design and management of all elements of business necessary to define, develop and deliver customer value in the challenging environment of global competition and rapidly changing markets. The course brings together theoretical and practical perspectives with the goal of developing students' skills in conception, development, and execution of a marketing strategy that would allow a firm to serve its customers in a profitable and sustainable way. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 335. Spr (O. Kravets)

MAN 421 Capital Markets and Institutions
This course gives an introduction to the analysis of the participants, relationships, instruments and institutions of money and capital markets. Topics covered also include problems and trends in global and domestic financial markets. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 102 and MAN 321. Aut (A. B. Tanyeri)

MAN 422 International Finance
Financial management of foreign operations of the firm. Financial constraints imposed by the international environment and their effect on the financial function of the firm. Also included are the functioning of foreign exchange markets, international money and capital markets. Credit units: 3 ECTS Credit Units: 6. Prerequisite: consent of instructor. Aut (Staff) Spr (S. Ozyildirim)

MAN 423 Financial Modeling
The purpose of this course is to enable students to use computers and selected software when solving business financial problems. Spreadsheet and simulation programs are the primary tools of the course. Students will work on exercises that cover various aspects of corporate finance and investments. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 221 and MAN 321.
MAN 424 Risk Management
This course aims to introduce the risk management and the derivatives markets. The concept of risk management and the question of why risk management is vital for modern financial institutions will be explored. The topics will include forwards, futures, swaps, options, hedging, and portfolio insurance, value at risk. Credit units: 3 ECTS Credit Units: 6. Spr (A. Altay-Salih)

MAN 429 Financial Regulations
Every modern financial system operates according to legislated rules that are interpreted by regulatory bodies. These impediments to financial system freedom are based upon a conceptual understanding of regulation's function as well as the practical lessons of many countries over many decades. This course in financial regulation is designed to explore the general issues that exist in modern financial systems, especially banking, and to demonstrate how they fashion the regulatory landscape in a variety of countries. The U.S. and Turkish banking systems will receive the bulk of the course's attention, although examples will also be taken from the EU and the developing world. In addition to general issues, among the specific topics covered are entry and exit regulations, competition and failure, deposit insurance, bank capital, and non-banking activities. Credit units: 3 ECTS Credit Units: 6.

MAN 430 Anthropological Marketing
Students learn how to do qualitative research in order to understand markets and consumers. Quoting from a textbook (Mariampolski), "ethnography, with its focus on observed everyday behavior, is quickly becoming the method of choice to identify unmet needs, stimulate novel insights, and create strategies for developing new ideas." The students do research, employing ethical and effective field practices, as well as use the research for marketing and business decisions. The research assignments will also enhance writing and presentation skills. Credit units: 3 ECTS Credit Units: 6.

MAN 431 Marketing Research
Development of market research objectives and processes. Introduction to market research approaches including qualitative survey and experimentation, and design of the research methodology. Also a short overview of methods of measuring consumer reactions to product characteristics, effectiveness of advertising, and other promotional devices. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335 or consent of instructor.

MAN 432 Consumer Behavior
A study of the nature and determinants of consumer behavior. Examines how individuals process information and make decisions; the influence of psychosocial factors such as personality, small groups, demographic variables, social class and culture on the formation of consumers' attitudes and purchasing behavior. To enhance understanding and prediction of market place behavior and demand analysis, emphasizes applications to the development of marketing policy planning and strategy. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335 or consent of instructor. Aut (O. Kravets)

MAN 433 Global Marketing and Emerging Markets
Application of marketing concepts and methods to the international marketplace. Problems and decisions involved in marketing across national boundaries are discussed. While focusing on the export marketing, some of the other topics covered include the international environment, export market selection, export market entry strategies, export marketing mix decisions, financing and methods of payment, and the export order and physical distribution. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335. Aut (O. Sandikci)

MAN 434 Integrated Marketing Communications
This course introduces students to various tools such as advertising, sales promotions, and sponsorships, that marketers use while communicating with their customers. The emphasis rests on strategic planning and development of marketing communications campaigns, their integration and evaluation. The course combines theory and practice and aims to develop analytical skills necessary for effectively assessing and managing communication needs of companies operating in today's competitive business environment. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335. Spr (O. Sandikci)

MAN 436 Services Marketing
The aim of this course is to provide strategic insights to the marketing managers of service firms. To realize the previously given objective, the course focuses on the unique characteristics of service products that differentiate them from manufactured goods and classifies services according to many different variables such as the nature of the service act, method of service delivery. Then, alternative strategies that can be executed to achieve organizational objectives by the marketing managers of different types of service firms are discussed in detail. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335.

MAN 437 Retail Management
Learning retailing terminology and discussing today's changing retailing concepts in light of retailing studies and knowledge are the main goals of this course. The retailer is one of the most important distribution channel member and the only member with the ability to change the effects of the manufacturer's push and pull strategies, and thus the total channel members' interactions is the main focus in the first part of the course. Retail stores
are also places where consumers first face the manufacturers' products. Therefore, retail store management and the factors that influence in-store activities constitute the second part of the course. 

MAN 438 E-Commerce

The primary objective of this course is to prepare students to be strategic decision makers in organizations that are being impacted by the emerging digital technologies. The emphasis is on understanding key E-Commerce tools and develop skills using Internet applications. Topics include e-commerce infrastructure, starting an online business, strategizing, understanding traffic to websites and building brands. Thus, a major aspect of this course will be study of the Internet, its implications and its uses with concentration on understanding the managerial implications of E-Commerce. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335.

MAN 439 New Product Development

In this course, focus is on the tools and techniques associated with analyzing market opportunities and then designing, testing, and introducing new products and services. Both quantitative and qualitative approaches are covered. In particular, the course covers the new product development process, market entry strategies, how to generate new product ideas, mapping customer perceptions, segmentation, product positioning, forecasting market demand, and product design. The course emphasizes how to incorporate consumers, customers, and competitors into all of these aspects of the company's new product development. It is intended for students who are interested in working on new product innovations, both in entrepreneurial firms and in established companies. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 335. Aut (J. Prager)

MAN 440 Revenue Management

Revenue management is concerned with two types of demand decision: quality (how to allocate capacity to different market segments, when to withhold a product from sale etc.) and price (how to set prices, how to price across product categories, over time etc.). This course aims to introduce students to the tools and conceptual frameworks of revenue management and its applications in diverse industries such as tourism, hospitality, manufacturing, and fashion. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 256. Spr (A. Kocabıyıköğlu)

MAN 441 Service Operations Management

SOM is designed to develop an understanding of those aspects of management of particular importance to service-producing as opposed to goods-producing firms, and to encourage analytical thinking about all services that affect our lives. Topics such as service quality, service guarantees, design of service delivery systems, supply and demand management, management of waiting lines, and productivity improvement are discussed. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 341.

MAN 442 Operations Strategy

This is an undergraduate elective course designed to study the content and process of competitive impact of operational decisions. It utilizes the basic concepts developed in the operations management sequence, but focuses on the strategic aspects not covered in such introductory courses. The course begins with a general overview of operations strategy at the theoretical level. A selected number of empirical studies expose the students to the issues of measuring operations performance and identifying operations strategies. The practice exercises are intended to expose students to a range of concepts, tools and techniques in simulated environments for addressing issues such as the design and evolution of operating networks, the selection and development of process technologies, and the creation of operating systems that effectively connect operations with customers, distribution channels, and suppliers. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 341.

MAN 443 Special Topics in Finance

The most obvious manifestation of global financial instability is the current banking crisis that began in the U.S. but spread swiftly to Europe, other developed nations, and some developing economies. The creation of exotic financial instruments, the presence of unregulated participants in global markets such as hedge and private equity funds, the failure of rating agencies to properly evaluate novel financial instruments, and the search for higher returns without properly accounting for risk were some of the evident contributors to the crisis, resulting in severe write-offs and even the failure of some of the most visible and highly respected institutions in the financial universe. This course will begin with an extensive and intensive examination of the 2007 crisis of the late ’90s and the Turkish crisis of ’94. Furthermore, the absence of international financial architecture to prevent global crises, the inability or unwillingness of national regulatory bodies to intervene proactively, and the actions of regulators to mitigate national financial problems will then be examined. Credit units: 3 ECTS Credit Units: 6. Aut (J. Prager)

MAN 444 Total Quality Management

Quality is an integral part of doing business in today’s world. Every organization must meet the challenge of providing goods and services that exceed the customer’s expectations. This course is designed to teach students the basic quality concepts and techniques of total quality management, quality culture, quality improvement, quality costs, quality systems, statistical process control, reliability and liability. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 222.
MAN 446 Supply Chain Management
This course covers the essential elements of Supply Chain Management, which consist of controlling and coordinating all the activities that take place from the raw material purchasing to the end customer satisfaction; such as order processing, purchasing, material storage and handling, production scheduling, packaging, transportation and setting customer service standards. How these activities are successfully modeled, planned, and controlled in manufacturing and service industries are addressed. The decisions and strategies regarding transport and inventory, which are the most important parts of Business Logistics for a firm, are highlighted. The course is augmented with case studies to facilitate discussion and to gain an understanding of basic principles. 

Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 341. Aut (N. Çömez)

MAN 447 Project Management
The role of projects in organization is getting more important as they become the major tool for reaching strategic goals. This course provides an integrative view of project management. Topics include project selection, project organization, budgeting and cost estimation, progress and performance measurement and evaluation, and project auditing. Project planning and control techniques, such as CPM and PERT, are also covered.

Credit units: 3 ECTS Credit Units: 6. Aut (F. İnal)

MAN 449 Brand Planning & Management
Brand Planning & Managing provides the framework to build and manage a brand-equity driven sustainable business. Brand equity is one of the most valued assets a firm can leverage with a proven link to higher stock market valuations and returns. We will explore what it takes to build a long-term branded customer experience and mutually rewarding relationship. We will assess the global competitive market-place, discover what it will take to win the strategic brand war as well as the net value that may be gained. Once we believe in the certainty of winning, then we will move on to developing the business, vision, positioning, objectives, competitive marketing strategy and the marketing mix. Creatively, we will explore ways that the branded product experience can create associations in the mind that may develop into mindshare. And we will determine the plan needed to give the brand everlasting life through a superior value proposition over the current product life cycle and new cycles created from innovative progress. The class learning is organized around text and articles, mini lectures, market-based case analyses and guest speakers. You will also practice building your own brand within a team.

The reward for participating in the course is that you will be better prepared to build and manage brands which are again one of the most valued assets of a firm. 

Credit units: 3 ECTS Credit Units: 6.

MAN 451 Decision Analysis
Examines decision making under uncertainty. Introduction to statistical decision theory and game theory. Utilities and probabilities, optimal decision and information rules, and risk aversion.

Credit units: 3 ECTS Credit Units: 6

MAN 457 Information Systems Planning
An Internet Protocol (IP) based network architecture project course. Interdisciplinary teams composed of four senior students from the Engineering and Management faculties develop technical business proposals for a new network service provider entering the market. Business case includes a cost-effective network design and planning based on through analysis of market needs. Students learn about the data communication industry, comprehend different network architectures, understand venture capital business, and experience working in an interdisciplinary environment. At the end of the semester, each group is required to develop a business case built on engineering and business analysis of the market and involved technologies.

Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 341. Aut (A. Kocabıyıkolu)

MAN 460 Organizational Symbolism and Culture
Cultural and symbolic processes are an essential part of organizing practices in today’s business life. Serving as a foundation to understand these processes, this course is an introduction to the analysis of organizational culture in contemporary business organizations. The course examines the nature of organizational cultures; how they evolve into being and get legitimized; how they are managed and sustained; and, the processes through which they change over time. In the course, these cultural processes are analyzed from multiple theoretical perspectives. This analysis is also put into practice through an application component in which students engage in hands-on cultural analysis of an actual organization.

Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 262 and MAN 361.

MAN 461 Organization Development
Analysis of recent literature on organizations, organizational structure, organizational behavior, organizational change and design; the interaction of design strategies in terms of planned change and development.

Credit units: 3 ECTS Credit Units: 6, Prerequisite: consent of instructor.

MAN 462 Human Resources Management
In this course, an academic understanding of human resource management (HRM) is aimed to be given to students who have little or no prior knowledge of the area. The development of HRM as an academic field is critically explored in its historical context, emphasizing the differences between personnel management and more contemporary approaches such as HRM. Various functions and dimensions of HRM are defined and discussed,
by using case studies and real examples both from Turkey and other countries. Current issues around HRM are also explored. The course eventually aims to simulate answers to the following questions: firstly, why HRM is one of the most significant management functions, and secondly, who does HRM in organizations. This course will be suitable for senior students who want to extend their background in HRM before actually going into the business world, whether or not they plan to work as specialists in this area. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 271 or MAN 262. Aut (K. Z. Sayım)

MAN 464 Change Management
Edward Deming said in an interview that "we do not have to change, because staying in business is not compulsory!" Charles Darwin wrote that "it is not necessarily the strongest or the most intelligent who survive, but those who adapt and change." This course presents organizational change as an absolute necessity for all organizations that wish to become or remain competitive in the 21st Century. It explores the forces causing the need for change, the current models utilized for managing change, and the reasons why over 60% of all changes efforts fail. Case studies, team projects, and individual research will constitute a major portion of this course. Emphasis will be placed on the practicalities of managing change as well as on the supporting research. Credit units: 3 ECTS Credit Units: 6.

MAN 466 Management Skills
The central function of all managers is to direct, coordinate and control the efforts of others in order to achieve organizational goals. The quality of the interface between managers and the "others" in the organization is critical not only to organizational success, but also to individual managerial success. The quality of the interface varies according to the knowledge, skills, abilities, and attitudes brought to it by managers. This course seeks to develop appropriate managerial knowledge and attitudes concerning the "interface" by examining the theoretical functions of critical managerial skills, and to provide opportunities to develop basic competencies in selected skill areas. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 361.

MAN 467 Cross-Cultural Management
This course is designed for persons who expect to do business in an unfamiliar country or interact with people from other cultures. It recognizes the importance of becoming consciously aware of the fundamental cultural differences that determine everyday life as well as business practice. It is based on the literature of cultural anthropology, and applies it to such practical matters as negotiation, the role of deadlines and a culture's sense of time, the structure of organizations, business ethics and corruption, stress management, and business etiquette. Specific countries as well as general principles are discussed. Student groups will investigate a culture of their choice and present their findings to the class. Their written reports will be collected into a Cultural Handbook that will be distributed to the class. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

MAN 471 Motivation and Leadership
The main objective of this course is to introduce the basic concepts and theoretical perspectives on motivation and leadership that are useful for understanding human behavior in organizations. It offers an extensive examination of the nature of leadership and motivation in organizations with an emphasis on both theoretical and practical understanding. At the end of this course, students should have a better conceptual sense of leadership and motivation, and important insights into themselves as potential leaders and motivators. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 271 or MAN 262. Aut (Z. Aygün Karakitapğolu)

MAN 473 SME's and Cross-Border Ventures
The course is designed for students who are interested in learning more about the linkage between entrepreneur- ship end small and medium sized enterprises as well as about the management of people and thus, change. In many countries, SMEs form the backbone of economic activities (including Turkey and United Kingdom). Entrepreneurship, leadership, cross-border ventures, research and development, national and European funding, coaching, human resources management, business analysis and plans including SWOT are some of the areas covered. The course aims at addressing the problem of how to bridge the gap between academic research and practical business administration for future managers and related roles/functions. Obstacles and opportunities for Turkish SMEs in connection with Turkey’s position as future EU member state as well as a field-trip and one guest lecture form an integral part of the module. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 361.

MAN 474 European Union and Turkey: Trade and Policies
This is an interdisciplinary course introducing the students to the European Union and Turkey-EU relations. After a review of EU history and institutional and legal framework, emphases will be on external and internal trade law and implementation of the Customs Union Decision between Turkey and the EU. Full membership criteria are also discussed. Credit units: 3 ECTS Credit Units: 6. Aut (B. O. Gökakin)

MAN 475 Business Negotiations
Negotiation is a life skill. Every day we negotiate with colleagues, suppliers or customers. Negotiation skills can have a serious impact on profits, project deadlines, your reputation with your colleagues and your ability to implement change successfully. This course will help students to: Recognise the strengths and weaknesses of their negotiation style; Plan and prepare effectively for a negotiation; Cope with difficult negotiations; Know how
to trade concessions conditionally, and adapt their style in differing situations. Credit units: 3 ECTS Credit Units: 6.

MAN 476  Group Processes and Team Dynamics
This student-centered course is designed to introduce students to the structures and processes that affect team performance as well as some of the common pitfalls associated with working in teams. Topics include team building, team development, problem solving, communication, decision-making in teams and designing effective teams. Exercises, assessment tools and group activities will provide students with the opportunity to gain insight and practice team-based skills. Case illustrations will also help students to discover the challenges in teamwork. Credit units: 3 ECTS Credit Units: 6. Prerequisite: IE 271 or MAN 361.

MAN 477  Financial Intermediation
The goal of the course is to provide theoretical and practical understanding of the financial intermediation especially commercial banking. The main topics are: the economic role of financial intermediation in producing and monitoring of borrowers; risk faced by financial intermediary's managers and methods through which these risks are managed; the rationale for regulation. The problem of adverse selection and moral hazard will be introduced in order to understand efficient functioning of the financial intermediaries. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 321 and MAN 322.

MAN 479  Sales Management
Sales managers are responsible for the strategy (planning), people and sales process (implementation) and performance (customer acquisition and retention). Sales managers must be able to develop the most effective human interactions and relationship nurturing among many stakeholders: salespeople, the firm's other functional managers and especially prospects and customers. In this course a wide range of topics will be explored such as: Personal Selling, Sales Agents, CRM/Sales Technology, Sales Compensation, Sales Forecasting, Sales Organization, Sales Promotions and Sales Strategy. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 335.

MAN 480  International Human Resource Management
This course aims to explore human resource management (HRM) within a comparative and international context. While international dimensions of HRM is critically discussed with participants who have a basic level of knowledge in HRM, policies and practices of multinational corporations (MNCs), particularly those from the USA, will be emphasised. The most significant substantive HRM issues, i.e. recruitment and selection, performance management systems, training and development, and labour relations will be covered within this framework through readings and using case studies. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MAN 262.

MAN 481  Financial Economics
This course covers the theoretical foundations of modern financial economics. The focus is on financial markets and the valuation of financial claims treated in those markets, under discrete time models. Topics analyzed include models of consumption and investment decisions under uncertainty; risk aversion; stochastic dominance; mean variance theory; equilibrium models of asset pricing (CAPM, ICAMP, APT); linear multifactor models; and incomplete markets. Credit units: 3 ECTS Credit Units: 6.

MAN 482  The Global Economy
Globalization became an all purpose catchword in public and scholarly debate as we began a new century. Governments attribute their country's economic problems to global forces that are beyond their control; business leaders justify downsizing of companies as necessary to prepare for globalization and advocates for local cultures blame the disappearance of tradition and culture on uncontrollable globalization. The objective of this course is to examine the economic, political and cultural aspects of globalization. In doing so, we will try to answer several questions related to the globalization phenomenon: What does globalization involve? Is globalization new? Is globalization driven by the expanding market? Does globalization make the world more homogeneous? Does globalization determine local events?, and Is globalization harmful? The goal is to assist the students in understanding the patterns and problems of globalization, which is likely to be a dominant concern of the twenty-first century. Credit units: 3 ECTS Credit Units: 6.

MAN 483  Entrepreneurial Management
The course aims to give additional tools and knowledge to graduating students to create their own business, or to acquire share of already running business or to become top executives who shape the future of companies in which they work. Lectures will be augmented by case discussions. Groups of students will do a term project in which an entrepreneurial example will be evaluated in detail. Throughout the semester, prominent businessmen and top executives will be invited to the class to share their experience through active participation of the students. Credit units: 3 ECTS Credit Units: 6.

MAN 485  Real Estate Finance
This course deals with the central issues in real estate finance and investment. Typical policies and procedures used in financing of residential, industrial, and commercial properties are discussed. Topics include methods of measuring rates of return, feasibility and appraisal processes, risk analysis, equity and debt financing vehicles. Real estate investment trusts and mortgage backed securities are also covered. Credit units: 3 ECTS Credit Units: 6. Prerequisite: IE 342 or MAN 321.
MAN 490 Business Case Analysis
Business case analyses and competitions provide opportunities to synthesize codified knowledge, to develop the skills of decision making in the face of ambiguity, to acquire a global view of management, to assess personal strengths and competencies, and thereby, prepare for a professional managerial career. This course aims to develop, in simulated settings, the skills of extracting information from data, identifying and contextualizing management problems within the frameworks of management theories, proposing solutions to multi-dimensional management problems and communicating ideas effectively. Teamwork, time management, written and oral presentation skills are to be stressed. The course also intends to prepare Bilkent business administration students for national and international case competitions. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MAN 321 and MAN 335 and MAN 401.

GRADUATE COURSES

MAN 509 International Business
This course will provide an understanding of international business as an essential part of Globalization. The international business environment will be evaluated in economic, cultural, political, and legal aspects to explore how international businesses are initiated and conducted. Economic Integration among nations will be discussed with emphasis on Europe. Methods of entry into foreign markets via licensing, franchising, joint ventures, coventures, and foreign direct investment will be reviewed providing actual real life examples. Credit units: 3 ECTS Credit Units: 6. Spr (F. Woolley)

MAN 525 Financial Economics
This course covers the theoretical foundations of modern financial economics. The focus is on financial markets and the valuation of financial claims traded in those markets, under discrete time models. Topics analyzed include models of consumption and investment decisions under uncertainty; risk aversion; stochastic dominance; mean variance theory; equilibrium models of asset pricing (CAPM, ICAPM, APT); linear multifactor models; and incomplete markets. Credit units: 3 ECTS Credit Units: 7.5. Spr (A. Altay-Salih)

MAN 528 Stochastic Models in Finance
The objective of the course is to introduce the basic ideas and methods of stochastic calculus and its applications in finance. First, topics such as stochastic processes, stochastic differential equations and stochastic control are discussed and their use in financial modeling are illustrated in numerous applications. The models to be studied include optimum consumption and portfolio selection problem, arbitrage pricing model, intertemporal capital asset pricing model, option pricing model, futures pricing model, term structures of interest rates and the capital structure of the firm. The course introduces the recent developments in asset pricing as well as providing the essential methods to understand the theoretical foundation of securities and evaluations under uncertainty. Credit units: 3 ECTS Credit Units: 6.

MAN 551 Decision Analysis
Decision analysis is an interdisciplinary field that derives from economics, psychology and quantitative modeling. This course is designed as an introduction to the basic concepts, principles and methods of decision analysis. The first part of the focuses on the prescriptive approach to decision making, topics covered include decision trees, value of information and utility theory. The second part of the course focuses on behavioral decision theory, which seeks to analyze how people actually make decisions. Topics covered include the heuristics and biases program of Kahneman and Tversky, consumer decision making and group decision making. Credit units: 3 ECTS Credit Units: 6.

MAN 555 Probability and Statistics
This course reviews the basic principles of probability and statistics prior to their development in more specialized quantitative research methods. It also provides a short introduction to some simple methods of data presentation and exploration, and some standard statistical tests. Topics include probability rules, distributions, densities, random variables, limit theorems, sampling distributions, estimations and basics of hypothesis testing. Credit units: 3 ECTS Credit Units: 7.5.

MAN 591 Independent Study II
Credit units: 3 ECTS Credit Units: 6. Spr (Z. Önder)

MAN 593 Research Paper I
Credit units: None ECTS Credit Units: 3. Aut (Z. Önder) Spr (Z. Önder)

MAN 594 Research Paper II
Credit units: None ECTS Credit Units: 3.

MAN 599 Master's Thesis Project
Credit units: None ECTS Credit Units: 22. Aut (Z. Önder) Spr (Z. Önder)

MAN 601 Research Methodology I
The objectives of the course are to (1) familiarize students with different modeling approaches through a selected set of articles, (2) provide an opportunity to each student to work individually on a research topic that might...
eventually lead to a dissertation topic, (3) improve writing skills and styles essential for publication, and (4) develop a scientific personality to be able to analyze, synthesize, and criticize the writings of others. Report writing assignments are frequent and, for most students, demanding. Credit units: 4 ECTS Credit Units: 8.

MAN 602 Research Methodology II
This course concentrates on certain quantitative and qualitative research methods that are essential for conducting the research projects formulated during Research Methodology I. In contrast to Research Methodology I, although a continuation of it, Research Methodology II is actively research oriented and each student is required to write a dissertation research. Development of writing skills and styles is essential. Credit units: 4 ECTS Credit Units: 7.

MAN 604 Qualitative Business Research
The course covers various aspects of survey designs and analysis issues including sampling questionnaire design, interviewing techniques and analytical strategies of survey data, a general survey of social science research techniques. Experimental and non-experimental research designs, measurement theory, reliability and validity, and an overview of statistical evaluation procedures are discussed. Credit units: 3 ECTS Credit Units: 7.5.

MAN 605 Qualitative Research
This course aims to introduce students to the philosophical foundations, design, conduct, and presentation of qualitative research. Issues of quality and methods of data collection, analysis, and interpretation will be emphasized. The course focuses on enabling students to experience the research process in the course of learning how to plan, execute, and evaluate qualitative research. Assignments and a term project provide experience and practice in data collection, analysis, and presentation. In this way, the role of various creative skills, including oral and written skills, in gathering, interpreting, and reporting on qualitative data are also emphasized. The seminar aims to provide an opportunity for learning from each other and by interacting with others in the class while students present materials and critically evaluate and discuss the readings. Students are encouraged to develop research relevant to dissertation or other projects of interest. Credit units: 3 ECTS Credit Units: 8.

MAN 607 Philosophy and Epistemology of Scientific Inquiry
This seminar aims to introduce students to the philosophical and epistemological foundations of science and scientific inquiry, fundamental issues distinguishing positivist versus post positivist approaches to research, and the types and issues of research design. Following a study of philosophy of science, epistemological issues, and alternative approaches, methodology and design (surveys, experiments, interpretive research) issues are discussed. Assignments, presentations, and term papers provide exposure to fundamental issues as well as practice in critical reading and thinking about a) scientific inquiry, b) evaluation (“goodness”) of research, and c) research methodology. The seminar provides an opportunity for thinking through and presenting well-developed thoughts about issues of science and research and learning from each other while students present and discuss the readings. Credit units: 3 ECTS Credit Units: 8. Aut (G. Ger)

MAN 608 Qualitative Business Research Methods I
This course aims to introduce students to the philosophical foundations and design of qualitative research. Issues of quality and methods of data collection, analysis, and interpretation will be emphasized. The seminar aims to provide an opportunity for learning from each other and by interacting with others in the class while students present materials and critically evaluate and discuss the readings. Students are encouraged to develop research relevant to dissertation or other projects of interest. Credit units: 1 ECTS Credit Units: 2.

MAN 609 Qualitative Business Research Methods II
This course aims to introduce students to the philosophical foundations, design, conduct, and presentation of qualitative research. Issues of quality and methods of data collection, analysis, and interpretation will be emphasized. The course focuses on enabling students to experience the research process in the course of learning how to plan, execute, and evaluate qualitative research. Assignments and a term project provide experience and practice in data collection, analysis, and presentation. In this way, the role of various creative skills, including oral and written skills, in gathering, interpreting, and reporting on qualitative data are also emphasized. The seminar aims to provide an opportunity for learning from each other and by interacting with others in the class while students present materials and critically evaluate and discuss the readings. Students are encouraged to develop research relevant to dissertation or other projects of interest. Credit units: 2 ECTS Credit Units: 6.

MAN 620 Financial Econometrics
This course covers methodological concepts to test the empirical relevance of theoretical models in finance. It will focus on the statistical properties of asset returns, tests for market efficiency and asset return predictability, the testing of asset pricing theory, and the estimation of time-varying volatility as well as the analysis of financial high-frequency data and market microstructure. Credit units: 3 ECTS Credit Units: 7.5.

MAN 621 Advanced Corporate Finance
The objective of this course is to discuss issues and models concerning corporate finance and the role of banks. Topics include the theory of the firm, capital structure, separation of ownership and control, causes and
consequences of particular structures of corporate ownership, performance and ownership structure, analysis of the principal-agent problem, agency costs and capital structures, the role of debts, models of debt, banks, design of bank loans, bankruptcy, post-bankruptcy and management turnover. Credit units: 3 ECTS Credit Units: 6.

MAN 623  Mathematics of Finance
This course covers discrete and continuous models for asset pricing, including topics such as binary tree models, Itô calculus, and martingale representation theorem, as well as selected topics from interest rate models and portfolio optimization. Credit units: 4 ECTS Credit Units: 7.5.

MAN 625  Debt Pricing
The objective of this course is to introduce some of the basic tools of debt and credit pricing while familiarizing the students with the institutional aspects of the debt and credit markets, and their derivatives. This is an introductory course with an emphasis on breadth rather than depth. Since the debt and credit markets are intertwined, the markets considered include government, agency, sovereign ("developed" and emerging market), corporate, mortgage pass-through and collateralized mortgage obligations), asset-backed (auto loans, home equity loans, credit card receivables, etc.) debt as well as interest rate and credit derivatives markets. After a review of the institutional aspects of these markets, following a crash course on basic probability and stochastic calculus, one and multi-factor interest rate models including the Vasicek, Cox-Ingersoll-Ross, Exponential Affine and Heath-jarrow-Morton models are examined. The interest rate derivatives considered include bond options, option embedded bonds, mortgage bonds, floating rate bonds, caps, floors, swaps, swaptions and the like. In the last part of the course, time permitting, pricing of the credit risky securities are studied. Starting with the seminal work of Merton, the structural and reduced-form credit risk models, including those of Lando, and Duffie and Singleton, are introduced, and pricing of defaultable debt as well as credit default swaps are discussed. Credit units: 4 ECTS Credit Units: 7.5.

MAN 627  Seminars in Corporate Finance
It is a doctoral seminar course covering major theories and empirical studies that have been developed in the area of corporate finance. The aim is to teach a class that will generate research ideas. Credit units: 3 ECTS Credit Units: 7.5.

MAN 628  Seminars in Investment Theory
It is a doctoral seminar course covering major theories and empirical studies that have been developed in the area of investment theory. The aim is to teach a class that will generate research ideas. Credit units: 3 ECTS Credit Units: 7.5.

MAN 631  Marketing Theory
This course aims to develop fundamental knowledge of and about marketing as a field of study and provoke critical thinking about the field. Readings and discussions examine the historical development of marketing thought and theory, as well as contemporary issues, alternative perspectives, and critical insights. The course considers the philosophical foundations of marketing practice and marketing thought and issues of scholarship and science in marketing. The course is interactive and involves critical discussion of the readings during both lectures and student presentations. Students search for possible dissertation topics and develop a preliminary dissertation proposal. Credit units: 3 ECTS Credit Units: 6.

MAN 632  Globalization Consumption and Development
The course examines the interface and interplay of marketing and its local and global environment-society, politics, ethics, culture, economy, technology, nature. The emphasis is on the role and consequences of marketing systems in different types of economies and societies, especially in marketizing economies or societies in transition in the global system. Role of marketing in development, sustainability, quality of life, and well-being is considered. Marketing is examined in the context of the contemporary issues and conditions of global media and culture, globalization and localism, consumption, poverty, minorities, ethnic groups, and consumer movements and organizations. Green and socially responsible marketing and ethical, legal, and ecological dimensions of marketing are also discussed. The course is interactive and involves critical discussion of the readings during both lectures and student presentations. Student search for possible dissertation topics and develop a preliminary dissertation proposal. Credit units: 3 ECTS Credit Units: 6.

MAN 633  Seminar in Marketing Strategy
This course is designed to provide doctoral students with a foundation in marketing strategy research. This course will identify, review, and critique a variety of theoretical perspectives that can be applied to areas including firm capabilities, marketing channels, strategic alliances, and firm boundaries. Credit units: 3 ECTS Credit Units: 6.

MAN 634  Advanced Consumer Behavior Theory I
This course deals with the understanding of the behavior, attitudes, preferences and decision making processes of people as consumers and psychological theories underlying consumer behavior. Some strategic implications of consumer preference formation, judgment and decision making are also addressed. Understanding consumers is a critical component of marketing to implement efficient marketing strategies. Principles from psychology as well as other social sciences are integrated to analyze consumer behavior. Credit units: 3 ECTS Credit Units: 7.5.
MAN 635  Consumer Culture Theory
This course aims to familiarize students with the main topics of interest within the field of consumer culture theory. Using key readings from consumer behavior literature as well as related readings from anthropology, sociology, cultural studies, and urban studies, the course spans different research traditions in studying consumers and consuming, and builds a knowledge base in theories of consumption. Credit units: 3 ECTS Credit Units: 7.5.

MAN 636  Theoretical Perspectives on Consumer Behavior Theory
This course details with the understanding of the behavior, attitudes, preference and decision making processes of people as consumers and the psychological theories underlying consumer behavior. Some strategic implications of consumer preference formation, judgment and decision making are also addressed. Understanding consumers is a critical component of marketing to implement efficient marketing strategies. Principles from psychology as well as other social sciences are integrated to analyze consumer behavior. Credit units: 3 ECTS Credit Units: 7.5.

MAN 656  Advanced Multivariate Statistics
The objective of this course is to introduce tools for multivariate analysis including multivariate ANOVA, principle components analysis, discriminant analysis, cluster analysis, factor analysis, structural equations modeling, canonical correlations and multidimensional scaling. Credit units: 3 ECTS Credit Units: 6.

MAN 681  Readings in Operations Management I
This is a doctoral level reading/seminar course which intends to familiarize students with current research in Operations Management, in terms of models and methodologies, through guided reading and discussion of recent works. Each selected work will provide both a basis for introducing the seminal works in the area and/or employed methodologies and an opportunity for the participants to generate new ideas and research problems. The objective of the course is to supplement the transfer of codified knowledge in a classroom setting with exposure to the mindset of scholarly research. The rigorous discussion and exchange of ideas are intended to help students formulate their own research agenda. Credit units: 3 ECTS Credit Units: 4.

MAN 682  Readings in Operations Management II
Continuation of MAN 681. Credit units: 3 ECTS Credit Units: 4, Prerequisite: MAN 681.

MAN 699  Ph.D. Dissertation
Credit units: None ECTS Credit Units: None. Aut (Z. Önder) Spr (Z. Önder)

MBA 500  Bilcamp
This is an extended MBA orientation. It will be used to review some background that is important for the program, as well as team building. It will be run as a one-credit orientation course during the week before classes start in September. Possible skills components to be included are calculus review, basic statistics, intermediate excel (modeling), presentation skills, group skills (team work), research skills, leadership skills and emotional intelligence. Credit units: 1 ECTS Credit Units: 1. Aut (S. Özyıldırım)

MBA 502  Macroeconomics
Macroeconomic conditions play important roles in managers’ decision and firm performances. For instance aggregate income, unemployment and inflation affect profitability, borrowing rates and investment plans of the firms. The topics that will be introduced are: economic growth, unemployment, inflation, money demand and supply, interest rates, balance of payments, foreign exchange markets and exchange rates. Credit units: 3 ECTS Credit Units: 6. Spr (L. Akdeniz)

MBA 503  Microeconomics
This course summarize the theory and practice of microeconomics for managers. Theory of the consumer and the firm are the primary areas of the course. In addition, different market structure (perfect competition, monopolistic competition, oligopoly and monopoly), choice under uncertainty and some topics in financial economics will be covered. Credit units: 3 ECTS Credit Units: 6. Aut (L. Akdeniz)

MBA 511  Accounting
In this course, students will be able to aware the need for accounting records and reports and the basic principles underlying the accounting cycle and preparation of financial statements. Emphasis is given to accounting as an aid to managerial decision making. In addition, topics such as budgeting, funds flow and the basics of cost accounting are discussed. Credit units: 3 ECTS Credit Units: 6. Aut (M. S. Uslu)

MBA 512  Managerial Accounting
The course focuses on the information development and analysis, presenting and communicating information to make it useful, and bring in accounting, financial and business information into the decision process. As students learn the fundamental concepts of management accounting, an attempt is made to identify problems with current accounting and managerial conventions. Credit units: 2 ECTS Credit Units: 4. Spr (N. Akman)
MBA 513 Financial Statement Analysis
This course introduces the tools of financial and credit analysis. Analysis of the relation between financial accounting data and firm performance is emphasized. Characteristics of accounting ratios and their relations to market and industry factors, time series behavior of earnings and forecasting models are also investigated. Credit units: 2 ECTS Credit Units: 4. Spr (N. Akman)

MBA 517 Fixed Income Securities I
The course summarizes the theory and practice of fixed income securities and markets. It covers topics such as Bond prices, discount factor and arbitrage; spot rates, forward rates and yield to maturity; curve fitting and one-factor measures of price sensitivity; price sensitivity based on parallel yield shifts; the science of term structure models; short-rate process and the shape of the term structure, the art of term structure models: drift, volatility and distribution; multi-factor term structure models: trading with term structure models; A standardised reference framework is used for each concept examination of market and institutional data, model formulation, its analytical specification and solution and, finally, numerical computation and applications. The more practical facet to the course is to expose students to current bond management practices and real-world fixed income securities. Numerous examples will be used to raise students’ awareness of the problems faced by bond managers and fixed-income analysts in today’s financial service industry. Credit units: 2 ECTS Credit Units: 4.

MBA 518 Fixed Income Securities II
The continuation of MBA 517 Fixed Income Securities I. Credit units: 2 ECTS Credit Units: 4.

MBA 519 Financial Institution and Markets
In this course, the history, structure and functions of financial institutions (banks, insurance companies, mutual funds, etc.) as well as central banking are introduced. The existence of money, financial intermediaries, financial markets and the necessity of regulations are discussed within domestic and global context. Topics include why banks and other financial institutions exist, how asset prices are determined, what is the risk and term structure of interest rates and what is efficient market hypothesis. All major markets and their respective financial instruments are studied to develop the necessary quantitative toolset for sensible decision making in an increasingly global economy. Credit units: 3 ECTS Credit Units: 6. Aut (A. B. Tanyeri)

MBA 520 Risk Management I
This course introduces the risk management and the derivatives markets. The concept of risk management and the question of why risk management is vital for modern financial institutions will be explored. The topics will include forwards, futures swaps, options, hedging and portfolio insurance, value at risk. Credit units: 2 ECTS Credit Units: 4.

MBA 521 Risk Management II
Continuation of MBA 520. Credit units: 2 ECTS Credit Units: 4.

MBA 522 Corporate Finance
A course in the theory of corporate finance with emphasis on investment and financing decisions of the firm. Topics include valuation, capital budgeting, capital structure, cost of capital, dividend policy, financial statement analysis, profit planning, financial forecasting, and working capital management. Credit units: 3 ECTS Credit Units: 6. Aut (K. Aydoğan) Spr (K. Aydoğan)

MBA 524 Investment Analysis
Risk and return characteristics of various investment instruments such as common stocks, bonds, convertibles and options are considered. Modern portfolio theory is discussed and related concepts are used in constructing portfolios for individual and institutional investors. Alternative portfolio management strategies and financial analysis and valuation of corporate securities are also covered. Credit units: 3 ECTS Credit Units: 6. Spr (Z. Önder)

MBA 525 Investment Analysis II
Continuation of MBA 524. Credit units: 2 ECTS Credit Units: 4.

MBA 526 International Finance
This course introduces the environment, theory and practice of international finance. The major topics covered are: the foreign exchange market and price elasticities of trade, the Keynesian Model of Income and the trade balance, the Monetary Approach to the balance of payments, introduction to capital mobility: The Mundell-Fleming model. In the second part of the course international monetary system, the European monetary system, financial liberalization and stabilization in LDC’s are covered. Credit units: 3 ECTS Credit Units: 6.

MBA 527 Financial Intermediation
The goal of the course is to introduce theoretical and practical understanding of the financial intermediation especially commercial banking. The main topics are: the economic role of financial intermediation in producing and monitoring of borrowers; risks faced by financial intermediary’s managers and methods through which these risks are managed; the rationale for regulation. The problem of adverse selection and moral hazard will be introduced to identify efficient functioning of the financial intermediaries. Credit units: 2 ECTS Credit Units: 4.
MBA 529  Real Estate Finance
The basic aims of this course are to apply basic financial economics theory to the real estate financial markets and decisions and to demonstrate how changes in economic and financial environment affect real estate decision making. Topics include fixed adjustable rate mortgages, other creative real estate financing methods, individuals’ mortgage choice and refinancing decisions, secondary mortgage and mortgage-backed securities. Credit units: 2 ECTS Credit Units: 4.

MBA 530  Marketing Research I
This course primarily focuses on the foundations of the qualitative research. Qualitative research involves collecting, analyzing, interpreting, and reporting data by observing what people do and say. More specifically, this course discusses qualitative research design, sampling issues, data collection techniques such as in depth interviewing, focus groups, observations, case studies, and constructive techniques, and analysis techniques such as content analysis. Credit units: 2 ECTS Credit Units: 4.

MBA 531  Marketing Research
After a brief review of the examination of marketing information needs and resources including the collection and dissemination of primary and secondary data, this course focuses on quantitative research in marketing. More specifically, this course discusses problem definition, research design, sampling techniques, data collection and analysis. An overview of methods of measuring consumer reactions to project characteristics, effectiveness of advertising, and other promotional devices are also discussed. Credit units: 3 ECTS Credit Units: 6. Spr (D. Kandemir)

MBA 532  Marketing Management
Survey of the marketing concept, consumer behavior, segmentation, marketing research, competitive analysis, and marketing decisions involving products, price, distribution and promotion are discussed in this course. Analytical, strategic and decision making aspects are emphasized. Cases are used for application of the principles discussed. Credit units: 3 ECTS Credit Units: 6. Spr (Ö. Sandıkçı)

MBA 533  Marketing Strategy
The objective of this course is to introduce the conceptual background and analytical tools that are used in solving strategic marketing problems in a contemporary economy. Text and assigned readings furnish the conceptual background for effective analysis of marketing problems; the cases utilize practical application tools for making strategic marketing decisions. Credit units: 2 ECTS Credit Units: 4.

MBA 535  Consumer Behavior I
This course introduces micro aspects of consumer behavior and its implications for marketing strategy. Students will be able to discuss consumer needs and motivations, exploring both the rational and emotional bases of consumer actions. Moreover, students will be able to analyze how consumers learn, store and recall information about products, form attitudes and make decisions about consumption activities. Credit units: 2 ECTS Credit Units: 4.

MBA 536  Consumer Behavior II
This course introduces macro aspects of consumer behavior and its implications for marketing strategy. Students are able to discuss how the consumer functions as a part of a larger social structure including social class, subcultures and age groups. The relationship between consumption and the expression of cultural values and lifestyles and the effects of globalization on consumption will also be discussed. Credit units: 2 ECTS Credit Units: 4.

MBA 537  Brand Planning for New and Existing Products
Brand Planning provides the framework to build a brand-equity driven sustainable business. Brand equity is one of the most valued assets a firm can leverage with a proven link to higher stock market valuations and returns. The course will start with the customer and will explore what it takes to build a long-term customer experience and mutually rewarding relationship. After assessing the global competitive marketplace, and the course will move on to defining the business, creating a vision, positioning, setting objectives, developing a competitive marketing strategy and the marketing mix program. The knowledge effects will be measured and analyzed: brand awareness, disposition, propensity, expectations, attitudes and behavior, and the resulting level of brand equity will be discovered. And the plan needed to give the brand everlasting life through a superior value proposition over the current product life cycle and new cycles created from innovative progress will be determined. The course is organized around multiple methods of learning including text readings, case analyses and market-based visitor presentations. Credit units: 2 ECTS Credit Units: 4.

MBA 538  Marketing Communications
This course introduces the strategic management of marketing communications. It aims to familiarize students with different marketing communications tools, such as advertising, sales promotions, electronic marketing, sponsorship programs, and event marketing that marketers use when reaching to their customers. The focus rests on developing analytical skills needed for planning, integrating, and evaluating communications campaigns. The course combines theory with examples, cases, and projects. Credit units: 2 ECTS Credit Units: 4.
MBA 540 Manufacturing Strategy
In this course, students will be able to identify manufacturing strategy formulation and decision making. Marketing-manufacturing interface, process profiling, product profiling, focused manufacturing, infrastructure development will be discussed. Cases are used to demonstrate the manufacturing strategies applied in private and public sector. Credit units: 2 ECTS Credit Units: 4.

MBA 541 Procurement and Inventory Systems
The deterministic and the probabilistic models and algorithms for single-item single-source inventory systems are defined. Topics such as price increases, product quality, pull control and Kanban systems, JIT methods are discussed. Extension to systems with multi-item and multi-source characteristics. Credit units: 2 ECTS Credit Units: 4.

MBA 542 Production and Operations Management
This course familiarizes the student with the nature and content of methods of quantitative analysis employed in production/operations management decision making; enables him/her to identify, formulate and solve operations management problems that s/he may encounter in his/her professional careers. Course themes include strategic impact of operations management; global trends/practices in operations management; product/service design and development; design of production and work systems; total quality management; supply chain management. Credit units: 3 ECTS Credit Units: 6. Spr (E. Berk)

MBA 543 Pricing Strategies and Tactics
Pricing is one of the most important and challenging business decisions with short run and long run implications. This course is designed to provide the students with the necessary tools and techniques to make effective pricing decisions, such as economics of pricing, differentiated pricing, dynamic pricing, markdown pricing and customer perspectives of pricing practices. Applications of pricing and revenue optimization techniques in a variety of industries such as media broadcasting, electricity pricing, and event ticketing will also be covered. Credit units: 2 ECTS Credit Units: 4.

MBA 544 Revenue Management
Revenue management integrates pricing with sales and inventory management strategies, and can be used in managing demand decisions such as allocating capacity to different market segments, and pricing products across categories and over time. This course aims to introduce students to the basic tools and techniques of revenue management as well as its applications in industries such as airlines, hospitality and fashion retail. Credit units: 2 ECTS Credit Units: 4.

MBA 545 Service Operations Management
Service Operations Management is designed to familiarize a students to management of service industries. The role of services in an economy and the distinctive characteristics of service operations will be identified. In addition, the strategic service concept, competitive service strategies, the role of information, service delivery systems and management of day to day operations will be described. Upon successful completion of this course, students will be able to discuss strategies to achieve worldclass services. Credit units: 2 ECTS Credit Units: 4.

MBA 546 Supply Chain Management
This course introduces the essential elements of Supply Chain Management, which consist of controlling and coordinating all the activities that take place from the raw material purchasing to the end customer satisfaction; such as order processing, purchasing, material storage and handling, production scheduling, packaging, transportation and setting customer service standards. Students will be able to aware how these activities are successfully modeled, planned, and controlled in manufacturing and service industries are addressed. They will also discuss decisions and strategies regarding transport and inventory, the most important parts of Business Logistics for a firm. The course is augmented with case studies to facilitate discussion and to gain an understanding of basic principles. Credit units: 3 ECTS Credit Units: 6. Spr (N. Gómez)

MBA 548 Project Management
In this course, students familiarizes the project management area from a management perspective. Topics include project selection, project organization, budgeting and cost estimation, and project auditing. Project planning and control techniques, such as CPM and PERT, are also covered. Credit units: 3 ECTS Credit Units: 6.

MBA 550 Service Operations Management II
Continuation of MBA 545. Credit units: 2 ECTS Credit Units: 4.

MBA 551 Probability and Statistics
Uncertainty is a key concept in business decision making. Given the incomplete information in their environments, business decision makers are confronted with the challenging task of making "good" decisions in the face of uncertainty and risk. Probability provides the mathematical language of uncertainty; while statistics provides a toolbox for the collection, analysis and synthesis of data to aid in decision making. Within this framework, this course aims to provide the concepts and principles of a variety of introductory statistical tools and techniques.
The emphasis of this course is on the themes of testing hypothesis, correlation and regression, analysis of contingency tables, analysis of variance, and time series. Credit units: 3 ECTS Credit Units: 6. Aut (C. D. Yenigün)

**MBA 552 Management Information Systems**

Internal control helps an organization accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes. Management information system is a subset of the overall internal controls of a business. This course familiarizes students with the nature and content of overall internal controls of a business covering the application of people, documents, technologies, and procedures by management accountants to solve business problems that you may encounter in your professional careers. Credit units: 2 ECTS Credit Units: 4.

**MBA 553 Data Models and Decisions**

This course introduces students the fundamental techniques of using data and management science tools and models to think structurally about decision problems, make more informed management decisions, and enhance decision-making skills. Topics include linear, discrete, and non-linear optimization and simulation modeling, as well as multi-criteria optimization. Spreadsheet models and spreadsheet-based software packages will be used extensively. Credit units: 3 ECTS Credit Units: 6. Aut (E. Erel)

**MBA 561 Management**

Managing successfully in the chaotic and dynamic world of 21st Century business demands a wide range of management skills and understanding. This course familiarizes students to these new skills and understandings in its three major components: (1) The Fundamentals of Modern Management: concepts, theories, and models of effective management. (2) Competing by Design: organizational structure as the critical tool for implementing corporate strategies. (3) The Management of Organizational Behavior in order to achieve a competitive advantage. Credit units: 3 ECTS Credit Units: 6. Aut (J. Couvas)

**MBA 562 Human Resource Management**

Human resource management (HRM) is one of the major functional areas in management. It is now widely accepted that all managers need to be aware of HRM to successfully deal with various managerial issues. In this course, it is aimed to give MBA students with little or no prior knowledge of HRM an academic understanding the subject. The development of HRM as an academic field is critically explored in its historical context, with a special emphasis on the differences between personnel management and HRM. Various functions and dimensions of HRM (i.e. recruitment and selection, training and development, performance management, etc.) are defined and discussed, by using case studies and real examples both from Turkey as well as from abroad. Contemporary issues around HRM (e.g. discrimination and diversity, downsizing, industrial relations, etc.) are also explored. Upon successful completion of the course, students will be able to answers to the following questions: firstly, why and how is HRM one of the most significant management functions? and secondly, who does HRM in organizations? Credit units: 2 ECTS Credit Units: 4. Spr (K. Z. Sayım)

**MBA 563 Group Processes and Team Dynamics**

This course is designed to introduce students to the structural characteristics of teams including types of teams, size, composition, team roles and norms. The emphasis will be on team building and development, team design and effectiveness. Exercises, assessment tools and group activities will provide students with the opportunity to gain insight and practice team-based skills. Case illustrations will further help students to discover the challenges in teamwork. Credit units: 3 ECTS Credit Units: 6. Aut (Z. Aygün Karakıtağlı)

**MBA 565 Business Ethics**

In this course individual, organizational, and macrolevel issues in business ethics are examined. The course aims to increase ethical awareness and it is designed to assist the student as a potential businessperson to make more informed ethical decisions. To accomplish this objective, ethical issues and dilemmas that managers and organizations may face are discussed and both descriptive and normative models of unethical and ethical decision making in business are analyzed. Credit units: 2 ECTS Credit Units: 4.

**MBA 566 Change Management**

Edward Deming said in an interview that "we do not have to change, because staying in business is not compulsory!!" Charles Darwin wrote that "it is not necessarily the strongest or the most intelligent who survive, but those who adapt and change." This course presents organizational change as an absolute necessity for all organizations that wish to become or remain competitive in the 21st Century. It explores the forces causing the need for change, the current models utilized for managing change, and the reasons why over 60 fail. Case studies, team projects, and individual research will constitute a major portion of this course. Emphasis will be placed on the practicalities of managing change as well as on the supporting research. Credit units: 3 ECTS Credit Units: 6.
MBA 568 Enterprise and Innovation Management
This course covers approaches to the study of entrepreneurship and discusses challenges that companies face in identifying, creating and exploiting opportunities for innovation on a systematic basis. Within this context, family businesses and the private sector development and innovation in Turkey will also be explored. Credit units: 3 ECTS Credit Units: 6. Aut (O. Örge)

MBA 570 International Business I
In this course, students will be aware how international business is an essential part of globalization. The international business environment will be defined in economic, cultural, political, and legal aspects to explore how international businesses are initiated and conducted. Economic integration among nations will be discussed with emphasis on Europe. Methods of entry into foreign markets via licensing, franchising, joint ventures, coventures, and foreign direct investment will be reviewed providing actual real life examples. Credit units: 2 ECTS Credit Units: 4.

MBA 573 International Business II
Credit units: 2 ECTS Credit Units: 4.

MBA 574 EU Integration
The course is split into two equally important parts: an introduction to EU Law Making with special emphasis on EU case law and how business can influence the decision-making process as stakeholders; and an introduction to the need for the supremacy of economic harmonisation over political integration in the European Union of 25 after the initial defeat of the European Constitution. Topics include besides others: The EU institutions and their functionality in EU Law Making/EU case law/Public procurement and access to public contracts for EU business/The 35 acquis chapters/Economic policies in other New Member States/Welfare state vs. Anglo-Saxon liberalism/Cleavages and issues in both Turkey and the EU. Credit units: 2 ECTS Credit Units: 4.

MBA 576 Business Plan Development
This course concentrates on business plans as an essential part of starting a business and also demonstrates business plans including determination of the contents and will include the assessment of actual plans. Upon the completion of the course, students will be able to incorporate the contents of the core management courses. In addition, student will be prepare and evaluate the components of a business plan. Credit units: 2 ECTS Credit Units: 4. Aut (M. Akman)

MBA 578 Human Resource Management II
Continuation of MBA 562 Human Resource Management I. Credit units: 2 ECTS Credit Units: 4. Spr (K. Z. Sayım)

MBA 579 Behavioral Dynamics of Organizations
This course is designed to provide a background for understanding the behavioral dynamics of organizations. The course aims to provide students with an overview of the different topics and issues that guide and explain behavior (in organizations) that in turn influence the functioning, success and failure of organizations. The primary goal of this course is to improve understanding of how individuals behave in organizational settings through a comprehensive analysis of the essential topics of organizational theories and management. In doing so, the emphasis of the course will be on approaching these issues from a managerial standpoint and will concentrate on individual, group and organizational level implications of the aforementioned behavioral dynamics. Credit units: 3 ECTS Credit Units: 6. Spr (C. I. Göğüş)

MBA 580 Sales Management
In this course, students familiarize with the activities functions, challenges and opportunities of the sales force manager, analyzes the key elements of the sales strategy, and shows how an effective sales strategy supports the overall marketing effort. Design of sales organization structure, recruitment, selection, training, motivation, assessment and compensation of salespeople will also be discussed. Credit units: 2 ECTS Credit Units: 4.

MBA 582 New Product Design and Marketing
New products and services are vital to the success of all companies and their brands. However, innovation is risky and most new products fail in the marketplace. Ineffective marketing is the primary cause of new products failures whose financial impact to the economy is significant. Thus, expertise in the marketing and design of new products is a critical skill for all managers, inside and outside of the marketing department. In this course, we focus on the tools and techniques associated with analyzing market opportunities and then designing, testing and introducing new products and services. Both quantitative and qualitative approaches are demonstrated. In particular during the course, students will analyze real case studies and competitive team projects to apply the new product development process, market entry strategies, how to generate new products ideas, mapping customer perceptions, segmentation, product positioning, forecasting market demand, and product design. Credit units: 2 ECTS Credit Units: 4.

MBA 584 Special Topics in Business Administration
Each semester a different topic is covered in this course. Examples include E-commerce, product Design and Brand Planning. Credit units: 2 ECTS Credit Units: 4.
MBA 591  Business Strategy
Business strategy is concerned with managing the competitive position and long-term development of the enterprise in order to ensure its survival and success. In this capstone course, students will be able to synthesize the previous training in functional areas to address the evaluation, formulation and implementation of corporate and business level strategies in relation to the firm's environment. Students also acquire familiarity with the principal concepts, frameworks, and techniques of corporate and business strategy and strategic management: gain expertise in applying these concepts, frameworks, and techniques in order to discuss the reasons for good or bad performance by an enterprise; and generate, evaluate and recommend strategy options for an enterprise. 
Credit units: 4 ECTS Credit Units: 8. Aut (J. Covas)

MBA 592  Business Practice
The business practice course will require students to either complete a management consulting project or a business plan for an organization (company, government branch, NGO, or non-profit enterprise). Projects will be completed in groups of three or four. In this course, students will be able to propose a structured analysis, a decision support tool, a report, and/or other deliverables dictated by the organization in their terms of reference with the students. Credit units: 4 ECTS Credit Units: 8. Aut (E. Berk) Spr (E. Erel)

MBA 597  Business Strategy Simulation
In this course, students participate in an online strategy game called CAPSTONE®. This game is used by the major US and European business schools and most of the Fortune 500 corporations. Credit units: 1 ECTS Credit Units: 2.

MBA 600  MBA Project I
This course is designed to guide students to study a business related-research topic. Students must finish their proposal and literature review during this course. Credit units: 3 ECTS Credit Units: 6. Spr (C. I. Göğüş)

MBA 631  Competitive Marketing Strategy
Competitive Marketing Strategy is a rigorous course that focuses on the vital skills that all business managers need to know in order to create winning strategies as you face competitive forces at the product and service level. The premise of the course is that firms are successful when they implement strategies that create and capture value. Thus, the objectives of the course are to learn how to (a) analyze competition, category, company, customers and consumers in specific marketplace situations; (b) create strategies that maximize competitive advantages in gaining economic profit; and (c) formulate plans to implement those strategies. You'll not just be developing strategy; you will also learn to become a strategy critic when you serve on an executive board examining, questioning and voting on another student team's strategic plan for a case study. In addition, you will gain valuable experience as you fine-tune verbal and written presentation skills. The course consists of lectures and case presentations. Topics covered include both the process and content of strategic action and interaction; measuring and mapping value; strategic models; brands and other major sources of competitive advantage; methods for comparing competitive offers and strategies; scenario analysis; competitive signaling and competitive intelligence. Credit units: 2 ECTS Credit Units: 4.

MBA 632  E Commerce and Internet Marketing
E-commerce & Internet Marketing is a combined intensive course designed to prepare students to be strategic decision makers in firms (small or large) that are impacted by emerging digital technologies and interested in harnessing the power of the web to grow their business. The rise of the internet and its proliferation as a mass medium has transformed the traditional role of marketing. Business has become more interactive, individualized and efficient. And according to folk at the MIT Media Labs, "the best is yet to come." On the e-commerce side, we examine commercial opportunities created by information technology. We study the enabling infrastructure, its application to fundamental business processes, and strategies in pursuing electronic commerce initiatives. In order to grow and profit from an e-commerce business, we then focus on developing online marketing strategies and tactical plans in response to evolving online buyer profiles, attitudes and behaviors. Students will be exposed to the tools necessary to identify appropriate target segments, develop product opportunities, price in a real-time environment, maximize access, build a brand and create long term profitable relationship equity. Credit units: 2 ECTS Credit Units: 4.

MBA 662  International Human Resource Management
This course aims to explore human resource management (HRM) within a comparative and international context. While international dimensions of HRM is critically discussed with participants who have a basic level of knowledge in HRM, policies and practices of multinational corporations (MNCs), particularly those from the USA, will be emphasized. The most significant substantive HRM issues, i.e. recruitment and selection, performance management systems, training and development, and labour relations will be covered within this framework through readings and using case studies. Credit units: 2 ECTS Credit Units: 4.

MBA 671  Growth Through Globalization: Creating and Managing the International Enterprise
The purpose of this course is to familiarize students with the knowledge and skills of how to apply management theory and practical tools used by managers in the process of the globalization of the enterprise, whether an
MNC or SME, already established internationally or aspiring at entering foreign markets. The course covers the key aspects of international expansion, from opportunity evaluation to decision making in the selection of target countries; political analysis affecting forms of market-entry; quantitative and qualitative success factors; implementation project management in a multicultural and multiple stakeholder environment; day-to-day management challenges; and investment considerations. It also addresses particularities of competition in the global marketplace, strategic and operational focus similarities and differences between selected industry sectors, and highlights new possibilities for revenue growth through penetration of emerging markets. Credit units: 2 ECTS
Credit Units: 4. Spr (J. Couvas)

MBA 672 Leadership for International Managers
This course aims at familiarizing students with the knowledge and skills for recognizing leadership patterns and developing competencies and attitudes that will enhance their own competitiveness in the corporate arena and contribute to developing their personal managerial styles. It combines management theory and practical tools used by managers to carve a leading role for their organizations? Whether commercial enterprises or not-for-profit organizations? in the global environment, taking into consideration the impact of cultural diversity and the increasing importance of the emerging markets on drawing and implementing international strategies successfully. Credit units: 2 ECTS Credit Units: 4. Spr (J. Couvas)

MBA 673 International Business Strategy
Business conducted internationally entails the consideration of a far greater range of variables and associations than business conducted in the home country. Accordingly, in this course, students are able to learn their environment, markets, institutions, challenges, strategy, and operations of international and cross-cultural business. Upon conclusion of this course, students should: (a) become sensitized to the urgency and challenges of international business for the contemporary enterprise; (b) have substantial understanding of fundamentals of international business with respect to major world markets, their environments and consumers; (c) understand basic managerial requirements for the successful performance of firms in international business; (d) be able to fit in quickly and perform in the international business operations of any firm. Credit units: 2 ECTS Credit Units: 4.

MBA 674 Global Supply Chain Strategy
Supply chain management is a fundamental role for maximizing the performance of the supply chain. The course starts with an introduction to supply chain management and reviews the key competitive priorities of quality, cost, speed, and the right product mix along with the supporting philosophies of just-in-time/lean, total quality management/six sigma, and theory of constraints. Key performance measures are identified, supply chains of different companies are discussed and some of the key areas to improve to support the competitive priorities and the performance measures are addressed. These areas include supply chain alignment, forecasting partnerships, strategic sourcing decisions, achieving innovation and resilience across the supply chain, reduction of cycle-times, speedy delivery to the markets, and balancing the global risks and returns across supply chains. Credit units: 2 ECTS Credit Units: 4.

MBA 675 Enterprise Resource Planning (ERP) Systems: Strategy and Practice
This is a managerial overview course for Enterprise Resource Planning Systems implementations. With this course, the students are expected to become familiar with the whole Enterprise Systems implementation life cycle from deciding to implement to post-implementation support. Some of the strategic issues that will be covered are implementation planning, organizational change management, knowledge management, business process reengineering, best practices, implementation methodologies and project management for ERP systems. This course is the first step to prepare the students to take part in ERP implementation project as a business user, business manager, implementation team member or to consider other ERP related careers. The course will also give the ability to hear experiences of ERP professionals in the United States (through video presentations). Credit units: 2 ECTS Credit Units: 4.

MBA 676 Globalization Branding and Emerging Markets
This course focuses on the impact of globalization on the emerging markets and examines the marketing strategies of domestic and foreign firms operating in emerging economies. The course consists of three subsections: the consumptioncape and business environment of the emerging markets; the multinationals operating in the emerging markets; emerging giants - opportunities, risks, and strategic alternatives facing emerging market companies. All three sections are supported by cases. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Sandıkçı)

MBA 677 Negotiating Skills for International Executives
This course aims at familiarize the students with knowledge and skills to understand the dynamics of cross-cultural negotiations in the global business environment and apply in practice proven techniques in a variety of circumstances. After an initial skill assessment of the participants, theory and cases inspired from real-life situations alternate in order to immerse the participants and equip them with first hand experience. role playing, feed-back, self-evaluation, and multi-media aids are some of the pedagogical tools used. One-on-one, multiparty, cross-border, government, mediation, alternate conflict resolution approaches are addressed, to degrees tailored to the profile and needs of the students. The topic of negotiations in the work-place for personal achievement is
also covered. Assignments are used for ongoing evaluation, and final examination is in the form of a short essay. Credit units: 2 ECTS Credit Units: 4.

EMBA 510 Foundations of Management and Human Resources in Organizations

Foundations of Management: The participants of this course will be able to identify and analyze the theories, approaches, concepts, knowledge, techniques, applications, and skills necessary and helpful to manage business organizations in a global and complex environment, where stakeholders, ethics and social responsibility have become important topics and issues. Credit units: 6 ECTS Credit Units: 12.

EMBA 520 Law

The aim of this course is to have the participants to define and discuss the obligation law, formation and validity of legal transactions; In addition, the participants will learn the basic concept of commercial enterprises law and negotiable instruments law, partnerships and corporations, different aspects of public companies, principals of bankruptcy law, forcing of payments of debts, order of payment, forced sale and bankruptcy, legality, sources and application of the criminal laws. Credit units: 5 ECTS Credit Units: 10.

EMBA 530 Economics

Fundamentals of Macroeconomics: The participants will be able to recognize the macroeconomic environment in which businesses operates. They will define and discuss economic growth; unemployment; inflation; money supply; money demand; interest rates; trade; balance of payments; and exchange rates in order to analyze and examine the functioning of aggregate economy. Financials Markets and Institutions: Upon successful completion of this course participants will examine the role and functioning of the capital and money markets as a device for the allocation of resources, the channeling of investable funds, and reallocation of risk. They will also discuss the function of financial intermediaries operating in these markets, and international financial relations. International Finance and Turkish Economy: The participants will have an understanding of how and through which channels international financial environment affects the local economy. They will be able to discuss the international monetary system, trade balance, balance of payments, adjustment mechanisms, parity conditions, exchange rate determination, forward-looking market instruments (options, forwards, futures), interest rate and exchange rate risk management and financial crisis. Credit units: 2 ECTS Credit Units: 4. Aut (A. Altay-Salih) Spr (A. Altay-Salih)

EMBA 531 Accounting

Financial Accounting: The participants of this course will be able to analyze accounting records and reports and the basic principles underlying the accounting cycle and preparation of financial statements. Emphasis is given to accounting as an aid to managerial decision making. In addition, the participants will be able to discuss topics such as budgeting, funds flow and the basics of cost accounting are discussed. Managerial Accounting: The aim of the course is to introduce the participants to the main issues in management accounting. Special emphasis will be put on decision making at different levels of management, and on data and reports to facilitate the decision making process. Topics covered include: cost volume profit analysis, cost behavior, costing systems, budgeting, unit cost calculations, pricing, variance analysis, responsibility accounting and performance evaluation. Financial Statement Analysis: The participants of this course will be able to develop an ability to analyze financial information as an aid to financial decision making. The emphasis will be on the usefulness of information for various groups, such as investor’s of the firm, security analysts and creditors. Basic financial statement analysis tools, such as ratio analysis, cross-sectional and time-series analysis, statistical forecasting models will be covered. Credit units: 4 ECTS Credit Units: 8. Aut (A. Altay-Salih) Spr (A. Altay-Salih)
EMBA 532 Corporate Finance
Valuation and Financial Mathematics: This course is intended to serve as a basic introduction to financial mathematics. The participants will have a perspective on the valuation of financial instruments (futures, options, etc.) and their risk-management. The purpose of the course is to introduce participants to the stochastic techniques employed in derivative pricing. Corporate Finance: The participants of this course will be able to identify and discuss valuation, capital budgeting, capital structure, cost of capital, dividend policy, financial statement analysis, profit planning, financial forecasting, and working capital management. Risk Management: Upon successful completion of this course the participants will be able to define and discuss the concept of risk management and the question of why risk management is vital for modern financial institutions will be explored. The topics will include forwards, futures, swaps, options, hedging and portfolio insurance, value at risk. 

Credit units: 3 ECTS Credit Units: 6. Aut (A. Altay-Salih) Spr (A. Altay-Salih)

EMBA 540 Decision Making
Probability and Statistics: This course is intended to introduce a framework for thinking about problems involving uncertainty and, building on this framework, and developing tools for analyzing and interpreting data. Spreadsheet Modeling and Simulation: This course introduces the spreadsheet tools that are specifically useful in business life. The participants will be able to demonstrate proficiency in these tools including conditional formatting, data validation, what-if analyses (data tables and goal seek), filtering and pivot tables, financial functions, and an introduction to macros. An introduction to simulation and mathematical modeling using spreadsheets (solver tables) will also be covered. Management Information Systems: The participants of this course will learn how to use and manage information technologies to revitalize business processes, improve business decision making, and gain competitive advantage. Particular emphasis is placed on Internet technologies that provide a platform for business collaboration processes among all stakeholders in today’s networked enterprises and global markets. The course is built on five major areas of information systems knowledge needed by business professionals: Foundation Concepts, Information Technologies, Business Applications, Development Processes, and Management Challenges. Managerial Decision Making: Managerial decision making draws on insights from psychology, economics and management to provide a realistic portrayal of human judgment and decision making. Founded on descriptive and prescriptive approaches, the participants will have a perspective on the relationship between technology transfer and innovation, operational management challenges.

Credit units: 3 ECTS Credit Units: 6. Spr (A. Altay-Salih)

EMBA 541 Operation Management
Operations Management: This course addresses the management of operations in manufacturing and service firms. The participants will be able to discuss and analyze topics like determining the size and type of production process, purchasing the appropriate raw materials, planning and scheduling the flow of materials and the nature and content of inventories, assuring product quality, and deciding on the production hardware and how it gets used. Decisions about what to produce will also be covered. Project Management: The role of projects in organization is getting more important as they become the major tool for reaching strategic goals. The participants of this course will have an integrative view of project management. Topics include project selection, project organization, budgeting and cost estimation, progress and performance measurement and evaluation, and project auditing. Supply Chain Management: This course covers the essential elements of Supply Chain Management, which consists of controlling and coordinating all the activities that take place from the raw material purchase to the end customer satisfaction; such as order processing, purchasing, material storage and handling, production scheduling, packaging, transportation and setting customer service standards. The participants will be able to discuss how these activities are successfully modeled, planned, and controlled in manufacturing and service industries.

Credit units: 5 ECTS Credit Units: 10. Spr (A. Altay-Salih)

EMBA 550 Marketing Management
Marketing Management: Participants will specifically be exposed to subjects regarding brand identity, brand image, brand design, brand value and brand expansion. Consumer Behavior and Research: The participants of this course will be able to examine how individuals process information and make decisions; discuss the influence of psychosocial factors such as personality, small groups, demographic variables, social class and culture on the formation of consumers’ attitudes and purchasing behavior. Demand Forecasting and Revenue Management: The participants of this course will be able to recognize the ways of providing the right product to the right customers at the right time at the right price. More specifically, the participants will be equipped with a demand management tool that helps the firm to manage its interface with the market.

Credit units: 4 ECTS Credit Units: 8.

EMBA 551 Marketing Strategy
Integrated Marketing Communications: Marketing Communication is probably the most dynamic part of the marketing mix. The participants will be able to discuss the features and advantages of integrated marketing communications (IMC) including communication elements and how they should be tightly interwoven for the successful management of a brand. Strategic Planning and Competition: This course will help participants to understand the relationships between competition and marketing strategies. More specifically, those who suc-
cessfully complete this course will comprehend the relationship between marketing and competition, understand
the basics of sustainable competitive advantage, and will be able to apply the principles of game theory into
strategic marketing planning. Distribution Channels and Sales/Retail Management: Participants will specifically
be exposed to functions of marketing channels, marketing channel alternatives, organization and interaction in
the marketing channel and with the identification of sales opportunities, management of sales force, coordinat-
ing sales with other marketing processes and planning, designing and managing retail operations. International
Marketing: The participants of this course will be able to discuss the application of marketing concepts and meth-
ods to the international marketplace, problems and decisions involved in marketing across national boundaries.
While focusing on the export marketing, some of the other topics covered include the international environment,
export market selection, export market entry strategies, export marketi
The Faculty of Economics, Administrative, and Social Sciences comprises five academic departments:

- Economics
- History
- International Relations
- Political Science
- Psychology

The Departments of Economics, International Relations, and Political Science offer programs leading to Bachelor’s, Master’s, and Doctor of Philosophy degrees, while the Department of History has only a graduate program leading to M.A. and Ph.D. degrees. The Department of Psychology offers a Bachelor’s degree program.

**ACADEMIC STAFF**

- **Michelle Adams**, Assistant Professor

- **İlhan Akipek**, Adjunct Senior Lecturer

- **Nedim Alemdar**, Assistant Professor

- **James Alexander**, Assistant Professor (on leave)

- **Mark Almond**, Visiting Associate Professor
  M.A., History, Oxford University, 1984. Modern History, The relationship between international relations and the internal dynamics of societies, especially in the former communist bloc, Research on the Balkans and the Caucasus.

- **Neil Arnwine**, Instructor
  Ph.D., Economics, Rice University, Houston, Texas, 1996. Macroeconomics, monetary economics and mathematical methods.

- **Ersel Aydınlı**, Associate Professor

- **İlker Aytürk**, Assistant Professor

- **Gamze Baray**, Instructor

- **Hakan Berument**, Professor

- **Ahmet Beyatlı**, Instructor
  Ph.D., Management, University of Baghdad, 1994. Arabic.
Hatice Pınar Bilgin, Associate Professor

 Hüseyin Boyacı, Assistant Professor

 Tolga Bölükbaşı, Assistant Professor

 Berrak Burçak, Assistant Professor

 Dilek Cındır, Assistant Professor

 Nur Bilge Criss, Assistant Professor
Ph.D., History, George Washington University, 1990. Modern History, Ottoman History, Turkish Foreign Policy, Contemporary History, Cold War History.

 Esra Çuhadar Gürkaynak, Assistant Professor

 Katja Doerschner, Assistant Professor
Ph.D., New York University, 2006. Perception of surface material, including color, in complex environments, perception of shape and motion.

 Aycan Eren, Instructor
M.S., Psychology, Middle East Technical University, 1985. Psychology.

 Özer Ergenc, Visiting Professor

 Tahire E. Erman, Associate Professor
Ph.D., Environmental Psychology, City University of New York, 1993. Rural to urban migration, squatter housing and gender.

 Ahmet Ertuğrul, Visiting Senior Lecturer

 Nilgün Fehim-Kennedy, Instructor
Ph.D., Sociology, Middle East Technical University, 2005. Sociology.

 Tore Fougner, Assistant Professor

 Onur Gökoç, Lecturer
B.S., Faculty of Political Science, Ankara University, 1962. Turkish Foreign Policy, Diplomatic Language.

 Ioannis N. Grigoriadis, Assistant Professor
Ph.D., Turkish Politics, University of London, 2005. Turkish Politics, European Politics.

 Serdar S. Güner, Associate Professor

 Refet Gürkaynak, Associate Professor

 Jale Gürzumar, Instructor
M.B.A., Middle East Technical University, 1986. Business administration.
Kevin Hasker, Assistant Professor

Banu Helvacıoğlu, Adjunct Senior Lecturer
Ph.D., Political Studies, Queen’s University, 1988. Politics of identity, European concepts, political theory.

Metin Heper, Professor
Ph.D., Public Administration, Syracuse University, 1971. Turkish politics, comparative state politics and bureaucracy.

Ferhad Hüseyin, Assistant Professor
Ph.D., Mathematics, Moscow State University, 1976. Mathematical economics, game theory.

Halil İnalçık, Professor
Ph.D., History, Ankara University, 1942. Ottoman history.

Yüksel İnan, Senior Lecturer

Başak İnce, Instructor
Ph.D., Political Science, University of London, 2008. Turkish politics, Comparative politics.

Pınar İpek, Assistant Professor

Daniel Just, Assistant Professor
Ph.D., Comparative Literature, New York University, 2005. Sociology of Literature, political theory, Cold War culture.

Şebnem Kalemlı Özcan, Visiting Associate Professor (on leave)

Mehmet Kalpaklı, Assistant Professor
Ph.D., Turkish Literature, University of Washington/İstanbul University, 1992. Ottoman literature and cultural history, Near Eastern languages and literature, modern Turkish literature, theory of literature, use of computers for humanities.

Mine Kara, Instructor
Ph.D., Economics, Hacettepe University, 2002. Methodology in economics, history of economic thought, economic development.

Tank Kara, Assistant Professor
Ph.D., Economics, University of Rochester, 1996. Game theory, social choice theory, mathematical economics.

Emin Karagözoglu, Assistant Professor

M. Nedim Karakayalı, Assistant Professor

Hasan Ali Karasar, Instructor

Eugenia Kermeli, Instructor
Ph.D., History, University of Manchester, 1996. Late Byzantine and early Ottoman institutional history.

Sırır Hakan Kirmlı, Associate Professor

Mustafa KiBAROĞLU, Assistant Professor
Akif Kirecci, Assistant Professor
Ph.D., University of Pennsylvania, 2007. Middle Eastern Modernization; Orientalism.

Edward Kohn, Assistant Professor

Semih Koray, Visiting Professor
Ph.D., Mathematics, Bogazici University, 1980. Mathematical economics.

Paul Latimer, Assistant Professor
Ph.D., History, Sheffield University, 1982. Medieval European history.

Cadoc Leighton, Associate Professor

Syed F. Mahmud, Visiting Associate Professor
Ph.D., Economics, McMaster University, 1986. Econometrics, applied econometrics, macroeconomics.

Sean McMeekin, Assistant Professor
Ph.D., History, University of California, Berkeley, 2001. Modern German and Russian History, Communism, World War I.

Kivilcim Metin, Associate Professor

Bilin Neyapti, Associate Professor
Ph.D., Economics, University of Maryland, 1997. Macroeconomics, monetary economics, institutional economics.

Tank Oguzlu, Assistant Professor
Ph.D., International Relations, Bilkent University, 2003. Turkey’s Relations with the European Union, NATO and the United States, European Union’s Security, Defence and Foreign Policies, Turkish-Greek Relations, Cyprus Dispute, Turkey’s Foreign Policy towards Iraq and Iraqi Turkmen, International Relations Theory.

Ilber Ortayli, Visiting Professor (on leave)
Ph.D., Political Science, University of Ankara, 1974. Ottoman Social History, Russo-Turkish Relations.

Cagla Okten, Associate Professor

Ergun Ozbudun, Professor

Saime Ozcurum Bolumbas, Assistant Professor

Ozugur Ozdamar, Assistant Professor
Ph.D., Political Science, University of Missouri-Columbia, 2006. International Relations Theory, Foreign Policy Analysis, Research Methods, American Foreign Policy, Black Sea Politics.

Oktay Ozel, Assistant Professor
Ph.D., History, University of Manchester, 1993. Ottoman socio-economic history, demographic changes, methods and problems in historical writings.

Emre Ozgen, Assistant Professor
Ph.D., Psychology, University of Surrey, 2000. Cognitive psychology, color perception, perceptual learning, vision research.

Aida Paskeviciute, Assistant Professor
Evgeni Radushev, Visiting Assistant Professor
Ph.D., History, Bulgarian Academy of Sciences, 1982. Ottoman diplomatics and paleography, Ottoman socio-economic, political and ethnocultural history.

Hüseyin Çağrı Sağlam, Assistant Professor

Jeremy Salt, Visiting Associate Professor
Ph.D., Middle Eastern History, Melbourne University, 1980. Middle Eastern studies.

Zeki Sargıl, Assistant Professor
Ph.D., Political Science, University of Pittsburgh, 2007. Turkish Politics, comparative Politics.

Selin Sayek Böke, Assistant Professor

Norman Stone, Professor (on leave)

Nil Seda Şatan, Assistant Professor
Ph.D., Political Science, State University of New York (SUNY), 2006. Inter and Intra-State Conflict, Civil-Military Relations, Terrorism.

Zerrin Tandoğan, Instructor

Fatma Taşkin, Associate Professor

Ali Tekin, Assistant Professor

Ann-Marie Thornton, Instructor

David E. Thornton, Assistant Professor

Sübidey Togan, Professor

Dimitris Tzarouhas, Assistant Professor
Ph.D., Politics, University of Sheffield, 2005. European Integration, Political Economy, EU-Turkey Relations.

Gülgün Tuna, Senior Lecturer

Fikret Üçcan, Instructor

Kenneth Weisbrode, Assistant Professor
Ph.D., History, Harvard University, 20th Century American diplomatic history.

Paul Williams, Assistant Professor

Oliver A.C. Wright, Instructor
Lerna Yanik, Assistant Professor  
Ph.D., Government, Georgetown University, 2002. Turkish foreign policy in Eurasia, culture and international relations.  

A. Erinci Yeldan, Professor  

Taner Yigit, Assistant Professor  

PART-TIME ACADEMIC STAFF  

Omer Altay, Graduate Diploma, University of Essex, 1974.  

Celci Apaydin, M.S., Operations Research, Middle East Technical University, 1989.  

Hidir Colpan, M.A., Economics, University of Exeter, 1981.  

Necdet Pamir, B.Sc., Petroleum Engineering, Middle East Technical University, 1980.  

GENERAL SOCIAL SCIENCE COURSES

SOC 101 Introduction to Sociology  
Introduces students to the subject matter, major concepts, and theoretical approaches of sociology. Includes readings in the works of both classical and modern theorists. Emphasis is on social organization and stratification, community, power, social change.  
Credit units: 3 ECTS Credit Units: 5. Aut (A. Eren, N. Fehim-Kennedy, J. Gurzum, D. Just)

SOC 203 Sociology of the Family  
This course will be an analysis of the family as a social institution. Family organization, family structure, inheritance, sexual division of labor, and socialization within the family across various cultures will be the prime focus of study. The course will cover “traditional”, “modern”, and “alternative” family forms. The gendered role expectations present within marriage and family systems will be addressed, as well as, how current changes in social and economic contexts may lead to variations in family forms. Emphasis will be placed on how the emergence of women in the work force may be influencing the overall family system, especially with respect to men and children.  
Credit units: 3 ECTS Credit Units: None.

SOC 205 Socialization and Development  
Using several theoretical perspectives, this course investigates the processes of socialization and personality formation through the life cycle. Emphasis is placed on the content, stages and agencies of socialization in a variety of social contexts. Discussion and analysis are based on social, social psychological and comparative data. A comprehensive coverage of cognitive development and social personality development for each stage of life will be undertaken.  
Credit units: 3 ECTS Credit Units: 6.
DEPARTMENT OF ECONOMICS

Economics is the study of the behavior of economic units, institutions and systems and the choices that they make with respect to the allocation of scarce resources between production and consumption. It is concerned with a wide range of problems that directly affect society: the causes of unemployment and inflation, productivity and economic growth, foreign debt and trade links, and the role of government in market economies.

UNDERGRADUATE PROGRAM

The program leading to the Bachelor’s degree in Economics combines training in technical economics with opportunities for a broad and balanced undergraduate education. The program aims to give the students a solid grounding in modern economic theory and accompanying skills necessary for independent and critical thinking which will allow them to acquire an understanding of the Turkish and the world economy. The aim is achieved through a flexible curriculum which is structured to provide the basic social science and quantitative toolbox necessary for all economists in the first two years, followed by a student-tailored curriculum in the last two years during which the students choose a track of study they prefer to complete under economics. These tracks cover all general economics fields including Academics Economics Track which aims to prepare students for a highly quantitative graduate study, Macroeconomics Track which emphasizes topics about the workings of the macroeconomy such as monetary and international economics, Microeconomics Track which focuses on the decision making of individuals and firms in depth, Managerial Economics Track which capturing the synergy issues between management and economics, and finally a General Economics Track which allows the students to explore cross tracks during their studies. All of these general tracks are supported by a range of free electives allowing students to becoming well-rounded social scientists and furthermore university graduates.

Electives (4) 12 / 24

TRACK REQUIREMENTS

Each student has to choose a track that comprises of six classes at the end of their fourth semester. The tracks are: Academic Economics Track, Macroeconomics Track, Microeconomics Track, Managerial Economics Track, and General Economics Track. The track courses contents are listed below:

Academic Economics Track
ECON 302 Econometrics II
ECON 439 Game Theory I
ECON 443 Advanced Economic Theory
MATH 225 Linear Algebra and Differential Equations
MATH 215 Mathematical Analysis
One of the following two courses:
* ECON 401 Seminar on Microeconomic Policy
* ECON 402 Seminar on Macroeconomic Policy

Macroeconomics Track
ECON 331 International Economics I
ECON 332 International Economics II
ECON 322 Monetary Economics
ECON 432 Turkish and World Economy in the 20th Century
ECON 443 Advanced Economic Theory
ECON 402 Seminar on Macroeconomic Policy

Microeconomics Track
- ECON 351 Fiscal Economics I
- ECON 433 Industrial Economics I
- ECON 439 Game Theory I
- ECON 430 Economics of Regulation and Antitrust
- Any course from Faculty of Law
- ECON 401 Seminar on Microeconomic Policy

Managerial Economics Track
- MAN 213 Principles of Financial Accounting
- MAN 321 Corporate Finance
- Any course from Faculty of Law
- ECON 432 Turkish and World Economy in the 20th Century
- Any two of the following courses:
  * MAN 262 Organizational Behavior
  * MAN 335 Fundamentals of Marketing
  * MAN 341 Production Management
  * MAN 447 Project Management

General Economics Track
- Any four 300 or above level course from the Department of Economics
- Any two 200 or above level course from the Faculty of Management

ELECTIVE REQUIREMENTS

Regardless of the track a student has chosen, the elective composition of each student should adhere to the following quotas:

1. One 100 level social science elective.
2. Six 300-400 level electives (at least 2 are from Economics).
3. Two electives from any department, other than the Department of Economics, of the Faculty of Economics, Administrative and Social Sciences (FEASS) which are at least 200 level.
4. Seven general electives (2 of them non-FEASS courses).

MINOR PROGRAM

The Minor program in Economics is offered to students who are interested in economics but hold primary interests in other fields. Economics is the study of the allocation of resources and provides an understanding of a very wide range of issues that one faces both in their daily personal operations and in their careers. By arming the students with the theoretical toolkit as well as the basics of empirical analysis, and allowing the application of this expanded toolbox in a field elective course, the Minor program in Economics promotes the intellectual growth of the individual student and contributes to them becoming better citizens as well as better professionals. The minor is not only useful for students in fields other than economics that may wish to continue their education with a graduate degree in economics but also for those who wish to prepare for a MBA, graduate studies in other social sciences including law, international relations, public policy and finally in quantitative analysis.
Prerequisite Courses:
MATH 106 Introduction to Calculus or an equivalent mathematics course
ECON 221 Probability and Statistics I or an equivalent statistics course

Open to Students from
Faculty of Business Administration
Faculty of Economics, Administrative, and Social Sciences
Faculty of Engineering
Faculty of Law
Faculty of Science
Department of Philosophy

GRADUATE PROGRAMS IN ECONOMICS

Graduate programs in economics aim to train students to enable them to carry out independent research. For this purpose, the programs are designed to ensure that the students get a solid background in both economic theory and the techniques used in empirical research. While the Department offers both M.A. and Ph.D. degrees, the M.A. degree is considered, in principle, as an intermediate step that is passed en route to the Ph.D. The core requirements common to both programs leave little room for choosing the courses to be taken in the first year, but the students are offered considerable flexibility as to their choice of the fields of specialization later on.

Students admitted to graduate studies in the department are expected to have a strong background in undergraduate level economics and some training in mathematics and statistics. Sufficient (though not necessarily a pre-condition) background would consist of an undergraduate degree in Economics, a year-long calculus sequence that includes multivariate analysis, a course in linear algebra, and a course in probability and statistics. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

Master of Arts in Economics

The curriculum aims to prepare the students toward a Ph.D. degree. However, elective courses and a thesis study in the 2nd year gives the students the opportunity to over take practical training, preparing them for jobs in the government or private sector.

Prospective students must have completed Bilkent University’s requirements for a Bachelor of Arts degree in Economics or approximately equivalent training. Since students will be required to take the same courses as the Ph.D. candidates, similar preparation in mathematics and statistics is generally expected. Degree requirements for Master of Arts in Economics are:

1. The core curriculum for Master of Arts in Economics degree must be successfully completed.
   The courses in the core curriculum for Master of Arts in Economics include the graduate level Mathematics Review course (ECON 500), Microeconomic Theory (ECON 503-504), Macroeconomic Theory (ECON 505-506), Mathematics for Economists (ECON 515-516), Probability and Statistics (ECON 509-510) sequences, two elective sequences, and Pre-Thesis Seminar (ECON 590) and the Master's Thesis (ECON 599) courses.
2. A Master's thesis must be submitted and successfully defended.

3. A grade point average of at least 3.00 must be maintained for the duration of Master's level work.

Doctor of Philosophy in Economics

The Ph.D. program in economics is a program requiring the attainment of scientific competence in conformity with international scientific standards. Admission to the doctoral program is by written application and evaluation by the department. It is expected that admitted students will be adequately prepared in calculus, linear algebra, and statistics. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

All students take a common core curriculum at the outset and later branch out in the desired fields of specialization. The fields may be chosen from fiscal economics, international economics, macroeconomics, monetary economics, econometrics. Well-prepared students should anticipate spending approximately two years in course work and another two years in seminars, independent study, and dissertation research. While exceptional progress may make a three-year program feasible, some types of research programs will require at least five years to complete.

A candidate for the doctorate degree must:

1. Successfully complete the core curriculum for Ph.D. degree in Economics. The courses in the core curriculum for Ph.D. degree in Economics include the graduate level Mathematics Review course (ECON 500), Microeconomic Theory (ECON 503-504), Macroeconomic Theory (ECON 505-506), Mathematics for Economists (ECON 515-516), Probability and Statistics (ECON 509-510) sequences, two elective sequences, and Pro-Thesis Seminar (ECON 590) and the Ph.D. Dissertation (ECON 699) courses.

2. Successfully complete the course requirements for Ph.D. degree by earning at least 24 credits from the courses listed under “Graduate Electives”. (Some graduate courses offered by other departments may be counted towards this requirement.)
3. Show competence in two comprehensive examinations in macroeconomics and microeconomics within the first three semesters after being admitted to the Ph.D. program.

4. Submit a detailed thesis proposal while taking the ECON 699 course and give a seminar on this work.

5. Submit and successfully defend a dissertation that represents a contribution to knowledge in the field.

Candidates must be in residence for a minimum of three years including the period spent on the Master of Arts program.

During each semester of the second year at least three credit units of electives must be taken. The Ph.D. candidate may also take elective courses for credit in the third and fourth years of study. These electives may include courses from other departments or institutions as well as courses offered by the Department. There is no upper or lower limit on the number of such courses.

**COURSE DESCRIPTIONS**

**UNDERGRADUATE COURSES**

**ECON 101 Introduction to Economics I**

Introduces microeconomic concepts and analysis, supply and demand analysis, theories of the firm and of individual behavior, competition and monopoly, welfare economics. Application to problems of current economic policy. Credit units: 3 ECTS Credit Units: 6. Aut (M. Kara, T. Kara, K. Metin, B. Onar, Ç. Ökten, T. Yiğit) Spr (K. Metin, B. Onar, T. Yiğit)

**ECON 102 Introduction to Economics II**

An overview of macroeconomic issues: the determination of output, employment, unemployment, interest rates, and inflation. Monetary and fiscal policies are discussed as well as international economic issues. Introduces basic models of macroeconomics and illustrates principles with the experience of Turkish and foreign economies. Credit units: 3 ECTS Credit Units: 6. Aut (N. Arnwine, A. E. Yeldan) Spr (N. Arnwine, R. Gürkaynak, M. Kara, B. Neyaplı, S. Sayek Böke)

**ECON 103 Principles of Economics**

Introduces the basic concepts of micro and macro economics, supply and demand analysis, and economic theories. The implications of economics in regards to social issues and the role of economics in the field of communication and advertising are discussed. Credit units: 3 ECTS Credit Units: 6. Aut (M. Kara, M. Polat) Spr (M. Kara, M. Polat)

**ECON 105 Principles of Economics I**

Introduction to basic microeconomic concepts. What is microeconomics all about? Economists’ approach to current microeconomics issues at the individual household and firm level. Government’s micro policies in
providing incentive for production, consumption, and technology choice. Current debates on firm behavior, “new economy”, and issues of privatization and efficient use of resources. Market organizations, welfare and the firm objectives. Credit units: 3 ECTS Credit Units: 6. Aut (İ. N. Durubal)

ECON 106 Principles of Economics II
An overview of macroeconomic issues. The concept of the gross national product and its determination. Theories of macroeconomic equilibrium and government policies to effect the gross national product, employment, investment, and foreign trade. Current issues on the “global economy”, international economic organization and Turkey’s role in a changing world macroeconomic environment. Credit units: 3 ECTS Credit Units: 6. Spr (İ. Fisher)

ECON 201 Economic Theory I
Basic theory of consumer behavior, production and costs, partial equilibrium analysis of pricing in competitive and monopolistic markets, general equilibrium, welfare and capital. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 101.

ECON 202 Economic Theory II
Theory of national income determination, static and dynamic; components of aggregate demand; analysis of aggregate supply. Theory of growth and inflation. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 102.

ECON 203 Microeconomic Theory I
This course is the first part of an intermediate level microeconomics sequence. Consumer theory, theory of the firm, and partial equilibrium theory are explained in depth. Applications of the partial equilibrium model to public finance and trade are also covered. Credit units: 3 ECTS Credit Units: 6. Prerequisite: (ECON 101 and MATH 106) or MATH 102 or MATH 114. Aut (K. Hasker, E. Karagözglu, B. Onar) Spr (B. Onar)

ECON 204 Microeconomic Theory II
This course is the second part of an intermediate level microeconomics sequence. Topics covered are: general equilibrium, welfare economics, monopoly, imperfect competition, externalities and public goods, uncertainty and information, and game theory. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 203. Spr (K. Hasker, E. Karagözglu)

ECON 205 Macroeconomic Theory I
This course is the first part of an intermediate level macroeconomics sequence. Besides the analysis of national income determination, inflation and unemployment, analysis of aggregate supply and growth theories will be introduced. Within the frameworks of basic business cycle models, demand side equilibrium, and the IS/LM models (including its open economy version) fiscal and monetary policy effectiveness will be studied. Credit units: 3 ECTS Credit Units: 6. Prerequisite: (ECON 102 and MATH 105) or MATH 102 or MATH 114. Aut (N. Arnwine, H. Berument, B. Neyapti) Spr (H. Berument)

ECON 206 Macroeconomic Theory II
This course is the second part of the intermediate macroeconomics sequence and it focuses on microfoundations in order to study macro models. Among the subjects are the consumption and investment theories, inflation and unemployment trade-off, and fiscal and monetary policy design and institutions with regards to open economy macroeconomics, exchange rate models and current account dynamics that are grounded in the intertemporal optimization problem of the representative agent will also be introduced. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 205. Spr (N. Arnwine, B. Neyapti, H.Ç. Sağlam)

ECON 207 Economics Theory for Engineers
This course is designed to introduce Engineering students to the fundamentals of economic analysis. It provides an introduction to micro and macroeconomic principles and concepts. The course also introduces the students to the core topics of intermediate level of microeconomic analysis: analysis of the consumer, the firm, and the market. Credit units: 3 ECTS Credit Units: None. Prerequisite: MATH 225. Aut (N. Arnwine)

ECON 211 Economic History
A survey of world economic history designed to introduce students to the subject matter and methodology. Various aspects of European and Turkish experiences are emphasized. Credit units: 3 ECTS Credit Units: 6.

ECON 221 Introduction to Probability and Statistics I
Descriptive statistics. Fundamental concepts of probability, Combinatorial methods. Conditional probability, Random variables, univariate and bivariate distribution. Expectation, variance, covariance and correlation. Some commonly used discrete and continuous probability distributions, the law of large numbers and the central limit theorem. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Apaydin, S. F. Mahmud, K. Metin, F. Sezgin) Spr (S. F. Mahmud)

ECON 222 Introduction to Probability and Statistics II
Sampling and sampling distributions, introduction to inference, point and interval estimation. Hypothesis testing. Small sample distributions (t, X², F), Introduction to analysis of variance, regression and distribution free methods.
Applications using statistical computer programs. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 221. Spr (I. Apaydin, T. Kara, S. F. Mahmud, F. Sezgin)

**ECON 225 Mathematics for Economists**
Multivariate calculus, constraint optimization, Hessians, implicit function theorem, difference equations. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 106. Aut (Staff) Spr (Staff)

**ECON 301 Econometrics I**
Introduction of linear multiple regression model, inference, hypothesis testing; and maximum-likelihood methods. Illustration from economics and application of these concepts to economic problems will be emphasized. The course covers Gauss-Markov assumptions and violation of the assumptions such as heteroskedasticity, serial correlation and errors variables. Credit units: 3 ECTS Credit Units: 6, Prerequisite: (ECON101 and ECON102 and ECON222) or ((ECON207 or ECON208) or. Aut (H. Berument, F. Taşkın) Spr (H. Berument)

**ECON 302 Econometrics II**
Identification and estimation of simultaneous equation models. Advanced topics such as Generalized Least Squares, instrumental variables, non-linear regression techniques and limited dependent variable models. An introduction to time-series analysis such as stationary and nonstationary processes, VARs, unit roots, and cointegration. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 301. Aut (Staff) Spr (F. Taşkın)

**ECON 308 Forecasting**
Quantitative and statistical techniques for forecasting and decision sciences. Credit units: 3 ECTS Credit Units: 6.

**ECON 321 Financial Institutions and Markets**
Role and functioning of the capital and money markets as a device for the allocation of resources, the channeling of investable funds, and reallocation of risk. Function of financial intermediaries operating in these markets. International financial relations. Monetary history. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 202 or ECON 206. Spr (Staff)

**ECON 322 Monetary Economics**
Basic models of money and monetary economics; the role of expectations; asset pricing models with special reference to equities and the term structure of interest; the Phillips curve; banking and financial intermediaries, monetary and fiscal policies. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 202. Spr (K. Metin)

**ECON 323 Economics of Monetary Union**
Contemporary issues of monetary integration; the European Monetary Union experience; Euro zone; monetary and fiscal policies for monetary union targets; the Maastricht Criteria; Central Bank Independence and Price Stability. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 202 or ECON 206. Aut (Ö. Altay)

**ECON 331 International Economics I**
Theory of international trade and applications in commercial policy. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201. Aut (S. Togan)

**ECON 332 International Economics II**
Adjustment in international economic relations with attention to foreign exchange markets, balance of payments, and the international monetary system. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 202 or ECON 206. Spr (S. Togan)

**ECON 351 Fiscal Economics I**
First and second best fiscal theory. Incidence models. Economic response to taxation. Quantitative analysis of economic effects of fiscal instruments and fiscal changes. Government finance statistics; tax and expenditure structures; the budget and government financing; fiscal management in Turkey and abroad. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 or ECON 204. Aut (S. F. Mahmud)

**ECON 352 Fiscal Economics II**
Continuation of the course ECON 351 with particular attention paid to the fiscal aspects of Macroeconomic Theory, Local governments and international issues such as tax harmonization. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 202 or ECON 206.

**ECON 361 Methodology and Evolution of Social Theory**
The course introduces concepts of the evolution of social theorizing in economics: alternative paradigms of economics; basic approaches to research methodology with emphasis on philosophy and epistemology; critical thinking on the economic rationale. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 204 and ECON 206. Spr (A. Ertuğrul)

**ECON 363 History of Economic Thought**
The main topic of this course is the developments in the theoretical aspects of economics, after the marginal utility revolution. The context starts from 1870’s with the contributions of major economists to marginal utility theory and applications. It proceeds with general and partial equilibrium analyses. Finally, Keynesian income
Monetarism, New Classical economy and post-Keynesian approaches are examined. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 203 and ECON 205. Aut (A. Ertuğrul) Spr (A. Ertuğrul)

**ECON 400 Analytical Writing for Economist**
For students in the department of economics, writing analytical and effectively is important. Thinking, writing and presenting effectively are increasingly becoming the determinants of success in the professional world. The course aims at developing the analytical writing and presentation skills of the students and emphasizes the discussion, presentation and conveying of ideas in the field of economics. The coursework will consist of the writing exercises and presentations of discussions in economic topics and issues. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 204 and ECON 206. Aut (Staff)

**ECON 401 Seminar in Microeconomic Policy**
The course aims to develop the student's skills to undertake an independent research project in the area of microeconomics. The structure of the course is designed to improve student's presentation and writing skills. The course outline includes a comprehensive reading list in microeconomic theory and policy issues. The students are required to gain familiarity with the topics through weekly in-class discussions, presentations and written reports. Furthermore the students are required to demonstrate proficiency in a strand of literature chosen from the assigned reading list, formulate an academic hypothesis and complete a research report as part of the course requirements. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 204 and ECON 206. Aut (Staff)

**ECON 402 Seminar in Macroeconomic Policy**
The course aims to develop the student's skills to undertake an independent research project in the area of microeconomics. The structure of the course is designed to improve student's presentation and writing skills. The course outline includes a comprehensive reading list in microeconomic theory and policy issues. The students are required to gain familiarity with the topics through weekly in-class discussions, presentations and written reports. Furthermore the students are required to demonstrate proficiency in a strand of literature chosen from the assigned reading list, formulate an academic hypothesis and complete a research report as part of the course requirements. **Credit units:** 3 ECTS **Credit Units:** None. Spr (Ç. Ökten)

**ECON 403 Issues in Public Finance**
Introduces fundamentals of deficit financing. The role of the bureaucracy and its relations with the government is discussed with an emphasis on the role of the Treasury and its functioning. New orientalism in government financial management, government balance sheet approach, expenditure management and control issues are other topics that are covered in this course. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 202 or ECON 206.

**ECON 405 Issues in Macroeconomics**
Principles of mathematical induction and training in areas of mathematics such as optimization theory which have applicability to economic problems. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 202 or ECON 206.

**ECON 406 Issues in Public Finance**
Introduces fundamentals of deficit financing. The role of the bureaucracy and its relations with the government is discussed with an emphasis on the role of the Treasury and its functioning. New orientalism in government financial management, government balance sheet approach, expenditure management and control issues are other topics that are covered in this course. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 202 or ECON 206. Aut (Staff)

**ECON 407 Economics of Crises**
The course aims to acquaint the students with the economics of crises. It will review the recent developments in economic theory and the evidence from the crises in Asia, Brazil, Argentina and Turkey, emphasizing their differences from previous crises. It will discuss the importance of capital flows and the approaches to reforming the international financial system and will cover various methods of coping with, and the measures to forestall future crises. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 202 or ECON 206. Aut (Staff)

**ECON 408 Contemporary Issues in Turkish Economy I**
Contemporary problems confronting the Turkish economy, structural adjustment reforms and macroeconomic policies. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 202 or ECON 205.

**ECON 409 Contemporary Issues in Turkish Economy II**
Turkish Economy in the 1990's, financial liberalization, Turkey and the European Union. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 202 or ECON 205. Spr (F. Emil)

**ECON 410 History of Economic Thought I**
A selective historical survey of the development of economic analysis giving varying degrees of attention to the contributions of Aristotle, Aquinas, Mun, Hume, Smith, Malthus, Ricardo, Marx, Mill, Walras, Marshall, Keynes and Schumpeter. **Credit units:** 3 ECTS **Credit Units:** 6, Prerequisite: ECON 201 and ECON 202.
ECON 412 History of Economic Thought II
Continuation of the History of Thought I, with emphasis on post-Neoclassical economics, the rise and fall of Keynesianism, the new classical macroeconomics, rational expectations and post-Keynesianism. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 and ECON 202.

ECON 415 Mathematics for Economists I
This course will introduce the students to advanced mathematical techniques via discrete mathematics. The main topics covered are: proof techniques, recursive relations, difference equations, backward induction, dynamic programming and their applications. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 225 or MATH 102 or MATH 114. Spr (F. Hüseyin)

ECON 416 Mathematics for Economists II
Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 415.

ECON 417 Environmental Economics I
Analysis of environmental problems, cost-benefit analysis, techniques, costs of abatement. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 101.

ECON 421 General Equilibrium
Theory of general competitive equilibrium from modern mathematical points of view. Topics include existence of equilibrium; fixed point theorems; computational techniques; and empirical general equilibrium models. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 and ECON 202.

ECON 423 Time Series Analysis in Economics and Finance I
The course introduces students to the fundamentals of classical time series analysis in economics and finance. The topics covered in the course include classical issues of time series models, stationarity, ARIMA, Random Walk, Cointegration, VAR and ECM analysis, Causality, ARCH and GARCH models. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 302.

ECON 424 Time Series Analysis in Economics and Finance II
This course is a continuation of Econ 423, the aim of the course is to introduce students to contemporary time series analysis with a special emphasis on high-frequency data applications. The topics covered are Linear Filters, Optimum Linear Filters, Wavelet transformation, Artificial Neural Networks, Multifractality and Scaling Analysis, Stochastic Volatility, Markov Chains, and Extreme Value Theory. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 302.

ECON 426 Applied Economic Analysis
Develop skills in the empirical analysis of economic theory, models and data. Emphasis will be placed on applications of finance theory and economics of privatization to the Turkish economy. Topics may vary with the instructor. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 301 and (ECON 201 or ECON202).

ECON 430 Economics of Regulation and Antitrust
The course deals with questions such as what particular market failures provide a rationale for government intervention? How can economic theory illuminate the character of market operation, the role for government action, and the appropriate form of government action. What do formal empirical analyses of economic behavior and the effects of government intervention indicate about the direction that this intervention should take? Where does the antitrust policy stand within this framework? To provide the most up to date answers to these questions, the course utilizes economic theory and empirical analysis that have been devised to further understanding of regulations and antitrust policies. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 or ECON 204 or ECON 207. Spr (C. Ökten)

ECON 432 Turkish and World Economy in the 20th Century
Growth and developments in Turkey and the World from World War I to present. The application of economic analysis to historical issues. Topics: Great Depression, the interwar period, the developments in Soviet type economies since 1917, the Bretton Woods System, the collapse of the Bretton Woods System, the collapse of communism, Turkish economy during the Great Depression and thereafter. Credit units: 3 ECTS Credit Units: None, Prerequisite: ECON 202 or ECON 206. Spr (A. E. Yeldan)

ECON 433 Industrial Economics I
This course will survey the current thinking and issues in industrial organization and regulation. The objectives of the course are both to examine in some depth how firms behave in a market economy, and to review some basic forms of state intervention in modern capitalist economics. The course will provide some background on firm behavior and, the legal environment in which they operate, and will review the rational and experience of antitrust and competition policies. The second semester will concentrate on the regulation of private monopolies. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 or ECON 204 or ECON 207. Aut (C. Ökten)

ECON 434 Industrial Economics II
Continuation of ECON 433. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201.
ECON 435  International Political Economy
Major international institutions and agreements such as the International Monetary Fund, the World Bank Group, The General Agreement on Tariffs and Trade, the Commodity Agreements, the Organization for Economic Cooperation and Development, European Union and the European Free Trade Association. These institutions will be discussed with emphasis on their origin, organization, functions and operations, policies and the role they play on the world economic order. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 331 and ECON 332.

ECON 437  Positive Political Economy
This course is a survey of current economic development models with special emphasis on recent developments in the global economy, the changing nature of work such as female labor force participation, flexible labor systems, employment, and industrial relations. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 and ECON 202.

ECON 438  Economics of Competition
This course explores the economic rationale for, and consequences of competition policies, antitrust laws, antidumping actions, countervailing duty actions, safeguard measures. In addition to economic analysis landmark cases will be studied. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 331.

ECON 439  Game Theory I
This course is an introduction to the theory of games. Games theory provides a set of analytical tools that can be used to model the interactions of decision-makers (consumers, firms, politicians, government, etc). The course introduces the basic theory of noncooperative game theory. A variety of applications will be discussed. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 201 or ECON 204 or ECON 207. Aut (K. Hasker) Spr (K. Hasker)

ECON 440  Game Theory II
Continuation of ECON 439 with emphasis on cooperative game theory. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ECON 225 or MATH 102 or MATH 114.

ECON 443  Advanced Economic Theory
Special topics in micro and macroeconomics. Topics include inflation and unemployment, theories of macroeconomic policies, economic stabilization, theories of the consumer and the firm welfare and general equilibrium analysis. Credit units: 3 ECTS Credit Units: 6, Prerequisite: (ECON 201 and ECON 202) or (ECON 204 and ECON 206). Aut (R. Gürkaynak)

ECON 453  Theories of Economic Growth and Development I
Introduction to modern theories of growth; the neoclassical growth model; the golden rule of accumulation; transitional dynamics and the steady state; exogenous versus endogenous growth modeling; sources of growth and the convergence of nations; empirics of growth. Introduction to endogenous growth. Credit units: 3 ECTS Credit Units: 6, Prerequisite: (ECON 201 and ECON 202) or (ECON 204 and ECON 206). Aut (A. E. Yeldan)

ECON 454  Theories of Economic Growth and Development II

ECON 455  Institutions and Development
A synopsis of earlier development theories. Analysis of the linkages between economic development and macroeconomic institutions in the framework of “New Institutional Economics”. Empirical analysis of institutional designs that are related to fiscal and monetary policy making are introduced. Specifically, economic effects of fiscal decentralization; budgetary rules and procedures; central bank independence and inflation targeting are examined. Credit units: 3 ECTS Credit Units: 6, Prerequisite: (ECON 202 or ECON 206) and ECON 222. Aut (B. Neyaplı)

ECON 458  Labor Market Economics
The economics of the determination of earnings and the allocation of labor. The theory of labor supply and labor demand will be developed, and then applied to questions of income distribution, unions, government intervention in the labor market, and discrimination. If time allows, the relation between unemployment and inflation will be discussed. Credit units: 3 ECTS Credit Units: 6, Prerequisite: (ECON 201 and ECON 202) or (ECON 204 and ECON 206).

ECON 471  Economics of Transition
The course covers overall global processes of transition from command systems to market systems. The policy debates and theoretical contributions surrounding the implementation of price reform and the design of new institutions are introduced. The changed role of the state and the birth of the new entrepreneurial class are investigated within the realm of the globalized world economy. The post-soviet countries and their experiences
on policy reform are contrasted. Credit units: 3 ECTS Credit Units: 6. Prerequisite: (ECON 201 and ECON 202) or (ECON 204 and ECON 206).

GRADUATE COURSES

ECON 500 Mathematics Review Course
The course is designed to maintain and develop familiarity with the mathematical tools used in the Masters and PhD Program in the department of Economics. This course is designed to help students master an important set of mathematical skills necessary to study economics. It will cover basic concepts from calculus, linear algebra, optimization, and mathematical analysis, which will be used in the first year courses. Credit units: 3 ECTS Credit Units: 6. Aut (H. Ç. Sağlam)

ECON 501 Economics I
A course designed for MBA students of the Faculty of Business Administration. The fundamentals of micro- and macroeconomics. Theory of the firm, demand theory, and market structures are among the micro topics. Macro subjects include national income, theory of income determination, money and banking, monetary policy, and international trade. Credit units: 3 ECTS Credit Units: 6.

ECON 502 Economics II
A course designed for MBA students of the Faculty of Business Administration. The fundamentals of micro- and macroeconomics. Theory of the firm, demand theory, and market structures are among the micro topics. Macro subjects include national income, theory of income determination, money and banking, monetary policy, and international trade. Credit units: 3 ECTS Credit Units: 6.

ECON 503 Microeconomic Theory I

ECON 504 Microeconomic Theory II
Theory of general competitive equilibrium. Topics include existence of equilibrium, computational techniques, core of the economy, stability, uniqueness of equilibrium, and empirical general equilibrium models. Credit units: 4 ECTS Credit Units: 7. Spr (E. Karagözoglu)

ECON 505 Macroeconomic Theory I
A wide-ranging survey of modern macroeconomic theory with an emphasis on the necessary mathematical tools and the dynamic methods. Focuses on competitive equilibrium, optimality, dynamics of equilibria, economic fluctuations, long-run growth, technological progress, life-cycle aspects and economic policies. Credit units: 4 ECTS Credit Units: 7. Aut (H. Ç. Sağlam)

ECON 506 Macroeconomic Theory II
Stochastic models of economic fluctuations. Rational expectations. The effectiveness of monetary and fiscal instruments. Uses of general equilibrium econometric models for forecasting and policy simulations. Multi-country models and the international transmission mechanism. Credit units: 4 ECTS Credit Units: 7. Spr (R. Gürkaynak)

ECON 507 Economics for International and Public Affairs I
This course introduces basic concepts of microeconomic analysis relevant for international economics and public affairs. Theories of rational consumer behavior, the profit seeking firm, and market structures are introduced in a policy setting. Issues of corporate governance, pricing strategies and social welfare are analyzed within the realm of efficiency and optimality, in a rapidly changing and globalizing world. Credit units: 3 ECTS Credit Units: 6. Aut (M. Polat)

ECON 508 Economics for International and Public Affairs II
Basic concepts and theories of macroeconomic analysis are introduced. The determination of national income, employment, inflation, interest rate and the exchange rate. Monetary and fiscal policy instruments are introduced with special emphasis on their effects on international economic relations. The course further introduces modern paradigms of open economy macroeconomics, and illustrates current economic problems with the experiences of Turkish and foreign economies. Credit units: 3 ECTS Credit Units: 6. Spr (M. Polat)

ECON 509 Probability and Statistics I

ECON 510 Probability and Statistics II
Ordinary Least Squares: basic assumption, estimation and tests of hypotheses, the coefficient of determination, prediction, functional forms, the problem of choosing between them and specification tests, multicollinearity. Dummy Variables, testing structural change, estimating the prediction error variance and pooling cross-sectional and time-series data. Lagged dependent variables, binary dependent variables. Autocorrelation and het-
eroscedasticity. Simultaneous equations; identification and single-equation estimation techniques. Credit units: 4 ECTS Credit Units: 6. Spr (T. Yığıt)

**ECON 511 Econometrics I**
Theory and applications of time series models. Topics include ARMA and VARMA models, Trend-Cycle decomposition, Unit roots, Cointegration, Structural change, GARCH, Regime switching and threshold models, Statespace form and Kalman filters, and specialized topics such as Fractional Integration and I(2) models. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 510. Aut (T. Yığıt)

**ECON 512 Econometrics II**
Theory and application of existing micro-econometric techniques, econometrics of panel data, and Monte Carlo simulation. Topics include Discrete regression models, Censored and Truncated regression, Models with self-selectivity, Disequilibrium models, Count Data, Duration models, Static panel data analysis, Dynamic panel data analysis, Non-stationary panel methods: Panel unit roots and cointegration, PanelVAR, Monte Carlo and bootstrap. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 510. Spr (Staff)

**ECON 513 Game Theory I**
Game theoretic approaches to economics, strategic decision-making, discussion of contemporary issues in economic design. Credit units: 3 ECTS Credit Units: 6. Aut (S. Koray)

**ECON 514 Game Theory II**
Continuation of ECON 513. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 504. Spr (S. Koray)

**ECON 515 Mathematics for Economists I**

**ECON 516 Mathematics for Economists II**
The contraction mapping theorem. Theorem of the maximum. Dynamic programming under certainty. Measure theory and integration. Stochastic dynamic programming. Modes of convergence and laws of large numbers. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 515. Spr (S. Koray)

**ECON 517 Mathematical Economics I**
Mathematical theory of general economic equilibrium. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 516. Aut (S. Koray)

**ECON 518 Mathematical Economics II**
Dynamic aspects of equilibrium models. Game theory and the theory of industrial organization. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 517.

**ECON 521 International Economics I**
Theory of international trade and applications in commercial policy. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 504.

**ECON 522 International Economics II**
Adjustment in international economic relations with attention to foreign exchange markets, balance of payments, and the international monetary system. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 506 and ECON 521.

**ECON 531 Economic History I**
A survey of world economic history designed to introduce the students to the subject matter and methodology of economic history. Credit units: 3 ECTS Credit Units: 6.

**ECON 532 Economic History II**
Continuation of ECON 531. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ECON 531.

**ECON 536 Methodology and History of Economics**
A selective historical survey of the developments of economic analysis giving varying degrees of attention to the contributions of Hume, Smith, Malthus, Ricardo, Marx, Mill, Walras, Marshall, Keynes and Schumpeter. Credit units: 3 ECTS Credit Units: 6.

**ECON 551 Studies in Growth and General Equilibrium Modeling I**
The course focuses on the general equilibrium properties of economies in dynamic movement. Theories of growth and computation of transitional versus steady state dynamics are discussed and modeled using dynamic programming techniques. The Walrasian general equilibrium system is extended to study Grossman-Helpman-Romer-type of endogenous growth based on R and D formation, and the economics of human capital-intensive, knowledge-driven endogenous growth. Dynamic Applied General Equilibrium is modeled to address contemporary issues on growth, accumulation and savings. Credit units: 3 ECTS Credit Units: 6.
ECON 552  Studies in Growth and General Equilibrium Modeling II
Continuation of ECON 551. This part of the course extends over multi-sector properties of the general equilibrium system. The Input-Output Methodology and Social Accounting Matrices are introduced and programming techniques are discussed in a multi-sector, multi-agent optimizing framework. The intersectoral price system is studied with applications of applied general equilibrium modeling of trade instruments, measures of nominal versus effective rates of protection, microeconomic efficiency, and decomposition of the sources of growth and structural change. Credit units: 3 ECTS Credit Units: 6.

ECON 561  Topics in Microeconomic Theory I
The subject matter of this course will vary from year to year, according to the interests of the instructor. Credit units: 3 ECTS Credit Units: 6.

ECON 562  Topics in Microeconomic Theory II
The subject matter of this course will vary from year to year, according to the interest of the instructor. Credit units: 3 ECTS Credit Units: 6; Prerequisite: ECON 561. Spr (F. Hüseyin)

ECON 563  Topics in Macroeconomic Theory I
The subject matter of this course will vary from year to year, according to the interests of the instructor. Credit units: 3 ECTS Credit Units: 6; Prerequisite: ECON 561.

ECON 564  Topics in Macroeconomic Theory II
Continuation of ECON 563. Credit units: 3 ECTS Credit Units: 6; Prerequisite: ECON 563. Spr (R. Gürkaynak)

ECON 566  Advanced Topics in Financial Economics
This is an advanced international finance and macroeconomics course that uses a mix of theoretical, empirical and policy frameworks to analyze topical problems in international macroeconomics and finance. Credit units: 3 ECTS Credit Units: None.

ECON 571  Fiscal Economics I
First and second best fiscal theory (income distribution, public goods, externalities; deadweight burden, Ramsey Problem). Incidence models. Economic response to taxation. Credit units: 3 ECTS Credit Units: 6; Prerequisite: ECON 504.

ECON 572  Fiscal Economics II
Quantitative analysis of economic effects of fiscal instruments and fiscal changes such as negative income tax, corporate income tax, integration, general fiscal incidence, expenditure taxation. Credit units: 3 ECTS Credit Units: 6; Prerequisite: ECON 571.

ECON 575  Monetary Economics I
The analysis of the empirical methods, such as optimal control theory and vector autoregression that widely used in monetary models and some basic models that explore the relationship between output, money and interest rates are studied. The role of exchange rates within the course of monetary policymaking is also analyzed in details. Credit units: 3 ECTS Credit Units: 6.

ECON 576  Monetary Economics II
This course is designed to explore the short-run monetary transmission mechanism, mainly within the context of dynamic stochastic general equilibrium models. Also “monetary policy rules”, which dominated the literature on monetary economics in the last decade are widely studied, with a clear emphasis on open economy models. Credit units: 3 ECTS Credit Units: 6.

ECON 590  Pro-Thesis Seminar
Independent work leading to the selection and elaboration of thesis topic. Presentation of research in departmental seminars. Credit units: None ECTS Credit Units: None.

ECON 591  Masters Pro-Thesis Seminar I
This is a course where students will attend a series of lectures presented by faculty members and/or invited academics and submit written reports on the papers presented. (Fall Semester) Credit units: None ECTS Credit Units: None. Aut (Staff)

ECON 592  Masters Pro-Thesis Seminar II
This is a course where students will attend a series of lectures presented by faculty members and/or invited academics and submit written reports on the papers presented. (Spring Semester) Credit units: None ECTS Credit Units: None. Spr (Staff)

ECON 593  Seminar in Economic Design I
This seminar will discuss topics in “Economic Design” which can be described as the art and science of inventing, analyzing and testing economic as well as social and political institutions and mechanisms aimed at achieving individual objectives and social goals. Constitutions, allocation and regulation mechanisms, tax and incentive schemes, contracts, voting procedures, markets and auctions exemplify legal-economic instruments that can be used in solving design problems. Credit units: None ECTS Credit Units: None.
ECON 594 Seminar in Economic Design II
Continuation of ECON 593. Credit units: None ECTS Credit Units: None.

ECON 595 Research Paper I
Credit units: 3 ECTS Credit Units: None. Aut (R. Gürkaynak)

ECON 596 Research Paper II
Students read, discuss and present research papers in particular areas. An in-depth study of an appropriate question and completion of a paper of high quality. Credit units: 3 ECTS Credit Units: None. Spr (R. Gürkaynak)

ECON 599 Master’s Thesis
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

ECON 691 Ph.D. Pro-Thesis Seminar I
This is a course where students will attend a series of lectures presented by faculty members and/or invited academics and submit written reports on the papers presented. The students working on their dissertation are expected to present the outcome of their research and submit a research paper of publishable quality. (Fall Semester) Credit units: None ECTS Credit Units: None. Aut (Staff)

ECON 692 Ph.D. Pro-Thesis Seminar II
This is a course where students will attend a series of lectures presented by faculty members and/or invited academics and submit written reports on the papers presented. The students working on their dissertation are expected to present the outcome of their research and submit a research paper of publishable quality. (Spring Semester) Credit units: None ECTS Credit Units: None. Spr (Staff)

ECON 699 Ph.D. Dissertation
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)
DEPARTMENT OF HISTORY

The Department of History functions mainly as a graduate department, offering M.A. and Ph.D. programs in the areas of Ottoman, American, and European histories. At the undergraduate level, the department offers both compulsory and elective courses in History of Civilization (HCIV 101/102) for the students of other departments and faculties, and provides preparatory courses for the entering graduate students entering the Department of History, some of which are also offered as electives for senior undergraduates of other departments.

MINOR PROGRAM

History is the academic study of past societies by means of written sources. An understanding of history is important for all students. Familiarity with the past of one’s own country, as well as that of other countries, is obviously essential for both one’s own identity but also for a full appreciation of the increasingly global atmosphere of the twenty-first century. Without a sense of history, we are nothing!

The new minor program in history is intended to teach the main skills of historical research while providing a strong background in the three main areas taught by the History Department: students will undertake a study of Ottoman history from the classical period to the early twentieth century, as well as research about medieval and modern Europe and the history of the USA. Emphasis is placed on independent thinking and critical analysis of sources and ideas rather than mere memorization of names and dates.

The minor courses in history form part of the History Department’s preparatory year for its master’s students. These courses are specifically designed for students with no previous experience of studying history and are already popular as electives among students from undergraduate departments. The minor program is open therefore to applicants with a sufficient CGPA from any department. Students who are considering a graduate degree in history are encouraged to apply, and those in social sciences and humanities who wish to support their major field with a broader historical knowledge will also find the history minor useful. However, the minor program requires no prior, specialist experience of studying history or related disciplines, and it will therefore be of interest to those students who simply wish to improve their knowledge of history, as well as those who have a more long-term interest in history as an academic field.

Prerequisite Courses: None

Open to Students from All Departments

GRADUATE PROGRAMS

The Department of History offers graduate programs in Ottoman, European and American history, leading to Master’s and Ph.D. degrees. Emphasis is placed on preparing students to be able to undertake independent research in these particular fields. The graduate program involves a preparatory year designed to give students the background knowledge, skills and language proficiency which will
enable them ultimately to make original research with primary source materials. Since profound historical research can only be carried out through the use of primary source materials, it is necessary for students to acquire the relevant linguistic and paleographic skills.

**Master of Arts in History**

The program is designed to concentrate on the areas of Ottoman History, European History and the History of the United States.

The preparatory year prior to the Master’s program provides a background in Western and Turkish history. The first year in the Master’s program features specialized courses in Ottoman History, European History, and the History of the United States. Students should be able to raise questions concerning more specific historical themes. During the second year the student begins to write his/her Master’s thesis under the supervision of an advisor. During the Master’s program the student is expected to submit papers at the end of each semester.

**Admission:** Graduates from all departments may apply to this program. An undergraduate degree in History is not a prerequisite for entering the M.A. program. All students entering the graduate program in History must take one year of preparatory courses before they begin to take Master’s level courses of the department. Therefore, graduates from the Faculties of Management, Engineering or Science, as well as those from Humanities and Social Sciences Faculties who are interested in History are also eligible to apply for admission. Students admitted should have passed the English Language Test (level equivalent to internet based TOEFL 80). (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

**Degree Requirements:**

1. Completion of at least 24 graduate-level credits after a preparatory year.
2. Students of Ottoman History must demonstrate competence in Ottoman Turkish and at least in one of the elective European and one of the Middle Eastern languages.
3. Students of European History and the History of the United States must demonstrate competence in at least two of the elective European languages.
4. A Master’s thesis must be submitted and accepted.
5. A grade point average of at least 3.00 must be maintained for the totality of Master’s level work.

HIST 582 Latin for Medieval and Early Modern History IV ........................ 3 / -
HIST 612 Ottoman Imperial Socio-Economic History, 1453-1600 ................ 3 / -

Doctor of Philosophy in History

To enter the Ph.D. program a candidate is required to have completed an M.A. program in History, and passed the entrance exam for his/her specific major area of the doctoral program. Applicants with M.A. degrees from other programs at Bilkent or other universities are also subject to the same requirements for admission into the doctoral program. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

Among the degree requirements is a minimum of 24 credit units of graduate level course work beyond the course work completed at the Master’s level, to be determined by the advisor and the departmental chair for each doctoral candidate. To meet the course requirements, the candidates may take the graduate level history courses that they have not previously taken and, if necessary, graduate level courses from other departments. For those who have taken graduate courses elsewhere, the department may apply for permission from the director of the graduate school (the Institute) to grant partial or full-credit for such courses. The candidate may also take language courses as recommended by his/her advisor. The candidate is expected to have participated in seminars offered on source materials.

Candidates in Ottoman history are required to undergo language examinations in one of the Western languages (French, German, Latin, Ancient Greek, Italian) and in one of the Middle Eastern languages (Arabic, Persian) in reading proficiency prior to the comprehensive exams.

After the completion of a minimum of 24 credits of course work, the candidate is eligible to take the written and oral comprehensive exams. The first part of these examinations evaluates the candidate’s expertise in the relevant field/period. The second part is tailored to each particular students’ research proposal for the dissertation. The candidate must prepare a doctoral dissertation embodying original research and must successfully defend it in a final exam before a committee of the faculty before the end of the fourth year of the doctoral program unless an extension is granted. The dissertation has to represent a substantial contribution to the historical knowledge in one of the particular fields of study.

**COURSE DESCRIPTIONS**

**UNDERGRADUATE COURSES**

**HCIV 101 History of Civilization I**
- Provides background to the origins of early Western civilizations: deals with the nature and spread of the earliest civilizations in the Ancient Near East and the development of civilization in classical and medieval Europe, concerning their political, social, economic and religious life; focuses on the globalization process of the civilization to be culminated in Western Europe. Credit units: 3 ECTS Credit Units: 6. Aut (C. Gates, E. Kermeli, A. Kireçi, C. Leighton, J. Morin, A. Thornton) Spr (İ. Özen)

**HCIV 102 History of Civilization II**
- Provides background to the origins of modern Western civilization: deals with the development of European society from around AD 1500 until the present, concerning the political, social economic and religious life of the West during that period. Credit units: 3 ECTS Credit Units: 6. Spr (E. Kermeli, A. Kireçi, P. Latimer, J. Morin, E. Radushev, A. Thornton, D. E. Thornton)

**HCIV 103 History of Civilization for Law**
- Credit units: 3 ECTS Credit Units: 4. Aut (F. Üçcan) Spr (F. Üçcan)

**HCIV 111 Introduction to Ottoman Turkish I**
- This course gives an introduction to the reading and writing systems and grammar of Ottoman Turkish through close reading of graded selections taken from poems, essays, short stories and archival materials printed in the late Ottoman and early Republican era. Credit units: 3 ECTS Credit Units: 6.

**HCIV 113 Introduction to Ottoman Turkish III**
- The course is devoted to the reading and understanding of texts focusing on key issues in late Ottoman and early Republican Turkish history. The course goals are to develop reading skills on Ottoman Turkish and to examine important texts written between 1700 and 1928. Credit units: 3 ECTS Credit Units: 6.

**HIST 114 Ottoman Turkish IV**
- This course emphasizes the different types of ottoman writing in the elaborate high style of classical Ottoman (15th to 20th century). Selections from manuscripts are used to enable students to read the types of texts they are likely to encounter in their historical research. Some documents will be selected from Ottoman archives. The documents will be in Nasîh, Rik'a, Divâni scripts. Credit units: 3 ECTS Credit Units: 6.

**HIST 313 Classical Arabic I**
- Basic grammar of Classical Arabic. The main tenses. Credit units: 3 ECTS Credit Units: 6. Aut (A. Beyati)

**HIST 314 Classical Arabic II**
- Basic grammar of Classical Arabic. Irregular grammatical forms. Reading of simple religious and legal texts. Credit units: 3 ECTS Credit Units: 6. Spr (A. Beyati)

**HIST 315 Advanced Classical Arabic I**
- Reading and grammatical interpretation of Classical Arabic texts. Credit units: 3 ECTS Credit Units: 6. Aut (A. Beyati)

**HIST 316 Advanced Classical Arabic II**
- Reading and grammatical interpretation of Classical Arabic texts. Credit units: 3 ECTS Credit Units: 6. Spr (A. Beyati)

**HIST 347 Ottoman Reform Movements I: Political and Social (1550-1839)**
HIST 348 Ottoman Reform Movements II: Political and Social (1839-1914)
Credit units: 3 ECTS Credit Units: 6.

HIST 354 Comparative Perspectives on Museum and Archives History and Practice
This course examines the development of museum and archives in the United States, the Ottoman Empire and the Republic of Turkey. It focuses on the historical background of these agencies and on issues relating to their management and mission. The course is open to students from Bilkent and Case Western Reserve University in Cleveland Ohio. The Bilkent students will participate via a live interactive broadcast of the lecture from Case Western. Turkish and American students will work in pairs by internet on course projects. Provided grant funding is secured a mutual "site visit" from Cleveland to Ankara from Ankara to Cleveland will be offered at the end of the semester. 
Credit units: 3 ECTS Credit Units: None.

HIST 401 Ottoman Turkish and Paleography I
Course on Arabic script and Ottoman grammar. Credit units: 4 ECTS Credit Units: 8.

HIST 402 Ottoman Turkish and Paleography II
Course on Arabic script and Ottoman grammar. Reading exercises on printed Ottoman texts. Credit units: 4 ECTS Credit Units: 8. Spr (K. Emiroğlu)

HIST 403 The American Revolution in Comparative Perspective
This course examines the era of the American revolution, 1760s-1780s, to understand the causes, means, and consequences of America's war for independence. Comparisons to revolutions in Europe, Latin America, Africa, and the Middle East will be drawn. Students are expected to read, write, and discuss relevant literature on a weekly basis. 
Credit units: 3 ECTS Credit Units: 6.

HIST 404 Comparative Urban History in America and Eurasia
The urbanization of human life -the shift of population and of political, economic, and cultural power in most societies from the country to the town- counts as perhaps the most remarkable social phenomenon of recent centuries. This course offers a comparative perspective, with examples drawn from the Americas as well as Eurasia, on why cities emerge, how they operate, and how people build, live in, and perceive them, questions that go to the heart of what it means to be a person in recent times. 
Credit units: 3 ECTS Credit Units: None.

HIST 405 Islamic and Turkish History Until the Ottoman Empire
This survey course covers the origin and the land of the Turks as recorded in classical sources. The Pre-Islamic Turkish States such as the Huns, Göktürks and Uygurs, and the Turkish States at the advent of Islam. The cultural background of the Turks. The sources of Islamic history and their methodological significance. Pre-Islamic Arabia. The prophet Muhammed's life and his achievements. The first four caliphs and the early Islamic conquest. Muawiyah and his successors. Umar b. Abdutarik and his reforms. The fall of the Ummayads. The coming of the Abbasids and their rise. The decay of the Abbasid caliphate and the rise of the Turks and minor dynasties. The achievements of the Buwayhids, Hamdanis and Fatimids. The crusaders in Syria and the Ayyubids. The coming of the Seljuks. The Turkish Principalities of Anatolia. 
Credit units: 3 ECTS Credit Units: 6.

HIST 411 Ottoman History: 1300-1600
Classical period of the Ottoman Empire. Economic, political and religious institutions. Ottoman economic system. Relations with its European neighbors. 
Credit units: 3 ECTS Credit Units: 6. Aut (O. Özel)

HIST 412 Ottoman History: 1600-1914
Ottoman Empire in decline. Political, economic and ideological developments at the capital as well as in the provinces. Nationalism among non-Muslims and Muslims. Administrative and political reforms during the eighteenth and nineteenth centuries. 
Credit units: 3 ECTS Credit Units: 6. Spr (O. Özel)

HIST 413 Byzantine History I: 324-1025
Foundation of the Eastern Roman Empire, development of Byzantine institutions, relations of the Byzantine Empire with the East and West. Cultural and religious developments. 
Credit units: 3 ECTS Credit Units: 6. Aut (E. Kermeli)

HIST 414 Byzantine History II: 1025-1453
Credit units: 3 ECTS Credit Units: 6. Spr (E. Kermeli)
HIST 415  British History: 1485-1914
Development of the religious, social and economic structures of the states in the British Isles from the accession of the Tudor dynasty to the zenith of imperialism and industrialism in the early 20th century. Credit units: 3 ECTS
Credit Units: 6.

HIST 416  Medieval British History
Formation of the medieval English state from its Anglo-Saxon beginnings to the 14th century, tracing the developments in central and local government, its politics, social structure and its interaction with the rest of the British Isles and the Continent. Credit units: 3 ECTS Credit Units: 6. Aut (D. E. Thornton)

HIST 417  Medieval Europe (500-1500)
This course traces the history of western Europe from the fall of the Roman Empire to the Renaissance, and deals with the main political, social and religious changes during that period. Credit units: 3 ECTS Credit Units: 6. Aut (P. Latimer)

HIST 418  Modern Europe (1453-1914)
The course seeks to deal, selectively with the historiography of major themes in the political, social intellectual and religious history of Europe from the Renaissance to the eve of the emergence of the national state system characteristic of the twentieth century. Credit units: 3 ECTS Credit Units: 6. Spr (C. Leighton)

HIST 419  Us Immigration History
This course will provide an overview of immigration to the United States from the colonial period to the present. It will focus on governmental policy toward immigration as well as on the social history of immigrants and the communities they established. Particular attention will be given to the questions of assimilation and acculturation and to the role of immigration in shaping an "evolving" American identity. Credit units: 3 ECTS Credit Units: 6.

HIST 420  US Historiography
This course surveys the writing of American history from the patriotic/romantic historians of the early-nineteenth century through the progressive historians of the late-nineteenth and early-twentieth century, the consensus historians of the immediate post-World War II period, the new social historians who emerged in the 1960s, and on to the post-modernists of the late-twentieth and early-twenty-first century. Along the way we will learn how historians' interpretations of the U.S. past change to reflect the times in which they (the historians) lived. Credit units: 3 ECTS Credit Units: 6.

HIST 424  America and the World since 1898
This course examines United States foreign relations from the late nineteenth century through twentieth centuries. Particular attention is given to diplomacy, military and economic history using primary and secondary sources. Aspects of American foreign policy decisions, patterns and themes will be covered. A variety of historiographical approaches will receive attention as well as differing ideas over the motives behind America's dealings with foreign powers over time and by region. Credit units: 3 ECTS Credit Units: 6.

HIST 426  The History of the American South
Themes in the development of the Southern United States. Race, paternalism violence. Honour. Agrarianism. States rights. Populism. Also the problem of regional history. Time period covered is from the era of the old south of the early 19th century to the present. Credit units: 3 ECTS Credit Units: 6.

HIST 431  History of the United States until the Reconstruction
Basic history of the United States from the colonial period up to the Civil War, designed to orient students to more detailed information. Characteristic problems of early American political, economic and intellectual history during the nation-building process. Credit units: 3 ECTS Credit Units: 6. Aut (E. Kohn)

HIST 432  History of the United States from the Reconstruction
Basic history of the United States from 1865 up to the modern times, designed to orient students to more detailed information. Characteristic problems of American political, economic and intellectual history in the process of its emergence as a world power. Credit units: 3 ECTS Credit Units: 6. Spr (K. Weisbrode)

HIST 433  History of American Politics
Survey of the political history of the United States from the 18th century to the present, this course introduces students to organizing themes of U.S. political theory, electoral systems, politics in the legislature and the social bases of political power. Credit units: 3 ECTS Credit Units: 6.

HIST 434  US Social History
Survey of the development of American society and culture, focusing on the 19th and 20th centuries. The goal of the course is to sharpen students' understanding of the ways people lived in the United States and their responses to events - wars, economic change, demographic shifts - which were largely outside of their control. Credit units: 3 ECTS Credit Units: 6.
HIST 435  History of US Foreign Relations: the Cold War and Beyond
A survey of the major developments in American foreign relations from the end of World War II to the present. The course will include considerable emphasis on US-Middle East relations. Credit units: 3 ECTS Credit Units: 6.

HIST 461  An Introduction to the Economic History of Europe from the 16th to the 20th Century
After examining the special nature of ‘economic history’ and the relationship between economic and historical disciplines within it, the course will go on to look at major episodes within the economic history of Europe and the wider world, concentrating on developments from the sixteenth century to the twentieth. Among the subject covered will be the sixteenth-century price revolution, the impact of exploration, colonial settlement and trade beyond Europe, the seventeenth-century crisis, the onset of a commercial society, the industrial revolution, imperial economies of the nineteenth century, the impact of mass production, and the Great Depression of the 1930s. Credit units: 3 ECTS Credit Units: 6.

HIST 479  Comparative Perspective On Museum and Archives History and Practice
This course examines the development of museum and archives in the United States, the Ottoman Empire and the Republic of Turkey. It focuses on the historical background of these agencies and on issues relating to their management and mission. The course is open to students from Bilkent and case Western Reserve University in Cleveland, Ohio. Bilkent students will participate via a live interactive broadcast of the lecture from Case Western University. Turkish and American students will work in pairs by internet on course projects. Provided grant funding is secured a mutual “site visit” Cleveland to Ankara, Ankara to Cleveland will be offered at the end of the semester. Credit units: 3 ECTS Credit Units: None.

HIST 481  Latin for Medieval and Early Modern History I
Introduction of Medieval Latin to those graduate students who wish to specialize in Medieval as well as Early European History. Emphasis on both grammar and reading. Credit units: 3 ECTS Credit Units: 6.

GRADUATE COURSES

HIST 501  Ottoman Paleography I
Advanced reading exercises on Ottoman documents. Credit units: 4 ECTS Credit Units: 8. Aut (Ö. Ergenc)

HIST 502  Ottoman Paleography II
Advanced reading exercises on Ottoman documents. Credit units: 4 ECTS Credit Units: 8. Spr (Ö. Ergenc)

HIST 504  Crisis Regionalism and Reform in the Ottoman Empire (1774-1839)
This seminar is a thorough study of a short but significant period of transition, crisis, and early reform in the Ottoman Empire. This seminar is a survey of political concepts and institutions of this transitional period. Its main aim is to discuss and understand the distinct political culture of the time between the Ottoman ancien régime and modern reformism. The seminar will examine such themes as the beginning of the Eastern Question, regionalism and provincialism, janissary claims, the role of reading and listening public, the New Order (Selimism) and reformism, the coups and the role of zocrwm, premature constitutionalism, and popular sultanism/Mahmudism. Throughout the seminar, basic constitutional and political texts (including some diplomatic treaties) of the period, such as the Treaty of Kucuk Kaynarca, Hicaz-i Seriyye of 1807, Señed-i İltifak (1808), Treaty of Bucharest (1812) and the Gülhane Hatt-i Humâyûnu of 1839 will be scrutinized with the contemporary historical narratives, such as Tarih-i Astar, Tarih-i Vâsif, Şanızade Tarih, Rêvolutions de Constantinople by J. Saint-Denys, as well as French, British, Austrian, and Russian diplomatic documents. The seminar will mainly focus on the primary sources. Credit units: 3 ECTS Credit Units: 6.

HIST 505  Ottoman Rule in Southeast Europe I: 1354-1600
Local Balkan monarchies (Bosnians, Bulgarians, Serbs) and the growing feudalization of the region. Ottoman expansion and the foundation of the First Ottoman Empire. Interregnum and the Second Ottoman Empire. Social and economic developments. Administration and land regime. Urban and rural structure. The unique case of Dubrovnik. Credit units: 3 ECTS Credit Units: 6.

HIST 506  Ottoman Rule in Southeast Europe II: 1600-1878
Islamic culture and heterodox Islamic movements in Southeast Europe. Decline of the Ottoman Empire. Military and fiscal transformation and its impact on Ottoman Balkans. The Siege of Vienna in 1683 and the political and social effects of the Ottoman defeats. The rise of non-Muslim middle class and education. The struggle for independence of Balkan people and the “Eastern Question”. Credit units: 3 ECTS Credit Units: 6.

HIST 507  Methodology in History I
Basic methods in historical research. The history of historiography. Main traditions and currents of historical thought. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Özel)

HIST 508  Methodology in History II
Main methods and approaches in historical research. Problems of historical research using primary sources. Source typology, and text criticism and analysis. Credit units: 3 ECTS Credit Units: 6. Spr (P. Latimer)
HIST 509  Latin Palaeography for Medieval and Early Modern European History
The aim of this course is to introduce the main developments in European handwriting for the period 500 to 1600, and to enable history students to use Latin and vernacular manuscript sources as part of their research. In addition to different scripts, the course will also cover other palaeographical topics, such as abbreviations, as well as codicology and manuscript illumination. Credit units: 3 ECTS Credit Units: 6.

HIST 511  Ottoman Social and Economic History I
Ottoman Beylik as a frontier state. Hegemony in Anatolia and the Balkans. The Battle of Ankara and struggle for Revival. The conquest of Constantinople. The definitive foundation of the classical Ottoman Empire. Ottoman Empire as a world power. Internal disorders. Social, economic and religious institutions. Credit units: 3 ECTS Credit Units: 6. Aut (O. Ergenc)

HIST 512  Ottoman Social and Economic History II
The periods of transition and modernization of the Ottoman state and society. The detonation of the Ottoman classical socio-economic structure. The weakening of central authority. The ayans. Early attempts of modernization. Influence of the "Enlightenment" ideas on emergence of nationalist currents among non-Muslim communities. Tanzimat. Credit units: 3 ECTS Credit Units: None. Spr (O. Ergenc)

HIST 513  Intellectual Movements in the Tanzimat Period I

HIST 514  Islamic and Ottoman Law
The aim of this course is twofold. Firstly we will explore the development of fıkh (Islamic jurisprudence) and the tools used to construct legal principles. The development of different schools, the incorporation of hadith (prophetic traditions) into the body of law would be some of the aspects to discuss. The historical development of the position of the Şeyhülislam, the müftis and kadıs under the Umayyads and Abbasids would be used as basis of comparison to the ottoman paradigm. Secondly the development of kanun would be discussed vis-a-vis classical hanafi doctrine. Finally specific areas of Ottoman law like family law, inheritance, torts against person and property, procedural law, commercial law, criminal law would be discussed using court cases and legal opinions of müftis. Credit units: 3 ECTS Credit Units: 6.

HIST 515  Aspects of Ottoman Social History I
Main foundations of the Ottoman Empire. Demographic movements, fiscal structure, administrative institutions, land and peasants, settlement patterns, internal and external trade. Credit units: 3 ECTS Credit Units: 6.

HIST 516  Aspects of Ottoman Social History II
Main foundations of the Ottoman Empire. Demographic movements, fiscal structure, administrative institutions, land and peasants, settlement patterns, internal and external trade. Credit units: 3 ECTS Credit Units: 6.

HIST 517  Ottoman Millet System
Legal and social status of non-Muslim communities in the Empire, their cultural life and ecclesiastic organizations. The evaluation of the Christian and Jewish communities after the decree of "Tanzimat" in 1839 and after the Congress and Convention of Paris in 1856 will be discussed in this course. Credit units: 3 ECTS Credit Units: 6.

HIST 518  Introduction to Ottoman Diplomatics
History and development of the field of archival research. Archives and archival sources in Turkey. Development of the field of Ottoman diplomatics. Types and classification of Ottoman documents. Internal structure of Ottoman official correspondence, decrees and diplomas prior to the Tanzimat period. Ottoman official documentation in the period of reform until the dissolution of the Ottoman Empire. Credit units: 3 ECTS Credit Units: 6. Aut (O. Ergenc)

HIST 519  Sources of Ottoman Social and Economic History I
The Ottoman land regime. Social and legal changes throughout the Ottoman period. Reading and analysis of sources such as berats, mühürmèmes, sicils, tahris, temettuats and vakıfiyyes. Credit units: 3 ECTS Credit Units: 6.

HIST 520  Sources of Ottoman Social and Economic History II
The Ottoman land regime. Social and legal changes throughout the Ottoman period. Reading and analysis of sources such as berats, mühürmèmes, sicils, tahris, temettuats and vakıfiyyes. Credit units: 3 ECTS Credit Units: 6.

HIST 524  US in the Vietnam Era
This course is designed to give students in the Master's program in American history an in-depth look at the history of Vietnam War. The course will focus on the period roughly 1945-1975. In addition to the war itself, other
topics for discussion will include the Cold War, the Civil Rights movement, the counter culture and the legacy of the war in the 1990s. Credit units: 3 ECTS Credit Units: 6. Aut (E. Kohn)

HIST 525 Transition from Late Byzantium to Early Ottoman
Comparison of the institutions of the Byzantine Empire and those of its successor state, the Ottoman Empire. Discussion of continuity and change. Examinations of institutions such as the palace, pious endowments, land regime, taxation, guilds, armed forces based on Byzantine and Ottoman documents. Credit units: 3 ECTS Credit Units: 6.

HIST 526 Advanced Ottoman Diplomats
Historical development and characteristics of ottoman diplomatics, focusing particularly on the bureaucratic-institutional mechanisms that produced diverse genres in the ottoman central bureaucracy. Particular emphasis will be made on changing priorities of the central government over periods of time from the ‘classical’ period to the Tanzimat. Credit units: 3 ECTS Credit Units: None. Spr (Ö. Ergenc)

HIST 527 Feudalism: East and West I
Examination of the origins and development of the diverse modern concepts of ‘Feudal’ and ‘Feudalism’ from late medieval and early modern legal theory, through the Enlightenment and Marxism down to modern times. It will go on to deal with the elements of these concepts as historical phenomena in medieval and early modern Europe, and in the Byzantine and Ottoman Empires. Credit units: 3 ECTS Credit Units: 6.

HIST 528 Migrations Politics and Society in Late Ottoman History
The politics of migrations in the context of the changing nature of international relations. Emphasis will be on aspects of mass migrations that took place during the second half of the 19th century, with particular reference to emerging nationalisms and power politics, within and over empires such as the ottoman empire. Credit units: 3 ECTS Credit Units: None.

HIST 529 Bulgaria Under the Ottoman Rule: History and Sources
Medieval Bulgarian state before the Ottomans. Ottoman conquest - from “Bulgarian Empire” to Ottoman Rumelia. Turkish colonization in Bulgaria: ahis, gazis, dervishes, and yürüks in the early colonization process. Demographic structure of Bulgarian lands under Ottoman rule. Ottoman towns and Turkish settlements in the rural area. Administrative division of Rumelia, communication system and trade routes. Conversion to Islam in urban and rural areas. Islamization process in Bulgarian lands as a contemporary myth. Ottoman culture in Bulgaria. Sources for the study of the Ottoman rule in Bulgarian lands. Credit units: 3 ECTS Credit Units: 6. Aut (E. Radushev)

HIST 531 Social and Economic History of the United States I

HIST 532 Social and Economic History of the United States II

HIST 533 Religion: East and West (1350-1850)
The course offers a general understanding of European religious history from the late medieval period up to and including the earliest stages of secularization in the post-revolutionary/Tanzimat period. In dealing with western and central European history, its chief concerns are the transition from medieval to modern religion, and the challenge of the Enlightenment and the responses to it. In dealing with eastern European and Ottoman history, it examines the continuation of the Byzantine religious tradition in eastern Europe and in the Ottoman dominions and discusses the historical relationship between Christianity and Islam. Credit units: 3 ECTS Credit Units: 6.

HIST 534 Themes in the History of American Radicalism
This course establishes a conceptual framework, and then focuses on significant episodes in the history of American radicalism. Groups and movements studied include Puritanism, anti-federalism, abolitionism, secessionism, agrarianism, anarchism, socialism, suffragism, and black and ethnic separatism. Topics include the recurring or unique goals and strategies of radicals, the composition of radical groups, their relationship to mainstream society and the government, and their respective successes and failures. Students are asked to think critically and, where appropriate, from comparative or international points of view. Readings include primary and secondary sources. Open to graduate students and undergraduate students with department advisors’ approval. Credit units: 3 ECTS Credit Units: 6.
HIST 535  
Abdulhamid: Reformer or Reactionary  
The development of Ottoman government and society during the reign of Sultan Abdulhamid II (1876-1909), with special attention to the role he played in completing the work of the Tanzimat reform movement carried out earlier in the 19th century, while at the same time suppressing many of the political and social ramifications of reform. Credit units: 3 ECTS Credit Units: 6.

HIST 537  
US Civil War and the Reconstruction  
An intensive examination of the United States from 1848 to 1877. Investigation of the causes of the Civil War; the military, social, and political history of the war; and the conflict over emancipation and Southern political power during the Reconstruction. Credit units: 3 ECTS Credit Units: 6. Spr (E. Kohn)

HIST 538  
US in the Gilded Age and Progressive Era  

HIST 539  
Models of Cooperation in Ottoman Society  
The aim of this course is to provide an overview of conflict and co-existence within the multicultural Ottoman society. The organisation and administration of Christians after the Ottoman conquest and their interaction with the Muslims in the empire is to be discussed based on examples of cooperation and antagonism. The first part of the course will discuss the relation between Christians and Muslims in the fluid societal environment of the ottoman emirate and the second part will explore their interaction when the empire is established up until the 18th century. The course is to be a mixture of a lecture and a seminar. Students will be required to present a topic of interest each week to be followed by a discussion. Ottoman and Byzantine chronographies, hagiographies, imperial orders, patriarchal and private letters, folkloric songs, judicial opinions and court records are to be used. Byzantine Greek and Ottoman Turkish is not a prerequisite for the attendance of the course. Credit units: 3 ECTS Credit Units: 6.

HIST 540  
Warfare and Violence in Stuart Britain 1603-1807  
The course discusses in a Europe-Wide context, both violent disorder in general and warfare in particular (the war of the three kingdoms, the Dutch invasion of 1688 and the Jacobite wars) in the British Isles in the seventeenth and eighteenth centuries, it also deals, with the British struggle against the French revolutionary and Napoleonic states. Credit units: 3 ECTS Credit Units: 6.

HIST 541  
Archival Research and Methodology for Late Ottoman History  
This is a thematic course focusing on archival research for 18th and 19th Century Ottoman History. Throughout the course, fundamental constitutional, diplomatic and administrative texts of the late Ottoman Empire will be thoroughly read, analyzed and interpreted. Fundamental categories of the Ottoman administrative texts, such as ferman, ilam, arz huccet will be examined. Fundamental archival sources of the period, such as athkam, mühimme, baş muhasebe defters and court records, will be discussed. Besides the Ottoman archives in Turkey, European archives will be introduced. At the end of the class, each student will be asked to write two five-page papers based on archival documents. Credit units: 3 ECTS Credit Units: 6.

HIST 542  
American Foreign Relations From World War I to the Present  
This class will explore American Foreign Relations during its rise to world power during the twentieth century. Themes will include: Post-World War I foreign relations and the question of “Isolationism”; the FDR era and World War II; the origins of the Cold war; the Korean War; the Eisenhower era; Kennedy and Cuba; Nixon and Détente; Carter and Iran; Reagan and Gorbachev; the end of the Cold War... and beyond. Credit units: 3 ECTS Credit Units: 6.

HIST 543  
The British Isles in the Early Modern Period  
The course seeks to describe the distinctive mentalities and societies to be observed in the British Isles, in the post-medieval period and to consider the political, military and other consequences of this diversity. The topics are considered with reference to contemporary phenomena on the European mainland. Credit units: 3 ECTS Credit Units: 6.

HIST 545  
Themes in Historical Geography and Demography  
Examination of the bases of historical demographic research and the importance of geographical and topological information in the understanding of communities in Europe and the Ottoman Empire. Credit units: 3 ECTS Credit Units: 6.

HIST 546  
Comparative Perspectives on Museum and Archives History and Practice  
This course examines the development of museums and archives in the United States, the ottoman empire and the republic of Turkey. It focuses on the historical background of these agencies and on issues relating to their management and mission. The course is open to students from Bilkent and Case Western Reserve University in Cleveland Ohio. The Bilkent students will participate in a live interactive broadcast of the lecture from Case Western. Turkish and American students will work in pairs by internet on course projects. Provided grant funding is secured a mutual “site visit” from Cleveland to Ankara from Ankara to Cleveland will be offered at the end the semester. Credit units: 3 ECTS Credit Units: None.
HIST 550 Jewish History and Religion
This course will present a history of Judaism and its influence upon, and interactions with Christian and Islamic tradition and civilizations over the millennia. Students will be introduced to chronological events in Jewish history, to the basic texts of Judaism, to some central theological beliefs, to the cycle of festivals and the life cycle, and to some of the religious and mystical variations in Judaism through the ages. Most importantly, emphasis will be placed upon Jewish history in the context of medieval and modern international politics. Credit units: 3 ECTS Credit Units: 6.

HIST 555 Modernization of the Ottoman Empire During the 19th Century
Study of the Ottoman Tanzimat reform movement (1839-1876), its preliminaries during the reigns of sultans Selim III (1789-1807) and Mahmud II (1808-1839), its culmination during the reign of Sultan Abdülhamid II (1876-1908) and the Ottoman Constitutional Era (1908-1923). Credit units: 3 ECTS Credit Units: 6.

HIST 556 War, Technology and the American Military Experience: Since 1898
This seminar exposes students to the trends and themes that comprise American military thought and practice from the Colonial era to the eve of the Spanish-American War. It investigates various factors that shaped the American military experience, national defense strategies, doctrine, and the impact of technology upon armed conflict. The seminar strengthens graduate student critical thinking skills by allowing students to formulate their own ideas about the American military experience through a broad exposure to US military concepts and practices. Credit units: 3 ECTS Credit Units: 6.

HIST 557 US Politics and Culture Since 1945
From the red scare to Vietnam, and from the Reagen revolution to the Clinton implacament, American Politics have been about more than just elections. Religion, culture, value and ideas combine to both reflect and shape the politics of the day. This class will look at American politics and culture since 1945 to the present, stressing the unique American influence that continues to shape politics today. Credit units: 3 ECTS Credit Units: 6.

HIST 558 Economic History, the Rise of Capitalism
Analysis of Western economic development from the mid-seventeenth century to the present. Topics include: mercantilism, the rise of capitalism, industrialization, slave economies, agrarian economics, depressions, technological innovation, and the global economy and de-industrialization. The contributions of intellectuals and the responses of workers to various economic developments and changes will also be considered. Credit units: 3 ECTS Credit Units: 6.

HIST 559 Major Issues in Medieval and Early Modern Economies
Study of the main transformations in the economies of Europe and the Near East from late Roman times to the mid-seventeenth century. Examination of the disappearance of monetary economy, emergence of manorialism, and trade life in the Mediterranean basin. Development of markets and the domination of Atlantic economy. Price inflation. Reasons and consequences of these developments. Credit units: 3 ECTS Credit Units: 6.

HIST 560 Supervised Research in Ottoman History I
Individual works with students in tutorials, aiming to give students expert assistance in their research as well as in their studies on archival sources. Credit units: None ECTS Credit Units: None.

HIST 561 Supervised Research in Ottoman History II
Individual works with students in tutorials, aiming to give students expert assistance in their research as well as in their studies on archival sources. Credit units: None ECTS Credit Units: None.
HIST 564 Islamic Culture in the Ottoman Balkans, 1600-1900
Ottoman political decline in the Balkans. Decentralization and the Bektashis, Marufis, and Hamzevis. Centraliza-
tion, Tanzimat reforms and local Islamic reactions. Bektashis and the Albanian nationalist movement. Bosnian
Muslims and the Austria- Hungarian occupation of Bosnia. Credit units: 3 ECTS Credit Units: None. Spr (E. Radushev)

HIST 567 History and Literature in the Ottoman Empire
Chronicles in the form of literary works. Analysis and interpretation of historically significant literary works of
Ahmedi, chronicles of Asikpasazade and Oruc, MustafaAlis Menakib-Hul-Hulnervan, Mecalis in-Nefais and
Tezkires. Credit units: 3 ECTS Credit Units: 6.

HIST 568 British History-Writing to the Enlightenment
The course has as its subject matter a variety of writings about the past created in the languages of the British
Isles, from the early medieval period until the end of the eighteenth century. It seeks to show the circumstances
of their composition, their purposes, and their role in such field as law, theology, politics and purely imaginative
literature. The purpose of the course is to allow the student to become acquainted with large areas of the
intellectual history of the British Isles and also provide a comparative basis for a critical consideration of modern
historiography. Credit units: 3 ECTS Credit Units: 6.

HIST 569 Cultural History of the Ottoman Empire I
Analysis of the cultural history of the Ottoman Empire from 1453 to the period of Turkish Republic. Topics include
social and cultural structures of the Ottoman Empire, language, literature and artistic tradition, and analysis and
interpretation of some significant works (divan's, biographies of poets, kaside's, memoir's). Credit units: 3 ECTS
Credit Units: None. Aut (M. Kalpakli)

HIST 571 Religion and Nationalism in 19th Century Europe
The formation and development of nationalist movements in the late 18th and 19th centuries. Their relationship
to religion, and competing and complementary ideologies. Study of concrete examples in existing states and
in stateless ethnic groups, throughout Europe but with particular reference to the British Isles. Credit units: 3
ECTS Credit Units: 6.

HIST 572 New Era/New Deal (1920-1945)
This course is designed to give students in the masters program in US history an in-depth look at the history of
and historical literature about the period 1920-1945. Major topics will include the Jazz Age, the Roaring's, the
Great Depression, Franklin Roosevelt's New Deal and World War II. Credit units: 3 ECTS Credit Units: None.
Spr (K. Weisbrode)

HIST 573 US Labor and Immigration History
Labor history and the history of immigration into the United States are intimately related topics. This course is
designed to give students in the graduate program in American history an in-depth look at this relationship, with
a focus on historiography. Topics may include colonial economies and labor, slavery, early industrialization and
the breakdown of skilled trades, later industrialization and the struggle for control of the shop floor race and the
American working class, NAFTA, and post-industrialization. Credit units: 3 ECTS Credit Units: 6.

HIST 574 The Ottoman Empire in the Great War 1911-1923
Internal and external conditions in the Ottoman Empire during the Tripolitanian War (1911-1912), the Balkan
Wars (1912-1913), World War I (1914-1918), and the Turkish War of National Liberation (1918-1923). Credit
units: 3 ECTS Credit Units: 6.

HIST 575 US Military and Diplomatic History
An intensive examination of American military and diplomatic history from the colonial period to the present
with a focus on historiography. Topics may include colonial wars in North America, the wars of the United
States, war and American society, treaties with European nations and with Native Americans, imperialism and
anti-imperialism, relations, and the cold war. Credit units: 3 ECTS Credit Units: 6.

HIST 576 Magna Carta and Associated Documents:Texts and Contexts
Magna Carta - "The Great Charter" - first issued in 1215, was at the heart of discussions of the relationship
between government and people in the English-speaking world from the thirteenth century to at least the
eighteenth century. It is a document fundamental for the study of constitution and law in England, Britain and the
British colonies in America. Using English translations, this course will look at Magna Carta itself and associated
documents. It will examine the background to the drafting of Magna Carta and its place in the political situation
of the time, but will then go on to look at the continuing significance of the document, and of the principles behind
it, for the remainder of the Middle Ages and beyond. Credit units: 3 ECTS Credit Units: None. Aut (P Latimer)
HIST 579 Modernization of the Ottoman Empire: 1800-1923
Study of the processes by which the Ottoman Empire modernized itself during the 19th and early 20th centuries. Special attention to the Tanzimat, the reign of Sultan Abdülhamid II, and the Young Turk Constitutional era. Credit units: 3 ECTS Credit Units: None. Spr (A. Kireççi)

HIST 580 American Foreign Relations from the Early Republic to World War I
Important themes in the formation and early development of American foreign relations: Exceptionalism, isolationism, unilateralism, hegemony, expansionism, anti-colonialism, idealism, period covered 1787-1918. Credit units: 3 ECTS Credit Units: None. Spr (A. Kireççi)

HIST 585 Seminar in Medieval European History I
Selected topics in medieval European History tailored to current student research projects. Credit units: 3 ECTS Credit Units: None.

HIST 586 Seminar in Medieval European History II
Selected topics in medieval European History tailored to current student research projects. Credit units: 3 ECTS Credit Units: None.

HIST 587 Topics in American Legal History
This course surveys crucial themes in American legal and constitutional history from the late eighteenth century to the late twentieth century. We examine the interactions between social and political history and changes in the law and legal institutions. Topics include the law and ideological frameworks put in place in the American revolution; the creation of a national constitution; federalism. The law of slavery; the rise of the legal profession and formal legal education; the regulation of race and gender; labor law; economic regulation, citizenship and rights. Course materials include legislation, course cases, legal treatises, and secondary sources. Credit units: 3 ECTS Credit Units: None.

HIST 588 The Latin Kingdom of Jerusalem 1099-1291
Brought into being by the First Crusade, the Latin Kingdom of Jerusalem established a western presence in Palestine which, with the somewhat erratic assistance of further crusades, maintained itself against the Muslims, for nearly two centuries, before finally being destroyed by the Egyptian Mamluks. This course will examine the complex society that arose there of Latin princes, knights and lesser folk from Northwestern and Northern Europe, Military Religious Orders, Italians, Eastern Christians, Jews and Muslims. Although, focused on the Latin kingdom of Jerusalem itself, the course will also necessarily deal to some extent with the other crusader states of the Near East in this period, as well as the Muslim, Byzantine and Mongol states of the region. Credit units: 3 ECTS Credit Units: 6.

HIST 589 History of Arab Nationalism in the Middle East
This course explores the birth, triumph and fall of Arab nationalism in the Middle East. The course focuses on historical events, political leaders and movements all of which defined and shaped the nature of the movement. Concepts such as Arabism, Arab unity, Arab nationalism are among the terms that we will investigate along with their contextualization in different regions of the Middle East by various actors. Factors which contributed to the development and/or decline of the Arab nationalist movement will be examined are: colonialism, the dissolution of the Ottoman Empire, the World War I and WW-II, the emergence of the State of Israel, the Egyptian Revolution and the rise of Al-Nasser, Islamic resurgence and the recent incidents in the region. The ideological links between Arab nationalism and modern radical movements will also be examined. Credit units: 3 ECTS Credit Units: 6.

HIST 591 Seminar in Ottoman History I
Reading and interpretation of selected sets of documents on particular topics. Credit units: None ECTS Credit Units: None.

HIST 592 Seminar in Ottoman History II
Independent work on the periods of transition and modernization of the Ottoman state and society. Credit units: None ECTS Credit Units: None.

HIST 593 Seminar in English History I
Selected topics in English History tailored to current student research projects. Credit units: 3 ECTS Credit Units: None.

HIST 594 Seminar in English History II
Selected topics in English History tailored to current student research projects. Credit units: 3 ECTS Credit Units: None.

HIST 595 Seminar in American History I
Independent work on the history of the United States in the nineteenth century. Credit units: 3 ECTS Credit Units: None.

HIST 597 Seminar in Ottoman History III
Reading and interpretation of documents related to individual student's thesis research. Credit units: 3 ECTS Credit Units: None.

<td>The World Transformed (1975-2001)</td>
<td>This course deals with major themes in international affairs and is designed for graduate students and senior undergraduates. It starts with the post-Vietnam crisis of the West (including the oil shock) and the last Soviet expansion (culminating with Afghanistan). the western recovery after 1979 is assessed and so is the resulting upheaval in Moscow where a completely different tack was used. In 1986 the Soviet bloc started to disintegrate, a process culminating in 1991 with the disappearance of the USSR and the proclamation of a 'New World Order'. The Communist world then entered upon crisis, and the USA became by far the dominant power. This process is analyzed as far as the occupation of Iraq in 2002. Credit units: 3 ECTS Credit Units: 6.</td>
<td>None</td>
</tr>
<tr>
<td>HIST 663</td>
<td>The Revolution of the 1980’s: Causes and Consequences</td>
<td>This course covers the era of Turgut Özal, Ronald Reagan and Margaret Thatcher (1979-1993). All aspects, domestic, international, economic and cultural, will be surveyed, with a detachment that has not until recently been possible. The causes of the great change, in the failure of the post-1945 order with the inflation and unrest of the 1970's, are examined; so also are the consequences, the collapse of Communism and the spread of a 'free-market' ideology. <td>HIST 702</td>
<td>The Historical Image of &quot;The Turk&quot; in Europe</td>
<td>The course aims at giving an overview of the Image of the Ottoman Empire in different European countries up to World War I, as the picture is changing from century to century and from country to country. The course will deal with the first encounter with Islam, the perspectives and images created then and how some of these prejudices were transferred to the Ottomans after they established their first presence on the Balkans and above all after the Conquest/Fall of Constantinople. A general separation has to be made into Central Europe (primarily the German speaking countries Austria, and as a consequence of Protestantism, Germany) and Western European Countries. It will be taken into regard that there were different perceptions in the upper and lower classes and how propaganda instruments were used to either create a negative or positive image. Similarly, source material (such as diplomatic documents, philosophical and ecclesiastical writings, travelogues/travel books and the belles letters) will have to be divided into different classes identifying influences from various European countries.</td>

intellectual movements (i.e. Renaissance-Humanism, Enlightenment Period, French Revolution and its impacts on Europe, etc.) as well as different economic and diplomatic relations (sphere of interest) of diverse countries to the Ottoman Empire. Within the framework of the course, terms like “stereotypes” (Lippman), “images of the other” and “propaganda” will be discussed; visual media like paintings, wood engravings, leaflets, illuminations, caricatures will be involved. Credit units: 3 ECTS Credit Units: 6.

HIST 704 Medieval Nobilities
This course deals with the origin of medieval nobilities and their changing fortunes and nature in the course of the Middle Ages. It is also concerned with various questions about the material and ideological underpinnings of the position of nobilities. was one noble through birth, status, wealth, power or behaviour, or a varying mixture of all of these? How was nobility expressed? How were new members recruited into the nobility; what kind of wastage was there from within the nobility? What was the relationship between the nobility and other elites in society? What was the relationship between nobilities and kings? What was the relationship between nobilities and city-states? What of nobilities outside of Europe? Credit units: 3 ECTS Credit Units: 6.

HIST 706 Aristocraties from 1500
The course examines the character and constitution of aristocratic elites in a variety of states and regions throughout the period of post-medieval monarchical government. It also reflects on the military, cultural, political, social, administrative and economic roles of these elites in that period. In all these matters, emphasis is placed on local and temporal diversity and opportunity exists for students to pursue comparative studies. More general consideration is given to the topic of aristocracies in historiography, particularly of political thought and ideologies. Credit units: 3 ECTS Credit Units: 6.

HIST 707 European Migration to the Ottoman Empire and Early Republican Turkey
The course aims at giving an overview of European Migration to the Ottoman Empire up to Early Republican Times (1930ies). Jewish immigrants of 15th century Spain, the Levantines, renegades, and converts to Islam, reformers in different areas in the 18th and 19th centuries up to German intelligentsia migrating to the Republic of Turkey during World War II will be dealt with. Biographies of selected persons from different backgrounds will be introduced. Within the framework of the course, migration theories will be subject of discussion; selected primary sources will be studied and analysed. Credit units: 3 ECTS Credit Units: 6.

HIST 708 Hanover the British Isles and the Americas: Dynasty and Empire 1714-1837
The course offers a general survey of the history of Hanover, the British Isles and the overseas territories of their dynasty (with particular attention to the North American colonies), from its acquisition of the British throne in 1714 to the accession of Queen Victoria in 1837. It is intended for students of European and American history and of the history of empires. Credit units: 3 ECTS Credit Units: None. Aut (C. Leighton)
International Relations (IR) is a relatively new discipline. Its importance, however, has been rapidly growing in recent decades. All of us are affected by the international environment and by foreign policy decisions. International issues are becoming increasingly significant, complex, and diversified. We often read and hear about such issues as the Arab-Israeli conflict, the Aegean dispute, the post-Cold War period, the European Union, arms control negotiations, and problems of international trade and finance. All these issues lend themselves to conflicting interpretations and competing alternative solutions. In order to grasp the significance of these contemporary problems, we need to have not only a certain degree of specialized knowledge about the geographical regions in question, but also some theoretical understanding of International Relations.

Career opportunities in the field increase as Turkey's foreign relations diversify. The diplomatic service and other sectors of public bureaucracy continue to be an important source of employment. In addition to this, the media, private sector, professional organizations, and universities need increasing numbers of specialists in international affairs.

UNDERGRADUATE PROGRAM

The undergraduate program is comprised of a broad set of integrated courses designed to provide the training and perspective necessary for future career responsibilities in the field of International Relations. These courses emphasize increased competence in IR specialties such as International Law, Diplomatic History, Politics of International Economy, Foreign Policy Analysis, Global Issues and Area Studies. The teaching objectives are to maintain the crucial balance between theory and practice and to ensure that every student is exposed to the latest understanding of all the key IR issues and to the conceptual and analytical frameworks underlying them.

The core set of courses provides the fundamentals of the field of IR while a wide variety of elective courses, to be taken from the department as well as from the Departments of Political Science, Economics and Management, permits students to develop a program that will meet personal needs and special career interests.

For students who choose to pursue a more advanced degree in the field, the Department offers a Master's degree program and a doctoral degree program with considerable flexibility for graduate students to develop specialized academic programs to suit their needs and interests.

In addition to elective courses offered by the Department of International Relations, students are allowed to take up to one elective per semester from the departments of Economics, Political Science, Psychology, Faculty of Law, Management and/or Philosophy or foreign language courses.

BILKENT-BINGHAMTON DUAL DIPLOMA PROGRAM

in Global and International Affairs

The dual diploma program Bilkent-Binghamton, SUNY bachelor's degree in Global and International Affairs (GIA) offers students at Bilkent University a unique program of interdisciplinary study in International Relations, History, Economics and other fields yielding high-level substantive knowledge and analytical skills for careers requiring global perspectives on international issues of various kinds. This four-year program includes full-time enrolment for four semesters at Binghamton University, the SUNY doctoral campus most noted for its undergraduate excellence, its comprehensive internationalisation, and its history of fruitful association with Turkish universities. Students in the program meet all of the requirements for a Bachelor's degree both at Binghamton University and at Bilkent University. Although degree recipients receive two diplomas, one from each institution, both
diplomas refer to the degree as jointly awarded, and no student can receive the degree or either of the diplomas without satisfying the academic requirements of both institutions. To be able to start the program, students must achieve a satisfactory score, specifically a 550 or better on the U.S. Test Of English as a Foreign Language (213 on the computer based, 80 on the internet based).

Minimum credits for the joint Bachelor’s Degree in Global and International Affairs is 120 (minimum of 50 credits from each partner).

Following is the first and third year courses to be taken at Bilkent University.

SECOND and FOURTH YEARS (Binghamton University)

Binghamton will specify which courses are to be made available to students in this program in a given year. Binghamton also provides advising prior to students’ arrival in Binghamton and during their stay to ensure that they enroll in courses appropriate to their individual academic and personal backgrounds, needs, and interests. Following is a minimum credit breakdown by category (please note that some of these credits will be satisfied with courses taken at Bilkent):

Political Science: 32 credits
History: 32 credits
Economics: 9-12 credits
Research Methods: 6-8 credits
General Education: 36 credits (some of which will be satisfied with courses taken in above categories)
MINOR PROGRAM
The minor degree program in International Relations offers Bilkent University students with an interest in world politics a solid basis for understanding world politics in a globalizing world as well as Turkey’s international relations. The minor degree program is made up of four must courses: Diplomatic History, Foreign Policy Analysis, International Relations Theory and Turkish Foreign Policy. Students also take two elective courses of their own choosing. The Department offers a wide variety of courses, all of which are open to minor degree students (subject to availability).

Depending on their major degree program, students are advised to take introductory courses (for example, Introduction to World Politics) or they are encouraged to experiment with more specialized courses (including International Political Economy, Security Studies and Conflict research or Russian Studies).

Prerequisite Courses: None
Open to Students from
- Faculty of Business Administration
- Faculty of Economics, Administrative, and Social Sciences
- Faculty of Engineering
- Faculty of Humanities and Letters
- Faculty of Law
- Faculty of Science

GRADUATE PROGRAMS
Master of Arts in International Relations

Admission: Prospective students must have completed the Bilkent University requirements for a Bachelor of Arts degree in International Relations or approximately equivalent training. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

Degree Requirements: A completed program must satisfy the following criteria:

1. Completion of at least 31 units of credit course work. The five required international relations courses include the following: International Relations Theory (tied to Academic English Writing I), Research Methods (tied to Academic English Writing II) and Issues in Turkish Foreign Policy. The five elective courses can be selected from the offered graduate courses each semester.

2. Completion of an M.A. thesis proposal before the start of the second year.

3. An M.A. thesis must be submitted to and approved by the thesis defense committee.

4. A cumulative grade point average of at least 3.00 must be maintained for the totality of Master’s level work.

Every MIR candidate must pass the two Academic English Writing courses before starting to write the M.A. thesis.
Master of International Affairs and Public Policy (MIAPP)

The curriculum of the Master of International and Public Policy (MIAPP) is designed to provide students with a broad analytical background in the major fields of international affairs and European integration, combined with the specific focus on the newly emerging issues of governance and globalization. The program of study requires 60 units of graduate credits and is completed in four terms of full-time attendance without the requirement of submission of a Master’s thesis.

By underlining updated knowledge and skills essential to careers in international, private, and public sectors, the program responds to new professional opportunities at home as well as abroad. The program addresses the fundamental issues of the post-Cold War era, globalization, public governance, corporate governance and European integration with an approach that incorporates scholarly perspective and practical experience.

Requirements for Application: An undergraduate degree in international relations is not a prerequisite for admission. Graduates of other disciplines are also eligible and are encouraged to apply.

After having completed the core curriculum course work during their first year, students must satisfy the requirements of the second year through the completion of the course work of at least 30 credit units (five elective courses each semester). Students who wish to concentrate on European Affairs are advised to take at least 6 courses from basket 2. Those students who wish to acquire a more general international and policy outlook can construct their own individual programs by selecting courses out of all the baskets with the advice of the Director. Elective courses are divided into five baskets:

1. International Relations and Security
2. Politics, Economics and Law of European Integration
3. International Economics and Management
4. Decision-Making and Governance
5. Area Studies

**Doctor of Philosophy in International Relations**

The doctoral program at Bilkent IR is a highly specialized program. Its purpose is to develop the skills of doctoral candidates in international political analysis and to increase their capacity to conduct research on theoretical issues, international security studies, strategic studies, comparative foreign policy, international political economy, regional integration, global environmental problems, international law, peacekeeping and conflict resolution as well as area studies such as the European Union, the Balkans, Russia, the Middle East, Central Asia and the Caucasus. The program is reserved for a limited number of students who are qualified and committed to spend several years...
conducting intensive research. The program is particularly suitable for students who wish to pursue an academic career.

Degree Requirements: Students accepted to this program must complete at least 26 credit hours of course work (students who have not taken IR 501 International Relations Theory and IR 519 Research Methods, required courses at the M.A. level, must also complete these two courses for graduation as well as 12 credits of language study, for a total of 38 required course credits). The course work requirement can be met by taking graduate level International Relations courses and, if necessary, courses from other departments approved by BIR. A cumulative grade point average of at least 3.00 must be maintained for the totality of Ph.D. coursework. The doctoral program must be completed in at most 8 semesters.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

IR 101 Introduction to World Politics
This course introduces students to international relations by presenting the basic concepts, approaches and major contemporary currents in world politics. The purpose of the course is to provide students with a framework for analysis whereby they can understand and evaluate international phenomena. It covers a wide range of topics including security issues such as war, terrorism, diplomacy and arms control; ecological issues such as climate change and resource depletion, and economic issues such as development, world trade and globalization. Credit units: 3 ECTS Credit Units: 6. Spr (B. Ö. Gökakın, T. Oğuzlu, D. Tsarouhas, G. Tuna)

IR 205 Diplomatic History I
Diplomatic history from the Peace of Westphalia until World War I. Credit units: 3 ECTS Credit Units: 6. Aut (M. Almond, S. H. Kürçü, S. McMeekin)

IR 218 Diplomatic History II
Diplomatic history from World War I to the contemporary era. Credit units: 3 ECTS Credit Units: 6. Spr (M. Almond, S. H. Kürçü, S. McMeekin)

IR 227 Research Methods in International Relations
This course aims to introduce the students how to design an IR research paper and gradually write one throughout the semester. The students are familiarized with the basic concepts of research philosophies and methods such as formulation of a good research question, a theory, hypotheses and data collection & analysis techniques. The course does not only focus on theory but also makes the students acquainted with applied and empirical research. For that purpose, students get first hand experience on how to do library research by actually going to the library and meeting with a library advisor. Overall, the objective of the course is to build a basic background in students who are later in their training expected to write good research papers. Credit units: 3 ECTS Credit Units: 6. Aut (S. S. Güner, P. Ipek, G. Tuna)

IR 240 Introduction to Law
Sources of law. Social life and the law. Definitions and concepts. Division of public and private law. Branches of law. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

IR 303 International Law I
The first part of a comprehensive survey of international law as the normative factor in international relations, to be continued in IR 304. The basic legal concepts are described and explained, together with a view of prospective developments. Rules of law are considered in their political, economic and cultural contexts, while emphasizing their normative character and the elements of legal reasoning. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Akipek)

IR 304 International Law II
The second part of a comprehensive survey of international law as the normative factor in international relations, continuing IR 303. The basic legal concepts are described and explained, together with a view of prospective developments. Rules of law are considered in their political, economic and cultural contexts, while emphasizing their normative character and the elements of legal reasoning. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IR 303. Spr (İ. Akipek)

IR 305 International Organizations
A comprehensive study of the development of international organization and its role in the contemporary world. The central part of the course deals with the United Nations, its structure, performance and prospects, both in the maintenance of peace and in the economic and social field. Then specialized agencies and the regional organizations are treated on a descriptive basis. Credit units: 3 ECTS Credit Units: 6. Aut (Y. İnan) Spr (Y. İnan)
IR 308 Turkic/Muslim People of the Former USSR
Russian Rule over the Turco-Muslim lands, the enlightenment and national revival of the Turco-Muslim peoples: establishment of Soviet power, communist rule and the road to national independence. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

IR 309 Contemporary Socio-Political Movements
This course offers modern political trends that have impact on decision-making mechanisms such as ethnicity, nationalism, feminism, poverty and environmentalism in our days. Credit units: 3 ECTS

IR 311 Russian History
A survey of Russian History from the rise of Kievan Confederation (9th century) to the Bolshevik Revolution. Focus will be on reform, revolution, ideology and society. Credit units: 3 ECTS Credit Units: 6. Spr (S. H. Kirimi)

IR 318 Contemporary Balkan Politics
This course examines current political development in the Balkans and highlights potential flash-points with special reference to wars in former Yugoslavia. Credit units: 3 ECTS Credit Units: 6.

IR 322 International Protection of Human Rights
Analyzes the concept of human rights firstly at the domestic level and then shifts the focus to the international level. During these analyses minority rights are also analyzed from the point of the treaties signed by the Ottomans and the Turkish Republic. The turning point in the protection of human rights at the international level commences by the U.N. Due to this all the developments in the U.N. and also in the Council of Europe in this particular field are analyzed in detail. Credit units: 3 ECTS Credit Units: 6. Spr (Y. İnan)

IR 331 War, Peace and Security
This course is about three concepts that have been at the core of thinking about world politics, namely: ‘war’, ‘peace’ and ‘security’. By introducing a wide variety of intellectual traditions and contemporary ideas on these three core concepts to students, this course aims to provide a comprehensive basis for understanding the dynamics of world politics. The general objectives include the development of oral, written and research skills as the course requires students to become able to read, absorb and critically assess a large amount of complex (and at times contradictory) material. The subject-specific objectives of the course include the ability to discuss the causes and significance of war, alternative meanings and practices of peace, and contending conceptions and practices of security. Credit units: 3 ECTS Credit Units: 6.

IR 332 Foreign Policy Analysis

IR 333 International Relations Theory
This course provides students with a comprehensive introduction to contemporary international relations theory. No prior knowledge of international theory is expected. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Özdamar, N. S. Şatana, A. Tekin, D. Tsarouhas)

IR 337 Post Communist Conflicts: Wars from the Balkans to the Caucasus 1989-Present
This course will consider the reasons for conflicts in the break-up of the Soviet Union and Yugoslavia especially. But it will also consider why violence did not spread across the every component part of the Soviet Union or even Yugoslavia (e.g. the Baltic States). It will look at local and general causes and consequences of these conflicts. It will also consider the role of outside actors: the United States, the EU and other regional powers as well as UN, OSCE and other international organizations. Credit units: 3 ECTS Credit Units: 6.

IR 338 Politics of International Economy
The aim of this course is to provide students with a comprehensive introduction to International Political Economy (IPE) as a field of study. The course focuses on recent developments and current trends in the world political economy, various theoretical IPE-perspectives, as well as more specific topics such as international monetary affairs, global finance, foreign debt, international trade, global production, foreign direct investment, transnational corporations, and development. Credit units: 3 ECTS Credit Units: 6. Spr (T. Fougner, P. İpek, P. Williams)

IR 343 Middle East Security Structures
A series of inter-state as well as intra-state conflicts, have determined the political and military dispositions of the states in the Middle East. Heavy armament of the states in the region, including all categories of weapons of mass destruction and ballistic missiles, and the emergence of terrorist groups make the prospects for a fair and lasting peace all the more difficult. These developments in its immediate neighborhood which raise serious concerns for Turkey will also be studied. Credit units: 3 ECTS Credit Units: 6. Aut (M. Kibaroğlu)
IR 344 Selected Topics in International Security
The primary objective of this course is to introduce the undergraduate students of the International Relations discipline to a number of emerging threats to international and regional security and stability in the post-Cold War era. *Credit units: 3 ECTS Credit Units: 6. Spr (M. Kibaroğlu)*

IR 345 Policies of the European Union
This course will analyze European Integration and its policies. In doing so, firstly the main reasons for establishing the European Union and the general aspects of this integration, such as history, enlargement process, institutions will be examined. Then, we shall focus on different topics of the EU policies. In this part we shall first examine the internal policies of the EU integration, by taking into consideration the customs union and free circulation of goods, persons, services and capital. After that, we shall focus on the external policies of the EU integration. We shall put a particular emphasis on three types of policies; accession policy, association policy and commercial policy. At the end of the course the "European Foreign and Security Policy" will be examined. *Credit units: 3 ECTS Credit Units: 6.*

IR 346 Human Rights and Human Security Regimes
This course covers two closely interrelated subjects: 1) contemporary concepts, doctrines, and practice of human rights as generally understood by the international community; 2) international social and political trends aimed at the development of universal norms, rules and institutions in order to enhance the chances of human beings to lead safe, secure and qualitatively meaningful lives that are at the same time sustainable. The protection of civilians during armed conflict and the protection of the environment are among such movements. The ultimate goal of the regimes and/or arrangements multilaterally constructed to reach this goal is the survival of the human race into posterity in full possession of its natural physical, mental and emotional capacities. *Credit units: 3 ECTS Credit Units: 6.*

IR 347 The International System
Some international relations theories would argue that most of the problems and opportunities the world faces today are related to the structure of the modern international system. This course examines the historical and theoretical evolution of the international system, with particular emphasis on the last two centuries. The main objective is to see which ideas and events have shaped the structure of the current system, as well as how the structure has shaped ideas and events. The students are expected to actively participate in the class discussions. *Credit units: 3 ECTS Credit Units: 6. Aut (N. S. Şatana)*

IR 348 Post Communist Conflicts: Roots, Explanations and Prospect
This course will focus primarily on the post-Communist Conflicts in the Balkans and both sides of the Caucasus but it will also consider why the break-up of the Soviet Union and Yugoslavia did not lead to conflicts in every former republic despite the apparent presence of similar political, social, ethnic and ideological premises. Students should gain an overview of these crises since the 1980s but also will have the opportunity to specialise in a region or aspect of the subject. The role of international mediation, peacekeeping and international/humanitarian intervention will also be discussed. *Credit units: 3 ECTS Credit Units: 6.*

IR 349 International Relations in Movies
This course will use movies to understand and explain international issues. Through classroom discussions, readings and films that deal with international issues, we will analyze how these films shed light on international affairs, how they show us different perspectives on such issues and deepen our understanding. We will see 6 to 8 movies during the semester and discuss how the content of the movie relates to what you have learned in your studies in international relations. In these movies and readings, we will focus on issues like foreign policy making, war, terrorism, ethnic conflict, identity, environmental issues, revolutions, civil wars, foreign intervention, international institutions, espionage, Cold War and so on. *Credit units: 3 ECTS Credit Units: 6. Spr (Ö. Özdamar)*

IR 350 Negotiation and Mediation in Politics
*Credit units: 3 ECTS Credit Units: 6. Spr (E. Çuhadar Gürkaynak)*

IR 408 European Union Law
The historical evaluation of the European Community; the basis of EC Law; basic features, organization and functioning of European Community institutions; legal and budgetary principles of the community. *Credit units: 3 ECTS Credit Units: 6.*

IR 413 Game Theory and International Politics
This course is designed to study rational behavior related to conflict. Substantively, it focuses on strategic rationality underlying 1. bargaining; 2. deterrence; 3. surprise attack. *Credit units: 3 ECTS Credit Units: 6. Spr (S. S. Güner)*

IR 433 Selected Topics in International Politics and Economy
Special topics of international political economy will be studied: economic development, North-south relations, problems of foreign trade, aid, and investment, multinational corporations, environmental impact of economic policies. *Credit units: 3 ECTS Credit Units: 6.*
IR 434  Selected Topics in International Law
The course intends to focus on certain selected topics of contemporary international legal order and study them in depth referring to state practice, the practice of international organizations as well as to decisions of international courts and tribunals. Such topics may be related to self-determination, law of the sea, peacekeeping operations, humanitarian intervention, state succession and international responsibility. Credit units: 3 ECTS Credit Units: 6.

IR 436  Theory and Practice of Communism
This surveys the original Marxist doctrines and their adaptation by Lenin. Attention will be given to the relative failure of communism in the West – with qualifications, as far as France, Spain, Greece, Cuba, etc. are concerned – and its success in Russia, China and Vietnam. The Russian experience will have the center place, but comparison will be made with the other Communist countries, whether in Eastern Europe, Asia or Africa. Credit units: 3 ECTS Credit Units: 6.

IR 439  Turkish Foreign Policy I
Analysis of Turkish Foreign Policy from the beginning of the Republic until 1950. Credit units: 3 ECTS Credit Units: 6. Aut (N. B. Criss, H. A. Karasar, T. Oğuzlu)

IR 440  Turkish Foreign Policy II
The setting, objectives and issues of Turkish Foreign Policy since 1950. Credit units: 3 ECTS Credit Units: 6. Spr (N. B. Criss, O. Gökçete)

IR 452  Contemporary International Relations
Such topics as arms control, the international economy, intervention, and recent and current developments in various global regions will be addressed in this course. Students will be expected to undertake independent research that combines topicality and theoretical content. Credit units: 3 ECTS Credit Units: 6.

IR 454  International Environmental Politics
This course will focus on applying divergent theoretical approaches (realism, neoliberal institutionalism, domestic politics, epistemic communities, critical theory, feminism, etc.) to analysis of the causes, consequences, and resolvability of a representative range of international environmental political issues, from disputes relating to transboundary water shortages and degradation to global common property resource issues (especially ozone layer depletion, acid rain, and global warming). Credit units: 3 ECTS Credit Units: 6. Spr (P. Williams)

IR 455  The European Union and Turkey
This course aims to analyze the dynamics of Turkey's relations with the European Union since the foundation of official relations in the early 1960s till now. The particular issues to be analyzed are the following: The reasons for Turkey's application for membership in the EU, the reasons for the European Union to embrace an ambiguous attitude towards Turkey's membership, the role of the European Union in the Cyprus dispute, the impact of the September 11 on the dynamics of Turkey-EU relations, and the role of the United States in the general EU-Turkey relations. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

IR 456  Global Economic Governance
The aim of this course is to provide historical, theoretical and critical accounts of contemporary efforts to govern the world economy. The course focuses on the key multilateral institutions engaged in the management of the world economy, the growing role played by private authority, and the emergence of transnational social movements opposed to current forms of global economic governance. Credit units: 3 ECTS Credit Units: 6.

IR 470  International Terrorism and Transnational Crime
This course is designed to give students a comprehensive understanding both conceptual and practical of the topics of international terrorism and transnational crime. On the conceptual side, the theories, origins, definitions, forms, strategies/tactics, international relations and countering strategies of international terrorism and transnational crime will be explored. On the practical side, we will have guest speakers who are active counter terrorism/organized crime professionals, as well as having the opportunity to visit relevant departments of the national and military police commands. The course will be run on a lecture/seminar basis, and will include a simulation activity of an international terrorist act, which will involve the participation of all class members. Credit units: 3 ECTS Credit Units: 6. Spr (E. Aydını)

IR 471  Communication Skills for IR
The purpose of this course is to enhance students' oral communication skills by exposing them to the highly specialized vocabulary commonly found in foreign policy and diplomacy and by practicing a variety of speaking activities of particular importance in this field of study (e.g. presentations, press conferences, and debates). This course is primarily for students interested in pursuing careers in the Ministry of Foreign Affairs or in international organizations (e.g. UN and the World Bank). Credit units: 3 ECTS Credit Units: 6. Spr (M. Krugman)
IR 472  Diplomatic Language and Translation
The purpose of this course is to familiarize the student with diplomatic language, which is different from the language used in ordinary life. The difference stems mostly from the terms and expressions used that have a meaning other than those found in dictionaries. The course is an introduction to the art of communication and finesse employed in the diplomatic profession and as such, should be taken only by those who are interested in seeking employment in the Ministry of Foreign Affairs. Credit units: 3 ECTS Credit Units: 6. Aut (O. Göke)

IR 477  Political Economy of Natural Resources
This course introduces students to the importance of natural resources in the international political economy. It explores: how previously marginal actors on the energy scene, such as China, India, Russia, Turkey and their Caucasian and Central Asian neighbors, have become more central; the extent to which European Union energy requirements are driving this shift; how this shift is reshaping multinational business strategies; how ethnic conflict and terrorism are posing salient risks to major hydrocarbon supplies and supply lines; and the degree to which the need to preserve environmental integrity will ultimately limit fossil-fuel consumption. Credit units: 3 ECTS Credit Units: 6. Aut (P. Williams)

IR 479  Contemporary Trends in Eurasia
This course examines certain selected political developments in Eurasia and studies the construction of new international and national institutions in the post-Soviet space since 1991. A special focus will be given to contemporary “revolutions,” democratization and regional cooperation efforts. Credit units: 3 ECTS Credit Units: 6. Aut (H. A. Karasar)

IR 482  International Ethics
Theories of international relations usually ignore the relevance of ethics for world politics. This course proposes an alternative approach. It focuses on the ethical dimensions of international relations. It introduces students to a range of contemporary foreign policy issues and to the ethical dilemmas they may raise. We will focus on critical questions such as: What is the moral standing or justification of the principle of state sovereignty? What moral ends or principles constrain a state in pursuit of its national security? We will examine such problems facing the international community as resort to force, just and unjust war, humanitarian intervention, and the protection of human rights. Credit units: 3 ECTS Credit Units: 6.

IR 485  The Politics of Turkey's Relations With the European Union
This course will analyze Turkey's relations with the Europe Union from historical security and political perspective. In doing so we first will examine the nature of Turkey's Europeananization process from the early stages of westernization attempts during the Ottoman Empire up to now. Then, we will highlight the main turning points in Turkey-EU relations since Turkey's application for associate membership status in the European Economic Community in 1959. In this regard we will put a particular emphasize on Turkey's application for full membership in the European Communities in 1987, the EU's confirmation of Turkey's candidacy status in1999, and the changing dynamics of bilateral relations in the wake of September 11 events. This course will also analyze European approaches towards Turkey's membership aspirations and discuss the reasons why Turkey's accession process has lasted too long. Credit units: 3 ECTS Credit Units: 6. Aut (T. Oğuzlu)

IR 487  European Political Economy
This course is designed to introduce students to the political economy of the European Union. It starts with an overview of the links between globalization and European integration. It then focuses on the main political economy challenges that the EU faces today. Specific issues include, but not limited to, competitiveness, cohesion, demographic change, migration and xenophobia, unemployment and social polarization, enlargement and transition, and regionalism and regionalization. The course ends with a discussion of the place of the EU in the world. Credit units: 3 ECTS Credit Units: 6.

IR 488  Security and Strategy
This course is designed to examine the changing features of use of force, security and strategy. In this context, it studies the evolution of strategic theory, political and legal restrictions on the use of force in international relations, the causes of armed conflicts, peace operations, and terrorism and irregular warfare. Credit units: 3 ECTS Credit Units: 6.

IR 489  EU Foreign and Security Policy
This course aims at introducing the students with the theoretical and empirical analysis of the EU's foreign, security and defense policies. In this regard, the following questions are of interest. Does the EU integration process cover integration in foreign and security issues? What are institutional developments in this area? What are the foreign policy instruments of the EU? What are the main goals behind the attempts to endow the EU with capabilities in foreign and security policy? From which theoretical perspectives can analysts approach this process? What is the relationship between CFSP and ESDP (European Security and Defense Policy)? Does the existence of CFSP/ESDP imply that the EU is transforming into a global security actor? In which ways does CFSP impact the transatlantic relations between the USA and EU? Credit units: 3 ECTS Credit Units: 6.
IR 492 Gender in International Relations
The aim of this course is to highlight the role played by gender in world politics. The course locates a concern with gender in the broader context of International Relations as a field of study, and seeks to uncover and critically assess the gender dimension of key IR-issues such as war, peace, security, international political economy, development, and human rights. Credit units: 3 ECTS Credit Units: 6. Aut (T. Fougner)

IR 493 European Union
This course is designed to introduce the students to the history, institutions and policies of the European Union. It aims to develop an understanding of the basic dynamics of the European integration with a view of national and global contexts in which the EU has evolved towards an “ever closer union”. The course does not require previous study on the EU. Credit units: 3 ECTS Credit Units: 6. Aut (D. Tsarouhas)

IR 494 Causes and Prevention of War
This course examines the causes and prevention of war. The goal is to discover and assess why interstate and intrastate (civil) wars take place and how to prevent or at least control them. The first part of the course focuses on theoretical aspects of war and in the second part we aim to empirically understand war through the study of various case studies. The two world wars, ethnic cleansing in states such as Rwanda are only a couple of the cases we cover. By the end of the course students will be familiar with basic theories of causes of war and cases associated with them. Finally, an assessment of the possible causes of wars of the future, namely terrorism follows with a focus on possible means to prevent such wars. The course objective is to involve the students in an in-depth examination of war through discussion of extensive readings, class presentations and critical essay writing. Credit units: 3 ECTS Credit Units: 6. Aut (P. Williams)

IR 495 World Energy Politics
Energy resources and their geographical distribution. Advances in energy technologies, reference and alternative scenarios on energy. Supply and demand. Factors and actors effecting the oil prices. Major actors in the energy scene (States, organisations, etc). Main principles of energy policy. Energy policies and strategies of principal actors (U.S., Russian Federation, E.U., China and others). Concept of the energy security. Turkey’s resources and energy policies. Will Turkey be an energy bridge? The importance of international relations on energy policies. Credit units: 3 ECTS Credit Units: 6. Aut (N. Pamir) Spr (N. Pamir)

IR 496 Turkey’s Security in a Changing World
This course examines the key security challenges Turkey has faced throughout the history of the Republic (1923 - ). The course would focus on national security threats as identified by Turkey’s policy-makers as well as other insecurities that are voiced by non-state actors (interest groups, think tanks) and the citizens. Towards this end, we will make use of founding texts of the Republic, as with Nutuk, the Great Speech of Mustafa Kemal Atatürk, policy documents (to the extent that they are publicly available) and policy statements as well as the secondary literature addressing theoretical and practical debates. Credit units: 3 ECTS Credit Units: 6.

IR 498 International Relations and Media
When the telegram was first introduced into news reporting during the Crimean War in 1856, nobody could have predicted the current effect of the media in international relations today. Thanks to the continuous revolution in communication technologies and in the global economy, the role of the media in international relations, whether in wars or trade agreements or environmental affairs, is evolving from the level of propaganda to one of decision making capacity. International Relations and Media is a unique course being offered to examine this new and evolving situation. Through this practice-oriented class, students will become familiarized with practical issues and dilemmas of the media connection within International Relations. Several guest speakers will be brought in, from leading media figures to experienced public officials. Credit units: 3 ECTS Credit Units: 6.

IR 499 Us Security Policy in the Middle East
This course examines the major security challenges facing the United States in the contemporary Middle East and the U.S. responses to meeting those challenges. The primary topics examined are the Arab-Israeli conflict, terrorism and jihad, nuclear proliferation, and Islam and democracy. Theoretical and methodological questions of “interpreting” the Middle East are also addressed. Credit units: 3 ECTS Credit Units: 6.

GRADUATE COURSES

IR 501 International Relations Theory
The main traditions and currents of thought in international political theory. Early thinking about international relations. Major twentieth century approaches: idealist-realist debate; the power politics approach and its fundamental concepts such as balance of power, national interest, nationalism and imperialism. Behaviorism; systems thinking; interdependence and structure list theories. Decision-making and integration theories. Credit units: 4 ECTS Credit Units: 8. Aut (H. P. Bilgin)

IR 507 Foreign Policy of the United States
Credit units: 3 ECTS Credit Units: 6. Aut (P. Williams)

IR 509 M.A. Thesis Proposal
Students who have taken IR 519 (Research Methods) must have a thesis proposal in hand. Students will finalize these thesis proposals under their supervisors’ guidance. Later, the proposal will be presented to the Graduate
Director for his/her approval. Students will not be allowed to register for courses in the following semester unless they fulfill this condition. Credit units: 1 ECTS Credit Units: 1.

**IR 513  Game Theory and International Policy**  
This course is designed to introduce students to the main concepts and the applications of game theory to international politics. Accordingly, arms races, deterrence, crisis stability, arms verification, national security and war are among the subjects of this course. Credit units: 3 ECTS Credit Units: 6.

**IR 519  Research Methods**  
This course aims to develop in students an appreciation of research design and methods and to prepare them for the thesis stage of the Master's program. Topics covered include principles and foundations of empirical research, design and structure of research, and data processing and analysis. It also provides an opportunity for students to begin to design their own research project in the light of the methods discussed. Credit units: 4 ECTS Credit Units: 8. Spr (N. S. Şahana)

**IR 529  Arms Control and Disarmament**  
This course is designed to teach the concepts, approaches and institutions related to arms control and disarmament and the historical developments and current trends in this field. Credit units: 3 ECTS Credit Units: 6. Aut (M. Kıbaroğlu)

**IR 537  The Russian Revolutions**  
This course focuses on the analysis of the events leading up to the revolutions of 1905 and 1917 in Imperial Russia. Particular attention will be paid to the social, economic and political transformations of the pre-revolutionary period; the nature of the revolutionary and liberal opposition and the reactionary imperial administration. The main stages of the revolutions, changes in the nature of the Russian autocracy, the role of Duma in the imperial administration system, the nationalities problem, the formation of various political organizations and ultimately the overthrow of the autocracy will be examined in detail. A particular emphasis will be on the impact of the Russian revolutions on the subsequent global developments. Credit units: 3 ECTS Credit Units: 6.

**IR 541  Academic Writing I**  
This course will help you develop your ability to present your thoughts in written form, in a way that is appropriate in the International Relations academic community. You will work on different text types, including summaries and critiques, and you will also work on developing your skills in signposting and organizing text structures, important writing skills that will contribute to ease of understanding for those who read your work. According to the needs of the students, there may also be some emphasis on certain language structures that are important to academic discourse. Credit units: 2 ECTS Credit Units: 4. Aut (J. Mathews-Aydın)

**IR 542  Academic Writing II**  
A continuation of Academic Writing I, this course will further help you develop your ability to present your thoughts in written form, in ways appropriate to the International Relations academic community. In particular, writing skills related to the conducting of research, such as the preparing of research proposals and literature reviews, will be emphasized. Credit units: 2 ECTS Credit Units: 4. Spr (J. Walters)

**IR 543  International and Public Policy Decision Making**  
This course aims at a gentle introduction of students into formal political theory. It is basically divided into two parts: individual decision-making theory and game theory. The first part concentrates on individual preferences and choice including decision making under certain and risk, cardinal utility, subjective probability, the calculus and paradoxes of voting, and misrepresentation of preferences. The second part includes two-person mixed-motive games, coalitional-form games, concepts of equilibrium such as iterated elimination of dominated strategies and backward induction, Nash and subgame-perfect Nash equilibrium. These analytical tools would serve as nuts and bolts for the student to go beyond mere description of political events, either domestic or international, and to construct their own explanations of puzzling choices at those levels. Credit units: 3 ECTS Credit Units: 6. Aut (O. Özdamar)

**IR 547  International Politics**  
This course offers an introduction to the study of international politics. It aims to first provide the historical, conceptual, and theoretical tools and lenses for analyzing behavioral and institutional patterns in the international system, and then to use these analytical means in exploring major international issues and events. Particular emphasis will be given to topics of international security, such as major power rivalries, the impact of globalization on security, and the management of low intensity conflicts. Government experts and practitioners will be invited as guest lectures for certain specific issues, such as international terrorism and regional geostrategy. Credit units: 3 ECTS Credit Units: 6. Spr (E. Aydın)

**IR 563  Intensive Russian Language**  
This course is an intensive introduction to Russian language. Its contents and coverage are equal to the total of Russian, I, II, III and IV courses taught at Bilkent normally in four semesters. Credit units: 5 ECTS Credit Units: 12. Aut (G. Tannkulu)
IR 572 European Union Integration, EU and OECD Economies
This course includes analyses of EU integration, globalization, regionalism and their relationship with nation states. Students will learn about the impact of EU integration on economic, political, cultural and social structures, the structure of the Turkish economy and the dynamics of its technological and socio-economic development. There will be a comparative analysis of EU and OECD economies and a transdisciplinary analysis of Turkey and the EU integration process. **Credit units: 3 ECTS Credit Units: 6. Spr (O. Gülvenen)**

IR 573 Readings in Russian History Civilization and Culture
This course is an intensive introduction to the colorful world of Russian history, civilization and culture, aiming to increase students’ ability to understand and use sophisticated and intellectual level skills of the Russian language. **Credit units: 5 ECTS Credit Units: 12. Spr (G. Tannkulu)**

IR 574 Turkey’s International Relations
This course will first examine the structural and historical determinants of Turkish foreign policy, with an emphasis on the foreign policy decision-making mechanism, as well as the sources of change and continuity. This will be followed by first, a general exploration of the dynamics of the sub-system/region in which Turkey is located, and then more in-depth analyses of Turkey’s particular relations with different geographical regions, such as Europe, Eurasia, the United States, and the Middle East. Some experts from the Turkish foreign ministry, as well as public figures with experience and expertise on relevant issues, will provide guest lectures. **Credit units: 3 ECTS Credit Units: 6. Aut (E. Aydirdi)**

IR 575 History of the Cold War
The Cold War was an anomaly in history. Until then the World had never experienced bi-polarity, atomic foreign policies or third worldism. This course is designed as an inquiry into why this happened while assessing Cold War events. Topics include leadership profiles, cries, propaganda/intelligence activities and the Cold War culture throughout (1945-1991). **Credit units: 3 ECTS Credit Units: 6. Aut (N. B. Criss)**

IR 578 Readings in Central Asian History and Politics
This course will examine the emergence and development of modern nation states in Central Asia, taking into account the efforts for nation-building, regional cooperation, as well as the revival of ethnic, tribal and religious identities. Although its scope is post-Soviet Central Asia, an important amount of readings on the history of the region before 1991 will be required to better understand the contemporary trends. **Credit units: 3 ECTS Credit Units: 6.**

IR 579 International Law and Organizations
International relations have legal and political sides. This comprehensive study will firstly analyze the normative side of international relations by describing and explaining the basic legal concepts of international law. At the later stage, it will focus on to the role of international organizations e.g. UN, Council of Europe, EU etc. to the contemporary world order under the effect of international law and politics. **Credit units: 3 ECTS Credit Units: 6. Spr (Y. İnan)**

IR 598 Turkish Political Economy
This class is designed to introduce you to the political economy of the Turkish Republic. It starts with an overview of the Turkish political economy between the years 1908 and 1980. It then focuses on Turkey's economic and political structure and reform efforts in the post-1980 period. Within the political economy context, it looks at Turkey's interactions with the IMF, the EU and the USA. Finally, the course deals with the political economy of political ideologies; state-society relations; and the income distribution in Turkey. **Credit units: 3 ECTS Credit Units: 6.**

IR 599 Master’s Thesis
**Credit units: None ECTS Credit Units: 30. Aut (Staff) Spr (Staff)**

IR 614 New Directions in Security Studies
This course is designed as a post-graduate level introduction to new directions in the study of security. Since the late 1980s, there has been remarkable change in the way security is conceived, studied and practiced. The academic field of Security Studies has been the subject of intense academic, intellectual and political debate during this period. The main aim of this course is to introduce students to main debates in Security Studies by tracing the development of Security Studies from its Cold War past to its post-Cold War present and opening up alternative ways of thinking about the future. **Credit units: 3 ECTS Credit Units: 6. Spr (H. P. Bilgin)**

IR 616 Individual National and Global Security
Despite the prevalence of state-based (‘national security’) approaches to security studies during the Cold War, alternative ways of thinking about security – focusing on the individual and society – also developed during this time period. In the post-Cold War era the primacy of state in considerations of security has come under increasing challenge from a variety of perspectives. This course is designed to provide a critical overview of (1) state-based approaches to security in an increasingly globalized world; (2) alternative approaches to security that focus on individual, societal and/or global security. The strengths and, weaknesses of these approaches will be highlighted through a consideration of cases such as Turkey’s national security, societal security and the role
of security culture in Turkey-EU relations, regional security in the Middle East, state failure and human security in the developing world. Credit units: 3 ECTS Credit Units: 6.

IR 618 Eurasian Atlantic Security II
This course, as the follow-up of IR 617 Eurasian-Atlantic Security I, is designed to examine strategic issues in critical regions such as the Broader Middle East, the Black Sea and Caspian basins and Central Asia. It focuses not only on power political relationships between major regional and extra-regional actors, but also on cooperative security arrangements they make to contribute to regional stability and peace. How are major powers such as the United States, Russia, Turkey, and international organizations such as NATO, OSCE and EU engaged in those regions? How do regional states react to them? To what extent and in what ways do extra-regional involvements promote regional and national transformations? Credit units: 3 ECTS Credit Units: 6.

IR 621 Current Debates in International Relations Theory
This course is designed as a post-graduate level introduction to current debates in International Relations theory. The content and nature of International Relations theory is by no means fixed. Indeed, International Relations theory has been the subject of intense academic, intellectual and political debate. The main aim of this course is to introduce students to some of the major debates in International Relations theory. The course also covers epistemological, ontological and methodological debates in IR. Specifically, the course aims to generate familiarity with the language of social research, the uses of theory and meanings of methodology in IR, ethical and political issues involved in the research process. Credit units: 4 ECTS Credit Units: 12. Aut (E. Aydîni)

IR 625 Advanced Diplomatic History
The course is designed to help prepare students for the diplomatic history qualifying examination by introducing them to current literature and comparative history. Credit units: 4 ECTS Credit Units: 12. Spr (N. B. Crisis)

IR 628 European Union Studies II
This course begins with a study of the contents of the current EU policies. It then turns to the external policies and linkages of the EU, including its enlargement and new neighborhood policies. Next part focuses on the alternative futures of the European democracy and capitalism. Among the issues discussed are the European approaches to the US hegemony, to the promotion of democracy, and to the global political economy, all in comparative perspective. Credit units: 3 ECTS Credit Units: 6.

IR 629 Global Political Economy
This course is designed to explore questions relating to theory and process of increasingly globalizing international political economy. The purposes of the course are to expose students to major changes in the international political economy; to explore some of the theoretical debates over these changes; and, to examine the multitude of adjustment strategies states adopt to cope with changing structure of comparative advantage. Particular emphasis is placed upon the position of the middle-income developing countries (especially Turkey) within the global market structure. Credit units: 3 ECTS Credit Units: 6.

IR 634 Peace Operations
Evolution from collective security to peacekeeping operations. The new generation of peace operations after the Cold War. NATO-UN cooperation. Peace enforcement, peace-making and building. Conflict prevention. Humanitarian operations. Possibilities and constraints in peace operations are examined with reference to a number of typical and atypical cases ranging from the UN’s experiences in the Suez and Cyprus to the post-Cold War operations such as Cambodia and Bosnia. Credit units: 3 ECTS Credit Units: 6.

IR 647 Nuclear Weapons and U.S. Foreign Policy
This course examines the foreign policy of the United States in the nuclear age. Consideration is given to the closing days of World War II when nuclear weapons were dropped on Hiroshima and Nagasaki; the decades of the Cold War when nuclear weapons formed the backdrop to American policies in such conflicts as the Korean War, the Cuban missile crisis, and the Vietnam War; and the post-Cold War era in which American foreign policy is being driven by concerns about the proliferation of weapons of mass destruction in the hands of rogue states and militant jihadists. Various theories and models of foreign policy decision-making are tested against the reality of empirical cases. Credit units: 3 ECTS Credit Units: 6.

IR 654 Russia in the Age of Reform and Reaction (1855-1894): The Reigns of Alexander II and Alexander III
This course covers the reigns of the Russian emperors Alexander II and Alexander III in detail. The domestic reforms carried out by Alexander II, most specifically the emancipation of serfs and the educational, judicial, and administrative changes will be given special emphasis. The return to oppressive policies during the reign of Alexander III and its impact on the development of revolutionary movements will be thoroughly analyzed. A better understanding of the evolution of the Russian society, especially that of intelligentsia, throughout this period is one of the main goals of this course. Credit units: 3 ECTS Credit Units: 6.

IR 655 Post Communist Russia Her Neighbours and the World
This seminar will offer graduate students the opportunity to study and discuss Post-Communist Russia’s development since 1991 in a comparative perspective drawing on the experience of the other post-Soviet republics.
Subjects like Russia's foreign and trade policies, the role of energy as well as domestic political, social and cultural developments will be studied. Members of the seminar will prepare presentations on topics of their choice from the array of relevant subject matter. Credit units: 3 ECTS Credit Units: 6.

IR 656 Russia Turkey And The First World War
This course examines the causes, course, and consequences of the First World War, with particular emphasis on the eastern front(s). Although the enduring images of the war fixed in historical memory were of trench warfare on the western front, in strategic terms the war is best explained as the eruption of clashing great power ambitions in the east. Of all the belligerents, Russia stood to gain the most from a victory in the war, but in the end she lost nearly everything, falling into a violent revolution and a terrible civil war. By contrast, Ottoman Turkey may have had the most to lose in 1914, and yet Turkey came out of its own postwar crisis tolerably well. Together we will try to elucidate the reasons for Russia's collapse in 1917, and the consequences of the October Revolution for both the course of the World War, the formation of the Soviet Union, and the Turkish war of independence. Coincidentally, the basic settlement of the affairs of Turkey and Russia, along with those of the formerly Ottoman Middle East, can all be roughly dated to 1922, in which year we will wrap up our analysis. The principal texts will be Norman Stone, *The Eastern Front 1914-1917*, Richard Pipes, *A Concise History of the Russian Revolution*, and David Fromkin, *A Peace to End All Peace*. Credit units: 3 ECTS Credit Units: 6. Spr (S. McMeekin)

IR 657 Security and Governance
In the globalizing world states, societies, and individuals are vulnerable to a wide range of internal and external threats. Good governance is the key to an effective and efficient management of the contemporary security challenges. Poor governance has serious local, regional, and global implications. Although the subject matter has various aspects, this course focuses only on two of them, namely the theory and practice of civil-military cooperation and political-military effectiveness from a comparative perspective, studying different cases. Credit units: 3 ECTS Credit Units: 6.

IR 658 The World Transformed (1975-2001)
This course deals with major themes in international affairs and is designed for graduate students and senior undergraduates. It starts with the post-Vietnam crisis of the West (including the oil shock) and the last Soviet expansion (culminating with Afghanistan). The western recovery after 1979 is assessed, and so is the resulting upheaval in Moscow, where a completely different tack was used. In 1986 the Soviet bloc started to disintegrate, a process culminating in 1991 with the disappearance of the USSR and the proclamation of a ‘New World Order’. The Communist world then entered upon crisis, and the USA became by far the dominant power. This process is analyzed as far as the occupation of Iraq in 2002. Credit units: 3 ECTS Credit Units: 6.

IR 659 American Security Policy: Current Issues
The graduate seminar takes a practitioners approach to learning about current foreign and security policy decision-making in the United States. The first part of the course will review the actors and their roles in foreign and security policy formulation: executive branch (White House, National Security Council, Department of State and Defense, etc.), legislative branch (Senate and House, Foreign Affairs and Defense Committees), international partners (international organizations and national governments), non-state actors (think-tanks, lobbyists, private sector/industry, NGOs), and the media (24 hour television, print media, talk radio, MTV and The Daily Show, etc.). Credit units: 3 ECTS Credit Units: 6.

IR 660 Peter the Great: The Birth of Modern Russia (1682-1725)
This course is designed to survey and evaluate the reign of Peter the Great (1682-1725), the Tsar who made Russia a European power, in detail. It will cover his wide range of reforms, the resurgence of Russia as an Empire, the wars he fought and the foreign relations conducted in his era with references to the social and cultural traits of his time. The course will not only explore how Peter I reorganized Russia, but it will also enhance the students’ understanding on how his legacy shaped the course of Russian history. Credit units: 3 ECTS Credit Units: 6.

IR 661 The Making of Turkish Foreign Policy: Actors x Processes
This course particularly examines the Turkish Foreign Policy decision making and implementation process and its actors. In this regard we will analyze the interaction between government departments, the role of the parliament and the political parties and the contribution from the non state actors. The complexity of Turkish Foreign Policy structure will be highlighted as different foreign policy issues require different level of coordination and involvement of different actors. In addition to the related books and the articles, students will have the opportunity to discuss with the invited speakers in order to have a better understanding of the subject. In this regard selected cases on global and regional political, security and economic issues, which have significant places in Turkish Foreign Policy, will also be heavily discussed. Credit units: 3 ECTS Credit Units: 6.

IR 662 EU Politics
This course is designed to provide graduate students with an advanced analysis of EU politics. After a general historical introduction, Part 1 discusses EU's institutional architecture. Part 2 dwells on an in-depth analysis of European integration theories. Part 3 explores various meanings of Europeanization before examining some of
the most important EU policy areas, such as the single market. Part 4 concludes with a discussion of EU’s recent enlargements and possible future scenarios. **Credit units:** 3 ECTS **Credit Units:** 6. Aut (A. Tekin)

**IR 663**  
The Revolution of the 1980’s: Causes and Consequences  
This course covers the era of Turgut Öztal, Ronald Reagan and Margaret Thatcher (1979-1993). All aspects, domestic, international, economic and cultural, will be surveyed, with a detachment that has not until recently been possible. The causes of the great change, in the failure of the post-1945 order with the inflation and unrest of the 1970’s, are examined; so also are the consequences, the collapse of Communism and the spread of a ‘free-market’ ideology. **Credit units:** 3 ECTS **Credit Units:** 6.

**IR 664**  
Security and Development  
This course is addressed to students interested in a comprehensive introduction to the relationship between security and development studies. The course is divided into three sections. Section one introduces a discussion on a spectrum of empirical findings questioning the relationship between reasons of conflict and its relation to developmental issues. Section two examines in detail the concepts and dimensions of development theory within the framework of historical discourse on development studies and related pendulum of focus on state, market and society in the globalization process. Section three explores the reemergence of security and development studies in light of the debate on failed states and state-building as well as the cases of Iraq and Afghanistan. **Credit units:** 3 ECTS **Credit Units:** 6.

**IR 665**  
The Diaspora Phenomenon  
This course studies the theory and application of the diaspora phenomenon as an epistemological and ontological concept, which is a relatively infantile area of research in social sciences. The course will explore its historical evolution and provide a comparative account of the diasporas’ country of origin and residence with reference to the ethnic, cultural, class, religious dimensions. Another aspect of comparison will be among different diasporic populations and the role of diasporic interest groups. The cases will not be limited to a geography or time interval, but special emphasis will be given on the dispersal to, and from, the former Soviet/Russian imperial space. **Credit units:** 3 ECTS **Credit Units:** 6. Aut (S. H. Kirmil)

**IR 699**  
Ph.D. Dissertation  
**Credit units:** None **ECTS Credit Units:** 30. Aut (Staff) Spr (Staff)

**IR 4102**  
War and Peace in Middle East  
This course presents an analysis of the conflict and some efforts at conflict resolution in the Middle East. We will focus on the Arab-Israeli conflict, the various confrontations in the Persian Gulf region, and al-Qaeda based terroristism. Sources of conflict (nationalist, ideological, ethnic/sectarian, economic, territorial, and foreign manipulation and intervention) will be delineated and scrutinized. Our task will be to identify and explain the factors and actors (internal and external) that have made conflict and conflict resolution in the Middle East more (or less) likely. **Credit units:** 3 ECTS **Credit Units:** 6.

**IR 4103**  
Inter and Intra-State War and Peace  
This course covers variations in inter- and intra-state war and peace over time and space. We will seek to discover how theories can help us to understand the causes of particular internal and external conflicts, and how the proper use of history can help us to construct better theories of war and peace. Our task is to develop a conceptual framework that attempts to account for inter- and intra-state war and peace. **Credit units:** 3 ECTS **Credit Units:** 6.

**IR 4104**  
The Politics and Foreign Policy of Southeast Europe  
Taking Greece as its point of departure, this course reviews the evolution of politics and foreign policy relations of the Balkan states since 1945. Adopting a plurality of perspectives, including bilateral diplomatic relations, political economy and the influence of external actors, it provides a comprehensive overview of contemporary politics in the region. **Credit units:** 3 ECTS **Credit Units:** 6.

**IR 4105**  
World Trends and Futures  
The objective of this course is to develop abilities to understand and interpret the trends shaping possible futures for the world. The course reviews futures techniques and approaches and familiarizes the students with the futures literature. It analyzes the interaction of social, technological, environmental, economic, demographic and political systems at the global level with a focus on emerging trends that are drivers of change. Exploration of alternative images of the future state of the world will provide a future-oriented vision in a rapidly changing world. **Credit units:** 3 ECTS **Credit Units:** 6. Aut (G. Tuna)

**IR 4106**  
Global Security Trends and Future Conflict  
Potential sources and types of conflict have become more diverse and less predictable with increasing instability in a world where resources are becoming scarcer due to population growth and global warming; weapons of mass destruction proliferate, and terrorist activities and organized crime continue to rise. Transformations in the global economy, communications and military technology are likely to change strategic objectives and capabilities. The nature of the future security environment will be different especially because of technological innovations in nanotechnology, robotics and artificial intelligence. The purpose of this course is to study the long-range security
implications of key regional and global trends. It will provide an analysis of probable sources of conflict in the next 10-20 years and the new dimensions of national and global security. Credit units: 3 ECTS Credit Units: 6.

IR 4107 Future Technologies and World Politics
Technological revolutions are among the most important developments that affect world politics. Our modern lives are enabled by technology, though politics has not ensured an equal distribution of its benefits. Technology drives change, disequilibrium and conflict. In this course, students will learn how technology can improve or darken the human condition. The contemporary world is filled with the unintended, as well as intended consequences of technological innovations in defense, transportation, information, communication, finance and energy. In the near future, revolutionary innovations such as artificial intelligence, robotics, genetic engineering, nanotechnology and teleportation will have profound effects on war, terrorism, diplomacy and economics. Students will examine the impact of technological drivers on human welfare and politics through scenario analysis assignments. Credit units: 3 ECTS Credit Units: 6. Aut (G. Tuna)

IR 4108 Diplomacy
The objective of this course is first to look into the history of professional diplomacy and its evolution to what it is today, how its protocols and rules became established over time; and second to simulate on the subtleties of the profession by way of concentrating on how diplomacy is conducted, tactics are applied and how cooperative decisions are made inside and outside institutional structures to gain an understanding of how states pursue their national interests, strategize and negotiate with one another in order to achieve mutually desired goals in a highly complex and, occasionally, conflicting world Credit units: 3 ECTS Credit Units: 6. Spr (O. Gökçe)

IR 4109 Issues for Turkey in Global Political Economy
This course is designed to introduce you to the issues important for the Turkish Republic in the global political economy. The course topics are grouped through a historical overview of the political economy of Turkey in relation to structural economic transformations and political developments in the globalization process. The course is divided into three sections. Section one introduces the relationship between politics and economics of Turkey between 1908 and 1960s. The issues covered in section one are state-led development and important substitution industrialization. Section two examines the economic crises and market liberalization period between 1970 and 1991. This issues covered in section two are chronic inflation, financial crises, privatization, export-led economic growth, and foreign debt. Section three will cover student presentations on a topic that are related to the twin processes of regionalization, specifically accession to the EU, and globalization in Turkey. Credit units: 3 ECTS Credit Units: 6. Aut (P. Ipek)

IR 4110 Europe and the Middle East
This course is an introduction to the long history of the Islamic world and the West in general and Europe and the Middle East in particular. The relationship between Islam and the Western world occupies a special place owing to a complex set of religious, political, social, and economic factors. The seminar will analyze the defining elements of this relationship from the classical through the modern period, and students will be introduced to the multifarious perceptions of the two civilizations vis-à-vis one another. To this effect, the two broad categories of Islamic and Western worlds will be discussed while, at the same time, stressing the points of convergence and divergence between the two. Credit units: 3 ECTS Credit Units: 6.

IR 4111 The Rise and Fall of the Soviet Bloc: Internal and External Aspects (1917-1991)
The establishment of the Soviet Union after 1917 was both a revolution inside Russia but also the appearance of a new revolutionary force in international politics. This course considers the life-span of the Soviet system from birth via expansion to superpower status then its collapse as both an ideological state and superpower with a ring of allies/satellites by 1991. By studying the mixture of internal and external dynamics which shaped this key force in twentieth century internal relations students get good grounding in the continuities and change affecting contemporary post-Soviet states (Russia, her neighbours and East-Central Europe). Credit units: 3 ECTS Credit Units: 6. Aut (M. Almond)

IR 4113 The Ottoman Empire and Europe: 1798-1918
A survey of Ottoman history from Napoleon's invasion of Egypt to the end of World War I. Topics include the strategic decline of the empire; efforts to stem the decline through modernizing reforms and creative diplomacy; Islam and the West; European imperial rivalry in the Near East and Asia; the Eastern Question and the First World War. Credit units: 3 ECTS Credit Units: 6. Aut (S. McMeekin)

IR 4115 Turkey's International Relations and the Middle East
This course is designed to orient the student about Turkey's conduct of domestic and foreign policy with respect to the Middle East from both an historical and international relations perspective. The course will span from the end of WW I to contemporary times, with focus on mainly the Israel -Arab conflict, change and continuity, what factors play a role in the shaping of relations in the Middle East and how vital national interests are safeguarded. Credit units: 3 ECTS Credit Units: 6. Spr (O. Gökçe)

IR 4117 Global Governance
Credit units: 3 ECTS Credit Units: 6. Spr (T. Fougner)
IR 5101  Issues for Turkey in Global Political Economy
Credit units: 3 ECTS Credit Units: 6.

IR 5103  American Public and Foreign Policy
The course examines American foreign policy in connection with American politics, government, public opinion, media and economics. The first part of the course introduces domestic factors that shape foreign policy-making, including political parties and culture, the presidency, the congress, public opinion, media and civil society. Based on the concepts learned in the first part, the second section of the course will review American foreign policy with an emphasis on the twentieth century and America’s rise from isolationism to a world power. The course will focus on both domestic and international sources of foreign policy-making and cover functional topics, such as American human rights and democratization policy, foreign aid, economic policy and US military strategies. All issues will be discussed in connection with current challenges US foreign policy makers face. Credit units: 3 ECTS Credit Units: 6.

IR 5104  Issues in Turkish Foreign Policy
This course is not a historical account of Turkish Foreign Policy. Nor does it consist of a chronological description of the events and issues. It is designed to acquaint the candidates with conceptual and institutional frameworks useful to explain and understand Turkish foreign and security policy and the essence of Turkey’s diplomatic-strategic conduct. Nevertheless, as a prerequisite of this course, candidates are required to have a basic preliminary knowledge about the history of Turkey’s foreign relations. The approach of the course is critical as well as analytical. This means that the cause should underline not only the achievements, but also failures, contradictions, and deficiencies of Turkey’s foreign policy. Credit units: 3 ECTS Credit Units: 6. Spr (M. Kbaroğlu)

IR 5105  Issues in International Political Economy
This graduate seminar course explores a series of issues central to the field of International Political Economy (IPE). While the exact focus is contingent on the contemporaneous disciplinary and policy agendas, as well as on the research interests of the participants, the course is centrally concerned with integrating theory and practice in a thorough and critical engagement with both IPE as an academic field of study, and various substantive aspects of the current world political economy. Credit units: 3 ECTS Credit Units: 6. Aut (T. Fougner)

IR 5106  The Caucasus and The Balkans- Comparisons and Contrasts
This seminar will offer graduate students the opportunity to compare the developments in two key regions bordering Turkey. Although the primary focus will be on regional issues and their international consequences in the last twenty-five years, graduates will be free to offer presentations on historical perspectives illuminating recent issues. Among the issues for consideration will be the sources of inter-ethnic conflict, political change, the roots of current elites, but also the role of external actors (great powers, UN, EU, NATO, OSCE, etc.) and issues like energy and pipelines, trans-national crime and migration. Credit units: 3 ECTS Credit Units: 6. Spr (M. Almond)

IR 5107  EU Public Policy
Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

IR 5108  Diplomatic Negotiation Techniques
Negotiations can be classified into two main categories: bilateral and multilateral. The difference between these two categories lies in their context and framework rather than their form. The objective of this course is to show to the candidates the techniques used in both negotiating category, how constraining factors are eliminated, pitfalls are avoided etc. based on actual case studies and simulated workshops. Credit units: 3 ECTS Credit Units: 6. Aut (O. Gökçek)

IR 5109  The Politics of EU Enlargement
Credit units: 3 ECTS Credit Units: 6. Spr (D. Tsarouhas)
DEPARTMENT OF POLITICAL SCIENCE

Political science is one of the oldest social science disciplines. It examines how people in one society and in societies organized into states live together and resolve or fail to resolve their conflicts. Politics is the art of influencing others as well as arriving at consensus. It is a widespread phenomenon that one encounters at all levels of society (family, school, government, and the like) as well as between states.

The discipline of political science which studies systematically (that is, shows and accounts for) the recurring patterns of events in politics, is divided into five subdisciplines: political theory, comparative politics, international relations, national politics and public administration. The undergraduate and graduate programs offered by the Department aim to provide a balanced education and training in these five subdisciplines. Through elective courses students can, to a certain degree, specialize in certain areas.

UNDERGRADUATE PROGRAM

The Department offers an education in political science with opportunities for a broad and balanced undergraduate study. Students pursue programs which, in addition to providing a firm grounding in the core subjects of the discipline, allow students to take courses in economics, management, and international relations as well as in computer sciences and humanities. Departmental courses are divided in a balanced fashion between the fields of political theory, comparative politics, and Turkish government and politics, and cultural studies.

The Department aims at providing the students with an education that would enhance their understanding of social artifacts. In addition to giving the basic requirements of a degree in political science, the program emphasizes the utility of learning social and political roles. The goal for a study in the Political Science major is to maximize students’ capacity to analyze and interpret the significance and dynamics of political events and governmental processes. The purpose is not simply to reveal the significance of political events and issues. It is to equip the students with the knowledge in coping with political phenomena and problems. The aim is political education “in depth” for those students who have an interest in politics whatever their professional goals and eventual occupations are.

At least four of the elective courses must be chosen from amongst the departmental offerings. Other elective courses must be chosen from amongst the courses that are offered and open to POLS students by the Departments of International Relations, Economics, History, and Management. A senior is allowed to choose an elective course only at the 400 level.

Language courses satisfy elective requirements for the third and fourth year electives, but only one language course per semester is allowed.
MINOR PROGRAM

Politics is essentially a decision-making process which distributes status, power and resources at all levels of human society, ranging from the family to the international system. Being one of the oldest social science disciplines, political science examines perennial questions such as how those decisions are made, who makes them, or who benefits from them. The Political Science Department at Bilkent University focuses specifically on four sub-fields: comparative politics, Turkish politics, political theory and cultural studies.

The aim of the Minor Program in Political Science is to acquaint Bilkent students from any background with the academic study of politics. Students enrolled in any one of the Bilkent faculties might apply, provided that they fulfill the application criteria. The minor program is composed of six courses in total and four of those are compulsory. Depending on their major program, students are expected to take either one of Introduction to Political Science I or Social Transformation in Turkey. Other compulsory courses are Comparative Politics I, Turkish Political Development and Contemporary Turkish Politics. Minor program students are allowed to pick and choose any two Political Science courses as electives and they would be well-advised to concentrate in one of the four sub-fields.

Prerequisite Courses: None

Open to Students from
- Faculty of Business Administration
- Faculty of Engineering
- Faculty of Economics, Administrative, and Social Sciences
- Faculty of Humanities and Letters
- Faculty of Law
- Faculty of Science

GRADUATE PROGRAM

Doctor of Philosophy in Political Science

The Doctor of Philosophy Program in Political Science is designed to provide candidates with a depth of knowledge in their respective areas of study and help them to gain a high level conceptual and analytical capability in their subject. The candidate is expected to write a dissertation which would be a contribution to theory in Political Science. Refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.

The candidates must complete no fewer than 24 credit hours. All courses need to be approved by the Department.

</table>
POL 230  Turkish Political History II
This course is a survey of Turkish political history from the Democrat Party rule (1940-1950) until current affairs in Turkish politics, focusing on an analysis of political and social institutions with an emphasis on continuity and change. Credit units: 3 ECTS Credit Units: 6. Spr (B. Burçak)

POL 231  Introduction to Law
Sources of law, Social life and the law. Definitions and concepts. Division of public and private law. Branches of law. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

POL 232  Turkish Public Law
The idea of constitutional law, constitutionalism, and the constitutional system in Turkey. General characteristics of Turkish administrative law, Administrative power and judicial control of public administration. Credit units: 3 ECTS Credit Units: 6. Spr (H. Toroslu)

POL 234  Religion and Politics in the Arab World
An account of importance in the modern Middle East from the colonial/imperial period to the present time. Special attention will be paid to the role of the tarikats in the resistance to imperialism; the rise of the Muslim brotherhood in the Post-1918 period; the relationship between religion and state; and the resurgence of Islamist movements in the contemporary period. Credit units: 3 ECTS Credit Units: 6.

POL 235  Political Psychology
Political Psychology explores the area that lies between politics and psychology. This course is an introduction to the psychological study of political life. It is an inter disciplinary course which will draw upon from the literatures of political science, international relations, and psychology (especially social psychology). During the course, we will explore different perspectives in psychology and will apply those psychological theories to particular domestic and international political problems including foreign policy decision making, leadership, inter-group conflict and cooperation, identity, authoritarianism, social dominance orientation, the formation of belief systems, political socialization, and collective violence and mass hysteria. Credit units: 3 ECTS Credit Units: 6. Aut (E. Çuhadaroğlu Gürkaynak)

POL 236  Introduction to Political Anthropology
This course a comprehensive overview of political anthropology, including its history, its major research findings, and its theoretical concerns both past and present. It also covers such as topics of preindustrial political systems, religion and ritual in politics, the power of the people, the politics of identity, and the transition from modernism to postmodernism. Credit units: 3 ECTS Credit Units: 6.

POL 237  The Contemporary Middle East
This is a survey course designed to cover contemporary developments in the Middle East, including Is- rael/Palestine and the ‘peace process’ since 1993; the invasions of Iraq in 1991 and 2003 and their conse- quences, including constitutional developments and the formation of regional governments; nuclear technology, nuclear weapons and Iran’s nuclear program; and ‘western’ policies towards the region against a background of shifting global economic and political power. Turkey’s interests and involvement in all these issues will be continuing theme. Credit units: 3 ECTS Credit Units: 6. Aut (J. Salt)

POL 238  Negotiation and Mediation in Politics
This course focuses on both the theory and practice of negotiation and mediation concerning legal and political conflicts. The course covers a wide range of issues concerning negotiations including the different theories of bargaining, different outcomes of negotiations, processes of negotiation, psychological dynamics affecting negotiations, effective communication strategies, the role of language, culture, and power in negotiations, and the role of third parties in negotiations. An important part of the class is devoted to teaching the applied negotiation and mediation skills to students. Towards this end the students will carry out negotiation simulations and role plays related to various legal and political negotiations. In addition to the role plays and simulations, the course will also discuss several negotiation cases in detail including the negotiations over the Turkish Constitution, Cyprus, and Jerusalem. Credit units: 3 ECTS Credit Units: 6. Spr (E. Çuhadaroğlu Gürkaynak)

POL 240  Social Transformation in Turkey
This course aims at providing an insight into the social and cultural aspects of social transformation in Turkey. The transformation of spaces, divisions of labour, social stratification, life-styles and cultural values are explained through sociological and anthropological studies carried out in Turkey since the 1960s. Credit units: 3 ECTS Credit Units: 6. Spr (N. Fehim-Kennedy)

POL 303  Comparative Politics I
Historical and contemporary political developments in the USA, UK, France, and Germany. Credit units: 3 ECTS Credit Units: 6. Aut (T. Bölükbasi), I. N. Grigoriadis, S. Özçürüme Bölükbasi)
POLS 304 Comparative Politics II
Historical and contemporary political developments in Russia and her neighboring countries (the Commonwealth of Independent States), Eastern Europe, and the Peoples Republic of China. Credit units: 3 ECTS Credit Units: 6. Spr (T. Bölükbaba, S. Özcümez Bölükbaba, A. Paskeviciute)

POLS 305 Turkish Political Development
The development of the political systems from the Ottoman period to the present with special emphasis on problems of and prospects for democracy. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Aytürk, Z. Sargil)

POLS 306 Contemporary Turkish Politics
State, Politics and society in contemporary Turkey, from a theoretical perspective with special emphasis on the multi-party period. Credit units: 3 ECTS Credit Units: 6. Spr (M. Heper, Z. Sargil)

POLS 309 Turkish Political Thought I
This course is a survey of political trends in Ottoman-Turkish history. The course will concentrate on the late Ottoman period until the establishment of the Turkish Republic, focusing on an analysis of political ideas with an emphasis on continuity and change. Credit units: 3 ECTS Credit Units: 6. Aut (B. Burçak)

POLS 321 Health, Society and Politics
Sociology, history and politics of health care. Social response to disease (including epidemics); the development and organization of the medical profession (hospitals, public health and health insurance); politics of health policy in comparative perspective. Credit units: 3 ECTS Credit Units: 6.

POLS 324 Research Methods
Quantitative and qualitative research methods. Formulating research problems and selecting appropriate research designs. General problems of measurement, data collection techniques, analysis and interpretation of social science data. Credit units: 3 ECTS Credit Units: 6. Spr (A. Eren, Z. Tandoğan)

POLS 325 Transnational Cultures
The course aims to provide an anthropological perspective to the issue of transnationalism. Contemporary transnational experience challenges the culturalist approach to cross-cultural human contact, as well as, the conventional usage of the term "culture", and brings forth a new understanding of a very old phenomenon, people in motion. Credit units: 3 ECTS Credit Units: 6.

POLS 329 Politics in Russia and the Commonwealth of Independent States
This course analyzes the political, economic and social developments that took place in the countries, which were once part of the Soviet Union, since the collapse of communism in 1991. The main focus Russia, but the course also compares and contrasts the recent developments in other paths taken by Latvia, Lithuania and Estonia. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Yänik)

POLS 330 European Society and Culture
The course aims to provide a framework for understanding the social and cultural settings that lead to or are created by political decisions and economics policies. It covers European countries, including partially Eastern Europe, with a focus on the EU member countries. Topics covered are the human geography of the area with a brief historical background; citizenship, cultural identities, minorities and racism; employment, unemployment, social welfare, health and housing; gender issues and the family; social class, social behavior and attitudes. Credit units: 3 ECTS Credit Units: 6.

POLS 331 State and Society in Israel
The aim of this course is to acquaint students with the basic characteristics of the Israeli society and political system. The course covers the evolution of a self-governing Jewish community from its origins in Ottoman Palestine until the present day. It addresses issues such as the governmental system, political parties, foreign policy, military, nationalism, religion, citizenship and ethnicity from a comparative perspective. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Aytürk)

POLS 334 Turkish Political Thought II
This course is a survey of political trends in modern Turkish History. The course starts with the Kemalist Republic and its ideology and ends with current political ideas in modern Turkey with an emphasis on continuity and change. Credit units: 3 ECTS Credit Units: 6. Spr (B. Burçak)

POLS 338 Cosmopolis: From the Roman to the Ottoman and British Empires
This course will offer an unusual conspectus of political thought in the last two thousand years. Most political theory has considered the nature of the polis or the nature of the modern state: there are very few great works, with perhaps the exception of Augustine's City of God, which deal with the problem of the nature of the empire, or cosmopolis, that is, a universal city rather than a particular city. The course shall involve a study of the understandings of empire held by those who reflected on the Roman, Byzantine, Holy Roman, Ottoman, Austrian and British Empires. It will include not only writers who lived within empires, but those from the more
obvious western canon of political thought who reflected on empires from without. Not only political thought will be studied, but also some literature and history. The question will be why so little theory was written about empires. Credit units: 3 ECTS Credit Units: 6.

**POLS 341 State Freedom and Sovereignty**  
The course will examine various views which consider the concept of the modern state, with its connection to the ideas of freedom and sovereignty and with the relationship between an individual citizen and the state. The course will start by developing the ability to conduct independent research based on an analysis of both primary and secondary sources. Credit units: 3 ECTS Credit Units: 6.

**POLS 342 Contemporary Political Theory**  
This course is an overview of contemporary political theory, focusing on the most frequently debated theorists. We will start with the discussion of the legacy of key political figures in the late twentieth century (Carl Schmitt, Jurgen Habermas, John Rawls, Theodor Adorno, Michel Foucault and Noam Chomsky), and will continue with the most recent contributions to political theory by Michael Hardt, Antonio Negri, Slavoj Zizek, Ernesto Laclau, Alain Badiou, Jacques Ranciere and Fredric Jameson. Credit units: 3 ECTS Credit Units: 6. Spr (D. Just)

**POLS 343 Social Theory: Past and Present**  
A select survey of classical and contemporary social theories. The aim of the course is to enable students to understand the changes in social theory as a response to transformations in modern societies, and to develop an awareness of diverse theoretical perspectives that emerged since late nineteenth century. After a review of classical macro and micro theories, the focus will be on contemporary perspectives such as systems theory, critical theory, feminism, structuralism and post-structuralism. Credit units: 3 ECTS Credit Units: 6. (M. N. Karakayalı)

**POLS 344 Turkish Nationalism: Politics and Ideology**  
This course aims to examine the emergence of Turkish nationalism as a political ideology in the late nineteenth century and its spread and influence in the Republic of Turkey. On the one hand, the emphasis is put on the history of ideas: the environment in which Turkish nationalism was born and flourished, its influence in the early republican era, and its evolution after are covered in detail. On the other hand, another goal of this course is to highlight the political institutionalization of Turkish nationalism. The way in which the Republic adopted nationalism as the core ideology of the nascent state and how various branches of the nationalist movement had found a political expression, participating in politics in modern Turkey, constitute the other central questions to be discussed. Taking into account the nationalist responses to Turkey's domestic and global interests, commitments, and problems. New voices among Turkish nationalist, providing answers to current issues and introducing theoretical openings will receive attention, as well. Credit units: 3 ECTS Credit Units: 6. Spr (I. Aytürk)

**POLS 345 Political Parties and Voting Behavior in Democracies**  
This course is designed to introduce students to research on the electoral process in established and new democracies. Consequently the course will focus on political parties, party systems, and citizen voting behavior, and how they influence each other in democratic elections. The course will also take into account the role of electoral systems, social cleavages, political issues, the media, and the economy in the electoral process of contemporary democracies. Credit units: 3 ECTS Credit Units: 6.

**POLS 347 Liberty and Liberalism**  
This is a course about one particular political ideal-liberty-and the attempt to modernity to make it the foundation of politics-in the form of liberalism. There is an engagement with historical views of liberty, with classical of liberalism since the early nineteenth century, and criticism which have been made of liberalism since that time. In contrasting an ideal with an ideology the course intends to make clearer the problems of attempting to establish political ideals in political parties. Credit units: 3 ECTS Credit Units: 6.

**POLS 351 Information Age Landscapes**  
The second half of the 20th century and how they changed when their prior economic sectors were transformed by the information age. Cities changed and evolved as regional technological and educational hubs. One important theme to investigate is the rapid rates of rural-urban migration as families seek out economic and educational opportunities in the cities. Rapid urbanization puts a strain on city services and infrastructure and the environment. The underlying goal is to appreciate the underlying interrelationship between people and their urban landscapes and the influence of technology impacting this relationship. Examples of possible urban case studies are: Ankara, Turkey, San Jose California, Shenzhen, China, Bangalore, India and Guadalajara, Mexico. Credit units: 3 ECTS Credit Units: 6.

**POLS 353 Foundations of Modern Political Theory**  
This course historically focuses on Renaissance and Reformation period and particularly analyzes Republicanism, humanism, Lutheranism, constitutionalism, and absolutism. It addresses such questions as how and why one defends liberty, under what circumstances the right to resist is justified, what are different responses to constitutionalism, and what is state sovereignty with and without absolutism. Credit units: 3 ECTS Credit Units: 6. Aut (B. Helvacıoğlu)
POLS 355  Issues of Urbanization
Rural-to-urban migration, accompanied by squatter settlements in the physical realm, has been transforming many Asian, African and Latin American societies since the 1950s. This course investigates the social and political outcomes of “rapid urbanization” with a focus on squatter settlements and their residents. It covers theories that seek to explain social and economic transformation of “modernizing” societies and their urban development. It attempts to develop a critical approach to the ‘integration’ question of migrants in their new environment, and while so doing, it focuses mainly on the Turkish case. Gender, ethnicity, religion and regional identity are addressed. Credit units: 3 ECTS Credit Units: 3. Aut (T. E. Erman)

POLS 357  Ethics and Morality in Daily Life
Ethics and morality are usually either confined to realm of religion or taught, learned and discussed in the area of philosophy. However, in today’s world, people are faced with ethical dilemmas and moral issues in many areas of daily life. The lines between “good” and “evil”, and between “right” and “wrong” are becoming increasingly blurred, yet individuals are generally left without a guide for solving these issues. There is therefore a need to discuss such issues as part of the education of young people in every field. This course aims to equip students who are not students of philosophy with some basic philosophical approaches to ethics and morality in simplified form, and to encourage them to apply these approaches to some practical issues in politics, science, law and other aspects of social life. Credit units: 3 ECTS Credit Units: 3. Aut (N. Fehim-Kennedy)

POLS 404  Political Parties and Interest Groups
Analysis of origins, functions and organizational characteristics of political parties and interest groups in different political systems. Pluralism, patron-client relationship and corporatism. Credit units: 3 ECTS Credit Units: 6.

POLS 411  Gender and Politics
The aim of the course is to gain a deeper understanding of the ways in which gender and gender inequality shape institutions, policies, and political processes, as well as the way states affect gender relations, the political construction of gender, and political mobilization based on gender. Classical and contemporary views on gender and politics will be examined with a focus on three topics within the broad area of the relationship of gender and politics in some depths: women in politics; state social policy, and gender and ideology. Credit units: 3 ECTS Credit Units: 6.

POLS 420  Theory and Modern Society
Elaborate examination of the efforts to address, evaluate, and extend questions posed by founding fathers of social theory (Durkheim, Marx, Weber, Nietzsche) with particular attention to current positions in social and political theory within the dynamic axis of modernity vs. post-modernity. This seminar-type course develops upon these debates with a special emphasis on social and intellectual contexts, conceptual frameworks and methods, and contributions to modern society and its theorizing. Works: Darwin, Spencer, Parsons, Dahrendorf, Saussure, Habermas, and Foucault. Credit units: 3 ECTS Credit Units: 6.

POLS 421  Issues in Modern Political Thought
The object of this course is to critically analyze the project of modernity through the prisms of democracy, industrialization, science and cultural representation. The first half of the course focuses on the idea of progress in modern thought and politics. In the second half, the main question under investigation is the political impact of the project of modernity on different social forces. Credit units: 3 ECTS Credit Units: 6.

POLS 426  Civil Society in Turkey
The course aims at studying the development of civil society in Turkey. Firstly, it focuses on the nation of civil society at the global level from a comparative and historical perspective, and then shifts the focus to the national level. Central to this is the distinction between civil society and state. The course introduces students to the characteristics and dynamics of present-day civil society in Turkey, and therefore deals with a number of case studies. Accordingly, media, labor unions, non-governmental organizations (associations, foundations), political parties, interest groups in contemporary Turkey are among the subjects of this course. Credit units: 3 ECTS Credit Units: 6. Spr (T. E. Erman)

POLS 431  Politics and Society in Turkey
This course explores the debates and controversies over modernization, westernization, nationalism and secularism as they become the main themes of the constitutive norms of the modern Turkish Republic. After briefly tracing the historical developments around these themes since the founding of the Republic, the course examines different dimensions of Turkish nationalism and its aspirations for a West-oriented modernity in various contexts of politics and daily life such as the use of public spaces, urban planning issues, differentiation of gender roles, or trends in popular culture. Credit units: 3 ECTS Credit Units: 6.

POLS 433  Politics of European Integration
This course aims to provide the 4th year students with a basic understanding of the process of European integration and second, focus on the historical evolution of the European Union and its institutions. Third, the course will analyse the challenges to the nation-state in Europe, specially those posed by integrative and fragmentary forces. The ultimate objective is to furnish students with the comprehension that the state is going
through a major transformation in Europe due to the process of European integration. Credit units: 3 ECTS
Credit Units: 6. Spr (I. N. Grigoriadis)

**POLS 449 Political Concepts**
This course aims to consider a range of fundamental concepts in political theory, not for the purpose of introduction, but for the purpose of reflection. These concepts will be democracy, justice, ideology, liberty, party, politics, power, public opinion, representation, revolution, rights, rule, state etc. The intention of the course will be an intensive study and discussion of writings on these concepts. The basic text will be "Political Innovation and Conceptual Change" eds. Ball, Farr and Hanson. Credit units: 3 ECTS Credit Units: 6.

**POLS 452 State Society and Citizenship in Turkey**
The recent decades have witnessed the revival of the interest on citizenship issues worldwide. This course aims at analyzing the issue of citizenship in Turkey with respect to its relations with the state and society. The first part of the course will provide the students with theories on citizenship, how it emerged and developed, and various aspects of citizenship in the current literature. In the second part of the course, related with the contemporary debates on citizenship, namely identity politics, multiculturalism and constitutional citizenship, the Turkish experience will be analyzed. This part will consist of the historical background, the construction attempts, legal process and the current situation in Turkey. Credit units: 3 ECTS Credit Units: 6. Spr (B. İnce)

**POLS 454 Politics Media and Propaganda**
This course deals with propaganda and the construction of news in the context of political life. Particular emphasis is given to prejudice and bias and reinforcing of ethnic, religious and national stereotypes. Propaganda is studied as a tool of social control both formally and informally. The course will concentrate on the 19th century but there will be references back to earlier forms of propaganda. Credit units: 3 ECTS Credit Units: 6. Aut (J. Salt)

**POLS 455 World Politics I**
The course aims at analysing the basic dynamics behind the evolution of the international political order in the 20th century with reference to the theories of international relations and international political economy. It covers topics in a chronological order, the pre and post-World War politics, the interwar period, the Second World War, the Cold War and post-Cold War period. The chronological design of the course will revolve around the main topics of international politics in the relevant periods, such as colonialism, post-colonialism, nationalism, liberalism, fascism, postmodernism, etc. Credit units: 3 ECTS Credit Units: 6. Aut (L. Yanoğlu)

**POLS 457 Literature and Society**
This course examines literature as a social product, analyzing ways in which it reflects, influences, reacts to and participates in various social systems. The first part of the course will focus on the question of how different literary paradigms from realism, through modernism, surrealism, to postmodernism represent reality, and how they function as modes of social critique. In the second part of course, we will discuss how literature imagines social and political alternatives, how it forms collective identities, and how it helps to transform dominant social and cultural norms. Credit units: 3 ECTS Credit Units: 6. Aut (D. Just)

**POLS 458 Nationalism and Citizenship in Comparative Perspective**
Politics is not only about formal governance and the state but also about the nation and its formation. This course takes the nation as its locus of study and investigates different dimensions of the making of nations and issues of national belonging (citizenship) in a global context. The readings have been structured so as to explore the complexity of nation-building processes and issues of national belonging, i.e. citizenship. They address the ways in which national identities are constructed along different constitutive elements, such as race, ethnicity, gender, class, religion or colonial relations, as one or several of these elements converge in setting the parameters of national belonging in different contexts. The course will simultaneously explore different mediums of representation in the creation of nations and norms of citizenship, ranging from popular music, novels, architecture, art, films and mass media to clothing, food and other daily practices. The course and assignments are also designed to assist students in developing their reading, critical analysis and writing skills. Credit units: 3 ECTS Credit Units: 6.

**POLS 464 Interculturalism and Europe**
This course will cover the conceptual and practical aspects of interculturalism in Europe from an interdisciplinary perspective. It will focus on how cultural diversity is perceived and experienced by individuals (based upon anthropological studies) and the immigration policies and politics of the European Union since the end of Cold War. Credit units: 3 ECTS Credit Units: 6.

**POLS 466 Issues in Political Theory**
This course is motivated by a nagging sense that the gendered character of politics is more complicated than it appears. It aims to conceptualize the inherent contradictions in such gendered categories as masculinity and femininity by examining the relationship between sex, gender, body and the politics of race, class and nationalism. Credit units: 3 ECTS Credit Units: 6. Spr (B. Helvacıoğlu)
POLS 470  European Political Thought II
This course provides a thematic overview of the evolution of European political ideas and institutions from the post-Enlightenment period to the present, addressing the issues of justice, power, legitimacy, democracy, progress, public and private, state and civil society in basic texts. Credit units: 3 ECTS Credit Units: 6.

POLS 472  Science, Society and Technology
Social and political consequences of scientific and technological developments in the second half of the twentieth century. Topics include new information and communication technologies, the concept of "virtual reality" and controversies about genetic engineering. Credit units: 3 ECTS Credit Units: 6.

POLS 473  Democratization Process in Turkey
This course deals with the constitutional and legal amendments in the last 20 years designed to improve the standards of democracy in Turkey. Credit units: 3 ECTS Credit Units: 6.

POLS 475  European Union: The Challenges
This course will focus on the history, changing structure and enlargement processes of the European Union. We will then explore the more philosophical issues, for example the cultural homogenization and globalization debate. From the cultural geographic perspective we will critically examine the complexity of the issues of cultural identity, language, ethnicity, religion, migration, and gender. Finally we will study the opportunities and challenges in the process of Turkey's accession to the European Union. Credit units: 3 ECTS Credit Units: 6.

POLS 476  World Politics II
The course is designed to address the basic issues of world politics especially during the cold war and post-Cold War periods. It covers topics like deterrence, terrorism, nationalism, drug trafficking, immigration, refugees, new wars, regional and international organizations and their old-new roles in world politics. Credit units: 3 ECTS Credit Units: 6.

POLS 477  Liberalism and Socialism: Past and Present
This course examines the rise of liberalism and socialism from the nineteenth century to the present. Its primary focus is on the radically different conceptions of freedom, the good life and collectivism in liberal and socialist theories. Its objective is two-fold: to distinguish between political ideologies and political theories and to provide the students with a firm historical and theoretical background on two of the most popular ideologies which have shaped world politics in the last two centuries. Credit units: 3 ECTS Credit Units: 6.

POLS 478  Public Opinion and Political Behavior in Democracies
Democracy is often referred to as government of the people, by the people, and for the people. This course is therefore designed to introduce students to research on citizen political behavior and public opinion in contemporary democracies. The course will thus examine what people in different countries think about politics, how they form their opinion, and how and why people participate in the political process. It will also take up how public opinion and behavior affect each other and what consequences they have for the democratic governance. Credit units: 3 ECTS Credit Units: 6. Aut (A. Paskeviciute)

POLS 479  Body and Emotions in Social Life
This course explores why the body in general and emotions in particular is a concern for social and political scientists. The students will be introduced to social scientific approaches to body and emotions in specific contexts such as health, gender, strangeness, and bodily manners. Other topics of concern include formation of habits, the role of imitation in social processes and memory. Credit units: 3 ECTS Credit Units: 6.

POLS 481  Conflict Analysis and Resolution
The major goal of this course is to introduce the students to the basic concepts, frameworks, and techniques in the conflict analysis and resolution field. In this course, we will examine different approaches to and types of conflicts and deal with some of the contemporary questions the field is facing today. The course is organized in two parts. the first part deals with "conflict analysis" which aims to give students basic formation to assess conflicts in a more analytical and scientific manner. The second part will introduce the students to various conflict resolution techniques like negotiation, mediation, and interactive conflict resolution. At the end of this course, students are expected to think about conflicts analytically, acquire basic knowledge about conflict assessment tools, and develop some practical skills about conflict resolution processes such as negotiation and mediation. Credit units: 3 ECTS Credit Units: 6.

POLS 482  Life, Nature and Politics
A survey of past and current approaches in the social sciences which try to understand social and political institutions by paying special attention to the fact that human beings are living entities that interact with nature. The focus will be on contemporary sociobiological research which tries to analyze language and communication, social hierarchies, gender relations, moral and religious values, and the formation of habits and customs by models borrowed from the life sciences. Credit units: 3 ECTS Credit Units: 6.

POLS 483  Seminar in Comparative Politics
The course starts by examining the rationale for conducting comparative studies of political systems. The main body of the course considers the functions of constitutions, and the roles of (a) the main institutions of modern
states (legislatures, leaders and executives, the judiciary, state bureaucracies) and (b) non-state actors (political parties and party systems, pressure groups, the mass media, and the military). Broader issues considered include such concepts as leadership, the rule of law, theories of representation and corporatism. Each section will begin with an introduction by the convenor. In the following section, assigned members of the class will be asked to give short presentations on the topics scheduled. This will be followed by a general class discussion. 

Credit units: 3 ECTS Credit Units: 6.

POLS 486 Issues in Comparative Politics
This module introduces students to advanced research in comparative politics. It centers around the following topics: politics and government, the state, democracy, authoritarian rule, the comparative approach, political culture, political communication, political economy, political participation, elections and voters, interest groups, political parties, constitutions and the legal framework, multilevel governance, legislatures, the political executive, public management and administration, and public policy. Credit units: 3 ECTS Credit Units: 6.

POLS 487 Politics of International Migration
The aim of the course is to give an overall view about the aspects of the international migration in international relations. The topics to deal will be the terminology of migration, the causes and the results of migrations, the situation of sending and receiving countries, illegal migration, human trafficking, refugees, international law dealing with refugees, international organization and how they are working in this area, the importance of migration in international relations. Credit units: 3 ECTS Credit Units: 6. Spr (S. Özçüümmez Bölükbaşı)

POLS 488 Film and Politics
This course examines film as an extension of politics and a medium of political engagement. Concentrating on the second half of the twentieth century, we will discuss the fictions and the realities of various historical events (e.g., Hiroshima, Cold War, Red Scare, decolonization, mass emigration, fall of communism, terrorism) as they were represented in the mainstream, the avant-garde and the documentary film. We will ask to what extent these representations served as propaganda, a form of protest and resistance, or an attempt to formulate political alternatives, and what political influence they were able to generate. Credit units: 3 ECTS Credit Units: 3. Spr (D. Just)

POLS 490 Democracy, Development and Human Rights
This course is designed to introduce students to the issues of democracy, development, and human rights from the perspective of comparative politics. We will discuss different conceptualizations, theories, and measurements of these phenomena, analyze the extent to which existing theories contradict or complement each other, and whether their policy prescriptions have been successful in the real world. While the course focuses on how democracy, development, and human rights relate to each other, we will also address the effects of domestic and international institutions, natural resources, political culture, and globalization. The course is designed to provide a general understanding of challenges to democracy, development, and human rights; however, we will also pay some attention to regional differences among Latin America, East Central Europe, Asia, and the Middle East. Credit units: 3 ECTS Credit Units: 3. Spr (A. Paskeviciute)

POLS 491 Issues of Urbanization
Rural-to-urban migration, accompanied by squatter settlements in the physical realm, has been transforming many Asian, African and Latin American societies since the 1950s. This course investigates the social and political outcomes of “rapid urbanization” with a focus on squatter settlements and their residents. It covers theories that seek to explain social and economic transformation of “modernizing” societies and their urban development. It attempts to develop a critical approach to the “integration” question of migrants in their new environment, and while doing, it focuses mainly on the Turkish case. Gender, ethnicity, religion and regional identity are addressed. Credit units: 3 ECTS Credit Units: 6.

POLS 493 State and Society in the EU Member States
This course analyzes the relations between states and societies of the EU member states, major problems that key tackle in their domestic politics and how it related to the European integration process. This sequence of the course has two major purposes: to provide undergraduate students with knowledge on the EU member states their domestic problems regarding state-society relations and how they have addressed these problems within the scope of European integration. Credit units: 3 ECTS Credit Units: 6.

POLS 495 International Political Economy
Focusing on international political economy as inspired by both politics and economics, this course centers around the following topics: the neoclassical conception of an economy, new economic and political theories, national systems of political economy and the international trading, monetary and financial systems, multinationals corporations, economic and political development, and regional political and economic integration. Credit units: 3 ECTS Credit Units: 6. Aut (T. Bölükbaşı)

POLS 497 Local and Global in Cities
This course explores the relationship between local dynamics and global developments in the context of cities. By doing so, it aims to reveal how today’s cities are being transformed in the process of the interplay between
local and global forces. It brings together research on the cities of both the global South and the North. Credit units: 3 ECTS Credit Units: 6. Aut (T. E. Erman)

GRADUATE COURSES

POLS 601 Seminar in Turkish Politics
This is an introductory course on Turkish politics for the Ph.D. Program in Political Science. It covers such topics as political culture, including its antecedents, nationalism and politics, Islam and politics the dynamics of the political system with special reference to political parties and political leaders, the military and politics, and the consequent trial and tribulations of democracy in Turkey. Credit units: 3 ECTS Credit Units: 6. Aut (M. Heper)

POLS 602 Seminar in Comparative Politics
This seminar is designed to introduce students to the major theoretical and conceptual debates in the sub-field of comparative politics. The weekly readings are chosen to reflect the variety of topics and methodological approaches in comparative politics. Credit units: 3 ECTS Credit Units: 6. Aut (S. Özçüremez Bölükbasi)

POLS 603 Advanced Academic English
In this course, students will advance in academic English as it relates to the field of political science. Academic and stimulating texts will serve as the foundation—both the stimulus and quality example—from which students will improve their knowledge and usage of English. Students will analyze the writing style and method of political science writers, write analytical essays of political science texts, lead discussions and deliver academic presentations. Credit units: 3 ECTS Credit Units: 6. Aut (M. Krugman)

POLS 604 Democratization Process in Turkey
This course will deal with the processes of democratization and liberalization in Turkey particularly in the light of constitutional and legislative reforms adopted between 1993 and 1995. Attention will also be given to the impact of the EU membership prospective. Credit units: 3 ECTS Credit Units: 6.

POLS 606 Seminar in Political Theory
This course engages in a critical reading of a select number of contemporary thinkers from K. Marx in 19th to L. Irigaray 20th, and to S. Zizek in 21st century. The course starts with the most recent texts and moves backward in history. Although the questions posed each week revolve around the most pressing issues of the present political conjuncture, such controversial concepts as democracy, difference, representation and the subject are analyzed from within a broad range of perspectives. Credit units: 3 ECTS Credit Units: 6. Spr (B. Helvacioğlu)

POLS 607 Configuration of Political Theory Today
This course is designed to address multiple challenges world politics faces after September 11, 2001. It aims to utilize a diverse range of theories, methodologies and modes of thinking of politics. Throughout the whole term the main focus is on only one concept-power. We will examine classical and contemporary texts on different conceptualizations and dimensions of power, e.g. state power, power of the markets, power of terror. We will examine freedom, equality, representation, participation, gender and citizenship in relations to power. The format of the course is lecture in half and student presentation in half. Credit units: 3 ECTS Credit Units: 6.

POLS 608 Politics, Culture, Nation and Gender
This course takes the realm of urban daily life as the locus of politics and investigates different dimensions of the making of national identities in relation to issues of gender, race, ethnicity, and class. The readings have been structured so as to explore the complexity of national identities and founding ideologies around several dimensions. First, they will address the ways in which national ideologies are constructed and propagated in relation to race, ethnicity, gender, class, religion or colonial relations, as one or several of these elements converge in the making and contestations of national ideologies in different contexts. Second, the course will simultaneously explore different mediums of representation in the making and contestation of national ideologies, ranging from popular music, novels, architecture, art, films and mass media to clothing, food and other daily practices. Credit units: 3 ECTS Credit Units: 6.

POLS 609 Issues in Urban Studies
This course addresses the theoretical and methodological issues in studying the city as a socio-cultural entity, and it aims to reveal urban dynamics that shape the city and city spaces in a variety of contexts. Attention is paid to emerging social and spatial landscapes in our era of globalization. In the class such concepts and topics are explored as the global city, the city in modernity and post-modernity, urban ethnography, suburbanization, gentrification and ghettoization, gated communities, the privatization of urban space, and urban governance, as well as Third World urbanization, squatter formation, migrant enclaves, and local politics. The city is approached critically in terms of gender, ethnicity and class. Credit units: 3 ECTS Credit Units: 8. Spr (T. E. Erman)

POLS 610 Research Methods
The purpose of this course is to introduce you to the qualitative research methods in social sciences. Emphasis will be placed both on acquiring skills as a researcher and on learning to evaluate empirical work in political science. We will take up, in turn, basic concepts of qualitative research design and data collection. This is a seminar course and students will design their own research project in the light of the methods discussed in class sessions. Credit units: 3 ECTS Credit Units: 6. Aut (E. Çühadar Gürkaynak)
POL 611 Political Theory: An Overview
This is a broad introduction to political philosophy. It consists of an in-depth engagement with some of the most important political writings between the fourth century B.C. and the twenty-first century A.D., including Aristotle, Augustine, Hobbes, Nietzsche and Oakeshott and other, lesser, writings, concluding with a view of the present state of the field. The course addresses issues such as what is theory? Does political theory relate better to some types of association more than others? How does theory relate to history, religion and law? How can theory interact with practice? Can theory legitimately include prescription as well as description? What is the theoretical status of ideological pronouncements? Credit units: 3 ECTS Credit Units: 7.

POL 612 Seminar in Social and Cultural Studies:
This course brings together concepts and perspectives from various fields of the human sciences such as sociology, psychoanalysis, anthropology and semiotics. The focus will be on current analyses of how societies and cultures are formed and break down. Special attention will be paid to the problems and future of contemporary societies and cultures. Credit units: 3 ECTS Credit Units: 8. Spr (M. N. Karakayalı)

POL 614 Politics of Nationalism and Ethnicity
Historical origins, defining characteristics, enduring power, morality and typologies of nationalism. "New" nationalism(s). The pull and push of ethnic politics vis-à-vis integrationism of the modern nation-state. Credit units: 3 ECTS Credit Units: 8.

POL 616 Political Cultures in the Middle East
The overall aim of this course is to move away from traditional approaches to understanding the Middle East, through analysis of constitutions, parliaments, parties regional developments and interaction with the outside world, in favor of a more lateral approach based on the cultural content of Middle Eastern societies. Credit units: 3 ECTS Credit Units: 6. Spr (J. Salt)

POL 618 Hegel’s Philosophy of Right
This course will take the form of a close study of one of the most important modern works of political thought, Hegel’s Philosophy of Right. It will involve the relation of Hegel’s political thought to his philosophy as a whole, the identification of his political and philosophical concerns in the early nineteenth century, and will consider the possibility of theorising our later modernity in terms of his political thought. The aim will be for everyone who takes the course to have read the whole work, including its additions and appendices, by the end of the term and also to have studied a reasonable amount of Hegel commentary including the critiques of Hegel’s thought found in writers such as Schopenhauer, Marx and Kierkegaard. Credit units: 3 ECTS Credit Units: 7.

POL 627 Cultural Diversity Cosmopolitanism and Europe
Various cosmopolitanisms and different forms of cultural diversity will be explored through a reading of anthropological and philosophical texts on the issues of immigration, interculturalism and multiculturalism with the geographic focus on Europe. The overall objective of the course is to give students a critical understanding of social science concepts such as culture, race, and ethnic group, and to discuss culturalist, essentialist, fluid and dynamic conceptualisations of cultural diversity in the light of different cosmopolitan experiences, perspectives and education. Credit units: 3 ECTS Credit Units: 7.

POL 628 Social and Spatial Aspects of the Periphery
This course explores the politics of the periphery in social and spatial terms, focusing on the periphery of society (the poor, socially excluded, culturally stigmatized, politically repressed) and the periphery of space (squatter settlements, immigrant enclaves, diasporas, ghettos, transgressive spaces). It examines the mechanisms and strategies, as well as the discourses involved in the relationship of the periphery with the mainstream society and the role of space in it. The question of the governmentality of the periphery is addressed. Through reading ethnography and contemporary social science research the course aims to teach students how to theorize the periphery, and how to approach critically to the studies of disadvantaged groups. Credit units: 3 ECTS Credit Units: 6.

POL 629 Turkey in Its Muslim Environment
This course will deal with the relationships between Turkey and its Arab ‘neighbors’ and its place in the Muslim world generally. Starting points will be a definition of ‘neighbors’, the Ottoman legacy and the effect on relations between Turkey and Muslim countries of foreign and domestic policies adopted by the Turkish government after the foundation of the republic. Key issues will include Turkey’s role at the UN, in diplomacy and through peace-keeping operations (i.e. in Lebanon); complications in relationships with close Arab countries, especially Syria and Iraq; the water issue; economics; Turkey’s activities as a member of the Organization of the Islamic Conference; and the positioning of its Muslim world policies in the context of relations with the United States and the European Union. Credit units: 3 ECTS Credit Units: 6. Spr (J. Salt)

POL 630 Comparative Political Studies and Turkey
This seminar course aims to enhance students; understanding of comparative analysis and alternative theoretical approaches for analyzing and comparing political systems and processes focusing on Turkish politics. Substantive areas of inquiry include states, institutions, democratic transitions and consolidation, state-society relations, citizenship and political participation, and policy-making and governance in selected policy areas. The course will survey the research on the case of Turkey in order to critically examine and advance systematic and
contextualized comparison of the study of Turkish politics in the broader context of Europeanization processes and comparative political inquiry. Credit units: 3 ECTS Credit Units: 6.

POLS 631 Foreign Policy Analysis
This course is designed to introduce students to the comparative study of foreign policy, which lies at the intersection of comparative politics and international relations. It examines foreign policy activities of states and non-state actors and different theoretical perspectives that guide the study of foreign policy with an emphasis on the process of foreign policymaking and implementation. The first part of the course introduces the students to the general notions of foreign policy such as what foreign policy is, the levels of analysis, and how the scientific study of foreign policy has evolved. The rest of the course covers foreign policy analysis theories at different levels of analysis explaining both the external and domestic sources of foreign policy. Several case studies are examined in depth including the Israeli-Palestinian conflict and negotiations, US decision to go to war in Iraq, the signing of the Kyoto agreement, and Turkish-EU negotiations. Credit units: 3 ECTS Credit Units: 6.

POLS 633 Seminar on the European Union
The aim of the course is to provide the graduate students with the basic knowledge of how the European Union formulates and its basic policies within the member states as well as the challenges and opportunities in the implementation of these policies. The course exclusively addresses the main policy areas of the European Union that include social policies, public policies, migration, citizenship, justice and home affairs and how they are adapted by the member states within the framework of Europeanization. Credit units: 3 ECTS Credit Units: 6. Spr (I. N. Grigoriadis)

POLS 634 European Union Politics
This course discusses advanced studies on EU politics. The focus is on the following issues: EU executive, legislative and judicial politics, public opinion, democracy, parties and elections, interest representation, regulation of the single market, expenditure policies, economic and monetary union, citizen freedom and security policies, and foreign policies. Credit units: 3 ECTS Credit Units: 6. Spr (Ç)

POLS 635 Politics of Turkish Modernization
This course will explore the main themes around which Turkish modernization have revolved throughout the 20th century. First, the course will focus on debates and controversies over modernization, Westernization, nationalism and secularism as they become the main themes of the constitutive norms of the modern Turkish Republic. After briefly tracing the historical developments around these themes that have shaped Turkish society and politics since the founding of the Republic, the rest of the course examines different dimensions of the institutionalization and the negotiation of Turkish nationalism and its aspirations for a West-oriented modernity in various contexts of politics and daily life. Mainly, such negotiations are traced in daily life contexts such as the use of public spaces, urban planning issues, differentiation of gender roles, or trends in popular culture such as in music, political cartoons, films or television programs. Credit units: 3 ECTS Credit Units: 6. Aut (Z. Sargil)

POLS 636 Nationalism and Politics
The most important problem that inflicts the study of Turkish nationalism today is relative insularity in which its researchers are operating. Comparative studies are very few and the attempts to connect the field with the developments in nationalism studies of the last three decades are scanty. This doctoral seminar is designed to acquaint students of Turkish nationalism with select works from the enormous body of literature on nationalism as a global phenomenon and to draw parallels with the Turkish case. The main emphasis of the course will be on Turkish nationalism, covering a broad variety of topics from the origins of this ideology to its current institutionalization in the form of parties and civil society organizations. However, each one of those seminar themes will be embedded in a wider framework of theoretical analyses of nationalism as well as relevant case studies from other countries. Credit units: 3 ECTS Credit Units: 6. Spr (İ. Aytürk)

POLS 637 Power and State
This course presents advanced notions of the concept of political power and how it applies to the nation state and new emerging political entities. We cover normative, descriptive and explanatory approaches to power and review how political theory, comparative politics and international relations deal with this phenomenon. Credit units: 3 ECTS Credit Units: 6. Spr (T. Bölükbaşı)

POLS 638 Political Theory in a Time of Terror
This course examines the challenges ‘September 11’ has posed for political theory in the twenty-first century. It centers on critical analyses of such concepts as the passion for reality, difference, tolerance, the subject in politics and the politics of subject. In order to give a historical context for such analyses, the course starts with the present and moves backward to debates on transformations in the nineteenth century. The objective is to help students focus on different modes of reasoning, thinking and criticism on the same questions or concept. Credit units: 3 ECTS Credit Units: 6.

POLS 639 The Ecology of Social Relations and Cultural Processes
This seminar type course aims to explore key concept and models in social theory. One major concern throughout the course will be to compare and contrast the perspectives that were developed by social theorists since the nineteenth century with "ecological" approaches which propose that the forms that social relations and cultures
take can only be intelligible by looking at how human agents interact with their natural and social environments.
Credit units: 3 ECTS Credit Units: 6. Aut (M. N. Karakayalõ)

**POLS 640 Issues in Political Psychology**
Political Psychology is an interdisciplinary field which explores topics that lie at the intersection between politics and psychology. This is a seminar course that explores various topics in political psychology. The course focuses on various theories in political psychology and their application to domestic and international political processes. Some of these theories are concerned with elite behavior in politics; others try to explain mass political behavior. The topics that will be covered in the seminar include: political communication and media, social identity, authoritarianism, social dominance orientation, formation of belief systems and political attitudes, decision making and information processing, political leadership, inter-group conflict and cooperation, and collective violence.
Credit units: 3 ECTS Credit Units: 6. Aut (M. N. Karakayalõ)

**POLS 641 The Ultimate Sources of Politics**
Political theory often considers the question of the most just or right form of politics. This course aims at analyzing the three theoretical foundations of any form of politics orginates with God; that politics orginates with those who are spirited, strong or powerful; and that it originates with the people. The course will consider them on its own terms: first, theocracy, then timocracy, and finally democracy.
Credit units: 3 ECTS Credit Units: 6.

**POLS 642 Contemporary Issues in Human Rights**
One objective of this seminar is to familiarize students with the theoretical or philosophical aspects of human rights; distinctions among types of rights; major international covenants governing the human rights standards and the practical problems of implementation and protection; the institutional dimensions, and, in particular, the dilemmas associated with the use of human rights in cross-cultural or comparative perspectives. Another major goal is to focus on the essentially political character of the process by which human rights are shaped and structured; implemented and violated; valued and challenged. Among the problem-oriented human rights issues that are discussed are torture and cruel treatment; conflict between universalism and cultural relativism; religion and human rights; war-mass atrocities- genocide and human rights; reparations, restitution, and truth and reconciliation commissions; gender equality and human rights; limits of human rights and exporting democracy and human rights.
Credit units: 3 ECTS Credit Units: 6.

**POLS 643 Issues in Political Theory**
This is a higher level course which aims to extend political theory in terms of depth and breadth. In terms of depth, several major political works (highways) will be considered more reflectively and at more length than is usually possible elsewhere. And in terms of breadth, several rarely studied, little known or highly unconventional works (byways) which have contributed to political theory from odd angles, or what might be seen as cul-de-sac, will be studied. It is hoped that these two different approaches will give a better insight into the canons and canonical subjects of political theory than is possible in a more traditional course.
Credit units: 3 ECTS Credit Units: 6. Aut (B. Helvacioğlu)

**POLS 645 Voting Behavior and Political Parties**
This course is designed to introduce students to the field of research on electoral politics in contemporary democracies. It focuses on understanding how electoral democracy works and assessing how well it works. We will analyze how election outcomes result from the interplay of preferences and strategies among voters and political parties, and how this process is affected by various institutional arrangements (e.g. electoral systems), social cleavages, the media, and economy.
Credit units: 3 ECTS Credit Units: 6. Aut (A. Paskeviciute)

**POLS 699 Ph.D. Dissertation**
Credit units: None ECTS Credit Units: 24. Aut (Staff) Spr (Staff)
Psychology is the study of mind and behaviour. It explores the way in which humans (and sometimes animals) see, learn, remember, and think; as well as the way they behave among others. It also looks at the relationship between mind and brain physiology, and studies how all these faculties develop from conception and birth through to the end of life.

Psychology has a wide scope. Its subject matter ranges from biology of the brain and the nervous system, to social issues like what makes people behave the way they do in a group. Thus, it is widely accepted that psychology is a discipline of both natural and social science. There are five core areas of psychological science. These are biological, cognitive, social, developmental, and personality psychology. The undergraduate program offered by the department aims to provide a balanced education in all these areas as well as some more specialised areas offered as electives. It places importance on an active learning process with discussion-based classes and partly essay-based assessment.

The most important aspect of the program is its emphasis on scientific method and research. It is impossible to learn everything there is to know about such a vast area of scientific study. Thus it is more important to gain an understanding of the methods with which to study mind and behaviour. The main aim of the program therefore is to establish a good understanding of scientific method and analytic thinking as well as skills necessary to conduct research including data analysis and efficient use of computer software. In this capacity, students are required to take part in and conduct a range of research projects, which involve an increasing level of independence as the course progresses. In the final year students are required to complete an independent research project culminating in a senior thesis.

The program also aims to place somewhat more emphasis on the natural science aspect of psychology than social. Both the curriculum and research conducted in the department provide opportunity for students to specialise in cognitive psychology and neuroscience. However, the program also gives the choice to students to take courses in specialised application areas of psychology like health psychology or clinical psychology.

ELECTIVE REQUIREMENTS

The undergraduate curriculum requires students to take a total of 13 elective courses. At least 5 (five) of these must be chosen from the list of Psychology (PSYC) "elective courses" seen above. Not all of these courses may be offered in a given academic year, and new courses not mentioned here may be offered during the academic year. Available courses will be announced by the Department at the beginning of each academic year mainly in the "undergraduate" section of the psychology department website (www.psy.bilkent.edu.tr). Students have the sole responsibility to follow announcements made on the website and other media specified by the department.

At least 2 (two) elective courses in the curriculum must be chosen from the list of "restricted electives" seen above. This list may be changed during the academic year, which will be announced on the department website.

At least one of the remaining unrestricted electives should be chosen from among the Faculty of Art, Design, and Architecture or Faculty of Music and Performing Arts.

MINOR PROGRAM

The minor Program in Psychology aims to provide the student with a general introduction to the main issues in the science of psychology. Demonstrating the way psychologists study mind and behaviour, the minor program will form the basis for further study in the field. The minor program student must take four fundamental courses in Psychology that require no specialized background. 

- **Brain and Behaviour** covers the main principles of the workings of the brain and the nervous system and relates it to mind and behaviour. 
- **Cognitive Psychology** studies the way people know: perception, memory and learning among its main focuses. 
- **Social Psychology** is the study of mind and behaviour of the individual in a group setting: from families to workplace organisation, people spend a great deal of their lives in the presence of others. Finally, **Developmental Psychology** investigates the way people develop from birth to old age. In addition to these four courses, minor candidates are expected to attend two higher level courses offered by the department. This is an opportunity for students to further deepen their understanding in a particular area, and experience first hand, contemporary research in psychological science.

**Prerequisite Courses:** None

**Open to Students from**
- Faculty of Art, Design, and Architecture
- Faculty of Business Administration
- Faculty of Economics, Administrative, and Social Sciences
- Faculty of Education
- Faculty of Engineering
- Faculty of Humanities and Letters
- Faculty of Law
- Faculty of Music and Performing Arts
- Faculty of Science

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

PSYC 100 Introduction to Psychology
This course is a general introduction to the main issues and findings in psychological science. It lays out the kinds of questions facing psychologists trying to study the mind and behaviour, and it covers some major methods of answering them. The course spans the major research fields of psychology, presenting major findings from biological, cognitive, social, developmental, and personality psychology. It also gives a brief introduction to mental disorders and clinical psychology. Credit units: 3 ECTS Credit Units: 6. Aut (M. Adams, H. Boyaci, O. A. C. Wright) Spr (G. Baray, H. Boyaci, E. İnanç, O. A. C. Wright)

PSYC 102 Introduction to Social Psychology
This course is designed to acquaint the student with the nature and causes of individual behavior in social situations; to identify the factors that shape feelings, behavior and thought. The topics to be covered include: the research methods of social psychology, social perception, social cognition, attitudes, prejudice/discrimination, interpersonal attraction, social influence, aggression, individual behavior in groups, and applications of social psychology in health, the legal system and the work setting (organizations). Credit units: 3 ECTS Credit Units: 5. Spr (A. Eren, N. Fehim-Kennedy, J. Gürzum)

PSYC 110 Psychological Methods
This course provides a comprehensive introduction the area of cognitive psychology. It lays out the emergence and importance of cognitive psychology as a field of scientific research. Issues and findings are presented in sensation and perception, learning, memory, problem solving, thinking and reasoning, and language. Credit units: 3 ECTS Credit Units: 7. Spr (K. Doerschner)

PSYC 200 Cognitive Psychology
This course provides a comprehensive introduction the area of cognitive psychology. It lays out the emergence and importance of cognitive psychology as a field of scientific research. Issues and findings are presented in sensation and perception, learning, memory, problem solving, thinking and reasoning, and language. Credit units: 3 ECTS Credit Units: 7. Prerequisite: PSYC 100. Aut (O. A. C. Wright)

PSYC 201 Statistics and Research Methods in Psychology I
Main concepts and methods of statistical data analysis are covered and practiced. This is followed by a mini-research project requiring the use of the statistical technique being studied. Finally students write a research report on each of these mini-projects, outlining the theoretical issues, methods, results, and implications. Main topics covered in statistics: graphical representations, variables, distribution, measures of central tendency, probability, $X^2$, $t$ test, and one-way analysis of variance (ANOVA). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CS 121 and PSYC 100 and PSYC 110. Aut (E. Özgen)

PSYC 202 Statistics and Research Methods in Psychology II
This is the continuation of PSY 201 and follows an identical structure. Some topics covered in statistics: correlation, simple regression, multivariate analysis of variance. Credit units: 4 ECTS Credit Units: 7. Prerequisite: PSYC 201. Spr (E. Özgen)

PSYC 210 Interpersonal Communication
This course focuses on the theoretical background and practice of interpersonal skills for communicating effectively, for establishing and maintaining relationships in one-to-one and group situations. The main objective is the development of self-understanding and self-awareness along with the acquisition of effective communication techniques, to produce a discipline and conscious use of oneself in professional as well as personal relationships. Credit units: 3 ECTS Credit Units: 6.

PSYC 220 Brain and Behaviour
As a basis for all mental activity and behaviour the nervous system and the brain in particular are quite important. This course introduces the structure and workings of the brain, its main characteristics, and its relationship to mind and behaviour. Credit units: 3 ECTS Credit Units: 6. Prerequisite: (PSYC 100) and (MBG 101 or MBG 110). Spr (M. Adams)
PSYC 230  Social Psychology
This course is a comprehensive introduction to the field of empirical research which examines the individual in a social setting. It covers areas such as social cognition, social perception, attitudes, conformity, and aggression. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 100. Aut (G. Baray)

PSYC 240  Developmental Psychology
The mind develops from conception right up to the end of life. In order to understand our nature and capabilities, it is important to know how the mind develops and what affects the course of this development. Main topics covered are Piaget’s model of cognitive development and its critique, language acquisition, social interaction, attachment, parenting styles, and adolescent development. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 100. Spr (O. A. C. Wright)

PSYC 240  Developmental Psychology
The mind develops from conception right up to the end of life. In order to understand our nature and capabilities, it is important to know how the mind develops and what affects the course of this development. Main topics covered are Piaget’s model of cognitive development and its critique, language acquisition, social interaction, attachment, parenting styles, and adolescent development. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 100. Spr (O. A. C. Wright)

PSYC 240  Developmental Psychology
The mind develops from conception right up to the end of life. In order to understand our nature and capabilities, it is important to know how the mind develops and what affects the course of this development. Main topics covered are Piaget’s model of cognitive development and its critique, language acquisition, social interaction, attachment, parenting styles, and adolescent development. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 100. Spr (O. A. C. Wright)

PSYC 301  Laboratory in Psychological Research
This course follows the same system as the prerequisites PSY 201 and 202; the difference is that students form small groups in which to carry out research on a topic of their choice (from among a set of alternatives) and complete two such projects in the semester. They conduct all aspects of the research with supervision from the instructor, including design, analysis and report write-up. The statistics component of the course covers more advanced techniques than in the previous year such as factor analysis and multiple regression. 
Credit units: 4 ECTS Credit Units: 6, Prerequisite: PSYC 202. Aut (M. Adams, H. Boyaci, E. Özgen, O. A. C. Wright)

PSYC 304  Industrial Psychology
This course will integrate the principles, theories and practices of industrial psychology. Topics will include personnel psychology; employee selection; performance appraisal; organizational psychology; morale, motivation and job satisfaction; designing the optimal organizational structure; training, development and productivity in organizations; designing work conditions; engineering psychology and methods dealing with stress at work. 
Credit units: 3 ECTS Credit Units: 6.

PSYC 308  Workshop in Cognitive Psychology Research
The aim of the course is to involve students in research activity in their field of interest, in projects supervised by members of the department. The course will provide opportunity for the students to gain experience in research design, data collection, data analysis, report write-up presentation. research projects will be announced each semester. Credit units: None ECTS Credit Units: None.

PSYC 310  Perception, Attention, and Action
The focus here is on perception, specifically visual perception. This is the part of cognitive psychology, where we know more than any other area about the brain's involvement. Thus, studying perception, and specifically vision, tells us much about the rest of our cognitive capacities. Main topics covered are physiological structure of vision, modularity, attentional influences, spatial vision, colour vision, perceptual learning, categorical perception, and motion perception. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 200 and PSYC 220. Aut (K. Doerschner)

PSYC 320  Cognitive Neuroscience
This course covers the techniques and findings that have allowed us to know much more about what happens in our brains when we see, hear, think, talk, and even dream. Recent technological advances such as fMRI brain imaging techniques are covered and findings from studies using such techniques are discussed. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 200 and PSYC 220. Spr (H. Boyaci)

PSYC 330  Theory and Practice of Applied Social Psychology
Social psychology has accumulated a wealth of knowledge as well as theories to predict human behaviour in social settings. This knowledge is fast becoming crucial in understanding social problems such as immigration, national identity, inter-group relations, and conflict resolution. The course introduces studies and applications of social psychological findings to social issues and problems. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 230. Aut (G. Baray)

PSYC 340  Learning, Remembering, and Thinking
A great deal of what we call cognition (knowing) is a direct result of our capacity to learn and remember. Scientists have long been interested to find out exactly how we learn, and what happens in our minds and brains when we do learn. Learning of course is not enough; we also need to remember what we have learned. How does memory work? What is the best way of remembering things we learn? How are memories processed before they become a part of our mental world? After remembering, we have to make use of those memories: we have to relate them with each other, see connections, and reach to conclusions. In other words, we have to think. 
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 200 and PSYC 220. Spr (K. Doerschner)

PSYC 350  Cognitive and Social Development
This course elaborates on the previous year's developmental psychology course, providing a more in-depth analysis of problems and up-to-date findings in cognitive and social development. The object is to see the relationship between developmental processes and the adult mind. Main topics covered are development of...
logic and reasoning, memory, spatial cognition, perception, face recognition, prosocial behaviour, sociocultural approaches. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 240. Spr (Staff)

PSYC 360 Individual Differences and Personality
While, the rest of psychology studies the similarities between people, this area looks at what makes each individual distinct from others. It investigates areas such as intelligence, aptitude, personality traits, and development of a self concept, and tries to answer questions on why each individual turns out the way he/she does. One very important issue here is the famous nature-nurture debate: are we born like this or do we become what we are as we go through life? The course also looks at methods with which psychologists assess intelligence and personality. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 230 and PSYC 240. Spr (Staff)

PSYC 370 Conceptual Issues and Current Directions in Psychology
This course is a look at the historical and current trends in psychological research and thinking. Psychology as a science has shown remarkable developments over the past century or so. From Wundt and James to Skinner, to the cognitive revolution, there have been many arguments, switches of focus and philosophy, as well as a steady progress towards an exact science. It is important to study the journey of psychology in order to understand the research carried out today in a wider context. Credit units: 3 ECTS Credit Units: 6.

PSYC 400 Psychology in Historical Context
A survey of major ideas and hypotheses about the mind, ranging from influential philosophical precursors to key stages, doctrines and personalities that shaped the development of psychology as a science in 19th and 20th centuries. The class will insist both on the content of the most important doctrines and research programs as well as on the intellectual climate in which they arose and on their impact beyond psychology. The class will combine lectures with student presentations and discussions, and will involve readings of primary sources as well as of wider intellectual influences on the development of psychology. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 200 and PSYC 220 and PSYC 230 and PSYC 240.

PSYC 401 Senior Thesis I
This is a final year research project. Each student gets together with a supervisor, a member of academic staff whose research area is related to a topic of research he/she is interested in. Students spend a year to plan, design, conduct, analyse and write-up a research project. The role of the supervisor is minimal. The object is to acquire skills necessary to conduct an independent project. Students will have the opportunity to get together in tutorial groups with others and discuss common problems and difficulties and get instruction on these from a member of academic staff. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 301. Aut (E. Özgen, O. A. C. Wright) Spr (Staff)

PSYC 402 Senior Thesis II
This is a final year research project. Each student gets together with a supervisor, a member of academic staff whose research area is related to a topic of research he/she is interested in. Students spend a year to plan, design, conduct, analyse and write-up a research project. The role of the supervisor is minimal. The object is to acquire skills necessary to conduct an independent project. Students will have the opportunity to get together in tutorial groups with others and discuss common problems and difficulties and get instruction on these from a member of academic staff. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 301 and PSYC 401. Aut (E. Özgen) Spr (Staff)

PSYC 405 Introduction to FMRI
This course covers the basic principles of Functional Magnetic Resonance Imaging (fMRI), including the physical principles of signal generation in MRI and the relation of neuronal activity with the blood-oxygen-level-dependent (BOLD) signal. The course emphasizes techniques to conduct experiments investigating the functional activity of the nervous system, and statistical analysis of the fMRI data. Weekly hands-on sessions are held using the in-campus MRI scanner. The objectives of the course are to gain a basic understanding of physical and biological concepts of fMRI; a basic knowledge of fMRI data collection and the operation of the scanner (through weekly hands-on sessions); a basic knowledge of fMRI experimental design. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 200 and PSYC 220 and PSYC 320. Aut (H. Boyaci)

PSYC 410 Neuropsychology
This advanced course is a more in-depth study of the brain and the nervous system in relation to mind and behaviour. Specifically, here, disorders of the brain, lesions resulting from accidents and strokes, and the effects of these on mental capacity and behaviour are discussed. The implications of such findings are discussed particularly in relation to philosophical questions such as free-will and self determination. Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 220. Spr (K. Doerschner)

PSYC 415 Cognitive Aging
Credit units: 3 ECTS Credit Units: 6, Prerequisite: PSYC 200 and PSYC 220. Spr (M. Adams)

PSYC 420 Selected Topics in Cognitive Psychology
Members of academic staff cover a research topic that they are working on, presenting an in-depth, advanced understanding of the research problem, data that have been collected by the instructor or colleagues, and a
Members of academic staff cover a research topic that they are working on, presenting an in-depth, advanced understanding of the research problem, data that have been collected by the instructor or colleagues, and a discussion of these results in relation to the bigger questions. This course brings final year students up to date with a current research area and provides them an opportunity to continue academic study in this or other areas. 

Credit units: 3 ECTS Credit Units: 6.

**PSYC 421 Selected Topics in Social Psychology**

Members of academic staff cover a research topic that they are working on, presenting an in-depth, advanced understanding of the research problem, data that have been collected by the instructor or colleagues, and a discussion of these results in relation to the bigger questions. This course brings final year students up to date with a current research area and provides them an opportunity to continue academic study in this or other areas. 

Credit units: 3 ECTS Credit Units: 6.

**PSYC 422 Selected Topics in Developmental Psychology**

Members of academic staff cover a research topic that they are working on, presenting an in-depth, advanced understanding of the research problem, data that have been collected by the instructor or colleagues, and a discussion of these results in relation to the bigger questions. This course brings final year students up to date with a current research area and provides them an opportunity to continue academic study in this or other areas. 

Credit units: 3 ECTS Credit Units: 6.

**PSYC 430 Clinical Psychology**

The study of abnormal behaviour and mental disorder has led to techniques that have been developed by clinical psychologists to deal with such problems. This course provides an introduction to the most-well known application of psychology. It talks about how clinical psychology has developed ways of dealing with mental disorders and problems. In addition, it covers research and applications of a new, related field, health psychology which is related to psychological findings concerning a wider understanding of health than mental disorders. 

Credit units: 3 ECTS Credit Units: 6. 

**PSYC 431 Psychological Testing and Measurement**

This course introduces the student to the main advances of this relatively new field, which explore the psychological aspects of working in an organisation. What makes a good organisation? What are good strategies in dealing with the “human factor” in the workplace? Who is good for which job? How can people develop their careers? These are the kinds of questions that this course introduces. 

Credit units: 3 ECTS Credit Units: 6. 

**PSYC 433 Abnormal Psychology**

This course is about the study of mental disorders and problems. It covers the history of the understanding of mental health, and introduces the advances made. It provides an in-depth understanding of various disorders such as schizophrenia, depression, phobias, addiction, and sexual health. 

Credit units: 3 ECTS Credit Units: 6. 

**PSYC 435 Industrial and Organisational Psychology**

This course introduces the student to the main advances of this relatively new field, which explore the psychological aspects of working in an organisation. What makes a good organisation? What are good strategies in dealing with the “human factor” in the workplace? Who is good for which job? How can people develop their careers? These are the kinds of questions that this course introduces. 

Credit units: 3 ECTS Credit Units: 6. 

**PSYC 436 Economic Psychology and Consumer Behaviour**

We are all consumers and our consumption behavior is an important aspect of our daily lives. However, consumers are only one kind of economic agent, others include taxpayers, investors, entrepreneurs, bankers, multi-national companies and governments. Psychology is integral to the behaviour of all these economic agents - they base their decisions on their perceptions and judgments of economic data, their memory of past economic trends, and expectations about future economic developments. In this course we examine the psychology behind consumption, and economic behavior more generally. We do this by looking at relevant psychological theory and research within some of the main sub-divisions of psychological inquiry, for example: perception; learning and memory; motivation and personality; attitudes and expectations; judgment and decision making; game theory; and the relation between cognition and emotion. 

Credit units: 3 ECTS Credit Units: 6. 

**PSYC 437 Program Evaluation**

Program evaluation is an activity that organizations do routinely either formally or informally because they are concerned with how well human services programs serve people in need. In the course we will cover such topics as why evaluation, role of evaluator, methods of evaluation, utilization of evaluations and ethics in evaluation. Although the course will focus on social programs the course is equally relevant to the evaluation of educational programs, training programs and organizational change programs. 

Credit units: 3 ECTS Credit Units: 6. 

**PSYC 440 Cross-cultural Psychology**

Psychology has recently been interested to see if psychological principles discovered through scientific methods apply to different cultures differently. We are discovering every passing day that different cultures have different ways of dealing with life, different psychological reactions, and possibly even different cognitive structures. The
study of cross-cultural psychology aims to discover these differences in order to gain a better understanding of what makes us the way we are. It tells us a lot about ourselves to discover that our culture influences us to such an extent that even our mental capacities are affected. Credit units: 3 ECTS Credit Units: 6.

**PSYC 450  Cognitive Science Education and Literacy**
The course focuses on latest advances in educational psychology and literacy research. Topics include language acquisition, language and thought, culture and literacy, consciousness of language, speech and writing. Topics are covered from a cognitive science perspective. Credit units: 3 ECTS Credit Units: 6.

**PSYC 457  Special Topics in Theoretical Physics**
Credit units: 3 ECTS Credit Units: None.

**PSYC 482  Mind in Evolution**
As a biological capacity, the human mind must have evolved. Can evolution explain its design? The human mind has many components, from perception and emotion to language and thinking. Are they all products of natural selection, of other evolutionary forces, or of no such forces at all? Can evolution explain the uniqueness of the human mind? What could be the factors that explain this uniqueness: tool making, language, social life? In attempting to answer these questions, the course brings an evolutionary perspective to some important topics in philosophy of mind and cognitive science and offers a multidisciplinary introduction to the emerging but rapidly developing field of evolutionary cognitive science. Credit units: 3 ECTS Credit Units: 6.

**PSYC 483  Theory of Mind**
Theory of Mind (or ToM) is the name of the mental competence that enables humans (and possibly other primates) to represent and predict mental states, such as seeing, desiring, believing, thinking, and so on, whether they belong to others or themselves. This is a new discipline, barely 25 years old, which has rapidly become one of the most dynamic research areas in psychology, of central and increasing interest to developmental, comparative, cognitive and clinical psychology, as well as to cognitive science in general. There are several reasons for the importance of ToM: it is the mental competence directly involved in communication, socialization and the acquisition of culture; it is also the competence vitally implicated in the acquisition of language and of higher mental abilities, such as self-control, metarepresentation, introspection, and thinking about one's own thoughts. The class will survey and analyze the evolution and development of ToM, in terms of basic experiments and observational results, both psychological and neuroscientific, will examine clinical conditions caused by ToM deficits, such as autism and schizophrenia, and explore the impact of ToM on other competencies, such as empathy, imitation, self-regulation, and more. The class will also discuss major positions and explanations of ToM, such as (the so-called) theory-theory, simulation, modularity, learning, the recently discovered mirror neurons, and so on. Credit units: 3 ECTS Credit Units: 6.

**PSYC 491  Introduction to Cognitive Psychology**
Cognition is a process composed of various phases like transferring sensory information to memory, retention, reasoning, logic, and problem solving. This course is intended to provide an introductory overview of theories and findings in the field of cognitive psychology. The main topics will include perception, memory, language and thought, problem solving and neuroscience. Credit units: 3 ECTS Credit Units: None.

**PSYC 492  Developmental Psychology**
This course focuses on developmental psychology which studies the stages and the lifelong development of human beings in the physical, cognitive, social and emotional domains. The main topics will include developmental research methods; Piaget's stages of cognitive development; Erickson's psychosocial stages of development; nature and nurture. Credit units: 3 ECTS Credit Units: None.

**PSYC 493  Learning: Theory and Practice**
This course covers theories and findings about how we acquire and develop knowledge and skills. Topics will include the physiology of learning, learning theories and approaches (e.g. behavioral, cognitive, social-cognitive). Credit units: 3 ECTS Credit Units: None. Aut (K. Doerschner)
FACULTY OF EDUCATION

Mehmet Baray, Ph.D., Acting Dean
Margaret K. Sands, Ph.D., Assoc. Dean

The Faculty of Education, in conjunction with the Graduate School of Education offers:

- Department of Computer and Instructional Technology Teacher Education
- MA in Curriculum and Instruction
- MA in Curriculum and Instruction with Teaching Certificate
- MA in Education Management
- MA in Teacher Education
- MA in Teaching English as a Foreign Language (TEFL)

In addition, sports courses are offered through the Faculty’s Physical Education Unit.

ACADEMIC STAFF

Necmi Aksit, Assistant Professor
Ph.D., Educational Science, Middle East Technical University, 1998. Curriculum development, educational administration, instructional design, assessment and evaluation. Teaching English as a foreign language.

Cengiz Alacaci, Visiting Associate Professor

Armağan Ateşkan, Instructor (on leave)
Ph.D., Computer Education and Instructional Technologies, Middle East Technical University, 2008. Science and biology education, environmental issues.

Reyyan Ayfer, Instructor
M.S., Computer Engineering, Middle East Technical University, 1981. Database management, programming languages, data structures, information ethics and security.

Mehmet Serhat Azgur, Instructor
M.S., Computer Engineering, Middle East Technical University, 2010. Systems development, project management, computer networks, operating systems, instructional model design.

Barbara Clark, Instructor

Philip Durrant, Visiting Assistant Professor

Hande Işık-Mengü, Instructor
Ph.D., English Language Teaching, Hacettepe University, 2005.

İlker Kalender, Instructor
M.S., Secondary Science and Mathematics Education, Middle East Technical University, 2002. Computerized adaptive testing procedures, detection of creating/aberrant response pattern-through software, educational technology.

Ceylan Kızılduman Yazıcı, Instructor
Ph.D., Computer Education and Instructional Technology, Middle East Technical University, 2009. Instructional technology and design, development and evaluation, print and web-based learning material production, instructor training, project management and English language teaching.

Seyit Koçberber, Assistant Professor
Ph.D., Computer Engineering and Information Science, Bilkent University, 1996. Information retrieval, database systems.
Can Kültür, Instructor
Ph.D., Computer Education and Instructional Technologies, Middle East Technical University, 2009. Software engineering, human computer interaction, instructional technology, distance education, instructional systems design, introduction to programming, multimedia.

Joseph Malloy, Lecturer

Robin Martin, Instructor
Ph.D., Curriculum and Instruction, Iowa State University, 2003. Educational psychology, curriculum development, instructional design, learning and development.

Julie Mathews-Aydimli, Assistant Professor
Ph.D., McGill University, 2003. Literacy development, culture and identity in second language reading and writing, literature in the language classroom, curriculum development.

Gabriela McDonald, Visiting Assistant Professor

John O’Dwyer, Assistant Professor
Ph.D., Curriculum and Project-Evaluation, University of Surrey, 2005.

Murat Özsoy, Instructor

Rasim Özyurek, Assistant Professor
Ph.D., Turkish Language Teaching, Baku State University, 1998.

Simon Phipps, Instructor

Lori Russell-Dag, Instructor (on leave)
M.S., Computer Engineering, Atılım University, 2006. Object oriented programming, database management systems, computer applications.

Margaret K. Sands, Visiting Professor

Elif Uzel Şen, Instructor
Ph.D., English Language Teaching, Middle East Technical University, 2002.

Jodee Walters, Visiting Assistant Professor

Hülya Yavuz, Assistant Professor
Ph.D., Educational Sciences, Middle East Technical University, 1991. Computer aided education, curriculum development, mathematics education.

Daryl York, Lecturer
M.Sc., English Language Teaching, Aston University, 1997. School management, curriculum development, discourse analysis.

Füsün Yürütken, Instructor
M.S., Computer Engineering, Middle East Technical University, 1993. Database management systems, object oriented system analysis and design, systems development, programming languages.
PART-TIME ACADEMIC STAFF

Jale Ataşalar, MA., Psychological Counseling and Guidance, Hacettepe University, 1996. Guidance and counseling, social skills training in primary school.

Özgür Bayam, B.A., Turkish Language and Literature, Hacettepe University, 1993. Turkish language and literature teaching.

Semran Cengiz, Ph.D., Modern Turkish Literature, Hacettepe University, 2008. Turkish language and literature teaching, modern Turkish literature, comparative literature.

Aykut İnan İşeri, Ph.D., Secondary Science and Mathematics Education, Middle East Technical University, 2002.

Serpil Tuti, MA., Msc., Computer and Instructional Technology Education, Hacettepe University, 2002. Integrating information and communication technologies into teaching.
DEPARTMENT OF COMPUTER AND INSTRUCTIONAL TECHNOLOGY TEACHER EDUCATION

Part-time: T. Haşlaman, S. Tutı.

The program for Computer and Instructional Technology Teacher Education is designed to prepare well-qualified teachers for high schools in Turkey. It develops the skills and expertise required from teachers in modern classrooms. Students spend one day a week in partner schools, gaining practical experience of up-to-date approaches to teaching, followed by a block practice in a third school. The practical approach to the development of professional teachers is fully supported by the teacher education courses which emphasize student participation in problem solving, case studies, and developmental work.

Starting Fall 2009, the program is reorganized as a four year undergraduate program. Currently there are three programs offered:

1. Five-year combined undergraduate and graduate program, which leads to a M.A. diploma in computer and instructional technology teacher education for the students admitted prior to 2007.
2. Five-year undergraduate program which leads to a B.A. diploma in computer and instructional technology teacher education for the students admitted 2007 and 2008.
3. Four-year undergraduate program which leads to a B.A. diploma in computer and instructional technology teacher education for the students admitted 2009 and 2010.

#### Course Descriptions

**CTE 100 Transferable Skills**

This course aims to provide the input and practice in transferrable skills such as learning skills, self-management, working collaboratively, problem solving, communication skills and information technology. The course aims to help students discover their personal strengths and weaknesses as well as guiding them to develop their life-long competencies. The course work consists of self-awareness activities and authentic tasks such as role-plays and case studies. **Credit units: 2 ECTS Credit Units; 2. Spr (C. Aydogmus)**

**CTE 101 Introduction to Programming I**

An introduction to effective problem solving using the computer as a tool. Theoretical principles and phases of problem solving. Basic properties of algorithms. Top down design. Structured programming techniques will be
introduced along with the usage of C language. Data representation. Simple arithmetic expressions. Decision and control statements. Credit units: 4 ECTS Credit Units: 8.

CTE 102 Introduction to Programming II

CTE 103 Information Technologies in Education I
An introduction to computers and computer applications. This course aims to familiarize the students with the basic terminology and skills needed to use a computer efficiently. Course topics include computer structure and terminology, the Internet, operating systems (Unix and Windows). Applications covered include word processing, presentation, spreadsheet and database applications. Students work with widely used application packages, MS Word, PowerPoint, Excel and Access. Credit units: 3 ECTS Credit Units: 5. Aut (S. Uğurlubilek)

CTE 104 Information Technologies in Education II
The aim of this course is to provide the students with skills necessary to construct well-designed web sites. The course provides an introduction to basic web design and implementation topics to create professional looking web pages. Topics include an introduction to HTTP and CGI web protocols, HTML, cascading style sheets, principles of web page design, JavaScript basics, and the implementation of web pages using web authoring tools. Credit units: 3 ECTS Credit Units: 5. Aut (S. Uğurlubilek)

CTE 105 Discrete Mathematics
The aim of this course is to develop logical reasoning ability of students. Topics include: elements of logic, set theory and operations on sets; DeMorgan’s rules, finite and infinite. Relations and functions. Logic circuits. Induction and recursion, pigeonhole principle. Permutations, combinations and probability of discrete events. Graphs and their representation in computing. Credit units: 3 ECTS Credit Units: 5. Aut (H. Yavuz) Spr (H. Yavuz)

CTE 111 Introduction to Programming I
An introduction to programming using problem solving strategies. Theoretical principles and phases of problem solving. Basic properties of algorithms. Top down design. Structured programming techniques will be introduced using the C language. Topics include data representation, simple arithmetic expressions, basic problem solving concepts: selection and repetition, arrays, functions and modular programming, program testing and debugging. Credit units: 5 ECTS Credit Units: 10. Aut (C. Kozurlubilek) Spr (O. Say)

CTE 112 Introduction to Programming II

CTE 113 Information Technologies in Education I
An introduction to computers and computer applications. This course aims to familiarize the students with the basic terminology and skills needed to use a computer efficiently. Course topics include computer structure and terminology, the Internet, operating systems (Unix, DOS, and Windows). Applications covered include word processing, presentation, spreadsheet and databases applications. Students work with widely used application packages, MS Word, PowerPoint, Excel and Access. Credit units: 4 ECTS Credit Units: 5. Aut (M. Ozyay)

CTE 114 Information Technologies in Education II
This course is designed to introduce students to the fundamentals of the usage of the internet in education. Students will gain knowledge of the requirements of successful internet applications in different aspects of education, and become familiar with existing educational internet applications. The course includes an introduction to relevant educational topics. Following this, topics include internet applications used in education, such as blogs, forums and wikis. Students have the opportunity to apply the technologies in an educational context. Credit units: 4 ECTS Credit Units: 4. Prerequisite: CTE 113. Spr (C. Kozurlubilek)

CTE 115 Discrete Mathematics
The aim of this course is to develop logical reasoning ability of students. Topics include: elements of logic, set theory and operations on sets; DeMorgan’s rules, finite and infinite. Relations and functions. Logic circuits. Induction and recursion, pigeonhole principle. Permutations, combinations and probability of discrete events. Graphs and their representation in computing. Credit units: 3 ECTS Credit Units: 5.

CTE 191 Information and Communication Technology
This course aims to provide students with the ICT skills required for success in their academic and professional lives. The course covers basic concepts of information technology, Internet and web concepts, and the use of word processing, spreadsheet, and presentation software. At the end of the course, students should be able to effectively search for information using Internet, library and online database search tools, prepare professional
and well formatted documents, prepare well-organized, professional presentations using presentation software, use spreadsheet tools to create charts and prepare spreadsheets that use basic formulas and functions. The course will include project-based assignments to give students hands on experience with various applications.

**Credit units:** 3 ECTS Credit Units: 6. Aut (Staff) Spr (S. Uğurlubilek)

**CTE 201 Programming Languages I**

This course is designed as a first introduction to object-oriented design and programming concepts. Object-oriented concepts are taught using the Java programming language. The course teaches the fundamental concepts of OOP, including classes and objects, encapsulation, inheritance, polymorphism, interfaces and abstract classes. Important Java packages, classes, file and database access and GUI design are also included.

**Credit units:** 4 ECTS Credit Units: 8. Prerequisite: CTE 102. Aut (O. Say) Spr (O. Say)

**CTE 202 Programming Languages II**

The concept of object-oriented and event-driven programming. Designing effective GUIs using Visual Basic. Database access, the use of object linking and embedding. Credit units: 4 ECTS Credit Units: 8. Prerequisite: CTE 201. Spr (S. Kocberber)

**CTE 203 Data Structures**

**CTE 205 Computer Organization**

**CTE 208 System Analysis and Design**

The course presents a comprehensive introduction to the systems design skills in information engineering. It provides the students with the skills to identify business problems which may be solved by technology-based solutions, and determine requirements for information systems solutions. The course includes Systems Development Life Cycle (SDLC), Systems Analysis and Design Techniques (DFDs, Logical Modeling, E-R Diagrams, Object Oriented Modeling), review of Unified Modeling Language (UML), Project Management tools (CPM, GANTT, PERT), verification, validation and configuration management and evaluation of engineering standards such as MIL-STD-498, IEEE/EIA 12207 and ISO 9000-2000. Credit units: 3 ECTS Credit Units: 6. Aut (M. S. Azgur) Spr (M. S. Azgur)

**CTE 209 Communication Skills**

This course is designed to provide students with an understanding of the discipline of communication skills and to allow them to gain experience in interpersonal, small group and mass communication. After taking this course, students should be able to recognize and evaluate communication skills, improve discussions and writing skills, adapt communication skills to the demands of particular communication situations, learn how major elements of culture influence communication and develop an understanding of the intercultural communication process.

**Credit units:** 3 ECTS Credit Units: 4.

**CTE 211 Programming Languages I**

This course is designed as a first introduction to object-oriented design and programming concepts. Object-oriented concepts are taught using the Java programming language. The course teaches the fundamental concepts of OOP, including classes and objects, encapsulation, inheritance, polymorphism, interfaces and abstract classes. Important Java packages, classes, file and database access and GUI design are also included.

**Credit units:** 5 ECTS Credit Units: 7. Prerequisite: CTE 112.

**CTE 212 Programming Languages II**

The concept of object-oriented and event-driven programming. Designing effective GUIs using Visual Basic. Database access, the use of object linking and embedding.

**Credit units:** 4 ECTS Credit Units: 6. Prerequisite: CTE 201.

**CTE 214 Operating Systems**

The course is designed to provide the fundamentals of operating systems and an introduction to the internal operations of modern operating systems (OS). Topics include: history and basic OS concepts, process management, memory management, file systems, input/output management, operating system security and protection and support for distributed systems. Also covered is the UNIX environment and shell scripts. Lab sessions: Unix/Linux Administration.

**Credit units:** 3 ECTS Credit Units: 6. Prerequisite: CTE 205. Aut (M. S. Azgur) Spr (M. S. Azgur)
CTE 216  Introduction to Web Technologies
The aim of this course is to provide students with skills necessary to construct well-designed web sites. The course provides an introduction to basic web design and implementation topics to create professional looking web pages. Topics include an introduction to HTTP and CGI web protocols, HTML, XHTML, cascading style sheets, coding standards and techniques accepted by popular Web browser programs, template development, principles of web page design and the implementation of web pages using web authoring tools. Credit units: 3 ECTS Credit Units: 5. Spr (S. Uğurkibilek)

CTE 218  Operating Systems
The course is designed to provide the fundamentals of operating systems and an introduction to the internal operations of modern operating systems (OS). Topics include: history and basic OS concepts, process management, memory management, file systems, input/output management, operating system security and protection and support for distributed systems. Also covered is the UNIX environment and shell scripts. Lab sessions: Unix/Linux Administration. Credit units: 4 ECTS Credit Units: 5. Prerequisite: CTE 205.

CTE 225  Instructional Design
Principles and models of instructional design. Issues, concepts, and philosophical considerations behind uses of technology in education, with particular emphasis on teacher training resources. Analysis of content, learner, and resources. Selecting instructional objectives and sequencing instruction. Credit units: 3 ECTS Credit Units: 4. Spr (C. Kültür)

CTE 301  Programming for the Internet
Fundamentals of web-based computing, web clients and hyper text servers, the CGI standard and CGI programming techniques. DHTML, Javascripting techniques will be introduced for web based graphical user interface design. Techniques and tools for interfacing to popular RDBMS servers. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CTE 203. Aut (İ. Kalender) Spr (İ. Kalender)

CTE 302  Internet Applications in Education
This course is designed to introduce students to the fundamentals of the usage of the internet in education. Students will gain knowledge of the requirements of successful internet applications in different aspects of education, and become familiar with existing educational internet applications. The course includes an introduction to relevant educational topics. Following this, topics include internet applications used in education, such as course management systems, web quests, blogs and wikis. Students have the opportunity to apply the technologies in an educational context. Credit units: 3 ECTS Credit Units: 6. Spr (C. Kızılduman Yazar)

CTE 304  Database Management Systems
DBMS concepts, definitions, specifications and objectives. Topics include relational data model, SQL as a data manipulation language. Data base design considerations (ER Diagrams and normalization), concurrency control mechanisms, crash recovery concepts and an overview of current trends. Lab sessions include hands on experience using SQL, creating applications with a widely used database package. Credit units: 3 ECTS Credit Units: 8. Aut (F. Yüreğen) Spr (F. Yüreğen)

CTE 306  Human-Computer Interaction
This course focuses on human computer interaction (HCI) design processes and covers the underlying design principles, user interface design methodology, and the user-interface technologies used to implement HCI. The importance of good interfaces will be discussed and throughout the semester concepts and methods will be introduced. Students will complete small project to gain an understanding of HCI methods and concepts. Credit units: 3 ECTS Credit Units: 4. Spr (C. Kültür)

CTE 307  Network Structures and Communication
The course aims to provide information about the fundamentals of data communications and contemporary computer network principles and applications. Topics include general information about networking terminology: ISO 7 layers, physical connections, switching and dedicated connection, packet switching vs. session switching, topologies, transmission protocols, routing, peer networks vs. client-server networks, services. Lab sessions: Unix/Linux networking. Credit units: 3 ECTS Credit Units: 6. Aut (M. S. Ağzur) Spr (M. S. Ağzur)

CTE 308  Information Ethics and Security
Introduction to ethics and security in computer science. Topics include historical milestones; information ethics: privacy and anonymity, computer crime and malware, professional responsibility, intellectual property, Legal and licensing issues, licensing models, usability and authentication, security auditing. Credit units: 3 ECTS Credit Units: 4.

CTE 309  Community Service
This course aims to expose students to volunteer services in order to increase their awareness of the importance of volunteer work, and to gain hands-on volunteer experience. As part of the course, students will be expected to research and assess the needs of the community and, in doing so, participate in projects to gather information, develop community contacts, view ideas from different perspectives, and formulate solutions. To fulfill course requirements, students will be expected to participate in at least one volunteer project in the community. In
addition, students will be expected to attend conferences, seminars, panels, participate in organizing activities, and work as members of related students clubs. Credit units: 3 ECTS Credit Units: 6.

CTE 310  Project Management and Development
Specification, analysis, design, implementation, documentation and presentation of a medium-sized software system by small teams under close supervision of a faculty advisor for each team. Teams will develop a software system, utilizing tools and techniques taught in previous courses and new ones that they will independently choose and learn during project development. Credit units: 3 ECTS Credit Units: 4, Prerequisite: CTE 202. Aut (C. Kültür) Spr (T. Baycan)

CTE 311  Database Management Systems
DBMS concepts, definitions, specifications and objectives. Topics include relational data model, SQL as a data manipulation language. Data base design considerations (ER Diagrams and normalization), concurrency control mechanisms, crash recovery concepts and an overview of current trends. Lab sessions include hands on experience using SQL, creating applications with a widely used database package. Credit units: 4 ECTS Credit Units: 5, Prerequisite: CTE 214.

CTE 312  International Term Project
The ability to work with colleagues from other cultures and to work on international projects are key assets in today's job market. The centerpiece of this course is a real-world computing project that students develop in cooperation with peers from an institution of higher education in a foreign country. Exposes students to the procedures and complexities of working on projects that span many time zones and cultures. Additionally, students examine the use and impact of computing in a global community. Student will work in teams, to analyze, design and develop a software solution for a selected non-governmental organization (NGO). Students from the partner institute will visit Bilkent with their supervisor twice during the semester for face to face meetings. Credit units: 3 ECTS Credit Units: 5. Spr (C. Kültür)

CTE 314  Communications Skills
This course is designed to provide students with an understanding of the discipline of communication skills and to allow them to gain experience in interpersonal, small group and mass communication. After taking this course, students should be able to recognize and evaluate communication skills, improve discussions and writing skills, adapt communication skills to the demands of particular communication situations, learn how major elements of culture influence communication and develop an understanding of the intercultural communication process. Credit units: 3 ECTS Credit Units: 5. Aut (C. Aydogmus) Spr (C. Aydogmus)

CTE 316  Network Structures and Communication
The course aims to provide information about the fundamentals of data communications and contemporary computer network principles and applications. Topics include general information about networking terminology: ISO 7 layers, physical connections, switching and dedicated connection, packet switching vs. session switching, topologies, transmission protocols, routing, peer networks vs. client-server networks, services. Lab sessions: Unix/Linux networking. Credit units: 3 ECTS Credit Units: 5, Prerequisite: CTE 214.

CTE 317  Programming for the Internet I
The aim of this course is to provide students with a background in the fundamentals of web-based computing. The course focuses on creating interactive web pages through client-side scripting technologies. Includes a discussion of difference between client-side and server-side technologies. DHTML and Java-scripting techniques will be introduced for use in web based graphical user interface design. Also included are new technologies such as web services, AJAX, XML, XSLT, and RSS. Credit units: 3 ECTS Credit Units: 5, Prerequisite: CTE 102 and CTE 212.

CTE 321  Human Computer Interaction
This course focuses on human computer interaction (HCI) design processes and covers the underlying design principles, user interface design methodology, and the user-interface technologies used to implement HCI. The importance of good interfaces will be discussed and throughout the semester concepts and methods will be introduced. Students will complete small project to gain an understanding of HCI methods and concepts. Credit units: 3 ECTS Credit Units: 5.

CTE 322  Multimedia Design and Development
Basic principles of design and development of interactive instructional computer applications. Students will complete several projects utilizing a representative multimedia authoring tool and will create a prototype instructional software. Analysis of teaching-learning process using multi-media techniques in education. Credit units: 3 ECTS Credit Units: 5.

CTE 335  Material Design and Development in Education
Students will focus on using and integrating technology into teaching-learning processes: visual teaching aids, technology integration issues and interactive materials will be covered from an instructional point of view. The production of such materials and the evaluation of these materials when used in teaching are expected from the student teachers. Credit units: 3 ECTS Credit Units: 5.
The course presents a comprehensive introduction to the systems design skills in information engineering that and interfacing to popular RDBMS servers. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTE 317. Students will develop web-applications using accepted techniques and tools. Through server-side scripting languages such as PHP students will work as members of related students clubs. Credit units: 2 ECTS Credit Units: 4. Aut (C. Aydoğmuş)

CPE 409 Programming for Education
Program development for education environment using a visual programming language. Problem analysis and design. Development of effective user interfaces. Effective access methods to databases. Applications with event-driven visual programming languages. Credit units: 3 ECTS Credit Units: 6. Aut (T. Baycan)

CPE 410 Community Service
This course aims to expose students to volunteer services in order to increase their awareness of the importance of volunteer work, and to gain hands-on volunteer experience. As part of the course, students will be expected to research and assess the needs of the community and, in doing so, participate in projects to gather information, develop community contacts, view ideas from different perspectives, and formulate solutions. To fulfill course requirements, students will be expected to participate in at least one volunteer project in the community. In addition, students will be expected to attend conferences, seminars, panels, participate in organizing activities, and work as members of related students clubs. Credit units: 2 ECTS Credit Units: 4. Aut (C. Aydoğmuş)

CPE 417 Programming for the Internet II
The aim of this course is to provide students with an understanding of the fundamentals of web-based computing, web clients and hyper text servers, the CGI standard and CGI programming techniques. Through server-side scripting languages such as PHP students will develop web-applications using accepted techniques and tools and interfacing to popular RDBMS servers. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CTE 317.

CPE 421 Project Management and Development I
The course presents a comprehensive introduction to the systems design skills in information engineering that students, as future users or systems analysts, will need to work in a highly competitive computer-integrated business environment. It provides the students with the skills to identify business problems which may be solved by technology-based solutions, and determine requirements for information systems solutions. The course includes Systems Development Life Cycle (SDLC), Systems Analysis and Design Techniques (DFDs, Logical Modeling, E-R Diagrams, Object Oriented Modeling), review of Unified Modeling Language (UML), Project Management tools (CPM, GANTT, PERT) and evaluation of engineering standards such as MIL-STD-498, IEEE/EIA 12207 and ISO 9000-2000. Credit units: 3 ECTS Credit Units: 6.
CTE 422 Project Management and Development II
Students will be working as small teams under close supervision of a faculty member to produce a software system for educational purposes, or develop an "instructional system design" as a solution to an education related problem. Knowledge, structures, principles and methods from computer and/or education related courses from previous semesters will be used during the specification, analysis, design, development implementation, and evaluation phases of the project. Students' projects will be reviewed by a faculty committee. Credit units: 4
ECTS Credit Units: 8, Prerequisite: CTE 403 and CTE 421.

GRADUATE COURSES

CTE 502 Foundations of Distance Education
This course covers the historical development of distance education, uses of distance education and technologies used within distance education. Students will be involved in instructional design to build a learning architecture for a purely online course as their final project. Credit units: 3 ECTS Credit Units: 5. Aut (C. Kızılduman Yazuçı)

CTE 504 Material Design and Development
Students will focus on using and integrating technology into teaching-learning processes: visual teaching aids, technology integration issues and interactive materials will be covered from an instructional point of view. The production of such materials and the evaluation of these materials when used in teaching are expected from the student teachers. Credit units: 3 ECTS Credit Units: 5. Spr (C. Kızılduman Yazuçı)

CTE 508 Information Ethics and Security
Introduction to ethics and security in computer science. Topics include historical milestones; information ethics: privacy and anonymity, computer crime and malware, professional responsibility, intellectual property. Legal and licensing issues, licensing models, usability and authentication, security auditing. Credit units: 3 ECTS Credit Units: 6.

CTE 509 Subject Area Education Research Project
Students will be working as small teams under close supervision of a faculty member to produce a software system for educational purposes, or an "instructional system design"/"instructional design" (including instructional technology integration issues). Structures, operations, principles and methods from computer and/or education related courses from previous semesters will be used. Students' projects will be reviewed by a faculty committee. Credit units: 3 ECTS Credit Units: 9.
MA PROGRAM IN CURRICULUM AND INSTRUCTION

N. Aksit (Head), C. Alacaci, A. Ayas, M. Kim.

The program is designed for school teachers with at least two years teaching experience. They may be in positions of middle management, or intending shortly to move to such positions, and thus become educational leaders. It will enable participants to develop the knowledge and skills to improve their own practice and assist in the professional development of colleagues within their area. Those seeking positions of responsibility in a school will be able to offer an extended informed theoretical and practical background of relevance to their duties in such positions.

CURRICULUM

FIRST YEAR

Autumn Semester
- CI 501 Learning Development and Cultural Context for Teaching 3 / 6

Spring Semester
- CI 504 Contemporary Issues in Curriculum Development and Evaluation 3 / 6

SECOND YEAR

Autumn Semester
- CI 507 Educational Research 3 / 6
- CI 509 Thesis Seminar I
- CI 512 Written Academic Discourse 3 / 6

Spring Semester
- CI 510 Thesis Seminar II
- CI 513 Statistics 3 / 6

COURSE DESCRIPTIONS

CI 401 Basic Quantitative Concepts and Modeling
Set theory, metric spaces, limits, continuity, functions, derivatives, integral, matrices and basic linear algebraic concepts, mathematical modeling. Credit units: 3 ECTS Credit Units: 6.

CI 402 Probability Theory

CI 403 Statistics

CI 501 Learning Development and Cultural Context for Teaching
The course will focus on the holistic development of school students in their current cultural context. Topics for study include the development of cognitive abilities, critical, creative, and imaginative thinking, Gardner's multiple intelligences, and cognitive and affective taxonomies. The sociology of educability will be considered: the effect of the family and home environment on a child's development and ability to learn and achieve, as well as the impact of other social factors on development. Credit units: 3 ECTS Credit Units: 6.

CI 502 Managing the Classroom
The course will give a general overview of the social and psychological factors which determine or affect student behavior in educational settings. It includes systems for classroom management to maximize student learning outcomes, and techniques for meeting the varied needs of learners in a classroom, with a view to increasing motivation, managing groups, orienting students, and allowing the quality use of time in the classroom. Credit units: 3 ECTS Credit Units: 6.

CI 503 Educational Leadership and School Development
This course provides candidates with insights into managing the school as an organization and looks at defining goals and objectives for the school as well as how to carry out strategic and operational planning. The course
will explore ways of creating an effective learning and teaching environment from an administrative perspective. Emphasis will be given to the process of introducing successful innovation within schools and to improving the processes of decision making and communication. **Credit units: 3 ECTS Credit Units: 6.**

### CI 504 Contemporary Issues in Curriculum Development and Evaluation

The course will examine curriculum theory for elementary and high school courses of study. It will consider current trends and issues in curriculum development, the determinants of the curriculum, and conditions for curriculum change. The evaluation of the implementation of new curricula will be included. The role of the teacher, the school, other members of the school community, and the values and attitudes of society, in curriculum implementation will be studied. **Credit units: 3 ECTS Credit Units: 6.**

### CI 505 Supervision and Mentoring

The course gives an in-depth introduction to the principles and techniques of clinical supervision, giving a counseling-based approach to help teachers improve and grow in self-confidence. Students will critique the performances of videoed classroom teachers and later will work with a small number of school teachers, in clinical settings in schools, on improving instructional delivery. It is particularly relevant in assisting those who will act as mentors for pre-service student-teachers, those who work with newly-qualified teachers in a supportive peer relationship, or who are involved in appraisal. **Credit units: 3 ECTS Credit Units: 6.**

### CI 506 IB and IGCSE Curricula

### CI 507 Educational Research

The course is designed to introduce key concepts in quantitative and qualitative research in general. It will explore the different research methods used in educational research. Topics will include formulating research questions, reviewing the literature, synthesizing sources, selecting appropriate research designs, sampling, designing valid and reliable instruments for data gathering, and analyzing data. Action research as a qualitative approach to research will be given particular emphasis. **Credit units: 3 ECTS Credit Units: 6. Aut (N. Aksit) Spr (N. Aksit)**

### CI 508 Assessing Student Learning and Progress

The course will focus on formative and summative evaluation at elementary and high school levels. It will review fundamental concepts, principles and uses of testing and evaluation for monitoring the progress and achievement of school students of all ages. Participants will gain experience of devising effective means of formative assessment and recording progress, and in writing specific learning outcomes. They will compose tests, writing items to measure objective and complex outcomes, and analyzing items and examinations to guide student learning and to inform practice. **Credit units: 3 ECTS Credit Units: 6.**

### CI 509 Thesis Seminar I

The first seminar of the two thesis seminars is intended to guide the Masters students in their thesis work. Research methods, literature reviews, elaboration of topics, organization of material in relation to each student’s research will be discussed, leading to a thorough consideration of, and guidance in, the preparation of the thesis. Students will make presentations of their research to date in order to share their progress and learn from each other. **Credit units: None ECTS Credit Units: None. Aut (N. Aksit)**

### CI 510 Thesis Seminar II

The second seminar of the two thesis seminars is intended to guide the Masters students in their thesis work. Research methods, literature reviews, elaboration of topics, organization of material in relation to each student’s research will be discussed, leading to a thorough consideration of, and guidance in, the preparation of the thesis. Students will make presentations of their research to date in order to share their progress and learn from each other. **Credit units: None ECTS Credit Units: None. Spr (N. Aksit)**

### CI 511 Curriculum in an International Context

The course examines education, specifically education in schools and the school curriculum, in several countries. In particular, course participants study and compare the International Baccalaureate (IB) system of curricula and assessment from primary to high school, and the nature and role of international education. Such study includes the nature of the IB diploma program; planning, teaching and assessing IB courses; together with critical thinking and the theory of knowledge. The International General Certificate in Secondary Education (IGCSE) is also considered. International large scale comparative studies are included, particularly the findings from the Programme for International Student Assessment (PISA). **Credit units: 3 ECTS Credit Units: 6. Spr (D. York)**
CI 512  Written Academic Discourse  
The course focuses on developing essential research and language skills. It provides opportunities for participants to learn the APA system of referencing, analyze research articles, and start preparing the introduction and literature review sections of their thesis. **Credit units: 3 ECTS**  

CI 513  Statistics  
Descriptive statistics; measures of central tendency, measures of variability, measures of relative standing (percentile, z-scores), graphing data, sampling, point and interval estimation, sampling distributions, hypothesis testing, one and two sample tests of hypothesis for means (t-tests), introduction to analysis of variance, statistical software applications. **Credit units: 3 ECTS**  

CI 514  Curriculum Development and Evaluation  
This course is designed to examine approaches to curriculum development and evaluation. It considers curriculum theorizing, curriculum models and curriculum planning at different levels. The course also provides evaluation models and techniques to analyze curriculum and its components. Procedures and issues for curriculum development and evaluation, factors that impact curriculum, and curriculum decision making are also studied. **Credit units: 3 ECTS**  

CI 515  Trends and Issues in Instruction and Assessment  
This course will provide participants with an understanding of current trends and issues in instruction and assessment. It will explore procedures for instructional design, delivery, and evaluation. The course will also survey current methods and techniques used to assess student performance. Participants will critically reflect on, and evaluate, current practices and future directions. **Credit units: 3 ECTS**  

CI 599  Master’s Thesis  
Credit units: None  

CI 601  Instruction: Perspectives and Practice  
The course focuses on contemporary instructional theories and design models. Participants will also examine instructional strategies and effective delivery methods. Topics will include information processing, learning contracts, simulations, inquiry, learner-based instruction, and digital literacy. **Credit units: 3 ECTS**  

CI 602  Curriculum: Perspectives and Practice  
The course examines major themes and concepts relevant to curriculum theory and research. Participants will critically analyze models of curriculum theory through philosophical, psychological, sociological and historical perspectives. **Credit units: 3 ECTS**  

CI 603  Practicum in Curriculum Development x Evaluation  
The course provides experience in developing and evaluating curricula. It introduces technical and non-technical approaches to development and evaluation. Participants will be expected to pursue a field study in their own schools. **Credit units: 3 ECTS**  

CI 604  Educational Statistics  
This course introduces descriptive and inferential statistical concepts needed to conduct quantitative inquiry in educational statistics. Participants will be expected to analyze cases, and determine and apply appropriate statistical procedures, using the Statistical Package for Social Sciences (SPSS). They will also interpret and report the results. **Credit units: 3 ECTS**  

CI 605  Educational Research Methods  
The course gives an introduction to the logic of social scientific inquiry and exposure to the methodology, techniques and ethics of research. Participants will focus on how to formulate research problems, collect and analyze data, and present findings, considering various research designs. The use of a theoretical framework in conducting research in educational settings will be emphasized. **Credit units: 3 ECTS**  

CI 606  Qualitative Research Methods  
This course is intended to provide participants with the basic skills needed to conduct qualitative research. It will focus on methods of qualitative data collection and analysis. Participants will be expected to develop and implement data collection and analysis tools to explore and address educational issues. **Credit units: 3 ECTS**  

CI 611  Issues and Trends in Education  
The course focuses on educational issues and trends at the national and global level. Participants will explore and discuss implications of policies affecting educational goals, processes and outcomes. The course involves an analysis of the micro- and macro-level issues nationally and internationally, including those concerned with structural and organizational issues, teacher-training, elementary education, secondary education, higher education, and the transitional problems between these levels. **Credit units: 3 ECTS**
MA PROGRAM IN CURRICULUM AND INSTRUCTION WITH TEACHING CERTIFICATE

Part-time: O. Bayam, E. Bicer, S. Cengiz, S. Coskun, A. ICISERI.

The two-year program in teacher education at Bilkent University Graduate School of Education awards a Masters degree in Curriculum and Instruction, together with a Teaching Certificate which qualifies graduates to teach in high schools. The courses to be followed include the formation courses laid down by the Higher Education Council (YOK) for qualified teacher status, further courses in education, and a thesis.

Currently, the Graduate School of Education accepts students in four subject areas: Turkish language and literature, English, biology and mathematics.

A strong feature of the program is students' experience in schools. Each semester students have an internship in leading high schools in Ankara, Istanbul and Izmir, observing classes and teaching. In addition they have a five week internship at Cambridge University in England. The teacher education courses of the program cover the required educational knowledge and skills. Subject-area and liberal arts courses broaden and extend students' understanding of their subject area and educational philosophy. Strong emphasis is given to international dimensions, including the International Baccalaureate and IGCSE curricula.

COURSE DESCRIPTIONS

ETE 501 Development of Instructional Materials

The course gives an overview of the principles of analysing, adapting, developing and evaluating materials for varied instructional purposes. It also provides many hands-on opportunities for designing materials for secondary and grades 6-8 school students. Participants will be expected to try their materials produced for English language and literature teaching during their Teaching Practice course in schools, and to evaluate and improve them. Credit units: 3 ECTS Credit Units: 6.

ETE 502 Current Trends in English Language Teaching

This course examines current trends in English language teaching. Trends will be discussed and evaluated with regards to their appropriateness, timeliness and impact. Students will research and read from a variety of current ELT journals, and will be able to critically evaluate trends in their own teaching context. Topics include: talk for learning, English as an international language, discourse and power, the common European framework post-method period, teacher development, lexical approaches, task-based learning. Credit units: 3 ECTS Credit Units: 6. Aut (J. Walters)

ETE 503 English Curriculum Review

The course provides students with knowledge and experience to assist them to become effective English teachers. The major areas of the English curriculum taught in schools, especially in high schools, will be reviewed in detail.
and related to the demands made on high school teachers and students. The topics covered include curriculum objectives, content and implementation, assessment, the school-based language curriculum, textbooks used in schools, the IGCSE curriculum, and IB language curricula. Credit units: 3 ECTS Credit Units: None. Aut (D. York)

ETE 504 Literature for Young Learners
The course focuses on literary works that address young learners, using a wide variety of literary genres. Fictional texts written for young people will be studied, ranging from tales and short stories to young adult novels, with an emphasis on twentieth century fiction. Participants will learn how to use the texts in the school classroom, and how to relate them to the interests of school students, as well as how to analyze texts and teach literary concepts and devices. Credit units: 3 ECTS Credit Units: 6. Spr (J. Malloy)
MA PROGRAM IN EDUCATION MANAGEMENT

S. Phipps (Head), B. Clark, H. I. Işik-Mengü, J. O’Dwyer, E. Uzel Şen.

The M.A. in Education Management is offered as a part-time program consisting of three modules: managing the organization; managing the curriculum; and managing teaching.

Program Goals

The program is designed for administrators currently working in positions of responsibility in educational institutions and for practicing teachers considering such positions. It will enable participants to develop the knowledge and skills to play a key role in school management, curriculum management and staff development, as well as to develop effective teaching skills to a high level. The program aims:

- to give participants the necessary knowledge, skills, and practice to meet the needs of educational institutions and students in the university, secondary and primary education sectors in Turkey;
- to allow participants to make an effective and contemporary contribution to quality education within the institutions in which they work;
- to permit participants to continue working in their institutions and obtain a higher degree through extended, modular study.

In the longer term the program aims to exchange students and teachers with European universities as part of a linked network in the Socrates-Erasmus European program.

COURSE DESCRIPTIONS

EM 501 Managing Organizational Processes
This course provides candidates with insights into managing the school as an organization and looks at defining goals and objectives for the school as well as how to carry out strategic and operational planning. The course will explore ways of creating an effective learning and teaching environment from an administrative perspective. Emphasis will be given to the process of introducing successful innovation within schools and improving the processes of decision making and communication. Credit units: 3 ECTS Credit Units: 6. Aut (S. Phipps)

EM 502 Human Resources Management
This course looks at theories of effective organizations, particularly schools, and relates these to effective human resource management. Areas for study will include leadership, motivation, training and development, team work, as well as the issues of accountability, job planning and description, appraisal systems, recruitment and induction. Credit units: 3 ECTS Credit Units: 6. Aut (J. O'Dwyer)

EM 503 Accounting, Financial Management and School Administration
This course looks at financial resource management, accounting principles, budget planning and monitoring and putting these into practice. In addition, the marketing of the school with parents, and other stakeholders, project management, management evaluation, as well as practical skills to do with meetings, time management, and presentations will be covered. Credit units: 3 ECTS Credit Units: 6. Spr (J. O'Dwyer)

EM 504 Computing for Organizational Needs
This course aims to give students the necessary skills in word processing, spreadsheets and database management for educational purposes. The main thread will be to ensure that these skills are applicable to school contexts with a view to allowing computing to play a key role in creating more effective and efficient managers and institutions. Credit units: 2 ECTS Credit Units: 4.

EM 505 Management in Action
The course provides students with practical experience of management skills such as chairing and participating in meetings, time management and preparing and giving presentations. Students will be observed by the visiting tutor in meetings and giving presentations. Credit units: 3 ECTS Credit Units: 6.

EM 506 Research Methods in Education
This course introduces basic concepts in educational research; scientific and interpretive paradigms in educational research and of their characteristics; the key components in research design and of the relationships among these; devising effective research questions; the purposes of a literature review; different approaches to educational research; procedures for conducting ethical research; the role of sampling in educational research; procedures for collecting data; analysing quantitative and qualitative data; strategies for enhancing the quality of educational research; strategies for effectively disseminating research findings. Credit units: 3 ECTS Credit Units: 6. Aut (J. L. Mitton)

EM 511 Introduction to Development and Learning
This course will explore the physical and psychological development of the individual with respect to contemporary theories of learning. This will include consideration of individual learning styles, the growth of cognition, personal traits and the role of affective factors in learning. The implications of these factors for the classroom, and approaches to teaching and learning in general, will be brought to the fore and reflected upon. Credit units: 3 ECTS Credit Units: 6. Aut (E. Küchner)

EM 512 Managing the Curriculum I
This course will cover concepts, processes and principles of curriculum planning, development and evaluation and is intended to help the student develop the performance competencies needed to engage in curriculum planning and decision-making as an administrator, curriculum specialist or supervisor. Credit units: 3 ECTS Credit Units: 6. Aut (J. L. Mitton)

EM 513 Managing the Curriculum II
A basic introduction to the field of testing and evaluation. The course covers principles, concepts and processes behind evaluation and test construction and is intended to help develop the performance competencies needed to engage in decision-making for school improvement. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ME 512. Aut (S. Phipps)
EM 514  Materials Development for Language Teaching
This course provides an in-depth look at theories of evaluation, adaptation and development of materials for language learning. It enables participants to develop their own approaches to the development of principles and procedures for the evaluation, adaptation and development of materials for language learning. It also provides the opportunity for participants to develop effective skills in the application of their principles and procedures for the evaluation, adaptation and development of materials for language learning. Credit units: 3 ECTS Credit Units: 6.

EM 521  Managing the Classroom
A general overview of the social and psychological factors which determine or affect student behavior in educational settings. Systems for classroom management to maximise student learning outcomes and techniques for meeting the varied needs of learners in any particular classroom with a view to increasing learning success will be explored. Themes will include increasing motivation, managing groups, orienting students, and the quality use of time in the classroom. Credit units: 3 ECTS Credit Units: 6. Spr (B. Clark)

EM 522  Managing Learning Methods I
This course explores teaching methods and strategies, with particular relevance for ESL/EFL, and their application to a range of teaching and learning contexts. This will include the evaluation of books which illustrate these methods and their suitability for chosen contexts. Practical application of the methods will be experienced through micro-teaching, simulation and observation. Emphasis will be given to the systematic evaluation of teaching and learning. Credit units: 3 ECTS Credit Units: 6. Spr (M. I. Şen Ergun)

EM 523  Managing Learning Methods II
This course further explores teaching methods and strategies not covered in Methods I. Again a range of pedagogical materials will be evaluated, which illustrate methods and their suitability for chosen contexts. Application of the methods will be systematically evaluated by course members in practical sessions based on peer observation, micro-teaching and visits to classrooms in a variety of educational institutions. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ME 522. Aut (M. I. Şen Ergun)

EM 524  Developing Practice I
This course aims to introduce candidates to school organization and administration, the daily activities of a school, teachers and students, school-parent contacts, meetings, the observation of classes, specific school-related problems, teaching aids, and print resources. The course requires candidates to be attached to experienced teachers/administrators in selected educational establishments. Credit units: 3 ECTS Credit Units: 6. Spr (J. P. Fiteni)

EM 525  Developing Practice II
This course builds on insights gained in Practice I and prepares candidates for the Classroom Management in Action course by introducing them to a systematic program of observation and application related to classroom organization, using available course-books, materials preparation and use, and micro-teaching in the classroom. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ME 524. Aut (M. I. Şen Ergun)

EM 526  Classroom Management in Action
This course requires candidates to teach one full day, or two half days per week, for a minimum of 12 weeks in a selected school, and to take part in post-conference meetings with their tutor to evaluate the lessons taught and share teaching experiences. Taught lessons will be observed by the visiting tutor. Credit units: 4 ECTS Credit Units: 7. Aut (F. T. Akşit) Spr (E. Uzel Şen)

EM 531  Masters Project
This project enables candidates to carry out research into an area of their choosing in consultation with the tutor related to one or more of the areas covered during the MA programme. Candidates are expected to carry out research into an area of their choosing in consultation with the tutor related to one or more of the areas covered during the MA programme. Candidates are expected to review the literature related to their chosen topic, to collect and analyse data, and to write up their findings and conclusions. Credit units: None ECTS Credit Units: 24. Spr (J. L. Mitton)
MA PROGRAM IN TEACHER EDUCATION

Part-time: J. Atasalar, Ö. Bayam, E. Bicer, S. Cengiz, S. Coskun, A. I. Isleri.

The M.A. in Teacher Education is a masters-without-thesis program in five subject areas, biology, English, history, mathematics, and Turkish language and literature. The program, which also gives qualified teacher status, is designed to prepare well-qualified teachers for high schools in Turkey, with the potential to make effective contributions to the teaching profession.

The main aim of the program is to develop the skills and expertise required from teachers in the modern classroom. Students spend one or more days a week in partner schools, gaining practical experience of up-to-date approaches to teaching, extended by a block period in a further school.

The practical approach to the development of professional teachers is fully supported by the teacher education courses which emphasize student participation in problem solving, case studies, and developmental work. To broaden subject knowledge of intending teachers, and thus equip them for their future role in a dynamic education system, subject courses related to their main area are included. A particular aspect of the program is the international approach to teacher education, especially the inclusion of a period in US schools in the second year, working alongside American teachers in their classrooms. The US visit is made possible by the generous support of the US Department of State.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

TE 116 Introduction to Education Science

TE 203 Educational Psychology
Credit units: 3 ECTS Credit Units: 4. Aut (R. Martin) Spr (R. Martin)

TE 204 Principles and Methods of Instruction
Credit units: 3 ECTS Credit Units: 4. Spr (G. McDonald)

TE 301 Introduction to Educational Science

TE 307 Measurement and Evaluation
Credit units: 3 ECTS Credit Units: 5. Spr (A. Ayas)

TE 310 Computer Teaching Methods I
Credit units: 3 ECTS Credit Units: 4. Aut (S. Tuti) Spr (Staff)

TE 312 School Experience I
Credit units: 3 ECTS Credit Units: 5. Aut (S. Tuti) Spr (Staff)

TE 314 Classroom Management
Credit units: 2 ECTS Credit Units: 4. Spr (M. K. Sands)

TE 405 Computer Teaching Methods II
Credit units: 3 ECTS Credit Units: 6. Spr (T. Hasılaman)

TE 407 School Experience II
Credit units: 3 ECTS Credit Units: 6. Spr (T. Hasılaman)

GRADUATE COURSES

TE 501 Introduction to Teaching Profession
Characteristics and principles of the teaching profession. The school as an organization. Management, leadership and decision-making in schools. School effectiveness and school improvement. Sociological, psychological and philosophical foundations of educational practice. Classroom and school environments. The curriculum. Learning theories. Domains of learning. The Turkish educational system, its history and current policies. Credit units: 3 ECTS Credit Units: 5. Aut (G. J. Cotten) Spr (G. J. Cotten)

TE 502 Development and Learning
Physical, cognitive, psychological and social development of the individual. Learning theories and development. Application of learning theories to educational issues. Analysis of educational research with reference to the classroom and teaching/learning activities, the design of effective instruction. Credit units: 3 ECTS Credit Units: 5. Aut (R. Martin) Spr (R. Martin)

TE 503 Classroom Management
TE 504 Educational Technology and Materials Development
The use of technology in teaching: computers, visual teaching aids, and all other interactive materials. The production of such materials by student teachers, and the evaluation of these materials when used in teaching. 
Credit units: 3 ECTS Credit Units: 8. Aut (S. Tut)

TE 505 Guidance
General principles of guidance and counseling in schools. Nature and objectives of guidance services, and their role in education. Procedures to be observed. Special education: the special needs of individual school students, their assessment, and the education of students with such needs. Credit units: 3 ECTS Credit Units: 6. Aut (J. Ataşalar)

TE 506 Planning and Assessment in Teaching
Concepts, processes and principles of curriculum planning and program development. Production of annual, unit and daily plans. Teaching methods and strategies, and the selection of appropriate teaching materials. Introduction to the field of assessment and testing, theoretical background, and practice in test and item construction. Functions and uses of assessment. Credit units: 4 ECTS Credit Units: 6. Spr (A. Ayas, H. Yavuz)

TE 507 Subject Area Textbook Review
Review of Ministry of Education-approved textbooks. Book review in terms of the school curriculum, sequencing, ease of use by students, readability and other criteria. Contribution to the development of student understanding and skills. Credit units: 3 ECTS Credit Units: 6. Aut (J. Malloy)

TE 508 Introduction to Educational Science

TE 509 Developmental Psychology

TE 510 Curriculum and Instruction
Basic concepts. Theoretical foundations of curriculum development in education (historical, philosophical, psychological and social foundations). Curriculum design in education and models. The process of curriculum development (planning, preparing a proposal, piloting and evaluating, ensuring continuity) Instructional principles. Importance and benefits of studying regularly and methodically. Planning instruction (unit by unit yearly plans, sample daily plans and activities). Instructional methods and techniques, and their delivery. New trends in education and instruction (for example, effective learning, multiple intelligences, constructivism, lifelong learning, creative thinking). Duties and responsibilities of teachers in improving the quality of teaching. Credit units: 2 ECTS Credit Units: 4. Aut (J. L. Mitton)

TE 511 Special Teaching Methods I
There are separate methodology courses for each subject area. Each course explores, with practical examples, and with reference to current research, the teaching of that subject at high school level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

TE 512 Special Teaching Methods II
This course is a continuation of TE 511. There are separate methodology courses for each subject area. Each course continues the developmental work of TE 511 in the teaching of that subject. Students gain further understanding of the teaching and learning methods which may be used with different groups of students, and of the context in which learning is set. There will be further practical applications and classroom experience. Credit units: 3 ECTS Credit Units: 6.

TE 513 School Experience I
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (M. K. Sands)

TE 514 School Experience II
Students spend one day a week in a school, under the daily supervision of their mentor. Structured activities enable them to concentrate on particular teaching skills, which students practice in class. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 7.
TE 518 Measurement and Evaluation
Role and significance of measurement and evaluation in education, fundamental concepts of measurement and evaluation, desirable qualities of measurement tools (reliability, validity, practicality), measurement tools used in education and their characteristics. Traditional tools (written examinations, short-answer tests, true-false tests, multiple choice tests, matching, oral examinations, assignments). Tools which assess multiple facets of student performance (observation, interview, performance-based assessment, portfolios, research papers, research projects, peer assessment, self-assessment, attitude scales). Use of basic statistical tools to process the results of assessment, evaluating learner outcomes, grading, development of subject area specific assessment tools.
Credit units: 2 ECTS Credit Units: 4. Aut (A. Ayas) Spr (A. Ayas)

TE 519 Classroom Management
Fundamental concepts of classroom management, classroom communication and interactions. Definition of classroom management, various aspects of classroom management other than discipline. External and internal factors affecting the classroom climate. Models of classroom management, development and implementation of classroom rules. The physical arrangement of the classroom. Managing undesirable behavior, time management, class organization, developing a class environment conducive to learning (cases and suggestions).
Credit units: 2 ECTS Credit Units: 4. Aut (M. K. Sands)

TE 520 Instructional Technology and Material Design
Concepts of instructional technology, characteristics of various types of instructional technology. Role and use of instructional technology in teaching, identification of technology needs in the classroom/school. Appropriate planning and management of the use of technology. Using technology to develop 2-D and 3-D materials, developing teaching tools (worksheets, activities, OHP transparencies, slides, visual media tools such as DVD, VCD and computer based tools), Analyzing educational software, evaluating teaching tools of varying quality, Internet and distance education, principles of visual design, research pertaining to the effectiveness of teaching materials. The state of instructional technology for teaching in Turkey and the wider world.
Credit units: 3 ECTS Credit Units: 6. Spr (T. Haplamam, M. Kim)

TE 521 History of Political and Educational Philosophy
The course introduces students to philosophical thinking about the relation between human nature, society and education. It focuses on the study of key texts in the history of philosophy and educational thought including Aristophanes, Plato, Descartes, Voltaire, Mill and Russell. There is strong emphasis on the development of students critical reasoning skills. Students are encouraged to think about the implications of the views discussed for their own pedagogical practice.
Credit units: 3 ECTS Credit Units: 6.

TE 523 Teaching Theory of Knowledge
Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

TE 524 Guidance
Fundamental concepts, student support services, the role of guidance and counseling in student support services, Principles of guidance, principles and development of guidance, types of guidance and counseling, services, techniques, organization and personnel. Recent developments in the field. Techniques for getting to know students, counselor-teacher cooperation, guidance duties of the teacher.
Credit units: 2 ECTS Credit Units: 4.

TE 525 Learning and Teaching: Theory and Approach
Fundamental concepts (theory, principles, law, methods, techniques, strategies, tactics, styles, models and approaches). Theories of learning and teaching, deductive and didactic theories of teaching, theorists in the field, moving from method to strategy. Learning strategies, classifications of learning strategies. Teaching strategies, classifications of teaching strategies, style-strategy interaction, learning-teaching styles and style-centered teaching design. Examples of practical strategies for the provision of effective teaching, approaches such as problem-based learning, project-based learning, story-based learning, scenario-based learning, practical applications.
Credit units: 2 ECTS Credit Units: 4. Aut (R. Martin) Spr (R. Martin, G. McDonald)

TE 526 Subject Area Research Project
Preparing an academic research project on a topic chosen from the student's subject area. Data collection, data analysis, evaluation, writing up and presentation.
Credit units: 3 ECTS Credit Units: 7. Aut (R. Martin) Spr (R. Martin)

TE 528 Introduction to Educational Science
Basic concepts in education. Relationship of education to other disciplines (the philosophical, social, legal, psychological, economic and political foundations of education). History of educational science. Major trends in educational science in the 21st century; Research methods in educational science. Structure and characteristics of the Turkish Education System. Role of teachers in education. Characteristics of the teaching profession. Developments and practices in teacher education.
Credit units: 2 ECTS Credit Units: 5. Aut (Staff)

TE 529 Turkish Language and Literature Curriculum Review
This course provides students with knowledge and experience to assist them to become effective Turkish Language and Literature (TLL) teachers. The major areas of TLL taught in school will be reviewed in detail and related to high school curriculum and demands made on high school teachers and students. The skills covered...
include knowledge of the appropriate level of subject area content and relevancy, together with a working knowledge of school TLL text books, and the application of these skills in the classroom. National, IB and IGCSE curricula will be discussed. Credit units: 3 ECTS Credit Units: 8. Aut (Ö. Bayam)

**TE 530 Turkish Language and Literature Curriculum Review II**
This course is a continuation of TE 529. The major areas of Turkish Language and Literature (TLL) taught in school will be reviewed in detail and related to the high school curriculum. Students gain further understanding of the appropriate level of TLL content and relevancy, together with a working knowledge of school text books, and the application of these skills in the classroom. The Ministry of Education, IB and IGCSE syllabuses will be covered. Discussion of national standards in TLL will continue. Credit units: 3 ECTS Credit Units: 8.

**TE 531 English Teaching Methods I**
The course explores, with practical examples, and with reference to current research, the teaching of English at high school level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (N. Aksit)

**TE 532 Biology Teaching Methods I**
The course explores, with practical examples, and with reference to current research, the teaching of biology at high school level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (G. McDonald)

**TE 533 Turkish Language Teaching Methods**
The course explores, with practical examples, and with reference to current research, the teaching of Turkish language at high school level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (S. Cengiz, R. Özyürek)

**TE 534 History Teaching Methods I**
The course explores, with practical examples, and with reference to current research, the teaching of history at high school level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

**TE 535 Mathematics Teaching Methods I**
The course explores, with practical examples, and with reference to current research, the teaching of mathematics at high school level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (C. Alacac) Spr (Staff)

**TE 536 Computer Teaching Methods I**
The course explores, with practical examples, and with reference to current research, the teaching of computer at 6-12 level. It considers all relevant teaching methods, and their application to a range of teaching/learning contexts. Students will engage in extensive reflection on the methods and applications considered. Credit units: 3 ECTS Credit Units: 6. Aut (S. Tuti) Spr (Staff)

**TE 541 English Teaching Methods II**
This course is a continuation of TE 531. It continues the developmental work of TE 531 in the teaching of English. Students gain further understanding of the teaching and learning methods which may be used with different groups of students, and of the context in which learning is set. There will be further practical applications and classroom experience. Credit units: 3 ECTS Credit Units: 6. Prerequisite: TE 531. Aut (J. Malloy) Spr (J. Malloy)

**TE 542 Biology Teaching Methods II**
This course is a continuation of TE 532. It continues the developmental work of TE 532 in the teaching of biology. Students gain further understanding of the teaching and learning methods which may be used with different groups of students, and of the context in which learning is set. There will be further practical applications and classroom experience. Credit units: 3 ECTS Credit Units: 6. Prerequisite: TE 542. Spr (G. McDonald)

**TE 543 Turkish Literature Teaching Methods**
This course is a continuation of TE 533. It continues the developmental work of TE 533 in the teaching of Turkish language and literature. Students gain further understanding of the teaching and learning methods which may be used with different groups of students, and of the context in which learning is set. There will be further practical applications and classroom experience. Credit units: 3 ECTS Credit Units: 6. Prerequisite: TE 533. Spr (R. Özyürek)
MA PROGRAM IN TEACHER EDUCATION

TE 544  History Teaching Methods II
This course is a continuation of TE 534. It continues the developmental work of TE 534 in the teaching of history. Students gain further understanding of the teaching and learning methods which may be used with different groups of students, and of the context in which learning is set. There will be further practical applications and classroom experience. Credit units: 3 ECTS Credit Units: 6, Prerequisite: TE 534. Spr (Staff)

TE 545  Mathematics Teaching Methods II
This course is a continuation of TE 535. It continues the developmental work of TE 535 in the teaching of mathematics. Students gain further understanding of the teaching and learning methods which may be used with different groups of students, and of the context in which learning is set. There will be further practical applications and classroom experience. Credit units: 3 ECTS Credit Units: 6, Prerequisite: TE 535. Spr (C. Alacaci)

TE 546  Computer Teaching Methods II
Continuation of Computer Teaching Methods I. Further understanding of the teaching and learning methods which may be used with different groups of school students, and of the context in which learning is set. Further practical applications including microteaching (Preparing lesson plans and teaching materials on selected topics from school curricula, teaching in the classroom environment, evaluating teaching according to the computer teacher competencies). Credit units: 3 ECTS Credit Units: 6. Aut (T. Haslan) Spr (T. Haslan)

TE 551  School Experience I in English
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (J. Malloy)

TE 552  School Experience I in Biology
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (M. K. Sands)

TE 553  School Experience I in Turkish Lang and Lit
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (R. Özyürek)

TE 554  School Experience I in History
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6.

TE 555  School Experience I in Mathematics
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (C. Alacaci)

TE 556  School Experience I in Computer Teaching
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyze particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (S. Tut) Spr (Staff)

TE 561  School Experience II in English
Students spend one day a week in a school, under the daily supervision of their mentor. They teach classes, as well as working on structured activities related to teaching and the school environment. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 7, Prerequisite: TE 551. Aut (J. Malloy) Spr (J. Malloy)
TE 562 School Experience II in Biology
Students spend one day a week in a school, under the daily supervision of their mentor. They teach classes, as well as working on structured activities related to teaching and the school environment. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 7, Prerequisite: TE 552. Spr (G. McDonald)

TE 563 School Experience II in Turkish Lang and Lit
Students spend one day a week in a school, under the daily supervision of their mentor. They teach classes, as well as working on structured activities related to teaching and the school environment. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 7, Prerequisite: TE 553. Spr (S. Cengiz)

TE 564 School Experience II in History
Students spend one day a week in a school, under the daily supervision of their mentor. They teach classes, as well as working on structured activities related to teaching and the school environment. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 7, Prerequisite: TE 554.

TE 565 School Experience II in Mathematics
Students spend one day a week in a school, under the daily supervision of their mentor. They teach classes, as well as working on structured activities related to teaching and the school environment. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 7, Prerequisite: TE 555. Spr (C. Alacacõ)

TE 566 School Experience II in Computer Teaching
One day a week in a high school under the daily supervision of an experienced school teacher who acts as mentor. Students use structured activities which involve lesson observation and interviews to understand the organization and daily work of the school. They analyse particular teaching skills, and consider whole school issues. There is a one-hour seminar which consolidates the work done in school. Credit units: 3 ECTS Credit Units: 6. Aut (T. Haslıman) Spr (T. Haslıman)

TE 571 Teaching Practice in English
Students spend an extended period in a school, under the supervision of their school mentor and faculty supervisor. Students become members of the school for this period. They work with teachers, they attend meetings and extra-curricular activities, they observe lessons, and teach full lessons in the English department. The course includes tutorials and seminars which assist students in the planning and evaluation of their school work and allows them to share experience. Credit units: 5 ECTS Credit Units: 8, Prerequisite: TE 561. Aut (J. Malloy) Spr (J. Malloy)

TE 572 Teaching Practice in Biology
Students spend an extended period in a school, under the supervision of their school mentor and faculty supervisor. Students become members of the school for this period. They work with teachers, they attend meetings and extra-curricular activities, they observe lessons, and teach full lessons in the biology department. The course includes tutorials and seminars which assist students in the planning and evaluation of their school work and allows them to share experience. Credit units: 5 ECTS Credit Units: 8. Aut (G. McDonald, M. K. Sands)

TE 573 Teaching Practice in Turkish Lang and Lit
Students spend an extended period in a school, under the supervision of their school mentor and faculty supervisor. Students become members of the school for this period. They work with teachers, they attend meetings and extra-curricular activities, they observe lessons, and teach full lessons in the Turkish department. The course includes tutorials and seminars which assist students in the planning and evaluation of their school work and allows them to share experience. Credit units: 5 ECTS Credit Units: 8. Aut (G. McDonald, M. K. Sands)

TE 574 Teaching Practice in History
Students spend an extended period in a school, under the supervision of their school mentor and faculty supervisor. Students become members of the school for this period. They work with teachers, they attend meetings and extra-curricular activities, they observe lessons, and teach full lessons in the history department. The course includes tutorials and seminars which assist students in the planning and evaluation of their school work and allows them to share experience. Credit units: 5 ECTS Credit Units: 8. Aut (Staff)

TE 575 Teaching Practice in Mathematics
Students spend an extended period in a school, under the supervision of their school mentor and faculty supervisor. Students become members of the school for this period. They work with teachers, they attend meetings and extra-curricular activities, they observe lessons, and teach full lessons in the mathematics department. The course includes tutorials and seminars which assist students in the planning and evaluation of their school work and allows them to share experience. Credit units: 5 ECTS Credit Units: 8. Aut (C. Alacacõ)
TE 576  Teaching Practice in Computer Teaching
Students spend an extended period in a school, under the supervision of their school mentor and faculty supervisor. Students become members of the school for this period. They work with teachers, they attend meetings and extra-curricular activities, they observe lessons, and teach full lessons in the English department. The course includes tutorials and seminars which both assist students in the planning and evaluation of their school work and allows them to share experience.  Credit units: 5 ECTS Credit Units: 10.  Aut (S. Tuti) Spr (T. Haşlaman)
MA PROGRAM IN TEACHING ENGLISH AS A FOREIGN LANGUAGE

J. Mathews-Aydınli (Head), P. Durrant, J. Walters.

Master of Arts Program In Teaching English as a Foreign Language (TEFL)

The M.A. TEFL Program is designed to help experienced teachers of English as a foreign language develop professionally by increasing their knowledge of foreign language instruction theory and practice. Students in the program examine the following:

- Linguistics, sociolinguistics, and analysis of the English language;
- Second language acquisition and TEFL research;
- Language teaching methodology, curriculum and materials development, and testing.

M.A. TEFL students discuss and apply instructional models and linguistic theories which relate classroom experiences of EFL students to real-life communicative needs. They also improve their skills in understanding and conducting research in foreign language education.

Admission: Applicants are required to have a B.A. or B.S. degree in Linguistics, English Language Teaching, English, or American Studies. In addition, they are expected to have two years of teaching experience. Applicants must also successfully pass an entrance examination administered as part of the applicant screening process. The exact date and place of the examination is announced each year by the M.A. TEFL Program. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for general graduate admission requirements.)

Degree Requirements:

- Satisfactory completion of 36 credit units of course work;
- A thesis approved by a faculty committee.

Criteria for satisfactory completion of courses are described by each instructor at the beginning of each semester. Criteria for successfully completing theses are presented in three Research Methods courses. To a considerable extent, instruction is individualized and many opportunities are provided during the M.A. program to allow students to improve work which does not meet the criteria. Failure in one course or failure to complete the program in the allotted time, however, will result in no degree being granted. A grade point average of 3.00 is required to graduate.

COURSE DESCRIPTIONS

GRADUATE COURSES

TEFL 501 Second Language Acquisition
Theories of second language acquisition. Students analyze both qualitative and quantitative research studies done in this field during the past 30 years. Credit units: 3 ECTS Credit Units: 6. Aut (P. Durrant) Spr (J. Mathews-Aydinli)

TEFL 503 Linguistics: the Nature of Language
Foundations in linguistics with an emphasis on basic terminology, concepts, and analysis. Main topics include phonetics, phonology, morphology, syntax, semantics, and pragmatics. Discussion focuses on their relevance and application to second language acquisition and foreign language teaching. Credit units: 3 ECTS Credit Units: 6. Aut (P. Durrant) Spr (J. Mathews-Aydinli)

TEFL 505 Corpora in Applied Linguistics and Language Teaching
This course aims to introduce students to the theory and use of language corpora in applied language studies in general and language teaching in particular. Classes will integrate seminars on the theory of corpus design and use, partial hands-in sessions in which students will be able to explore corpus tools and applications for themselves, and discussion of relevant texts from the corpus-linguistic literature. Credit units: 3 ECTS Credit Units: None.

TEFL 506 Sociolinguistics
Examination of linguistic variation in English among social groups due to region, socio-economic status, gender, ethnicity, and age, especially as this variation relates to language learning. Linguistic registers, standard and non-standard dialects, language attitudes, and attitudes toward language learning are also treated. Credit units: 3 ECTS Credit Units: 6.

TEFL 510 Language Testing
Theoretical and practical considerations in the construction, use, and critical evaluation of both classroom and standardized tests of language proficiency. Students are acquainted with basic concepts of validity and reliability, as well as a variety of different kinds of tests and testing techniques. Credit units: 3 ECTS Credit Units: 6. Spr (P. Durrant)

TEFL 521 EFL Methodology I
Discussion of the major foreign language teaching methods in their historical contexts, as well as individual language skills and integrated skills. Current areas of concern in ESL/EFL are also examined, and key ESL/EFL terminology is reviewed. Credit units: 3 ECTS Credit Units: 6. Aut (J. Walters) Spr (Staff)

TEFL 523 Literature and Culture in EFL
Exploration of various issues involved in the teaching of culture and literature in the TEFL classroom, along with pedagogical implications. Particular focus is on such issues as the appropriate choice of materials and the incorporation of web-based tools to enhance cultural and literacy awareness. Credit units: 3 ECTS Credit Units: 6.

TEFL 525 Practicum
Different topics related to classroom teaching and classroom-centered research, including instructional observation, practice teaching, and in-class data collection and analysis. Projects based on these topics are assigned during the semester. Credit units: 3 ECTS Credit Units: None.

TEFL 528 Curriculum Development and Evaluation
Principles of course design, implementation, and evaluation. The role of the teacher in the curriculum process is central to the course. Small projects and papers relating to students' experiences will provide skills in developing and evaluating curricula. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

TEFL 530 Materials Development
Selection, adaptation, development, evaluation, and implementation of lesson plans, textbooks, and other materials for different teaching situations. Students become familiar with a variety of materials. Opportunities are provided for critiquing, developing, and adapting materials for a wide range of contexts and target groups. Credit units: 3 ECTS Credit Units: 6. Spr (J. Walters)

TEFL 531 Research Methods I in Linguistics
Introduction to skills in library research and applied linguistics research methodology including the collection, analysis, and processing of data. Issues of research methodology are examined for their applicability to critiquing published research and to conducting original research in language-learning environments. Quantitative, qualitative, and mixed-methods research traditions are examined. Credit units: 3 ECTS Credit Units: None. Aut (J. Mathews-Aydinli)

TEFL 532 Research Methods II in Linguistics
This course is a continuation of Research Methods in Linguistics I, and includes further detailed examination of theoretical and methodological topics in the contemporary literature on qualitative, quantitative, and mixed-
methods research designs. It also explores topics in the ongoing development of applied linguistics research methodology in particular, and provides students with additional practice in the critical reading, understanding, and assessing of published research. Credit units: 3 ECTS Credit Units: None. Spr (P. Durrant)

TEFL 551 Research Seminar I

Introduction to skills in library research and research methodology including the collection, analysis, and processing of data. Issues of methodology are examined for their applicability to critiquing published research and to conducting original research in language-learning environments. Both quantitative and qualitative research traditions are examined. Credit units: 3 ECTS Credit Units: 6.

TEFL 552 Research Seminar II

More detailed examination of skills in library research and research methodology including the collection, analysis, and processing of data. Issues of methodology are examined for their applicability to conducting original research in language-learning environments. Credit units: 3 ECTS Credit Units: 6.

TEFL 553 Research Seminar III

Advanced skills in library research and research methodology including the collection, analysis, and processing of data. Specific focus is on production of individual theses. Credit units: 3 ECTS Credit Units: 6.

TEFL 554 Thesis Writing

Focus on presenting aspects of research findings in an organised and coherent manner. Students receive critical feedback from their peers and their instructor on their theses. The emphasis is on the improvement of academic discourse in order to complete the program thesis successfully. Credit units: 3 ECTS Credit Units: 24.

TEFL 555 Written Academic Discourse

Focus on developing essential skills for effective presentation of academic language in written discussion. Meta-discussion of reading and exercises will help develop students’ own abilities to teach academic writing. Credit units: 3 ECTS Credit Units: 6. Aut (P. Durrant)

TEFL 556 Seminar in TEFL

In-depth exploration of and innovative approaches to topics of importance in the field of TEFL. The course may be divided into two eight-week seminars to allow expanded coverage of the issues. Specific topics to be determined by the instructor(s). Credit units: 3 ECTS Credit Units: 6. Spr (J. Walters)

TEFL 557 Written Academic Discourse II

Continuation of Written Academic Discourse I, with an emphasis on the academic writing process and its applications for teachers of writing. Credit units: 3 ECTS Credit Units: 6.

Credit units: 3 ECTS Credit Units: None.
The Faculty of Engineering comprises four academic departments:

- Computer Engineering
- Electrical and Electronics Engineering
- Industrial Engineering
- Mechanical Engineering

The mission of the Faculty of Engineering is not only to impart contemporary engineering and scientific knowledge in the four engineering disciplines but also to inculcate creativity, research techniques, and self development. The graduates of engineering programs are expected to acquire dynamic learning skills and to readily adapt to technological changes as well as to solve fast growing problems of the modern society.

The programs of study in Engineering aim to achieve a productive balance between depth of knowledge acquired in technical areas and breadth of knowledge acquired through humanities, arts and social sciences. Depth involves the intensive study of a subject through specialization in a major field; breadth on the other hand plays an important role to equip the graduate in pursuit of a richer personal and professional life. Hence, the curriculum provides a firm background in the basic sciences through courses in mathematics, computer science, physics, and chemistry. It has a solid syllabus of engineering which lead to specialized courses that are primarily of a technical nature. In order to provide the student with a broad intellectual spectrum, elective courses are offered through the other faculties of the University.

An integral component of engineering profession is centered upon various forms of communication. Therefore, a primary goal in engineering education is to equip prospective engineers with strong communication skills. Language and communications courses are integrate into the curriculum to reach such a target.

Engineering education is an evolutionary process driven by advances in technology. Hence, the aim of the programs is to develop the ability to learn on a career-long basis.

Physical, mathematical and engineering sciences courses are intended to provide the students with the necessary capability to model and analyze the real world. The courses with design components are to increase innovation and synthesis capability whereas the project courses are to enhance the integration capability of the students. Students are expected to utilize, integrate and advance their accumulated knowledge skills and engineering concepts during their semester-long specialized projects. Knowledge in humanities, arts and social science will contribute to students’ understanding of the society and environment in which the engineering is practiced.

ACADEMIC STAFF

Aybar C. Acar, Instructor
Ph.D., Computer Science, George Mason University, 2008. Databases, information integration, data security and privacy, information quality, machine learning.

Nail Akar, Associate Professor
Ph.D., Electrical and Electronics Engineering, Bilkent University, 1994. Teletraffic analysis, performance evaluation, high-speed telecommunication networks, Internet technologies.

Adnan Akay, Professor
Varol Akman, Professor
Ph.D., Electrical, Computer, and Systems Engineering, Rensselaer Polytechnic Institute, 1985. Artificial intelligence, logic, philosophy of language, philosophy of mind, pragmatics, the Internet and society.

Selim Aksoy, Assistant Professor

Defne Aktas, Assistant Professor
Ph.D., Electrical Engineering, The Ohio State University, 2002. Wireless communications, information theory, coding theory.

Özgür Aktaş, Assistant Professor
Ph.D., Electrical and Computer Engineering, University of Illinois at Urbana-Champaign, 2001. Computational modeling of microelectronic and microelectromechanical devices, experimental investigation of semiconductor materials and high-speed devices.

M. Selim Akkurt, Professor

Osman Alp, Assistant Professor
Ph.D., Industrial Engineering Department, METU 2000. Inventory models, supply chain management, logistics, transportation of hazardous materials.

Ayhan Altıntaş, Professor

Erdal Arık, Professor
Ph.D., Electrical Engineering and Computer Science, Massachusetts Institute of Technology, 1985. Information theory.

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Erdal Arık, Professor
Ph.D., Electrical Engineering and Computer Science, Massachusetts Institute of Technology, 1985. Information theory.

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor

Ayhan Altıntaş, Professor
Fazlõ Can, Visiting Professor
Ph.D., Computer Engineering, Middle East Technical University, 1985. Information Retrieval, data mining, machine learning.

Melih Çakmakçı, Assistant Professor
Ph.D., Mechanical Engineering, University of Michigan, 2009. Dynamic systems and control. Multivariable control systems, nonlinear systems and control, vehicle control systems and smart mechatronic components.

Tolga Çapın, Assistant Professor

Barbaros Çetin, Assistant Professor
Ph.D., Mechanical Engineering, Vanderbilt University, 2009. Microfluidics, lab-on-a-chip technology, electrokinetic transport at microscale, heat transfer at microscale.

Enis Çetin, Professor

David Davenport, Lecturer
Ph.D., Electrical Engineering, University of Birmingham, 1980. Artificial intelligence, cognitive science, information retrieval, computer and education, Internet-related issues.

Aynur Dayanık, Instructor
Ph.D., Computer Science, Rutgers University, 2006. Machine Learning, information retrieval, text mining, bioinformatics, data mining.

Savaş Dayanık, Assistant Professor
Ph.D., Industrial Engineering and Operations Research, Colombia University, 2002. Stochastic processes and modeling, stochastic dynamic programming, stochastic optimal control. Applications to financial engineering, statistics, and operations management.

Tuğrul Dayar, Professor

Hilmi Volkan Demir, Associate Professor

Uğur Doğrusöz, Associate Professor
Ph.D., Computer Science, Rensselaer Polytechnic Institute, 1995. Graph visualization, bioinformatics, combinatorial algorithms, and graph theory.

Pınar Duygulu, Assistant Professor
Ph.D., Computer Engineering, Middle East Technical University, 2003. Multimedia data mining, information retrieval, computer vision, statistical machine learning, visual perception.

Oya Ekin-Karaşan, Associate Professor

Figen Eren, Instructor
Nesim Erkip, Professor
Ph.D., Industrial Engineering and Engineering Management, Stanford University, 1984. Multi-
echelon inventory systems, Analytical models for supply chain management, inventory/production
planning under uncertainty.

Vakur B. Ertürk, Associate Professor
Ph.D., Electrical Engineering, Ohio University, 2000. Theoretical and computational electromag-
netics, numerical methods, communications.

Hakan Ferhatosmanoğlu, Visiting Associate Professor
Ph.D., Computer Science, University of California, Santa Barbara, 2001. Database systems, data
mining, bioinformatics.

Sinan Filiz, Assistant Professor
Ph.D., Mechanical Engineering, Carnegie Mellon University, 2009. Development of intelligent
micro-machining centers, integration of micro-machining centers in micro-factories, and fabrication
of medical micro-devices using micro-machining centers.

Sinan Gezici, Assistant Professor
Ph.D., Electrical Engineering, Princeton University, 2006. Statistical signal processing, ultra-
wideband systems, telecommunications, and radar.

Kağan Gökbayrak, Assistant Professor
Ph.D., Manufacturing Engineering, Boston University, 2001. Internet traffic engineering and quality
of service, stochastic discrete resource allocation, optimal control of discrete event and hybrid
systems.

Ügur Gündükbay, Associate Professor
Ph.D., Computer Engineering and Information Science, Bilkent University, 1994. Computer graph-
ics, physically-based modeling and animation, deformable models, multimedia databases, computa-
tional geometry.

Çiğdem Gündüz Demir, Assistant Professor
Ph.D., Computer Science, Rensselaer Polytechnic Institute, 2005. Computational biology, ma-
chine learning, pattern recognition for medical application and cancer research, data mining and
artificial intelligence.

Canan Güneş, Assistant Professor
Simulation, Bayesian statistics, humanitarian logistics.

Levent Gürel, Professor
Ph.D., Electrical and Computer Engineering, University of Illinois at Urbana-Champaign, 1991.
Computational electromagnetics, electromagnetic compatibility, wave propagation and scattering,
microwave integrated circuits.

Ülkü Gürel, Professor
Ph.D., Statistics, University of Pennsylvania, 1990. Stochastic inventory models, reliability and
maintenance survival analysis. Nonparametric estimation, Bayesian, Analysis.

H. Altay Güvenir, Professor
Ph.D., Computer Engineering and Science, Case Western Reserve University, 1987. Artificial
intelligence, machine learning, data mining, problem solving strategies.

Yusuf Ziya Ider, Professor
Ph.D., Biomedical Engineering, Northwestern University, 1979. Electrical impedance tomogra-
phy, magnetic resonance imaging, acquisition and processing of physiological signals, PC based
instrumentation.

Ezhan Karasğan, Associate Professor
Ph.D., Electrical and Computer Engineering, Rutgers University, 1995. Broadband integrated
networks, traffic and switching theory, optical networks, information and coding theory.
Yiğit Karpat, Assistant Professor

İbrahim Körpeoğlu, Associate Professor

Hayrettin Köymen, Professor
Ph.D., Electrical Engineering, University of Birmingham, 1979. Acoustic imaging, linear and finite amplitude acoustics, medical instrumentation, processing and modeling of physiological signals.

Jianjun Li, Instructor

Ömer Morgül, Professor

Ayşe Semra Mumcu, Instructor
M.S., Electrical and Electronics Engineering, Middle East Technical University, 1990. Computer architecture, technical computing.

Osman Oğuz, Associate Professor
Ph.D., Management Sciences, University of Waterloo, 1978. Mathematical programming, linear and integer programming, scheduling.

Ali Kemal Ökyay, Assistant Professor

Selim Olçum, Instructor

Levent Onural, Professor
Ph.D., Electrical and Computer Engineering, State University of New York at Buffalo, 1985. Signal and image processing, video processing, holography, diffraction, signal processing for diffraction and holography, 3DTV.

Özay Oral, Professor
Ph.D., Electrical Engineering, Middle East Technical University, 1971. Design of multivariable control systems, stabilization of large scale systems, systems theory, formulation of networks and systems.

Hilmi Öncül, Instructor

Haldun Özaktaş, Professor
Ph.D., Electrical Engineering, Stanford University, 1991. Optical information processing, signal and image processing, optoelectronic and optically interconnected computing systems.

Ekmele Özbay, Professor
Hitay Özbay, Professor  
Ph.D., Control Sciences and Dynamical Systems, University of Minnesota, 1989. Robust control, distributed parameter systems, applications of control theory in various engineering fields.

Özlem Özgü, Instructor  

Bülent Özgüç, Professor  

A. Bülent Özgüler, Professor  

Halil Nejat Özmen, Instructor  
M.S., Computer Engineering, Middle East Technical University, 1981. Data structures, algorithms, computer architecture, web based software development.

Özcan Öztürk, Assistant Professor  
Ph.D., Computer Science and Engineering, Pennsylvania State University, 2007. On-chip multiprocessors, compiler optimizations, computer architecture, memory optimization, low-power system design, reliability.

Mustafa Ç. Pınar, Professor  

Tank Reyhan, Senior Lecturer  
Ph.D., Electrical Engineering, University of Birmingham, 1981. Radio communication, RF design, thermal imaging, electro-optics, space communications.

İhsan Sabuncuğlu, Professor  
Ph.D., Industrial Engineering, Wichita State University, 1989. Simulation, scheduling, heuristics in optimization, advanced manufacturing systems.

Turgay Saracoğlu, Instructor  

Uluc Saranlı, Assistant Professor  
Ph.D., Computer Science: Intelligent Systems, University of Michigan, Ann Arbor, 2002. Formal methods for robot programming, analysis and control of legged locomotion, dynamically dexterous robot behaviors, applications of formal logic and type theory to robot motion planning, physically realistic simulation.

William Sawyer, Instructor  
M.S., Electrical Engineering, Northeastern University, 1988. Digital design, CAD tools, computer architecture.

Ali Aydın Selçuk, Assistant Professor  

İpek Sözen, Instructor  
M.S., Computer Engineering, Middle East Technical University, 1989. Programming languages, data structures, information systems.

Alper Şen, Assistant Professor  
Ph.D., Business Administration, University of Southern California, 2000. Revenue management, inventory theory, supply chain management, machine scheduling.
Mehmet Rüştü Taner, Assistant Professor  

Barbaros Tansel, Professor  

Bedir Tekinerdoğan, Assistant Professor  
Ph.D., Computer Science, University of Twente, 2000. Software engineering, software architecture design, software product line engineering, model-driven software development, aspect-oriented software development.

İlker Temizer, Assistant Professor  
Ph.D., Mechanical Engineering, University of California, Berkeley, 2005. Computational mechanics, thermodynamics of homogenization, contact mechanics, multiscale modeling.

Ayşegül Toptal, Assistant Professor  

Özgür Ulusoy, Professor  
Ph.D., Computer Science, University of Illinois at Urbana-Champaign, 1992. Data management for mobile systems, Web query languages and data models, multimedia database systems, real-time and active database systems.

Aslı Üstüner, Instructor  

Hande Yaman, Associate Professor  
Ph.D., Operations Research, Université Libre de Bruxelles, 2002. Integer programming, polyhedral theory, location and network design, robust optimization.

Bahar Yetiş, Associate Professor  
Ph.D., Industrial Engineering, Bilkent University, 1999. Hub location problems, hazardous materials transportation, bilevel optimization, mathematical programming.

ACADEMIC COORDINATORS

Johannes Marie Verhoeven, M.S., Philosophy, Groningen University.

PART-TIME ACADEMIC STAFF

Mehmet Akşit, Ph.D., Twente University, 1989.
Mehmet Çiğdem, Ph.D., Electrical and Electronics Engineering, Middle East Technical University, 2005.
Ahmet Suat Ekinç, Ph.D., Bilkent University, 1999.
Sedat Nazlıbilek, Ph.D., Electrical and Electronics Engineering, Middle East Technical University, 1993.
Yavuz Oruç, Ph.D., Syracuse University, 1983.
Ruşen Öktem, Ph.D., Information of Technology, Tampene University, 2000.
Namik Şengüzer, Ph.D., Bilkent University, 2010.
Mehmet Ali Tugay, Ph.D., Electrical and Electronics Engineering, Middle East Technical University, 1991.
Onay Urfaloğlu, Ph.D., Electrical and Electronics Engineering, Leibniz University Hannover, 2006.
Ahmet Şevket Üçer, Ph.D., Mechanical Engineering, University of Manchester, 1970.
Nur Yıldırım, M.S., Electrical and Electronics Engineering, Middle East Technical University, 1971.
DEPARTMENT OF COMPUTER ENGINEERING

Part-time: M. Akşit, Y. Oruç.

The Computer Engineering Department offers programs that lead to B.S., M.S., and Ph.D. degrees.

UNDERGRADUATE PROGRAM

Bilkent University has been founded with the aim of establishing a center of excellence in higher education and research. The Department of Computer Engineering is responsible for the implementation of this mission in the area of computer engineering, and is dedicated to serving society and the advancement of knowledge through excellent teaching and scholarship.

Computer Engineering Department is committed to providing its students with the knowledge, skills, and qualities necessary for our graduates to: a) show intellectual maturity in problem solving and design, while being creative, analytical, and critical thinkers, b) possess a strong background in the principles and practices of computer engineering, and demonstrate knowledge that is relevant to technological needs in a competitive global environment, while continuing to learn throughout their career, c) collaborate well with others and demonstrate strong written and oral communication skills, d) pursue advanced studies and/or have successful careers in industry, government, and academia, while demonstrating professional and ethical responsibility.

The program aims to provide students with the fundamental knowledge and interdisciplinary problem solving skills for a fulfilling career in high quality engineering work and advanced research, required in the information based society of the 21st century. The program emphasizes a solid background in basic science and mathematics, a strong preparation in hardware, software and theory towards the analysis, design and application of computers and information-processing techniques to the solution of real world problems. The courses are complemented with laboratory practice with state-of-the-art computing systems. With the help of two summer trainings each of which must be at least four weeks long, junior and senior students practice their knowledge, learn to function in a collaborative and most of the time multi-disciplinary environment, and improve their communication skills. The program also provides the students with a broad intellectual spectrum by including various elective courses in economics, social sciences, humanities and arts. For two semesters in the senior year, students work on a design project that requires creative thinking and present their work at the end of their study in the department.

RESTRICTED ELECTIVES

CS 411 Software Architecture Design ........................................... 3 / 6
CS 412 Embedded Software Systems ........................................... 3 / 6
CS 413 Software Engineering Project Management ........................ 3 / 6
CS 415 Software Product Line Engineering .................................. 3 / 6
CS 416 Compiler Design ......................................................... 3 / 6
CS 418 eBusiness Technologies and Business Solutions using eBusiness Patterns and Technologies ........................................... 3 / 6
CS 421 Computer Networks ..................................................... 3 / 6
CS 422 Wireless Networking Technologies and Applications .......... 3 / 6
CS 423 Computer Architecture ................................................ 3 / 6
CS 424 Computer Network Programming ................................... 3 / 6
CS 431 Embedded Systems ..................................................... 4 / 7
CS 442 Distributed Systems and Algorithms ............................... 3 / 6
CS 446 Database Management Systems II ................................. 3 / 6
CS 452 Systems Analysis and Design ....................................... 3 / 6
CS 461 Artificial Intelligence ................................................... 3 / 6
CS 464 Introduction to Machine Learning .................................. 3 / 6
CS 465 Computer Graphics I .................................................... 4 / 6
CS 466 Computer Graphics II ................................................... 4 / 6
CS 468 Principles of User Interface Design ................................. 3 / 6
CS 470 Introduction to Applied Cryptography ............................. 3 / 6
CS 471 Numerical Methods ..................................................... 3 / 6
CS 482 Logic for Computer Science ......................................... 3 / 6
CS 484 Image Analysis ......................................................... 3 / 6
CS 490 Introduction to Research in Computer Engineering and Science ........ 3 / 6
EEE 424 Digital Signal Processing .......................................... 4 / 7
EEE 443 Neural Networks ..................................................... 3 / 6
IE 325 Stochastic Models ...................................................... 3 / 6
IE 420 Heuristics in Optimization ........................................... 3 / 6
MATH 202 Complex Analysis .................................................. 3 / 6
MATH 213 Advanced Calculus I .............................................. 3 / 6
MATH 215 Mathematical Analysis ............................................ 3 / 6
MATH 253 Introduction to Number Theory ................................ 3 / 6
MATH 313 Real Analysis I ..................................................... 3 / 6
MATH 314 Real Analysis II .................................................... 3 / 6
MATH 318 Fourier Transform and Wavelets ................................ 3 / 6
MATH 324 Algebra II ............................................................ 3 / 6
MATH 420 Introduction to Cryptography ................................... 3 / 6
MATH 453 Algebraic Number Theory ........................................ 3 / 6
MATH 501 Real Analysis I ...................................................... 3 / 6
MBG 209 Principles of Genetics .............................................. 3 / 6
MBG 219 Genetics ............................................................... 4 / 7
MBG 222 Fundamentals of Molecular Genetics .......................... 3 / 6
MBG 324 Molecular Biology of the Gene .................................. 4 / 6
MBG 326 Introduction to Bioinformatics ................................... 3 / 6
MBG 418 Genomics .............................................................. 4 / 6
MBG 482 Computational Approaches to Biology ....................... 3 / 6

GRADUATE PROGRAMS

The Department of Computer Engineering offers M.S. and Ph.D. degree programs with the possibility of specialization in different areas of research in Computer Engineering. Current research areas are artificial intelligence, commonsense reasoning, computer vision, data mining, embedded systems formal semantics, machine learning, pattern recognition, database systems, object-oriented systems, information storage and retrieval, distributed database systems, graphics, physically based animation, ray tracing, radiosity, user interfaces, image analysis, parallel processing, parallel algorithm design, task assignment, simulation of various applications on multicompiler architectures,
parallel methods for scientific computing, computer networks, mobile and wireless networking, cryptography and network security, theory, algorithms, graph theory, graph drawing, graph coloring, computational geometry, Implications of Internet, capacity planning for web services, performance modeling.

Master of Science

Admission: All applicants are required to have a B.S. degree in computer engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitimi Girisi - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The maximum duration of M.S. study is four semesters. However, this may be extended for up to two more semesters upon approval.

Doctor of Philosophy

Admission: All applicants are required to have a B.S. degree or a M.S. degree in computer engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitimi Girisi - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: Each student's Ph.D. program is individually planned with a faculty advisor. In addition to successful completion of at least 24 credit units of course work above M.S. level (48 units of course work above B.S. level), the Ph.D. student is expected to pass a qualifying examination, and to prepare and defend a dissertation based on original research. The maximum duration for Ph.D. study is eight semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, these durations may be extended for up to four more semesters upon approval.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

CS 101 Algorithms and Programming I
Basic computer literacy: terminology, system components and operation. Fundamentals of computer programming: top-down structured design, sequence, decision, repetition, syntax, compilation, debugging and maintenance, object-oriented programming with Java, objects classes, methods, parameters, arrays, layout and style. The emphasis is on an engineering "right-first-time" approach to solving large problems using computers. Credit units: 4 ECTS Credit Units: 7. Aut (D. Davenport, Ö. Özgür) Spr (H. A. Güvenir, Ö. Özgür)

CS 102 Algorithms and Programming II

CS 111 Introduction to Computing in Engineering and Science
Basic computer literacy: terminology, system components and operation. MATLAB as a technical programming language for solving engineering and scientific problems. Variables, scalars, arrays, scalar and array operations,
top-down program design, relational and logical operators, branches, loops, syntax, compilation debugging and maintenance, built-in and user-defined functions, function arguments, pass-by-value, plotting, handle graphics, graphical user interface. Introduction to object-oriented programming concepts with Java. Credit units: 3 ECTS

CS 112 Introduction to Object-Oriented Programming
Object-oriented programming with Java. Writing and enhancing classes, arrays, inheritance and polymorphism, abstract classes and interfaces, graphical user interface, I/O streams, exceptions, data structures, lists, stacks, queues, and trees. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CS 101 or CS 111. Spr (T. Saracoğlu)

CS 113 Introduction to Computing for Engineers

CS 114 Introduction to Programming for Engineers
Introduction to programming with Java. Data and Expressions: character strings, variables and assignments, primitive data types, expressions, data conversion. Using classes and objects: creating objects, the String class, the Random class, the Math class, formatting output, enumerated types. Writing classes: classes and objects, anatomy of a class, encapsulation, anatomy of a method. Conditions and loops: Boolean expressions, the if statement, comparing data, the switch statement, the while statement, iterators, the do statement, the for statement. Arrays: array elements, declaring and using arrays, arrays of objects, command-line arguments, variable length parameter lists, two-dimensional arrays, the ArrayList class, Recursion: recursive thinking, recursive programming, using recursion. Credit units: 4 ECTS Credit Units: 7, Prerequisite: CS 113. Spr (H. N. Özen)

CS 121 Introduction to Computing for Social Sciences
Students enhance their understanding of office programs, such as Word, Excel, and Access, in this course. This course is taught in a class with a PC and projector. Students apply the topics covered in class in the PC Labs (2 hours per week). A class exercise and a lab exercise are provided every week. Exams are also held in the PC labs. This way, students are expected to be efficient in the use of standard office programs. Credit units: 3 ECTS Credit Units: 6. Aut (H. Öncül, H. N. Özmen, T. Saracoğlu, A. Üstün) Spr (H. Öncül, H. N. Özmen, İ. Sözen, A. Üstün)

CS 122 Introduction to Programming for Social Sciences
This course encourages students to develop logical thinking skills through the process of programming the computer. It also aims to introduce students to the world of the Internet and its applications in modern business. To this end, students will learn how to use e-mail, how to create their own home page, and how to produce web applications through Java programming. Credit units: 3 ECTS Credit Units: 5.

CS 123 Introduction to Computing and Programming for Social Sciences
This course is an introduction to office tools, and MATLAB. Basic operations for creating and editing documents are introduced using the document processing tool Word. Basic operations on spreadsheets, absolute and relative addressing, basic functions, simple database operations, generation of graphs, and macro recorder are introduced through the spreadsheet tool Excel. Students will learn basic programming concepts, methods to build arrays and refer to elements of an array, basic operations on arrays, loop and conditional commands, generating of simple plots using the MATLAB tool. Credit units: 3 ECTS Credit Units: None. Aut (A. S. Mumcu, H. Öncül, İ. Sözen) Spr (A. S. Mumcu, H. Öncül)

CS 153 Introduction to Computing I
Digital text, video files and executable programs are stored in Web sites. These documents contain cross-references or links to other web documents that are on the same computer or other computers of a network. This course explains HTML (Hyper Text Markup Language) that is to write web documents. Web browsers, such as Netscape, MS Internet Explorer and Mosaic are explained. Web page design and interaction principles are introduced. Credit units: 3 ECTS Credit Units: 6. Aut (M. H. Erdoğan) Spr (M. H. Erdoğan)
CS 154  Introduction to Computing II
A continuation of CS 153, this course will cover the basics of Internet and the World Wide Web, the basic tags, URLs (Uniform Resource Locators) and cross references, multi media files, data entry forms, image maps, CGI (Common Gateway Interface) programs and the Java language. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 153. Spr (M. H. Erdog)

CS 155  Multimedia Authoring System and Standards
Multimedia programming: basic tools and hypertext mark-up language (HTML), innovative applications and multitasking in the multimedia environment. Introduction to authoring systems: Currently used authoring systems. Paradigm structure of the authoring systems: Authoring and script paradigm, iconic/flow paradigm, frame paradigm, card/scripting paradigm and hypermedia linkage paradigm. Authoring process and interface metaphors, multimedia scripting and scripting languages. Communication through multimedia applications: Audio, motion, graphics and user interaction. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 154. Aut (M. H. Erdog)

CS 156  Introduction to Advanced User Interfaces
Window management systems. Color-map and true color display procedures. Events, event trapping and buffering. Multi-media data and their display techniques. Designing interfaces for the web. Complexity of an interface as a function of data transfer and response time. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 155.

CS 201  Fundamental Structures of Computer Science I
The course introduces the abstract data types of lists, queues, and stacks, and shows how one can implement them in C++ using fundamental data structures. It also introduces recursion and studies recursion as a problem solving technique using data abstraction. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 102. Aut (S. Aksay, A. Dayanik) Spr (A. Dayanik, Ç. Gündüz Demir)

CS 202  Fundamental Structures of Computer Science II
The course discusses concepts related with algorithmic efficiency on basic abstract data types. First the course introduces algorithmic efficiency on basic abstract data types and some sorting algorithms that utilize recursion. Then the course discusses the abstract data types of trees, tables, priority queues, and graphs. It also shows how one can implement these abstract data types in C++ using fundamental data structures by emphasizing run-time complexity analysis. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 201. Spr (A. C. Acar, Ç. Gündüz Demir)

CS 223  Digital Design

CS 224  Computer Organization
Instruction set architecture (ISA), ISA design considerations, RISC vs. CISC, assembly and machine language, programming a RISC machine. Computer arithmetic, arithmetic logic unit, floating-point numbers and their arithmetic implementations. Processor design, data path and control implementation, micro programmed control, exception detection. Pipelining, hazards, pipelined processor design, hazard detection and forwarding, branch prediction and exception handling. Memory hierarchy, principles, structure, and performance of caches, virtual memory, segmentation and paging. I/O devices, I/O performance, interfacing I/O. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 223. Spr (W. Sawyer)

CS 281  Computers and Data Organization

CS 299  Summer Training I
The minimum time for this practice in an organization is four weeks (20 working days). The main objective is to observe a company in an original setting and answer questions on the fundamental areas of Computer Engineering and Information Science. A written report summarizing the training experience is required. Credit units: None ECTS Credit Units: None, Prerequisite: CS 202. Aut (Staff) Spr (Staff)

CS 315  Programming Languages
Language evaluation criteria. Describing syntax and semantics. Tools for constructing lexical and syntactical analyzers. Names, bindings, type checking, and scopes. Data types. Expressions and the assignment state-
**Credit units:** 3 ECTS  
**Prerequisite:** CS 102. (P. Duygulu, U. Saranlı)

**CS 319 Object-Oriented Software Engineering**
Principles and stages of object-oriented software development. Overview of object-oriented software modeling with Unified Modeling Language and exposure to CASE tools for object-oriented development. Experience with such tools and environments through programming assignments and/or a term project.  
**Credit units:** 4 ECTS  
**Prerequisite:** CS 102 and CS 201. (U. Doğrusöz, B. Tekinerdoğan)

**CS 342 Operating Systems**
Introduction to computer operating systems; processes, threads, interprocess communication, process scheduling, process synchronization, deadlocks, memory management and virtual memory, file systems - interface and implementation, mass-storage structure and management, input/output systems, examples from operating systems such as Linux and Windows.  
**Credit units:** 4 ECTS  
**Prerequisite:** CS 202 and CS 224. (I. Köprüoğlu)

**CS 351 Data Organization and Management**
**Credit units:** 3 ECTS  
**Prerequisite:** CS 202. (F. Can)

**CS 352 Database Management Systems**
**Credit units:** 3 ECTS  
**Prerequisite:** CS 351. (A. C. Acar, Ö. Ulusoy)

**CS 399 Summer Training II**
The minimum time for this practice in an organization is four weeks (20 working days). The main objective is to observe a company in an original setting and answer questions on the fundamental areas of Computer Engineering and Information Science. A written report summarizing training experience is required.  
**Credit units:** None  
**Prerequisite:** CS 299. (Staff)

**CS 411 Software Architecture Design**
This course teaches the basic concepts, methods and techniques for designing software architectures. The topics include: rationale for software architecture design, modeling software architecture design, architectural styles/patterns, architectural requirements analysis, comparison and evaluation of architecture design methods, synthesis-based software architecture design, software product-line architectures, domain modeling, domain engineering and application engineering, software architecture implementation, evaluating software architecture designs.  
**Credit units:** 3 ECTS  
**Prerequisite:** CS 319. (M. Aksüt)

**CS 412 Enterprise Software Systems**
This course will introduce the concept of Enterprise Software by going over its unique properties and requirements while primarily focusing on the J2EE specification and comparing it to other software development approaches. The topics that will be covered include Multi-tiered application development, J2EE concept, J2EE Application servers, Java RMI, Enterprise Java Beans, Entity beans, Session beans, Message-driven beans, EJB Container Functionality, EJB persistence, bean-managed vs container-managed persistence, EJB Life cycle, EJB Passivation/Activation, Transactions, Locals Distributed, Isolation levels, Two-phase commit protocol, container-managed vs bean-managed transactions.  
**Credit units:** 3 ECTS  
**Prerequisite:** CS 319 and CS 352.

**CS 413 Software Engineering Project Management**
Software engineering project management ensures the delivery of a quality system on time and within budget. However the management of software development projects is a complex activity because of product complexity and requirements changeability. Furthermore involvement of various stakeholders and teamwork necessitates effective communication management. This course teaches students how to manage software engineering projects. It introduces project management fundamentals and unique aspects of software engineering projects. It covers project scope, time, and cost planning and estimation techniques, work product and process measurement and control, risk management, and teamwork, and organizational issues. Knowledge gained is applied to a team project by using various documents and project outcome presentation.  
**Credit units:** 3 ECTS  
**Prerequisite:** CS 319. (B. Akporay)
CS 415  Software Product Line Engineering  
Software reuse, SPE methods, domain engineering, application engineering, commonality and variability analysis, variability modeling, reference architecture, application architecture, software product portfolio management, software product line scoping, testing in SPE, organization structures for SPE, risks of SPE, adoption strategies for SPE. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 319. Spr (B. Tekinerdoğan)

CS 416  Compiler Design  
Development of the logical design of a compiler: lexical analyzer, parser, semantic analyzer, code generator, code optimizer, and error recovery routines. Analysis of formal algorithms for each component, description of overall compiler construction techniques. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 315.

CS 418  eBusiness Technologies and Business Solutions using eBusiness Patterns and Technologies  
This course introduces solution patterns for specific Business solutions like eCommerce, Customer Relationship Management, Supply Chain Management and Business Intelligence. This course also introduces necessary background information like eBusiness Building Blocks and Enterprise Application Integration. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 351 and CS 342 and CS 315. Spr (H. A. Güvenir)

CS 421  Computer Networks  

CS 422  Wireless Networking Technologies and Applications  

CS 423  Computer Architecture  

CS 424  Computer Network Programming  

CS 431  Embedded Systems  
This course is intended to give the students an understanding of the requirements, constraints and tools associated with the design and implementation of software systems that govern the operation of physical hardware. Since such systems are often combinations of electrical, mechanical and software components, we will learn about important aspects of design and implementation in each of these domains in the context of laboratory sessions and a term project. Specific topics will include real-time operating systems and concepts, microcontrollers and embedded development, communication protocols, data acquisition, sensory signal processing and basic control theory. Credit units: 4 ECTS Credit Units: 7, Prerequisite: EEE 212. Spr (U. Şaranlı)

CS 442  Distributed Systems and Algorithms  
Fundamentals of distributed systems and algorithms. Problems, methodologies and paradigms that are necessary for understanding and designing distributed applications with an emphasis on fault tolerance. Theoretical concepts will be complemented with practical examples of their application in current distributed systems. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 342.

CS 446  Database Management Systems II  
Principles of scalable data management with a focus on data warehousing and mining applications, multimedia and biomedical databases; storage and access structures, querying and mining, multi-dimensional indexing, row-store and column-store databases, database performance. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 352.
CS 452 Systems Analysis and Design
A study of the methods used in analyzing needs for information and in specifying requirements for an application system. Implementation of the operational system, integration of computer technology, and aspects of organizational behavior in the design support system are examined. Topics include the concept of the system life cycle, the iterative nature of the processes of analysis and design, and the methodology for developing a logical specification and physical design for an operational system. Credit units: 3 ECTS Credit Units: 6.

CS 461 Artificial Intelligence

CS 464 Introduction to Machine Learning
Bayesian decision theory, parametric methods, nonparametric methods, decision trees, linear discrimination, multilayer perceptrons, unsupervised learning and clustering, hidden Markov models, reinforcement learning. Credit units: 3 ECTS Credit Units: 6. Aut (Staff) Spr (A. Dayanık)

CS 465 Computer Graphics I

CS 466 Computer Graphics II
This laboratory-lecture course is an advanced application of computer graphics techniques. Shading, deformation, ray tracing, radiosity, texture mapping, fractal representation and various other advanced techniques are discussed. Concepts of motion are introduced for the generation of digital animation. Concepts of graphical workstation design, especially with respect to user interfaces and window managers are introduced. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CS 465.

CS 468 Principles of User Interface Design
Introduction and basic concepts in man-machine interaction. Principles of operation of interaction hardware and software. Events, event trapping and buffering. Windows, menus, panels; their inter-communication and interaction techniques. Problems of functionality, clarity, complexity and efficiency in designing interfaces. Robustness and error issues related to user interfaces. Credit units: 3 ECTS Credit Units: 6. Aut (T. Çapın) Spr (T. Çapın)

CS 470 Introduction to Applied Cryptography
This course gives a mild introduction into the field of cryptography and data security by exposing a number of applications. The course begins with an introduction of fundamental building blocks of cryptography such as secret and public-key primitives and cryptographic hash functions. The standard classification of cryptographic attacks is presented. Application examples will include secret sharing, digital cash, coin flipping and fair exchange over the internet, secure multi-party computation. The course will conclude with a brief summary of the politics of cryptography, e.g. export controls, and legal issues surrounding personal privacy. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CS 202.

CS 471 Numerical Methods
Surveys and applications of numerical techniques related to matrix inversion, systems of linear equations and optimization, finite difference expressions, interpolation and approximation, numerical differentiation and integration. The problems of speed, accuracy and applicability of the topics are examined with related algorithms. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 225.

CS 473 Algorithms I
CS 476 Automata Theory and Formal Languages
Finite automata, regular expressions, regular languages and their properties, the pumping lemma. Context free grammars and languages, normal forms, pushdown automata, the pumping lemma for the CFLs. Turing machines and their properties. Decidability and undecidable languages. Complexity theory, NP-completeness. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CS 201. Aut (Staff) Spr (A. A. Selçuk)

CS 482 Logic for Computer Science
Introduction to logic for computer scientists. An elementary exposition, from a computational point of view, of propositional logic, first-order logic, axiomatic theories, and theories with equality. Interpretations, models, validity, proof. There is considerable emphasis on presenting many of the fundamental ideas of first-order logic in the framework of Tarski's World, an educational proprietary software. Credit units: 3 ECTS Credit Units: 6. Aut (U. Saranlı)

CS 484 Image Analysis

CS 490 Introduction to Research in Computer Engineering and Science
The purpose of this course is to introduce students to research techniques in computer engineering and science. Each student is assigned a research topic that is suitable to his/her academic background and interests. Under the supervision of a departmental faculty member, the student will tackle the problem and try to find a satisfactory solution. Written and oral presentations of results are required. Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the course coordinator. Aut (H. A. Güvenir) Spr (H. A. Güvenir)

CS 491 Senior Design Project I
A technical project emphasizing engineering design principles on a specific topic in any field of computer science or engineering to be carried out by the team of senior students under the supervision of a faculty member. Students work within a team of 3 to 5 students. Three formal reports summarizing the specifications, analysis and the high level design of the project are required. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CS 202 and CS 319. Aut (Staff)

CS 492 Senior Design Project II
A technical project emphasizing engineering design principles on a specific topic in any field of computer science or engineering to be carried out by the team of senior students under the supervision of a faculty member. Students continue the project they started in CS 491 course, with the same team. Two formal reports summarizing the low level design and the implementation of the project and an oral presentation, including a demo, are required. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CS 491. Spr (Staff)

CS 502 Algorithms II

CS 503 Modeling and Simulation
Introduction to modeling and simulation. Simulation input data analysis. Random variate generation. Simulation output data analysis. Comparing systems via simulation. Discrete event simulations. Specific practices focusing on defense industry and game programming including; overview of some modeling and simulation, High Level Architecture (HLA), behavior modeling, optimization and analysis. Credit units: 3 ECTS Credit Units: 7.5.

CS 511 Introduction to Performance Modeling
Performance modeling with stochastic processes (introduction, Little's law and the M/M/1 queue, stochastic processes), single-server queueing models (M/M/1 queueing models, M/G/1 queueing models, M/G/1-FCFS queueing models, PH/PH/1 queueing models), queueing network models (open queueing networks, closed queueing networks, BCMP queueing networks), stochastic Petri nets, numerical solution of Markov chains, simulation. Credit units: 3 ECTS Credit Units: 7.5.

CS 512 Computer Networks

GRADUATE COURSES

CS 502 Algorithms II

CS 503 Modeling and Simulation
Introduction to modeling and simulation. Simulation input data analysis. Random variate generation. Simulation output data analysis. Comparing systems via simulation. Discrete event simulations. Specific practices focusing on defense industry and game programming including; overview of some modeling and simulation, High Level Architecture (HLA), behavior modeling, optimization and analysis. Credit units: 3 ECTS Credit Units: 7.5.

CS 511 Introduction to Performance Modeling
Performance modeling with stochastic processes (introduction, Little's law and the M/M/1 queue, stochastic processes), single-server queueing models (M/M/1 queueing models, M/G/1-FCFS queueing models, PH/PH/1 queueing models), queueing network models (open queueing networks, closed queueing networks, BCMP queueing networks), stochastic Petri nets, numerical solution of Markov chains, simulation. Credit units: 3 ECTS Credit Units: 7.5.

CS 512 Computer Networks
CS 513 Implications of the Internet

CS 514 Wireless Ad Hoc and Sensor Networks
Introduction to ad hoc networks, ad hoc Wireless MAC protocols, ad hoc routing protocols, service discovery, bluetooth and 802.11, introduction to sensor networks, sensor network architectures, hardware and software platforms and tools, topology control and routing in sensor networks, transport protocols, data dissemination and data fusion, data storage and querying in sensor networks, sensor data processing, power management and network lifetime, sensor network applications Credit units: 3 ECTS Credit Units: 7.5.

CS 515 Mobile and Wireless Networking

CS 518 Capacity Planning for Web Services
Web services rely on large-scale systems that consist of thousands of computers, networks, software components, and users. Large scale systems are inherently complex. The randomness associated with the way users request Web services compounds the problem of managing and planning the capacity of those services. The Web has special features that make its performance problems unique and demand novel approaches to dealing with them. This course presents a sound and practical approach to addressing these challenges using models based on probability fundamentals and the theory of queuing networks. In this way, it provides a quantitative approach to analyzing Web services, which lends itself to the development of performance and availability predictive models for managing and planning the capacity of Web services. Credit units: 3 ECTS Credit Units: 7.5.

CS 519 Cryptography and Network Security
Fundamental concepts of cryptography, block ciphers, stream ciphers, cryptographic hash functions, differential and linear cryptanalysis, publickey encryption, digital signatures, key distribution protocols, key management, authentication systems, security protocol pitfalls, strong password protocols, Kerberos, Internet cryptography, IPsec, SSL/TLS, e-mail security, firewalls. Credit units: 3 ECTS Credit Units: 7.5. Aut (A. A. Selçuk) Spr (A. A. Selçuk)

CS 522 Networks and Algorithms for Parallel Computation
Basic concepts in parallel and systolic computation; elementary algorithms for linear arrays and grids; retiming and systolic conversion theorem; algorithms for meshes of trees, hypercubes, hypercubic networks and product networks; data routing and communication on parallel architectures; graph embedding methods; complexity models for VLSI processor arrays. Credit units: 3 ECTS Credit Units: 7.5.

CS 524 Algorithm Design for Parallel Computers

CS 527 Advances in Switching Networks
This course will focus on recent advances in circuit and packet switching research. Its main goal is to familiarize the student with the frontier research results and open problems in the field. The format of the course is designed to encourage the students to develop research skills by reading and discussing the research results and techniques that have been described in the articles that are contained in the text and elsewhere in the related literature. The students will be assigned a number of papers for reading, presenting them in class, and evaluating their importance. Credit units: 3 ECTS Credit Units: 7.5. Aut (Y. Oruç)

CS 528 Advances in Switching Networks II
This course will focus on recent advances in packet switching research. Its main goal is to familiarize the student with the frontier research results and open problems in the field. The format of the course is designed to encourage the students to develop research skills by reading and discussing the research results and techniques that have been described in the articles that are contained in the text and elsewhere in the related literature. The students will be assigned a number of papers for reading, presenting them in class, and evaluating their importance. Credit units: 3 ECTS Credit Units: 7.5. Spr (Y. Oruç)
CS 531 Advances in Data Management Research
Managing and mining biological data (structural bioinformatics, similarity-based analysis of biomolecular sequences and structures, protein folding, gene expressions); high dimensional databases (indexing, similarity searching, multimedia, time-series), bitmap index systems (organization, compression, query processing), data stream management systems. Credit units: 3 ECTS Credit Units: 7.5. Spr (H. Ferhatosmanoglu)

CS 532 Database Systems

CS 533 Information Retrieval Systems
Introduction to information storage and retrieval (IR), IR vs. DBMS. User perspective, search models, evaluation of IR systems. Formal IR models. Data structures and techniques including, inverted files, signature files, information filtering, clustering and cluster-based retrieval, hypertext and multimedia systems. IR and the Internet, browsing strategies, search engines, web robots and intelligent agents. Credit units: 3 ECTS Credit Units: 7.5.

CS 536 Distributed Database Systems

CS 540 Parallel Programming Languages-Systems
Parallel programming models, languages and environments. Fundamental concepts: memory hierarchy, communication, locality, latency, synchronization, load balancing. Parallel programming models: data parallel, shared address space, message passing, object oriented, functional. Parallel programming languages and runtime systems: data parallel languages, message passing libraries and language constructs, data-driven object based languages, shared memory programming, multithreading. Credit units: 3 ECTS Credit Units: 7.5.

CS 541 Chip Multiprocessors
This advent of large-scale multi-core processors, also known as Chip Multiprocessors (CMPs), will change the way high-performance applications are designed, implemented, and executed. CMPs have advantages over complex uniprocessor systems in terms of ease of validation, power efficiency, and exploiting thread level parallelism. They will not only be the central components of future desktop machines, but they will soon be building blocks for constructing large scale parallel and distributed, computer architectures. Recent chip multiprocessors such as IBM's Cell and Sun's Niagara are an important step in this direction. Among the issues to be studied are chip multiprocessor architectures, motivation and trends, barriers on uniprocessor architectures, cache design and compilation in chip multiprocessors, static and dynamic compilers, future research directions. Credit units: 3 ECTS Credit Units: 7.5.

CS 543 Parallel Methods for Scientific Computing
Parallel methods for computations in the areas bioinformatics, computational physics, computational chemistry and other disciplines. The theme of the course will be development of parallel/distributed algorithms and/or software and interdisciplinary projects are emphasized. Students are assumed to be familiar with parallel architectures and parallel programming. Credit units: 3 ECTS Credit Units: 7.5.

CS 546 Advanced Operating Systems
Introduction and basic concepts in parallel and distributed operating systems. Synchronization mechanisms: Semaphores, monitors, communicating sequential processes. Deadlocks. Inter-process communication. Theoretical foundations of distributed operating systems: logical clocks, vector clocks, global state and consistency, termination, and agreement protocols. Task Scheduling for Multiprocessor and Distributed Operating Systems. Previous knowledge of operating systems is required. Credit units: 3 ECTS Credit Units: 7.5.

CS 548 Robot Motion Control and Planning
Basic concepts of motion planning, representations of state and movement, potential functions, roadmaps, cell decompositions, robot dynamics, basic control, constrained motion, hybrid planning and control, logical reasoning methods for planning. Credit units: 3 ECTS Credit Units: 7.5. Spr (U. Saranli)

CS 550 Machine Learning
CS 551 Pattern Recognition

CS 553 Intelligent Data Analysis
Differences between data and knowledge, assessing knowledge; Data analysis process, methods, tasks and tolls; Practical data analysis; Data understanding, attribute understanding, data quality, data visualization, correlation analysis, outlier detection, missing values; Principles of modeling, model classes, fitting criteria and score functions, model fitting, types of errors; Data preparation, feature selection, dimensionality reduction, record selection, improving data quality; Use of machine learning and data mining techniques in intelligent data analysis. Credit units: 5 ECTS Credit Units: 7.5.

CS 554 Computer Vision
Basic concepts in computational vision. Relation to human visual perception. The analysis and understanding of image and video data. Mathematical foundations, image formation and representation, segmentation, feature extraction, contour and region analysis, camera geometry and calibration, stereo, motion, 3-D reconstruction, object and scene recognition, object and people tracking, human activity recognition and inference. Credit units: 3 ECTS Credit Units: 7.5. Aut (P. Duygulu)

CS 558 Data Mining

CS 560 3D User Interfaces
3D/virtual reality input and output hardware. 3D interaction techniques. 3D UI toolkits and prototyping techniques. Augmented reality interfaces. usability evaluation of 3D UIs. Credit units: 3 ECTS Credit Units: 7.5. Spr (T. Çapın)

CS 564 Computational Geometry
Algorithmic background, data structures, geometric preliminaries, models of computation. Geometric searching, point-location, problems, range-searching problems. Convex hulls, problem statement and lower bounds, convex hull algorithms in the plane, graham's scan, Jarvis's march, QUICKHULL techniques, dynamic convex hull, convex hull in 3D. Proximity problem, a collection of problems, a computational prototype: element uniqueness, lower bounds, the closest-pair problem: a divide-and-conquer approach, the Voronoi diagram, proximity problems solved by the Voronoi diagram triangulation, planar triangulations, Delaunay triangulation, intersections, application areas, planar applications: intersection of convex polygons, star-shaped polygons; intersection of line segments. 3D applications: intersection of 3D convex polyhedra; intersection of half-spaces. Credit units: 3 ECTS Credit Units: 7.5. Spr (U. Güdükbay)

CS 565 Application of Computer Graphics

CS 566 User Interface Design
This course will be a hands-on, advanced class on human-computer interaction. It will cover major aspects of human-computer interaction topics in depth: computational models for humans in interaction; input/output technologies and techniques; designing human-computer interactions; UI SW development process; UI experimental design and testing processes. At the end of the course, students will be able to learn recent human-computer interaction solutions, and understand the recent research issues related to interactive computer graphics. Credit units: 3 ECTS Credit Units: 7.5.

CS 567 Computer Animation
This course will teach you about current techniques in computer animation. By the end of the course you should be able to: - use the basic animation techniques to produce motion for an animated sequence, - read and critically evaluate the current literature in computer animation. This course will introduce techniques such as keyframing, morphing, procedural methods, motion capture, and simulation. The course will also explore state-of-the-art research topics in computer animation such as dynamic simulation of flexible and rigid objects, automatically generated control systems, and evolution of behaviors. Credit units: 3 ECTS Credit Units: 7.5. Aut (T. Çapın)

CS 568 Advanced Topics in Computer Graphics
Advanced Topics in Computer Graphics, such as simulation of natural phenomena, are discussed. Students are expected to do research on a particular subject, design and implement software, and write a document in an official paper format, discussing the theories, design considerations, and implementation details of their projects.
A good prior knowledge of graphics such as formerly having taken CS 466 or CS 565 or CS 567 is expected.

**CS 569 Mobile and Ubiquitous Graphics**
Mobile graphics architectures. Mobile rendering and optimization techniques. Mobile user interaction design and implementation techniques. User-centered studies. Camera-based or sensor-based user interaction. Streaming mobile multimedia. Intelligent aware, proactive, and attentive environments, user perception, and modeling of the environment. Credit units: 3 ECTS Credit Units: 7.5.

**CS 570 Graph Theory**
Fundamental concepts and methods of graph theory and its applications in various areas of computing and the social and natural sciences. Topics include paths and searching, trees, networks, cycles, planarity, matching, and independence. Certain NP-complete graph problems and their approximation algorithms are discussed. Special topics such as graph drawing and graph coloring are covered. In addition, extremal graph theoretical problems are introduced. Previous knowledge of algorithms is required. Credit units: 3 ECTS Credit Units: 7.5.

**CS 571 Topics in Graph Theory and Algorithms**
A course on special topics in Graph Theory and Algorithms. Presents a detailed study of current research topics in these areas. Prior knowledge of fundamentals of algorithm design and analysis and graph theory required. Special permission from the instructor required. Credit units: 3 ECTS Credit Units: 7.5.

**CS 572 Theory of Computing**
Theory of computational complexity, intractability, unsolvability results. Classification of solvable problems according to their complexities. The class of NP-complete problems. Approximate, online, distributed algorithms, and some impossibility results. Credit units: 3 ECTS Credit Units: 7.5.

**CS 573 Algorithms I**

**CS 574 Varieties of Formal Semantics**

**CS 578 Natural Language Processing**
Brief history and overview of natural language processing. Computational morphology, Context-free grammars, unification and unification based grammars such as DCG, PATR, etc. Top-down/bottom-up parsing, chart parsing. Features and the lexicon, semantics, natural language generation. Natural language processing applications. CS 461 or equivalent, and CS 476 or equivalent. Credit units: 3 ECTS Credit Units: 7.5.

**CS 580 Advanced Finite State Techniques in Language Processing**
Overview of the theory of finite-state recognizers, transducers and regular languages. Regular relations as mapping between regular languages. Advanced finite state operators and calculus. Finite state applications in natural language processing: computational morphology, disambiguation and tagging, light parsing, information retrieval. Credit units: 3 ECTS Credit Units: 7.5. Prerequisite: Consent of the instructor.

**CS 584 Text Retrieval Database Design**
Principals of document retrieval; Controlled and free-text indexing. Boolean and best match retrieval systems; Probabilistic text retrieval; The nature of human interaction in retrieval systems; Evaluation of text retrieval systems; Knowledge discovery by text retrieval. Credit units: 3 ECTS Credit Units: 7.5.

**CS 586 Aspect-Oriented Software Development**
Aspect-oriented software development (AOSD) is an advanced technology for separation of concerns, which provides explicit concepts to modularize concerns that tend to be more systemic, crosscut a broader set of modules and as such cannot be easily specified in single modules. This course will provide an in-depth analysis of the basic concepts of AOSD and teach the state-of-the-art AOSD techniques. The important topics in this course are following: separations of concerns; software evolution problems; component-oriented software development; examples of crosscutting aspects; aspect-oriented programming using Aspect-J, Composition Filters, Hyper J, Cosmos and Demeter; aspect-oriented modeling; aspects at the requirements and architecture
design level; reflection and delegation techniques; design space modeling, composition anomalies. Credit units: 3 ECTS Credit Units: 7.5. Aut (B. Tekinerdoğan)

CS 587 Model-Driven Software Development
Software evolution problems, motivation for Model-Driven Software Development (MDSD), domain modeling, meta-modeling, model-driven architecture (MDA), model-driven engineering methods, model-to-text transformations, model-to-model transformations, domain specific languages, software factories, MDSD tools, Architecture-Driven Modernization (ADM), adaption strategies for setting up a model-driven approach, obstacles of MDSD. Credit units: 3 ECTS Credit Units: 7.5. Spr (B. Tekinerdoğan)

CS 590 Research Topics
This is a seminar course for graduate students. Faculty and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the supervisors and the students. Credit units: None ECTS Credit Units: 4. Aut (Staff) Spr (D. Davenport, U. Doğrusöz)

CS 599 Master's Thesis
Credit units: None ECTS Credit Units: 56. Aut (Staff) Spr (Staff)

CS 661 Philosophical Foundations of Artificial Intelligence
Action and agency; behaviorism; belief; computational models of mind; concepts; consciousness; content; context; Davidson and anomalous monism; Dreyfus's criticisms; folk psychology; functionalism; Goedel's theorem; intentionality; the Language of Thought; mental representation; naturalism; perception; possible worlds; practical reasoning; propositional attitudes; rationality; reasons and causes; reference; Searle and Chinese Room; the self; thought and language; Turing Test; Weak AI vs. Strong AI. Previous knowledge of artificial intelligence is required. Credit units: 3 ECTS Credit Units: 7.5.

CS 670 A Computer Science Introduction to Quantum Computing
This course is intended as an introduction to the fundamentals of quantum computing to computer scientists. We start by introducing the conceptual background and the mathematical framework of quantum states. Notions such as quantum evolution, measurement, entanglement, and quantum parallelism are introduced. This is followed by the treatment of popular applications of quantum computing: Shor's order finding/factoring algorithm, and Grover's database search algorithm, quantum teleportation and key exchange and quantum error correction. The course is self-contained and requires no prior exposure to the subject matter or advanced level physics. Credit units: 3 ECTS Credit Units: 7.5.

CS 681 Advance Topics in Computational Biology
This course is intended for graduate students and advanced undergraduates who would like to learn more about computational methods for solving fundamental problems related to molecular biology. We will talk about genome repeats, their discovery and evolutionary analysis, genome sequence analysis and motif discovery, in particular regulatory element, transcription factor binding site and non-coding RNA identification and search, topics in structural bioinformatics, in particular novel approaches to ncRNA structure prediction, alignment and interaction prediction, small molecule bioinformatics, in particular topics in functional identification, biomolecular networks, their topological properties, evolution and dynamics and other emerging topics in computational molecular biology. The computational techniques that will be covered are both combinatorial and probabilistic; we will also cover many novel machine learning techniques. Grading will be based on class participation, presentations and a final exam. We will have a number of Problem Based Learning sessions to help students improve their collaborative learning, team building and presentation skills. Credit units: 3 ECTS Credit Units: 7.5.

CS 682 Advanced Software Modularization and Composition
Due to the large size and dynamic and/or evolvable behavior, most modern software systems are extremely complex. Like any complex engineering activity, software design can be considered as a multiple set of problem solving activities. This requires effective design processes that can deal with the complexity of the problems. To manage complexity, it is necessary to separate the important concerns of software from each other. This requires advanced abstraction techniques that can capture the specifics of the concerns effectively. To create systems that satisfy its multiple requirements, it is necessary to compose the required concerns in effective and flexible ways. This necessitates advanced composition techniques. This course covers the following topics: The need for software composition; Software composition problems; Overview of software composition techniques; Definition of the term concern. Canonical modeling; Generic concerns; Domain specific concerns (for example concurrent systems, distributed systems and control systems); Various software composition approaches (language-based, transformation-based and framework/pattern-based); Event processing and aspect-oriented approaches; Comparison; Software composition challenges. Credit units: 3 ECTS Credit Units: 7.5. Spr (M. Akşit)

CS 690 Advanced Research Topics
This is a seminar course for Ph.D. students. Faculty and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the supervisors and the students. Credit units: None ECTS Credit Units: 4. Aut (Staff) Spr (D. Davenport, U. Doğrusöz)
CS 699  Ph.D. Dissertation
Credit units: None  ECTS Credit Units: 56.  Aut (Staff)  Spr (Staff)
DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

The Department of Electrical and Electronics Engineering offers programs that lead to B.S., M.S., and Ph.D. degrees.

UNDERGRADUATE PROGRAM

Electrical and Electronics Engineering Department has the vision to provide a program of the highest quality to produce leader engineers who can address the challenges of the new century and excel at an international level.

With this vision, the mission is to provide our graduates with the knowledge and skills needed for high quality engineering work as well as advanced engineering research and to equip them with a broad intellectual spectrum in order to prepare them for diverse and competitive career paths.

As individuals and as members of a team, our majors will have successful careers in the academic environment, industrial and government organizations. They will be able to use modern engineering techniques, skills and tools. They are trained to be sensitive to ethical, societal and environmental issues while conducting their professional work. They will be able to pursue advanced degrees in diverse fields and continue professional development. We prepare our graduates to be able to function in national/international/multi-cultural corporations and organizations.

To meet these objectives, our undergraduate program is built upon a strong analytical foundation in mathematics, science and engineering courses. Upon this foundation, basic electrical and electronics engineering background is established. In the fourth year, a variety of elective courses are offered in order to serve technical needs and objectives of students. The program is enriched by providing the student with courses in social sciences, humanities and economics to broaden their intellectual spectrum. In addition, our students are exposed to the professional life with the help of two summer practices. Also, a capstone design sequence is offered to students in the senior year to utilize their knowledge and skills in earlier course work and incorporate appropriate engineering standards and multiple realistic constraints.

**GRADUATE PROGRAMS**

Graduate programs focus on those fields which are heavily in demand worldwide. Current research areas are signal and image processing, electronics, optics, acoustics, electromagnetics, nanotechnology, robotics, telecommunications and networks, biomedical engineering, and system and control theory. The department emphasizes research with the support of excellent laboratories, computing facilities, and libraries. These facilities are continuously upgraded through various grants from national and international resources. Currently there are image processing, signal processing, optics, electronics, telecommunications, robotics, microwaves and antennas, nanophotonics, and biomedical laboratories.

**Master of Science**

**Admission:** All applicants are required to have a B.S. degree in electrical and electronics engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitimi Girış Sınavı - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the graduate admissions requirements).

**Degree Requirements:** In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The maximum duration of M.S. study is four semesters. However, this may be extended for up to two more semesters upon approval.

**Doctor of Philosophy**

**Admission:** All applicants are required to have a B.S. degree or a M.S. degree in electrical and electronics engineering or a related field of science and engineering. Applicants should take the
ALES (Akademik Personel ve Lisansüstü Eğitimi Giriş Sınavı - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: Each student's Ph.D. program is individually planned with a faculty advisor. In addition to successful completion of at least 24 credit units of course work above M.S. level (48 units of course work above B.S. level), a Ph.D. student is expected to pass a qualifying examination, and to prepare and defend a dissertation based on original research. The maximum duration for Ph.D. study is eight semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, these durations may be extended for up to four more semesters upon approval.

COURSE DESCRIPTIONS
UNDERGRADUATE COURSES

EEE 102 Introduction to Digital Circuit Design
Number systems and conversions, data representation, analysis and design of combinational logic circuits, Boolean algebra, logic gates, minimization techniques, HDL, sequential logic, flip-flops, registers, clocked circuits, clock generation, counters, shift registers, arithmetic circuits. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CS 101. Aut (E. Atalar) Spr (R. Öktem)

EEE 202 Circuit Theory

EEE 211 Analog Electronics
Fundamental analog electronics is studied in this course. The course is structured on a scenario of designing a HF radio transceiver. Topics in analog electronics in the frequency range of 100 Hz to 30 MHz range are covered. Block diagram concept, passive electronic components (R, L, C, diode, crystals, etc.) and integrated circuits, as active devices, are discussed. Filters, power supplies, audio amplifiers, speakers, microphones, radio amplifiers, oscillators, mixers, noise intermodulation, and antennas are progressively introduced towards the construction of the transceiver. Credit units: 4 ECTS Credit Units: 7, Prerequisite: PHYS 102. Aut (S. Olçum, T. Reyhan, M. A. Tugay) Spr (S. Olçum, M. A. Tugay)

EEE 212 Microprocessors
Introduction to microprocessors and microcontrollers. 8051 microcontroller. 8051 Assembly Language and C Programming. Input/output interfacing. Interrupt programming. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CS 223 or EEE 102. Aut (N. Şengöz) Spr (N. Akar, A. S. Ekinci, S. Gezici, J. Li)

EEE 299 Summer Training I
The minimum time for this practice in an organization is four weeks (20 working days). The main objective is to observe a company in an original setting and work on questions relevant to the company on the fundamental areas of Electronic Engineering. Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

EEE 313 Electronic Circuit Design

EEE 314 Digital Electronics

EEE 321 Signals and Systems
Basic discrete and continuous signals and systems, linear time-invariant systems, Fourier analysis for continuous and discrete signals and systems, filtering, sampling of continuous time signals, FIR and IIR filters, z-transform, elementary modulation techniques. Credit units: 4 ECTS Credit Units: 7, Prerequisite: EEE 202. Aut (H. Özaktas) Spr (S. Olçum)
EEE 342 Feedback Control Systems

EEE 351 Engineering Electromagnetics

EEE 352 Applied Electromagnetics
Review of static electric and magnetic fields. Dielectric and magnetic materials. Electrostatic and magnetostatic energy and forces. Magnetic circuits, transformers and electromagnetic energy conversion. Basic of electric machinery. Review of Maxwell's equations and plane waves. Reflection and transmission of plane waves at plane boundaries. Transmission lines, Smith chart and impedance matching. Waveguides and cavity resonators. Electromagnetic radiation and antennas. Antenna arrays, effective aperture, Friis transmission formula and radar equation. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE 351. Aut (Staff) Spr (L. Gürel)

EEE 391 Basics of Signals and Systems
Basics of discrete- and continuous-time signals and systems, sinusoids and complex exponentials, phasor representation, spectrum representation, sampling and aliasing, Shannon/Nyquist sampling theorem, finite impulse response (FIR) filters, frequency response of FIR filters, z-transforms, infinite impulse response (IIR) filters, continuous-time signals and systems, linearity, time-invariance, linearity time-invariant (LTI) systems, convolution, causality, stability, frequency response of systems, continuous-time Fourier transform. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE 351. Aut (I. Reyhan)

EEE 399 Summer Training II
The minimum time for this practice in an organization is four weeks (20 working days). The main objective is to observe a company in an original setting and work on questions relevant to the company on the fundamental areas of Electronic Engineering. Credit units: None ECTS Credit Units: None, Prerequisite: EEE 299. Aut (Staff) Spr (Staff)

EEE 405 Introduction to Numerical Analysis
This course will provide a comprehensive introduction to numerical analysis for students not specializing in computer science or numerical analysis. The emphasis will be on making a broad review, so that the students will be able to choose the appropriate methods and apply them to their problems of interest. The topics to be covered will include direct and iterative numerical methods for systems of linear equations, least squares problems, determination of eigenvalues and singular values, methods for nonlinear equations, optimization problems, interpolation, numerical integration and differentiation, and numerical solution of ordinary and partial differential equations. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 102. Spr (B. Barshan)

EEE 411 Telecommunication Electronics

EEE 412 Microwave Electronics
Microstrip and stripline techniques. Transistor and amplifier measurement techniques. Small and large signal high frequency amplifier design. Noise considerations in amplifiers. RF power amplifiers. Neutralization in RF amplifiers. Computer-aided design of amplifiers. Credit units: 4 ECTS Credit Units: 7, Prerequisite: EEE 313 and EEE 351. Spr (A. Atalar)

EEE 414 Introduction to CMOS VLSI Design
Introduction to CMOS circuits. MOS transistor theory, CMOS processing technology, CMOS circuit characterization. CMOS VLSI circuit design, clocking strategies, case studies. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE 313. Aut (A. Atalar)
EEE 415  Analog CMOS Integrated Circuits
Review of MOS device physics, single stage amplifiers, differential amplifiers, current mirrors, frequency re-
sponse of amplifiers, Miller effect, noise in amplifiers, feedback, operational amplifiers, slew rate, power supply
rejection, stability and frequency compensation, band gap references, switched capacitor circuits, nonlinearities,
linearization, offset, oscillators, phase locked loops. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE
313.

EEE 416  Principles of Applied Superconductivity
Principles of conductivity, superconductivity phenomenon, properties of superconductors, large scale applica-
tions. Type I and type II superconductors and magnetic properties, transport properties, electrodynamics of
superconductors, complex conductivity, principles of microscopic theories and applications, superconductor-
normal and superconductor-superconductor tunneling, Josephson Junctions and electrical characteristics, RF
effects in Josephson Junctions, principles of superconductive interference devices and applications. Credit units:
3 ECTS Credit Units: 6, Prerequisite: EEE 202 and EEE 351.

EEE 417  Theory and Modelling of Advanced Nanodevices
Advanced nanodevices course will concentrate on the state-of-the-art in nanoelectronic device concepts. At the
beginning of the course, a brief introduction to the physical principles needed to understand the devices to be
discussed will be given. Then, the “classical” nanoelectronic devices (HEMT, HBT, nanometer scale MOSFET,
and polymer/organic thin-film-transistors) will be discussed. These devices will be investigated through analytical
models and using two-dimensional device simulations. In the latter part of the course, we will concentrate on novel
concepts in molecular/organic devices (nanotubes, molecular-atomic junctions), nanobiodevices (ion-channels,
microarrays), spintronics, and data storage systems. Credit units: 3 ECTS Credit Units: 6.

EEE 418  Principles of Electronic Devices
unneling. Carrier concentrations and transport properties in semiconductors. Equilibrium states of PN junctions. Trans-
ient analysis of PN junction diodes. SS, MS, SIS junction characteristics and principles of special purpose diodes.
BJT equilibrium states and Ebers-Moll static model. Secondary effects and transient states in BJTs. Small signal
model. JFET characteristics and equilibrium states. Principles of metal-insulator-semiconductor transistors and
dc characteristics. Credit units: 4 ECTS Credit Units: 7, Prerequisite: EEE 202 and EEE 211 and PHYS 102.

EEE 424  Digital Signal Processing
Discrete-time signals and systems. Review of the z-transform. DFT and its compilation. Some other linear trans-
form. DCT, DST, Hartley, Walsh, Hadamard, etc. Digital filters (FIR and IIR) and filtering. Introduction to
multirate signal processing. Introduction to time-frequency representations. Inverse problems. Credit units: 4
ECTS Credit Units: 7, Prerequisite: EEE 321. Aut (E. Çetin) Spr (O. Uraloğlu)

EEE 428  Optics
Geometrical, scalar wave, and electromagnetic wave theories of light. Gaussian beam propagation. Signals and
systems concepts for analyzing optical systems (Fourier optics). Interference, diffraction, imaging, frequency
domain filtering, and holography. Polarization, propagation in anisotropic media, optical waveguides, fibers,
resonators, and their applications. Temporal and spatial coherence. Credit units: 4 ECTS Credit Units: 7,
Prerequisite: EEE 321 and EEE 351. Aut (O. Aytür)

EEE 429  Photonics
Photon theory of light with matter. Spontaneous emission, absorption, and stimulated emission. Principles
of laser amplifiers. Semi-conductor lasers, light emitting diodes, and light detectors. Electro-optics, accousto-
optics, and their applications. Introduction to nonlinear optics. Credit units: 3 ECTS Credit Units: 6, Prerequisite:
EEE 428. Spr (O. Aytür)

EEE 431  Telecommunications I
Time and frequency domain analysis of signals and systems. Amplitude modulation (AM); modulation and
demodulation of double, single and vestigial sideband AM signals. Frequency division multiplexing (FDM). Angle
modulation: modulation and demodulation of narrowband frequency modulation (FM); wideband FM; and phase
modulation (PM) signals. Superheterodyne receivers. Digital pulse modulation. Credit units: 3 ECTS Credit Units:
6, Prerequisite: EEE 321 and MATH 255. Aut (N. Akar, D. Aktaş) Spr (D. Aktaş)

EEE 432  Telecommunications II
Pulse modulation: modulation and demodulation of pulse-amplitude modulation (PAM); pulse code modulation
(PCM); differential pulse code modulation (DPCM); and delta modulation (DM) signals. Time division multiplexing
communication systems. Discussion of some of the basic technological aspects of telecommunication systems
such as satellite systems and data networks. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE 431. Spr
(S. Gezici)
EEE 434  Wireless Communications

EEE 436  Wireless Networking Technologies and Applications

EEE 442  Nonlinear Systems

EEE 443  Neural Networks

EEE 444  Robust Feedback Theory

EEE 445  Sampled Data Systems

EEE 447  Introduction to Robotics
Robot arm kinematics (forward and inverse kinematics); robot arm dynamics (equations of motion, equivalent formulations); planning of manipulator trajectories; range sensing (time-of-flight and triangulation systems, known target size, optical flow), proximity sensing (optical, magnetic, capacitive, inductive, ultrasonic), tactile (touch) sensing, force and torque sensing, dead reckoning (odometry and inertial sensing); mobile robots (localization, mapping, path planning, navigation, obstacle avoidance, object classification); multi-sensor data fusion. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 241 and PHYS 102. Aut (B. Barshan)

EEE 451  Microwave Engineering

EEE 452  Antenna Engineering

EEE 473  Medical Imaging
The course teaches the fundamentals and applications of four medical imaging techniques: magnetic resonance imaging, ultrasound, nuclear medicine X-ray computed tomography. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE 321. Spr (E. Atalar)

EEE 474  Foundations of Magnetic Resonance Imaging
Nuclear magnetic resonance signals were first detected in 1945. Since then, research on this amazing phenomenon continues at an increasing pace. In this course, the basic principles of magnetic resonance imaging (MRI), instrumentation, and various methods used in MRI are taught. Various research areas in this highly active field are discussed. Credit units: 3 ECTS Credit Units: 6, Prerequisite: EEE 321.
EEE 480 Advanced Optoelectronics: Innovative Design

EEE 481 Biomedical Signals and Instrumentation
Biophysics of cell membranes, models of neuron membrane potential, Hodgkin-Huxley equations for the action potential, propagation of the action potential, neurocommunication, simple neural networks which explain behavior, volume conductor fields, theory of Electrocardiography (ECG), ECG amplifiers and instrumentation ECG signal processing, EEG, EMG, and other bioelectric signals, model of the cardiovascular system, model of the respiratory system, model of the neurocardiac control system, transducers for bioelectric, cardiovascular and respiratory measurements, preconditng circuits and instrumentation techniques. Credit units: 3 ECTS Credit Units: 6. Prerequisite: EEE 313 and EEE 321 and EEE 351. Aut (Y. Z. Ider)

EEE 482 Electrical and Electronics Engineering Design I
A senior design project involving design and implementation of a complete system. Project includes different disciplines such as analog electronic design and digital electronic design employing FPGA, signal acquisition and processing, measurement techniques and telecommunication systems design. The project is divided into 2 or 3 sub projects, each of which is carried out by a member of the team. Project specifications are altered every year. Credit units: 3 ECTS Credit Units: 6. Prerequisite: EEE 212 and EEE 313 and EEE 321. Aut (Ö. Aktaş, Y. Z. Ider, H. Köyemen) Spr (Y. Z. Ider, H. Köyemen, T. Reyhan)

EEE 491 Electrical and Electronics Engineering Design II
A technical project emphasizing engineering design principles on a specific topic in any field of electrical engineering to be carried out by the senior student under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Aut (Staff) Spr (Staff)

EEE 495 Electrical and Electronics Engineering Design II
A technical project on electrical energy distribution system. Preparation of feasibility study for connection of new elements (such as loads, transmission lines, generation, interconnections) to the existing Turkish power grid considering technical rules, economical facts and environmental aspects. Grid simulation using PSSE software. Students are exposed to technical paradigms on comparison of the results, decision making for realization of the best grid performance. Topics include Basic concepts of power system. Components of a power system. Configuration and voltage levels of existing Turkish power system. Daily and yearly load curves, load duration curve of Turkish power system. Generation and load balance of Turkish power system. Power system analysis software to be used in the Project. Advanced studies for system design and testing. Online data acquisition system (SCADA) and on line system analysis programs. Laws and regulations published in order to establish electricity market in Turkey. Turkish electricity sector organization after Electricity Market Law no 4628. Credit units: 3 ECTS Credit Units: 6. Prerequisite: EEE 202. Aut (H. Köyemen, N. Yıldırım) Spr (A. Altıntaş, N. Yıldırım)

GRADUATE COURSES
EEE 501 Linear System Theory

EEE 505 Introduction to Numerical Analysis
This course will provide a comprehensive introduction to numerical analysis for students not specializing in computer science or numerical analysis. The emphasis will be on making a broad review, so that the students will be able to choose the appropriate methods and apply them to their problems of interest. The topics to be covered will include direct and iterative numerical methods for systems of linear equations, least squares problems, determination of eigenvalues and singular values, methods for nonlinear equations, optimization problems, interpolation, numerical integration and differentiation, and numerical solution of ordinary and partial differential equations. Recent methods in numerical analysis. Credit units: 3 ECTS Credit Units: 7.5.

EEE 511 Telecommunication Electronics
EEE 512 Microwave Electronics
Microstrip and stripline techniques. Transistor and amplifier measurement techniques. Small and large signal high frequency amplifier design. Noise considerations in amplifiers. RF power amplifiers. Neutralization in RF amplifiers. Computer-aided design of amplifiers. Recent topics in microwave electronics. Credit units: 3 ECTS
Credit Units: 7.5. Spr (A. Atalar)

EEE 514 Introduction to CMOS VLSI Design
Introduction to CMOS circuits, MOS transistor theory, CMOS processing technology, CMOS circuit characterization. CMOS VLSI circuit design, clocking strategies, case studies. Recent topics and developments in Introduction to CMOS VLSI Design. Credit units: 3 ECTS Credit Units: 7.5. Aut (A. Atalar)

EEE 515 Analog CMOS Integrated Circuits
Review of MOS device physics, single stage amplifiers, differential amplifiers, current mirrors, frequency response of amplifiers, Miller effect, noise in amplifiers, feedback, operational amplifiers, slew rate, power supply rejection, stability and frequency compensation, bandgap references, switched capacitor circuits, nonlinearities, linearization, offset, oscillators, phase locked loops. Recent topics in CMOS design. Credit units: 3 ECTS Credit Units: 7.5.

EEE 516 Principles of Applied Superconductivity
Principles of conductivity, superconductivity phenomenon, properties of superconductors, large scale applications. Type I and type II superconductors and magnetic properties, transport properties, electrodynamics of superconductors, complex conductivity, principles of microscopic theories and applications, superconductor-normal and superconductor-superconductor tunneling, Josephson Junctions and electrical characteristics, RF effects Josephson Junctions, principles of superconductor interference devices applications. Credit units: 3 ECTS Credit Units: 7.5.

EEE 517 Theory and Modelling of Advanced Nanodevices
Advanced nanodevices course will concentrate on the state-of-the-art in nanoelectronic device concepts. At the beginning of the course a brief introduction to the physical principles needed to understand the devices to be discussed will be given. Then, the "classical" nanoelectronic devices (HEMT, HBT, nanometer scale MOSFET, and polymer/organic thin-film transistors) will be discussed. These devices will be investigated through analytical models and using two-dimensional device simulations. In the latter part of the course, we will concentrate on novel concepts in molecular/organic devices (nanotubes, molecular-atomic junctions), nanobiodevices (ion-channels, microarrays), spintronics, and data storage systems. recent topics on nanodevices. Credit units: 3 ECTS Credit Units: 7.5.

EEE 518 Principles of Electronic Devices

EEE 520 Multirate Signal Processing and Wavelet Theory

EEE 521 Introduction to Radar Signal Processing

EEE 523 Speech Processing
Modeling of speech production, short-time Fourier analysis of speech, linear predictive coding (LPC), pitch estimation, code excited linear prediction (CELP) speech synthesis, introduction to speech recognition. Credit units: 3 ECTS Credit Units: 7.5.

EEE 524 Digital Signal Processing
Discrete-time signals and systems. Review of the z-transform. DFT and its computation. Some other linear transforms. DCT, DST, Hartley, Hilbert, Walsh, Hadamard, etc. Digital filters (FIR and IIR) and filtering. Introduction to multirate signal processing. Introduction to time-frequency representations. Inverse problems. Recent topics and developments in digital signal processing. Credit units: 3 ECTS Credit Units: 7.5.
EEE 525  Advanced Signal Processing
Signal spaces, signal representation and approximation, wavelets, signal modeling: AR, MA, ARMA models, adaptive filters, iterative and recursive methods in signal processing, spectrum estimation, beam forming and array processing, inverse problems. Credit units: 3 ECTS Credit Units: 7.5. Spr (O. Arõkan)

EEE 526  Digital Image Processing
Two-dimensional system fundamentals, image sampling and quantization, multi-dimensional transforms: DFT, Sine and Cosine, Hadamard, Walsh, KL transforms. Image models, image enhancement, image filtering and restoration, image analysis and computer vision. Image reconstruction from projections, image data compression. Inverse problems. Credit units: 3 ECTS Credit Units: 7.5.

EEE 527  Digital Coding of Waveforms
Sampling of band limited waveforms; characteristics of speech and image waveforms; quantization of discrete time signals. Pulse code modulation (PCM), differential PCM. Vector quantization, tree and Trellis coders. Subband coding, KL transform, DCT, DHT, OWHT, transform coding. Run-length coding of binary waveforms. Recent topics on digital coding. Credit units: 3 ECTS Credit Units: 7.5.

EEE 528  Optics
Geometrical, scalar wave and electromagnetic wave theories of light. Gaussian beam propagation. Signals and systems concepts for analyzing optical systems (Fourier optics). Interference, diffraction, imaging, frequency domain filtering, and holography. Polarization, propagation in anisotropic media, optical waveguides, fibers, resonators, and their applications. Temporal and spatial coherence. Recent topics and developments in optics. Credit units: 3 ECTS Credit Units: 7.5. Aut (O. Aytür)

EEE 529  Photonics

EEE 530  Digital Communications Theory

EEE 531  Quantum Communications and Information Processing I
Quantization of electromagnetic field. Quantum states of light; coherence; squeezing. Quantum noise. Quantum information and entropy. Classical and quantum measurement of photons; Mandel’s formula; teleportation. Entanglement in atomic systems; Bell’s inequalities; Zeilinger protocol. Entanglement and quantum cryptography. Credit units: 3 ECTS Credit Units: 7.5.

EEE 532  Quantum Communications and Information Processing II

EEE 533  Random Processes

EEE 534  Wireless Communications

EEE 535  Optical Networks
Introduction to optical networks; propagation of signals in optical fiber; components in optical networks; Wavelength-Division Multiplexing; Routing and wavelength assignment; algorithms for network design; virtual topology design; optical protection and restoration; optical burst and packet switching. Credit units: 3 ECTS Credit Units: 7.5.
EEE 536 Internet Architecture and Protocols

EEE 537 Wireless and Mobile Networks
This course introduces graduate students to fundamental techniques and protocols in first and second generation and emerging next generation wireless networks. Topics covered include fundamentals of radio propagation and channel models, transmission techniques for wireless communication, medium access control protocols, cellular network planning, mobility management, GSM system, mobile data networks (CDPD, SMS, GPRS), ad-hoc networks, wireless LANs (IEEE 802.11), wireless personal area networks (Bluetooth). Credit units: 3 ECTS Credit Units: 7.5.

EEE 538 Communication Network Analysis

EEE 539 Detection and Estimation Theory

EEE 542 Nonlinear Systems

EEE 543 Neural Networks

EEE 544 Robust Feedback Theory

EEE 545 Sampled Data Systems

EEE 547 Introduction to Robotics
Robot arm kinematics (forward and inverse kinematics); robot arm dynamics (equations of motion, equivalent formulations); planning of manipulator trajectories; range sensing (time-of-flight and triangulation systems, nown target size, optical flow), proximity sensing (optical, magnetic, capacitive, inductive, ultrasonic), tactile (touch) sensing, force and torque sensing, dead reckoning (odometry and inertial sensing); mobile robots (localization, mapping, path planning, navigation, obstacle avoidance, object classification); multi-sensor data fusion. Credit units: 3 ECTS Credit Units: 7.5. Aut (B. Barshan)

EEE 549 Nanoscale Fabrication Technologies for Semiconductors
This course will introduce the nanoscale fabrication methods used for semiconductor devices and VLSI technology. The following topics will be covered: review of Semiconductor Technology, Review of Semiconductor Device Physics, Outline of a nanoscale CMOS fabrication process, Crystal Growth, Semiconductor Manufacturing, Clean rooms and wafer cleaning, Nanolithography, Oxidation, Diffusion, Ion Implantation, Thin film deposition, Etching, and Backend technology. Credit units: 3 ECTS Credit Units: 7.5. Aut (E. Ozbay)

EEE 551 Microwave Engineering
EEE 552  **Antenna Engineering**  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Spr (V. B. Ertürk)**

EEE 554  **High Frequency Techniques in Electromagnetics**  
High frequency solutions to Maxwell's equations. Geometrical optics (GO), the geometrical theory of diffraction (GTD), the uniform geometrical theory of diffraction (UTD), equivalent current methods (ECM) and their application. Aperture integration, physical theory of diffraction (PTD). Curved surface diffraction.  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Aut (V. B. Ertürk)**

EEE 556  **Computational Methods in Electromagnetics**  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Aut (A. Altıntaş)**

EEE 557  **Acoustic Waves and Devices**  
Plane waves in fluids, acoustic wave equation; transient and steady-state reflection and transmission; lumped elements; refraction; strings, membranes, and cavities; ray acoustics; absorption and dispersion; source theory; vibrating piston, transducers; diffraction.  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Spr (H. Köymen)**

EEE 560  **Nanoeengineering and Nanodevices**  
Fundamentals of nanophotonics and nanoelectronics, with emphasis on applications in modern semiconductor devices based on quantum properties of light and matter. Topics include: Schrödinger's equation, elements of quantum mechanics (including quantum confined structures, simple periodic structures), tunneling, semiconductor fundamentals, review of Maxwell's equations, light propagation, and reflection from dielectrics, photonic crystals, advanced electronic devices.  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Spr (A. K. Okyay)**

EEE 573  **Medical Imaging**  
The course teaches the fundamentals and applications of four medical imaging techniques: magnetic resonance imaging, ultrasound, nuclear medicine and X-ray computed tomography.  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Spr (E. Atalar)**

EEE 574  **Foundations of Magnetic Resonance Imaging**  
Nuclear magnetic resonance signals were first detected in 1945. Since then, research on this amazing phenomenon continues at an increasing pace. In this course, the basic principles of magnetic resonance imaging (MRI), instrumentation, and various methods used in MRI are taught. Various research areas in this highly active field are discussed. Students are introduced to the literature on magnetic resonance imaging.  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Spr (H. Köymen)**

EEE 580  **Advanced Optoelectronics: Innovative Design**  
**Credit units:** 3  
**ECTS Credit Units:** 7.5

EEE 581  **Biomedical Signals and Instrumentation**  
Biophysics of cell membranes, models of neuron membrane potential, Hodgkin-Huxley equations for the action potential, propagation of the action potential, neurocommunication, simple neural networks which explain behavior, volume conductor fields, theory of Electrocardiography (ECG), ECG amplifiers and instrumentation, ECG signal processing, EEG, EMG, and other bioelectric signals, model of the cardiovascular system, model of the respiratory system, model of the neurocardiac control system, transducers for bioelectric, cardiovascular and respiratory measurements, preconditioning circuits and instrumentation techniques. Recent topics and developments in biomedical signals and instrumentation.  
**Credit units:** 3  
**ECTS Credit Units:** 7.5  
**Aut (Y. Z. İder)**

EEE 591  **Seminar**  
Seminars on recent topics in electrical and electronics engineering.  
**Credit units:** None  
**ECTS Credit Units:** 4  
**Aut (N. Akar)**

EEE 592  **Seminar**  
Seminars on recent topics in electrical and electronics engineering.  
**Credit units:** None  
**ECTS Credit Units:** 4  
**Aut (N. Akar)**

EEE 599  **Master's Thesis**  
**Credit units:** None  
**ECTS Credit Units:** 56  
**Aut (Staff) Spr (Staff)**

EEE 603  **Advanced Electromagnetic Theory I**  
EIE 604 Advanced Electromagnetic Theory II

Laura Gürel

EIE 621 Fundamentals of Three-Dimensional Television Systems

EIE 633 Coding Theory
This course covers error correction techniques used to protect digital information against noise. Topics covered include: (i) Algebraic coding techniques, including BCH and RS codes and the Berlekamp-Massey decoding algorithm. (ii) Convolutional codes and the Viterbi decoding algorithm. (iii) Turbo and LDPC codes and the message passing decoding algorithm. Credit units: 3 ECTS Credit Units: 7.5.

Okan Aktas

EIE 634 Information Theory

EIE 638 Current Topics in Computer and Communication Networks
A selection of topics are covered from network routing in IP networks, traffic engineering, QoS routing, congestion control, performance evaluation of computer and communication networks, optical communications, optical networks, wireless/wireline access network, ad hoc networks, wireless mesh networks, routing in multi-hop wireless networks. Credit units: 3 ECTS Credit Units: 7.5.

EIE 699 Ph.D. Dissertation
Credit units: None ECTS Credit Units: 56. Aut (Staff) Spr (Staff)
DEPARTMENT OF INDUSTRIAL ENGINEERING

The Department of Industrial Engineering offers B.S., M.S. and Ph.D. degrees in Industrial Engineering.

UNDERGRADUATE PROGRAM

Industrial Engineering (IE) is the scientific discipline that is concerned with how best to organize people, information, money, and materials to produce and distribute services and products efficiently. It draws upon specialized knowledge and skills in the mathematical, physical, and social sciences together with the principles and methods of engineering analysis and design to specify, predict, and evaluate the results to be obtained from such systems.

The mission of the Industrial Engineering Program is to foster a world-class academic environment for industrial engineering research and education in collaboration with industry. The department is committed to graduate competent industrial engineers equipped with the proficiency to adapt to technological and societal changes, and who are poised to excel in the field. The educational objectives are: 1) solve problems in their respective professional domains by applying the basic industrial engineering principles, including analytical and systems thinking, 2) play a significant role in the analysis, design, implementation and improvement of manufacturing and service systems, 3) foster intellectual maturity within their professional careers, 4) carry out scholarly research to contribute to the expansion of knowledge.

A necessary condition for the realization of this goal is to provide a solid preparation in foundations through courses in mathematics, computers, and basic sciences. The undergraduate IE curriculum is well supplemented in such foundational courses. To this is added a solid preparation in fundamentals of engineering through various specialized courses. Through the course work, the student acquires the necessary skills in modeling and analysis of engineering systems and learns to develop insightful approaches to problem solving. With a number of technical elective courses, students build up additional strength in engineering. To provide the student with a broad intellectual spectrum, electives in economics, social sciences and humanities are offered. Additional courses in communication, history, and professional ethics help develop self-confidence, articulation skills, and professional attitude in business and social environments. A special research course at the senior level allows higher achieving students to participate in a research project under the guidance of a faculty member. Design experience is incorporated in the courses as the student progresses through the program. A capstone two course sequence in system design in the fourth year gives the student the experience of how to integrate and use in creative ways the various modeling skills and analysis techniques he/she has acquired in designing real world manufacturing or service systems. This course sequence addresses real world problems supplied each year to the department by various companies in Turkey. These problems are studied and solved by students under the guidance of company officials and faculty members from the department. This hands-on experience gives students the unique opportunity to work on challenging problems and produce solutions of good quality within an imposed deadline.

ELECTIVE COURSES
A list of approved elective courses is announced at the beginning of each semester by the department. Humanities/Social Sciences electives are any approved courses offered by the Faculty of Humanities and Letters or the Faculty of Art, Design and Architecture or the Faculty of Economics, Administrative, and Social Sciences. Technical electives are any approved courses offered by the Faculty of Engineering, Faculty of Science, Faculty of Economics, Administrative, and Social Sciences or the Faculty of Business Administration.

GRADUATE PROGRAMS
The overall objective of the graduate program in the department is to conduct fundamental research in industrial engineering and operations research in accordance with scientific and technological developments, and to provide the students with a strong analytical basis for advanced theoretical work or for development of new approaches to applications. Current research areas are optimization theory/mathematical programming (linear and non-linear optimization, combinatorial and integer optimization, graph theory and network optimization, location theory, large scale optimization and parallel computing), stochastic systems (queueing models, maintenance, reliability and inventory control, modeling and optimization), simulation, statistics (estimation in stochastic systems, non-parametric analysis, Bayesian methods, analysis of censored and truncated data), manufacturing systems (advanced manufacturing technologies, robotics, flexible manufacturing systems, cellular manufacturing systems, machine scheduling, modeling and analysis of production systems), supply chain management, scheduling, production planning and control systems, operations research methods in finance.

Master of Science
Admission: All applicants are required to have a B.S. degree in industrial engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitim Girisimi - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The maximum duration of M.S. study is four semesters. However, this may be extended for up to two more semesters upon approval.

Doctor of Philosophy
Admission: All applicants are required to have a B.S. degree or a M.S. degree in industrial engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitim Girisimi - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: Each student's Ph.D. program is individually planned with a faculty advisor. In addition to successful completion of at least 24 credit units of course work above M.S. level (48 units of course work above B.S. level), the Ph.D. student is expected to pass a qualifying examination, and to prepare and defend a dissertation based on original research. The maximum duration for Ph.D. study is eight semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, these durations may be extended for up to four more semesters upon approval.
IE 102 A Process Outlook for Industrial Engineering
The main objective of the course is to familiarize the IE freshmen with the profession by introducing the basic notion of process. Industrial engineers visualize any systems as a collection of physical and abstract things, each of which are described by a process and these interrelated processes become crucial in the way system functions. Topics related to design of processes and process improvement, as well as notions of performance evaluation are covered and relations to decision making concepts are outlined. Throughout the course simple examples from daily life, as well as more complex examples from the service and manufacturing industries are used. Credit units: 3 ECTS Credit Units: 6, Spr (Ö. Öğuz, M. Ç. Pınar, B. Tansel, H. Yaman)

IE 202 Introduction to Modeling and Optimization
A general overview of operations research, with selected applications from engineering and management systems, and interdisciplinary areas. The methodology of mathematical modeling and its relation to problems in industrial, commercial, and public systems. Introduction to linear programming: the simplex method, duality, sensitivity analysis, and related topics. Network models and project scheduling. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 220 or MATH 225, Aut (B. Tansel) Spr (O. Öğuz, M. Ç. Pınar, B. Tansel, H. Yaman)

IE 262 Manufacturing Processes
Survey of machining, welding and finishing processes. Analysis of product and process design together with material selection for manufacturing. Special emphasis given to economics of metal cutting. Introduction to numerical control, automation and manufacturing systems. Laboratory use of traditional manufacturing processes, CNC programming, robotics, FMS cell controller, and related software. Credit units: 4 ECTS Credit Units: 6, Aut (F. Eren, Y. Karpat) Spr (F. Eren)

IE 271 Operations Analysis and Design
The course is designed to expose the student to traditional industrial engineering concepts and functions in the design, improvement, and analysis of man-machine systems in the context of a manufacturing and production environment. Topics covered are: industrial organization, work measurement procedures, motion and time study, and production and operation charts. Facilities planning and layout design with computer applications. Laboratory use of related software. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 262, Spr (O. Alp, Y. Karpat)

IE 299 Summer Training I
A minimum of four weeks (20 working days) for this practice is required in a manufacturing organization. The main objective is to observe a manufacturing company in an original setting. The details of the requirements and further information can be found at: http://www.ie.bilkent.edu.tr/ie299 Credit units: None ECTS Credit Units: None, Prerequisite: IE 271, Aut (F. Eren) Spr (F. Eren)

IE 303 Modeling and Methods in Optimization
Extension of linear programming to different methodologies including network models, integer programming and dynamic programming. Discrete optimization: local search heuristics. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 202, Aut (O. Erın-Karahan, H. Yaman) Spr (M. Ç. Pınar)

IE 324 Simulation
Use and misuse of simulation as a decision tool. The design and analysis of simulation. The use of simulation for estimation, and comparison of policies. Emphasis is primarily on applications in the areas of production management. Topics include modeling and programming simulations, random number and variate generation, statistical analysis of simulation output data. Credit units: 3 ECTS Credit Units: 7, Prerequisite: MATH 260 and (CS 112 or CS 102 or CS 114), Spr (K. Gökbayrak, C. Günes)

IE 325 Stochastic Models
Markov chains. Basic queueing models and applications. Stochastic inventory models: periodic and continuous review. Introduction to stochastic maintenance models. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 250, Aut (S. Dayanık, U. Güner) Spr (S. Dayanık)

IE 342 Engineering Economic Analysis
Analysis of engineering decisions; principles and methodology of comparing decision alternatives, such as various engineering designs, manufacturing equipment, or industrial projects. Dealing with uncertainty and risk; rational decision making when future outcomes are uncertain. Concepts of time value of money. Effects of depreciation, inflation, and taxation on economic decisions. Cost-benefit analysis of public projects. Replacement analysis. Introduction to financial engineering. Credit units: 3 ECTS Credit Units: 6, Aut (Staff) Spr (K. Gökbayrak, Ö. Öğuz)

IE 375 Production Planning
Design of production planning systems using mathematical, computational and other modern analytical techniques. Areas investigated will include forecasting; integrated production-inventory systems; deterministic inven-
tory and lot-sizing models; multi-echelon supply networks; machine scheduling and capacity planning. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 202. Aut (N. Erkip, A. Toptal) Spr (A. Toptal)**

### IE 376 Production Information Systems
The role of computers and data bases in production systems. Fundamental concepts in developing integrated production management systems including ERP, lean production and JIT with emphasis on inventory, lead time, work-order management, shop floor control and group technology based parts classification and coding systems. **Credit units: 3 ECTS Credit Units: 7, Prerequisite: CS 281 and IE 375. Spr (M. S. Aktürk)**

### IE 380 Quality Assurance and Reliability
Concepts and statistical methods employed in the assurance of product conformance to specification limits. Emphasis is planned to statistical process control, total quality management, acceptance sampling, process design and reliability. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 260. Spr (M. R. Taner)**

### IE 399 Summer Training II
This training can be held either in a manufacturing or service organization for a minimum of four weeks (20 consecutive working days). It is required to formulate an IE problem and offer a solution. The details of the requirements and further information can be found at: [http://www.ie.bilkent.edu.tr/~ie399](http://www.ie.bilkent.edu.tr/~ie399) **Credit units: None ECTS Credit Units: None, Prerequisite: IE 299. Aut (O. Alp) Spr (O. Alp)**

### IE 400 Principles of Engineering Management
This course is designed to introduce the engineering students to economic and management concepts. Topics will include economic concepts such as: cash flow, interest rates, rate of return, demand supply relations, product pricing, taxes, inflation, and related subjects; and management analysis such as management layers, network analysis, project management via CPM/PERT networks, optimization concepts, linear programming, and decision analysis. The course also includes use of related software. **Credit units: 3 ECTS Credit Units: 6. Aut (O. Ekin-Karas aşan, O. Oğuz)**

### IE 411 Mathematical Programming
Nonlinear optimization, convexity, Karush-Kuhn-Tucker conditions, line search, constrained optimization, quadratic, programming, large scale linear programming and decomposition, polyhedral analysis. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 202.**

### IE 412 Large Scale Optimization and Applications
The aim of this course is to present decomposition based methods to solve linear and integer programming problems of large sizes that we encounter in practice. The course covers methods like Lagrangian relaxation, cutting plane, Dantzig-Wolfe decomposition, column generation, and Benders's decomposition with applications in production planning, location, routing, network design, workforce scheduling, and capacity allocation. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 303.**

### IE 420 Heuristics in Optimization
Fundamental concepts of heuristics in solving various optimization problems with emphasis on meta-heuristics such as simulated annealing, tabu search, genetic algorithms, and ant algorithms. The basic material on heuristics will be covered in regular lectures. The students will be required to present a variety of application papers on different subjects related to the course. In addition, as a project assignment, the students will design a heuristic, write a code of an appropriate algorithm for the problem and evaluate its performance. **Credit units: 3 ECTS Credit Units: 6. Aut (İ. Sabuncuoğlu)**

### IE 421 Introduction to Stochastic Processes

### IE 422 Dynamic Programming
Deterministic and discrete-time stochastic dynamic programming; principle of optimality, forward and backward formulations, Markov decision processes under discounted and average payoff criteria, bandit problems, stochastic games. Applications: shortest path problems, resource allocation, stock options, inventory control, maintenance problems, knapsack and assignment problems. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 325.**

### IE 423 Forecasting Methods and Applications
Basic quantitative methods of forecasting are introduced. Time series decomposition, Regression methods, exponential smoothing and ARIMA models will be covered. Judgemental forecasting will also be briefly mentioned. Applications in Engineering will be emphasised. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 260.**

### IE 424 Introduction to the Concepts and Dynamics of Innovation
Introduction to care concepts. Evolution and economics of innovation within markets. Strategies for and commercialization of innovation. Organizational and social concepts; networks and clusters. Relations with en-
entrepreneurship, financial models, and venture capital. A number of case studies will be examined. Credit units: 3 ECTS Credit Units: 6.

IE 428 Project Scheduling
Introduction to project network analysis with CPM and PERT. Time-cost trade-off and learning curve analysis in relation to makespan minimization. Mathematical programming models for resource allocation and scheduling under resource constraints. Financial aspects including cash flow management. Exact and heuristic methods for solving the scheduling and resource management problems. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 202. Aut (O. Öğuz)

IE 434 Stochastic Models in Operations Research
Review of conditional probability; Markov chains, example models, Markov Chains with rewards; Markov decision processes, solution algorithms; an introduction to renewal theory and applications; queuing models, example applications in service systems; reliability models; other topics. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 325.

IE 440 Introduction to Financial Engineering
Financial markets (bonds, stocks, futures, forwards, options, interest rates and their term structures), models of security prices (Brownian motion, geometric Brownian motions, Ornstein-Uhlenbeck processes, Cox-Ross-Rubinstein binomial model, Merton-Black-Scholes model), pricing and hedging financial derivatives (Ito’s rule, stochastic integration, diffusion processes, probabilistic solutions of PDEs, no-arbitrage pricing in a complete market of futures, forwards, European and American type options, pricing in incomplete markets), Hedging with futures and options, bond hedging, numerical methods (pricing using trees, Monte-Carlo simulations, finite-difference methods), mean-variance analysis of portfolios, value at risk, optimal consumption and portfolio strategies (formulations and solutions of appropriate dynamic programming models and Hamilton-Jacobi-Bellman equations). Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 290. Spr (S. Dayanık)

IE 441 Cost Analysis and Control
Fundamentals of managerial cost accounting practices applied to manufacturing and service organizations. Cost terms, cost-volume-profit analysis, job costing, activity based costing as bases of accounting systems. Master budgets and flexible budgets for planning and control. Determination of cost behaviour and pricing decisions, cost allocation and revenues for profitability analysis. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 342. Aut (F. Eren) Spr (F. Eren)

IE 443 Multi-Objective Decision Analysis
This course is designed to cover quantitative decision analysis. The course begins with the structuring of objectives and value hierarchies, and determination of value functions. After introducing consistent characterization of preferences under certainty, it proceeds with value analysis under uncertainty including expected value analysis, utility theory, multi-attribute risk aversion, certainty equivalent calculations and the analytical hierarchy process. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 342.

IE 444 Operations Research in Finance
This course aims to introduce industrial engineering students to mainstream optimization tools and models used in modern finance. It will begin with a review of pertinent optimization technology, and develop from scratch basic financial optimization models. GAMS and XPRESS-MP modeling and optimization software systems will be used in homework assignments. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 202. Aut (M. Ç. Pınar)

IE 446 Introduction to Continuous Time Finance
This course aims to introduce students with no or little background on finance to the rudiments of continuous time financial option evaluation. The treatment is at an elementary level. The topics covered are Brownian Motion, Geometric Brownian Motion with Drift, Ito’s Lemma, Black-Scholes Analysis, Hedging in Continuous Time, American options, Portfolio Optimization in Continuous Time, Merton’s Problem, and Monte Carlo Methods if time permits. Credit units: 3 ECTS Credit Units: None. Prerequisite: IE 325 and IE 440.

IE 447 Decision Analysis with Engineering Applications
In general, this course aims to cover traditional decision and risk analysis methodologies as well as game theory. The goal is to introduce these topics and provide examples that pertain to engineering decisions. In this regard, the first part of the course covers decision trees, tornado diagrams and influence diagrams. we also focus on single attribute utility models and the measures of risk. We cover some applications in insurance, warranty and security design problems. The second part of the course includes introduction to Bayesian decision making, and game theory. Particular examples will be on applications in service sector and supply-chain analysis. Credit units: 3 ECTS Credit Units: None. Spr (Staff)

IE 460 Quantitative Models in Supply Chain Management
The purpose of this course is to introduce the quantitative models to analyze buyer-vendor relations across different functions and stages of supply chain. The topics covered include quantity and transportation discounts, multi-stage inventory and production systems, decentralized and centralized modeling approaches, strategic games in supply chains, and contracting. Credit units: 3 ECTS Credit Units: 6, Prerequisite: IE 375. Aut (A. Topal)
IE 461  Supply Chain Management  
A supply chain consists of all stages involved, directly and indirectly, in fulfilling a customer request. Supply chain management deals with the management of materials, information and financial flows in the supply chain to maximize total profitability. The topics that are covered in this course include review of inventory management and risk pooling, logistics network configuration, the value of information in supply chains, distribution strategies and strategic alliances, supply chain contracts, international issues in supply chain management, coordinated product and supply chain design, information technology for supply chain management.  
Credit units: 3 ECTS  
Credit Units: 6, Prerequisite: IE 460.

IE 462  Introduction to Advanced Manufacturing Technologies  
A study of the present impact of computers and automation on manufacturing, product design technologies. Concepts and principles of computer aided design and process planning; automated production lines; group technology; cellular manufacturing; flexible manufacturing systems; automated material handling. Introduction to robotics technology, work cell design and applications.  
Credit units: 3 ECTS  
Credit Units: 6.

IE 463  Operations Scheduling  
This course is designed to provide an introduction to the area of scheduling. Selected problems from a variety of manufacturing and service applications including job shop problems, assembly systems, reservation systems, timetabling problems, and workforce and crew scheduling will be presented. Exact and approximate techniques and approaches to modeling and solving these problems will be discussed. A brief overview of the current trends and future directions will be included.  
Credit units: 3 ECTS  
Credit Units: 6, Prerequisite: IE 303 and IE 375. Spr (M. R. Taner)

IE 464  Inventory Planning Models  
This course focuses on various inventory control problems in service and manufacturing environments. Single-item and multi-item inventory models are introduced. Applicability of such models is emphasized. Topics will include: extensions of economic-order-quantity model, power-of-two type policies, coordinated replenishment, economic lot scheduling problem, (r, Q) policies, (s, S) policies, models with lost sales, exchange curves, multi-period problems. Modeling, as well as computational issues are discussed.  
Credit units: 3 ECTS  
Credit Units: 6, Prerequisite: IE 303 and IE 375. Spr (O. Alp)

IE 465  Modeling and Analysis of Production Systems  
This course covers fundamental concepts for describing and analyzing production systems dynamics. Several performance measures of production systems, such as cycle time, throughput, WIP, fill rate, utilization etc. are analyzed through several quantitative tools. The influence of variability on such systems and the causes and types of variability are analyzed in details. Analysis and comparison of push and pull production systems, including a comparison of CONWIP, Kanban, and MRP approaches, are also covered.  
Credit units: 3 ECTS  
Credit Units: 6.

IE 467  Pricing and Revenue Optimization  
Pricing and revenue optimization focuses on how a firm should set and update pricing and product availability decisions in order to maximize its profitability. This course introduces the theory, concepts and applications of pricing and revenue optimization. The topics include a review of price-demand functions, price differentiation, pricing under constrained supply, revenue management, capacity allocation, multi-item revenue management, overbooking and dynamic pricing and markdown management.  
Credit units: 3 ECTS  
Credit Units: 6, Prerequisite: IE 202 and MATH 260. Spr (A. Şen)

IE 474  Facility Layout and Location  
This course addresses issues that arise in facilities planning. Main issues addressed include optimally choosing the locations of single or multiple facilities and layout design. The focus is on analytical methods for solving such problems.  
Credit units: 3 ECTS  
Credit Units: 6, Prerequisite: IE 202.

IE 477  Production Systems Design-Synthesis  
This course is a project based synthesis of the techniques and methodologies of operations research and industrial engineering covered in other courses. The projects are concerned with the design of complex systems and may involve modeling and analysis of manufacturing and service systems based on demand, resource, capability, location, computer integration, and information requirements. In addition, this course aims to improve communication, organizational, and group skills of the students, and emphasizes the role of Internet and Web in continuing professional development and technical collaboration.  
Credit units: 3 ECTS  
Credit Units: 6, Prerequisite: IE 324 and IE 325 and IE 376. Aut (I. Sabuncuoğlu, B. Yetiş)
IE 478  Production Systems Design-Practice
The purpose of this interactive course is to apply the methods, studied in earlier courses and synthesized in the prerequisite course IE 477, to solve real world problems. The problems are jointly determined by the department and representatives from the industry. They may include: Design of production information systems, inventory problems, capacity expansion and bottleneck identification, schedule operations, distribution requirements planning, etc. Students are required to carry out a semester long industrial project in teams. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: IE 477. Spr (I. Sabuncuoglu, B. Yetis)

IE 479  Distribution Logistics
This course focuses on the distribution of goods and services from their points of creation to their customers. Designing the logistics network with main emphasis on location models will constitute the first part of the course. In the second part of the course planning and controlling of freight-transportation will be practiced. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: IE 477. Spr (B. Yetis)

IE 482  Humanitarian Logistics
This course will provide an introduction to some important problems with societal impact and explore how OR/MS tools can be used in addressing these problems. Some of these problems are related to meeting the ongoing needs of the society, such as ambulance assignment and routing, location of public service facilities (e.g., fire stations, community health centers), delivery of meals to senior citizens, delivery of blood to hospitals, and public transportation. In addition to these ongoing needs, OR/MS tools can also have a tremendous impact in preparing for, responding to, and recovering from disasters. The aim of this course is to provide students with an understanding of humanitarian operations by introducing the context in which they take place, the organizations (UN Humanitarian agencies, NGOs, public and private sector), and the activities and challenges in the supply chain for the procurement, delivery, warehousing and distribution of the aid. Credit units: 3 ECTS. Credit Units: None. Spr (B. Yetis)

IE 490  Introduction to Research in IE and OR
The purpose of this course is to introduce students to research techniques in industrial engineering and operations research. Each student is assigned a research topic that is suitable to his/her academic background and interests. Under the supervision of a departmental faculty member, the student will tackle the problem and try to find a satisfactory solution. Written and oral presentations of results are required. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: Consent of the Department. Aut (N. Erkip) Spr (N. Erkip)

IE 491  Introduction to Research in IE and OR II
This course is a continuation of IE 490 Introduction to Research in IE and OR. It is designed for students who want to continue to work on the same problem to get deeper and extended results. The work will continue under the supervision of the same faculty member who has previously supervised the student’s work in IE 490. The course will be offered in the spring semester and is open only to students who have completed the required work in IE 490 and who have obtained the approval of the supervising faculty member for continuation of the work. Credit units: 3 ECTS. Credit Units: 6. Prerequisite: IE 490. Aut (N. Erkip) Spr (N. Erkip)

IE 492  Applications of IE in Bioinformatics
Introductory research in bioinformatics with emphasis on the use and development of algorithms and tools from the broad field of Industrial Engineering on specific biological applications. Examples include design and analysis of experiments for microarrays; dynamic programming and hidden Markov models for sequence alignment; and data mining for gene expression, DNA and protein data. Credit units: 3 ECTS. Credit Units: None.

IE 496  Seminar in Production Systems
A series of seminars on issues of current interest to the practice of industrial engineering. Credit units: None. ECTS Credit Units: 4. Prerequisite: Senior standing in IE. Spr (I. Sabuncuoglu)

GRADUATE COURSES

IE 500  Mathematics of Operations Research
Introduction to methods of proof, sets and functions, metric spaces, functions on metric spaces, differential and integral equations, fundamentals of linear algebra. Credit units: 3 ECTS. Credit Units: 7.5. Aut (Staff)

IE 505  Mathematical Programming
The course aims to give a comprehensive introduction to mathematical programming techniques for graduate students who are expected to become intelligent users of modern optimization tools and software. Subjects covered include linear and network programming, convexity, Karush-Kuhn-Tucker conditions in nonlinear programming and quadratic programming. The emphasis is on modeling and solution of problems of relevance to engineers rather than on theory. The course involves programming exercises using high level modeling languages GAMS and/or AMPL. Credit units: 3 ECTS. Credit Units: 7.5. Aut (M. Ç. Pınar)
IE 513  **Linear Programming**

IE 514  **Network Flows**

IE 515  **Convex Analysis**
Convex sets in IR and their basic properties, separation of convex sets, properties of convex polyhedra (and polynomials). Convex functions, continuity and differentiability properties, subdifferentiability, duality of convex sets, Fenchel dual of a convex function, bipolar theorem. Convex programming, dual convex programs, perturbation and lagrangian approaches to duality, the connection between the two approaches, saddle point theorems. Applications of convex analysis: inequalities, interior-point methods, approximation, merit functions. **Credit units: 3 ECTS Credit Units: 7.5.**

IE 516  **Discrete Optimization**
The models and methods of integer programming. Structure of integer programs, pure integer and mixed integer programming problems. Zero-one programming, branch and bound methods. Cutting plane and polyhedral approximation. Lagrangean relaxation. Applications to combinatorial optimization, heuristic methods and dynamic programming. Applications in resource allocation, facility location, scheduling, capital budgeting. Computer implementation. **Credit units: 3 ECTS Credit Units: 7.5. Spr (H. Yaman)**

IE 517  **Approximation Algorithms**
The course covers combinatorial and mathematical programming techniques to derive approximation algorithms for np-hard optimization problems. Possible topics include greedy algorithms for vertex/cover, approximation schemes via dynamic programming, rounding LP relaxations of integer programs, and semi definite relaxations. The course is complemented by the implementation of selected algorithms using a high-level language such as matlab. **Credit units: 3 ECTS Credit Units: 7.5. Aut (Staff)**

IE 520  **Stochastic Calculus**

IE 521  **Stochastic Processes**

IE 522  **Queueing Systems**

IE 523  **Probabilistic Analysis**
IE 524 Simulation
The design and analysis of simulations. The use of simulation for estimation, comparison of policies, and optimization. Variance estimation techniques including the regenerative methods, time series methods, and batch means. Variance reduction. Statistical analysis of output of simulations, applications to modeling stochastic systems in computer science, engineering and operations research. Credit units: 3 ECTS Credit Units: 7.5.

IE 525 Advanced Statistics

IE 530 Logistics Modeling and Optimization
Logistics involve making goods and services available at the right points, at the right times and in the right quantities. It is a wide ranging human activity that gives rise to a host problems including distribution, location, transportation, scheduling and routing. The course gives various mathematical techniques to model and optimize logistical systems. Credit units: 3 ECTS Credit Units: 7.5.

IE 534 Stochastic Models in Operations Research
Review of conditional probability: Markov chains, example models, Markov Chains with rewards; Markov decision processes, solution algorithms; an introduction to renewal theory and applications; queueing models, example applications in service systems; reliability models; other topics. Credit units: 3 ECTS Credit Units: 6.

IE 540 Introduction to Financial Engineering
Financial markets (bonds, stocks, futures, forwards, options, interest rates and their term structures), models of security prices (Brownian motion, geometric Brownian motions, Ornstein-Uhlenbeck processes, Cox-Ross-Rubinstein binomial model, Merton-Black-Scholes model), pricing and hedging financial derivatives (Ito’s rule, stochastic integration, diffusion processes, probabilistic solutions of PDEs, no-arbitrage pricing in a complete market of futures, forwards, European and American type options, pricing in incomplete markets), Hedging with futures and options, bond hedging, numerical methods (pricing using trees, Monte-Carlo simulations, finite-difference methods), mean-variance analysis of portfolios, value at risk, optimal consumption and portfolio strategies (formulations and solutions of appropriate dynamic programming models and Hamilton-Jacobi-Bellman equations). Credit units: 3 ECTS Credit Units: 7.5. Spr (S. Dayanik)

IE 542 Investment Decision Modeling
The meaning of investment process in general and for creating systems to produce products and services in particular. Classification of investment decision problems with respect to context and the precision of informational support, i.e. certainty, risk and uncertainty. A general mathematical structure for modeling for investment decisions. Deterministic, stochastic, combinatorial, sequential and dynamic investment decision models, and optimization techniques used for their solutions. A mathematical basis for deriving suitable value measures for evaluating investment alternatives and derivation of such measures. Types of risk taking as the fundamental dimension of a class of investment decision making situations. Credit units: 3 ECTS Credit Units: 7.5.

IE 546 Introduction to Continuous time Finance
This course aims to introduce students with no or little background on finance to the rudiments of continuous time financial option evaluation. The treatment is at an elementary level. The topics covered are Brownian Motion, Geometric Brownian Motion with Drift, Ito’s Lemma, Black-Scholes Analysis, Hedging in Continuous Time, American options, Portfolio Optimization in Continuous Time, Merton’s Problem, and Monte Carlo Methods if time permits. Credit units: 3 ECTS Credit Units: None.

IE 561 Manufacturing Systems
Application of systems analysis and industrial engineering to the design, planning, and analysis of manufacturing systems. Characteristics of flexible manufacturing systems (FMS). Elements of systems and their interaction with each other. Consideration of technical and economic aspects of equipment and process design. Integration aspects of the elements of manufacturing systems. Credit units: 3 ECTS Credit Units: 7.5.

IE 563 Game Theory With Applications in Operations Management
Introduction to Game Theory: Pre-commitment, the normal form, the extensive form; static games with complete information: pure strategy Nash equilibrium; mixed strategy Nash equilibrium; dynamic games with complete information: sub-game perfect equilibrium; games with incomplete information: bayesian Nash equilibrium, perfect bayesian Nash equilibrium; applications: oligopoly, supply chain management, queuing, competitive location. Credit units: 3 ECTS Credit Units: 7.5, Prerequisite: Familiarity with probability and optimization and instructor’s permission.

IE 564 Inventory Management
This course focuses on various inventory control problems in service and manufacturing environments. First, deterministic models and their extensions are introduced. Single and multi item problems, quantity discount
case, effect of inflation, classification of inventories are discussed. Second part of the course focuses on finite and infinite horizon problems with stochastic demand. Models for periodic and continuous review policies, coordinated replenishment problems, perishable items are examined. Finally, multi echelon inventory problems in supply chain context are introduced. Credit units: 3 ECTS Credit Units: 7.5.

IE 566  
Supply Chain Management
Supply chain management deals with the management of materials, information and financial flows in a network logistics consisting of suppliers, manufacturers, distributors, and customers. The topics that are covered in this course include network configuration of the supply chain using contracts and other mechanisms, distribution strategies for the supply chain and product design for supply chain efficiency. Credit units: 3 ECTS Credit Units: 7.5.

IE 571  
Analytical Models for Supply Chain Management
Theoretical and practical issues in the design and management of the supply chain. Logistic network configuration, risk pooling and multi-echelon inventory systems, value of information and bullwhip effect in supply chains, coordination of the supply chain using contracts, distribution strategies and strategic alliances for the supply chain and product design for supply chain efficiency. Credit units: 3 ECTS Credit Units: 7.5. Spring (A. Şen)

IE 572  
Production Planning Systems Design
Theoretical and practical issues in the design of systems for planning and control of production activity. Critical examination of tools and techniques of industrial engineering and operations research applicable to integrated manufacturing management. Credit units: 3 ECTS Credit Units: 7.5.

IE 573  
Theory of Machine Scheduling

IE 574  
Location and Layout Optimization
Single or multiple facilities location in the plane with minimum or minimax criteria. Discrete or continuous layout optimization. Single facility network location. Applications in public service, production, distribution, warehousing, emergency service, flexible manufacturing. Credit units: 3 ECTS Credit Units: 7.5.

IE 575  
Network Design
This course deals with network design problems arising in telecommunications, transportation and supply chains. It gives an overview of optimization models and solution techniques for basic problems. It covers multicommodity flows, common topologies like cliques, paths, trees and rings, fixed charge network design problems, capacity planning and quality issues. Credit units: 3 ECTS Credit Units: 7.5.

IE 576  
Facility Location on Networks
Applications, modeling, theory and algorithms for optimal location of service facilities on distribution, transportation, warehousing, emergency service, flexible manufacturing. Credit units: 3 ECTS Credit Units: 7.5.

IE 577  
Selected Topics in Locational Research
The primary emphasis of this course is to involve interest in various topics in locational research. Topics covered in the course depend on the research interests of the instructor and may include some well-known location problems as well as lesser known but more contemporary topics. The course will focus both on modeling aspects and solution algorithms. In each topic the primary emphasis will be a research frontiers and directions. Credit units: 3 ECTS Credit Units: 7.5. Autumn (B. Tansel)

IE 578  
Design and Analysis of Experiments
Basic design for scientific and industrial experiments: single-factor, and multiple-factor, completely randomized designs, randomized blocks, incomplete blocks, orthogonal contrasts, general regression approach, Latin squares, quantitative factors, use of statistical packages. Credit units: 3 ECTS Credit Units: 7.5.

IE 579  
Special Topics in Mathematical Programming
This course is designed for advanced master's students and PhD Students with a strong foundation in linear algebra and advanced calculus who wish to pursue research in mathematical programming. Varying topics in linear and nonlinear optimization, discrete optimization, and combinatorial optimization may be offered. Credit units: 3 ECTS Credit Units: 7.5.

IE 580  
Research Topics in IE and OR
The purpose of this series of seminars is to illustrate and discuss research interests of faculty members and research groups within the Department of Industrial Engineering. A faculty member, or guest will present his/her research interests and discuss the current status and future research areas in that field. Credit units: None ECTS Credit Units: 4. Autumn (M. Ç. Pınar) Spring (O. Oğuz)
IE 599  Master's Thesis  
Credit units: None  ECTS Credit Units: 56. Aut (Staff) Spr (Staff)

IE 613  Advanced Linear Programming  

IE 614  Nonlinear Programming  

IE 660  Performance Analysis of Manufacturing Systems  
The design and performance issues in production, transfer lines, production/inventory systems, network of production/inventory systems, and flexible manufacturing systems. Phase type processing times, failures and service completion processes. Buffering and blocking issues. Decomposition methods. Control policies in pure inventory and production/inventory systems.  Credit units: 3  ECTS Credit Units: 7.5.

IE 690  Advanced Research Topics in IExOR  
The purpose of this series of seminars is to illustrate and discuss research interests of faculty members and research groups within the Department of Industrial Engineering. A faculty member, or guest will present his/her research interests and discuss the current status and future research areas in that field.  Credit units: None  ECTS Credit Units: 4. Aut (M. Ç. Pınar) Spr (O. Öğuz)

IE 691  Summer Research  
Students starting to direct Ph.D. program are required to fulfill the summer research requirement in the first summer after enrollment. Students individually work on research topic under the supervision of a faculty member. the results of the study are to be compiled as a research report. the report is evaluated on the basis of novelty and contribution by a committee of three members composed of the coordinator, the supervisor of the research and a third faculty determined by the coordinator.  Credit units: None  ECTS Credit Units: None.

IE 699  Ph.D. Dissertation  
Credit units: None  ECTS Credit Units: 56. Aut (Staff) Spr (Staff)
DEPARTMENT OF MECHANICAL ENGINEERING

A. Akay (Chair), M. Çakmakçı, B. Çetin, S. Filiz, İ. Temizer.

The Mechanical Engineering Department offers programs that lead to B.S., M.S., and Ph.D. degrees.

The mission of our department is to provide our students with a rich environment for learning by providing them a broad-based education in the scientific and applied foundations of engineering and a solid foundation in problem solving, design and communication skills that they will need to pursue and meet the challenges of their individual career goals.

The ME program provides the students a strong foundation in engineering sciences through thermo-fluids, mechanics and materials and dynamics and control tracks, which emphasize students’ analytical abilities. These are combined with courses on design and manufacturing that address from component to system-level design and emphasize the creativity of students.

The mission of the ME program is to prepare engineers for the global environment in which they can make responsible decisions while serving societal needs. The program emphasizes communication skills, knowledge of humanities, and ability to work in teams. The program also recognizes the significant role mechanical engineering can have in life sciences and thus the need for familiarity with molecular biology. A mandatory physics course that includes quantum mechanics further fosters interdisciplinary interaction beyond traditional boundaries.

The Department envisions future engineers as life-long learners. The ME program offers numerous electives to respond to the different needs and interests of our students along this vision in the leap to 21st century engineering.

### GRADUATE PROGRAMS

The Department of Mechanical Engineering offers M.S. and Ph.D. degree programs with the possibility of specialization in different areas of research in Mechanical Engineering.
Master of Science

Admission: All applicants are required to have a B.S. degree in mechanical engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitimi Giriş Sınavı - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The maximum duration of M.S. study is four semesters. However, this may be extended for up to two more semesters upon approval.

Doctor of Philosophy

Admission: All applicants are required to have a B.S. degree or a M.S. degree in mechanical engineering or a related field of science and engineering. Applicants should take the ALES (Akademik Personel ve Lisansüstü Eğitimi Giriş Sınavı - Academic Personnel and Postgraduate Education Entrance Examination) and satisfy the announced minimum requirements. Applicants who are not Turkish citizens and Turkish citizen applicants who are residents of a foreign country may take GRE instead of ALES. All non-native speakers of English are required to submit a proof of satisfactory knowledge of English. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the graduate admissions requirements).

Degree Requirements: Each student’s Ph.D. program is individually planned with a faculty advisor. In addition to successful completion of at least 24 credit units of course work above M.S. level (48 units of course work above B.S. level), the Ph.D. student is expected to pass a qualifying examination, and to prepare and defend a dissertation based on original research. The maximum duration for Ph.D. study is eight semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, these durations may be extended for up to four more semesters upon approval.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

ME 101 Fundamentals of Mechanical Engineering
Introduction to Mechanical Engineering. Analysis of real engineering problems using mechanical engineering principles. Credit units: 1 ECTS Credit Units: 2. Aut (A. Akay, Ç. Temizer)

ME 102 Introduction to Systems Engineering
Treatment of engineering problems from a systems perspective and a unified application of mechanical engineering principles, introduction to and use of CAD systems and group projects. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ME 101 and PHYS 105. Spr (M. Çakmakçı, S. Filiz)

ME 211 Thermo-Fluids Engineering I
Unified development of the principles of thermodynamics, fluid mechanics and heat transfer and their applications with examples. Emphasis is on the first and second laws of thermodynamics. Heat, work, entropy and irreversibility are covered. Credit units: 4 ECTS Credit Units: 7. Prerequisite: MATH 102 and ME 102 and PHYS 105. Aut (Staff)

ME 212 Thermo-Fluids Engineering II
Emphasizes hydostatics and fluid mechanics, and applied to control volume, mass, momentum, and energy conservation, Euler and Bernoulli equations are developed, and topics such as internal and external flows, viscous flow, laminar flow systems, turbulence are covered. Thermodynamics, fluid mechanics and heat transfer principles are applied in a unified manner to analysis and design of systems. Heat transfer in laminar and turbulent flows and heat exchangers are also covered. Credit units: 4 ECTS Credit Units: 7. Prerequisite: ME 211, Corequisite: MATH 240. Spr (Staff)
ME 231  Mechanics and Materials I  
Sternly indeterminate problems; two and three dimensional problems. Analysis of bending, twisting, shear and axial combined stresses. Introduction to energy methods. Credit units: 4 ECTS Credit Units: 7, Prerequisite: MATH 102 and ME 102 and PHYS 105. Aut (S. Filiz)

ME 232  Mechanics and Materials II  
Use of engineering materials in design, analysis of combined loads and stresses and failure theories. Fatigue, impact and plastic deformation are covered. Credit units: 4 ECTS Credit Units: 6, Prerequisite: MATH 220 and ME 231, Corequisite: MATH 240. Spr (S. Filiz)

ME 299  Summer Practice I  
A minimum of four weeks (20 working days) for this practice is required in a manufacturing organization. The main objective is to observe a manufacturing company in an original setting. The details of the requirements and further information can be found at: http://www.me.bilkent.edu.tr/~me299 Credit units: None ECTS Credit Units: None.

ME 341  Dynamics and Control I  
Modeling and control of dynamical systems. Particles, groups of particles and motion of solids, effects of forces, kinematics, Lagrange equations. Solutions in time and frequency domains. Credit units: 4 ECTS Credit Units: 7, Prerequisite: MATH 220 and MATH 240 and ME 212 and ME 232 and PHYS 106.

ME 342  Dynamics and Control II  
Parametric modeling of systems and their analysis and control. Linear system theory, Laplace Transforms, transfer functions, introduction to feedback controls, root-locus analysis. Credit units: 4 ECTS Credit Units: 7, Prerequisite: MBG 110 and ME 341.

ME 343  Mechanical Vibrations  

ME 361  Numerical Methods for Engineers  
Application of numerical methods in engineering problems. Applications are selected from different areas. Credit units: 3 ECTS Credit Units: 6.

ME 362  Finite Elements  

ME 363  Computer-Aided Design  
Fundamentals of computer graphics, solid modeling, representation of curves and surfaces. Structural solid geometry and applications of computer aided design. Credit units: 3 ECTS Credit Units: 6.

ME 371  Measurement and Instrumentation  
Principles of experiment design, measurement, recording and analysis of force, strain, temperature, flow, and acceleration. Principles of impedance match, measurement circuits, MEMS sensors, Fourier transfer, and applications of probability and statistics. Use of typical laboratory equipment such as oscilloscopes, frequency analyzers, operational amplifiers, and thermo couples. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 230 and ME 341.

ME 381  Design and Manufacturing  
First steps in design, detailed design, analysis, and manufacturing concepts are covered. CAD and CAE are used to turn ideas into engineering drawings. Applications to machine elements and material selection. Effects of materials and uncertainties on manufacturing quality, manufacturing speed, cost and production flexibility. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 230 and ME 341, Corequisite: ME 371.

ME 384  Mechatronic Systems  
Course topics include integration of electrical and mechanical systems, modeling and simulation of mechanical systems, electric circuits and components, semiconductor basics and system response fundamentals. Control of mechanical systems with microcomputers. Emphasis on embedded sensors and actuators. Design under uncertainty. Includes a student project. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ME 341, Corequisite: ME 371.

ME 399  Summer Practice II  
This training can be held either in a manufacturing or service organization for a minimum of four weeks (20 consecutive working days). It is required to formulate an ME problem and offer a solution. The details of the requirements and further information can be found at: http://www.me.bilkent.edu.tr/~me399 Credit units: None ECTS Credit Units: None.

ME 401  Acoustics and Noise Control  
ME 402 Waves and Oscillations
Principles of waves and oscillations in solids and fluids and their applications to mechanical systems. Credit units: 3 ECTS Credit Units: 6.

ME 432 Applied Thermodynamics
Design and analysis of devices and thermal processes using principles of thermodynamics. Examples include nuclear power stations, jet engines, energy conversion, internal combustion engines, desalination and others. Credit units: 3 ECTS Credit Units: 6.

ME 433 Gas Dynamics
Development of compressible gas equations, properties of stagnation and sonic gas flow; shock waves; numerical methods for expansion waves and supersonic flows. Credit units: 3 ECTS Credit Units: 6.

ME 435 Environmental Thermal Engineering
Credit units: 3 ECTS Credit Units: 6.

ME 436 Energy Conversion Systems
Principles of energy conversion among different states of energy including heat, electricity and optical energy. Direct energy conversion devices for thermic, thermo-ionic, magnetohydrodynamic, photovoltaic energy. Principles and theories of chemical and mechanical energy storage devices. Credit units: 3 ECTS Credit Units: 6.

ME 437 Heat Engines

ME 440 Automotive Engineering

ME 442 Machinery Dynamics

ME 446 Application of Solid Mechanics

ME 451 Applications of Fluid Mechanics
Foundations of turbomachinery; nondimensional parameters and similarity law; turbines, centrifugal pumps, performance parameters. Aerodynamic principles; blade geometry, fluid flow; rotating flows; lift and drag of blades. Credit units: 3 ECTS Credit Units: 6.

ME 481 Mechanical Engineering Design I
Development of a mechanical engineering project, design procedures, design selection, engineering statement of customer preferences, ethical and professional responsibilities of engineers. Projects lead to products. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CHEM 201 and ENG 400 and ME 342 and ME 381 and ME 384.

ME 482 Mechanical Engineering Design II
The projects that are started in ME 481 are realized by teams of students. The final products are presented to a jury. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ME 481.

GRADUATE COURSES

ME 500 Integrated Product Development
This course examines the process of new product development from an interdisciplinary standpoint. A one-semester project course, it involves the collaborative team effort from engineering design to business plan. Credit units: 3 ECTS Credit Units: 6.

ME 501 Mathematical Techniques in Mechanical Engineering I
This course explores methods of solving ordinary differential equations and introduction to partial differential equations; reviews elementary concepts, series solutions, Fourier, Bessel and Legendre functions, boundary value problems, and eigenfunction expansions; and addresses calculus of variations. Solutions of classical partial differential equations of mathematical physics, including Laplace transformation and the method of separation of variables, will be covered in this course Credit units: 4 ECTS Credit Units: 8. Spr (I. Temizer)

ME 503 Numerical Methods in Mechanical Engineering
This course emphasizes numerical methods to solve differential equations that are important in Mechanical Engineering. Procedures will be presented for solving systems of ordinary differential equations and boundary value problems in partial differential equations. Students will be required to develop computer algorithms and
Credit units: 3 ECTS Credit Units: 6. Spr (Ç
elasticity, vibrations, heat conduction, and others. The background required for the class is calculus, linear algebra, and differential equations. Students also explore applications to problems in incompressible and compressible laminar flows, boundary layers, hydrodynamic lubrication, transient and periodic flows, thermal boundary layers, convective heat transfer, and aerodynamic heating. Credit units: 4 ECTS Credit Units: 8. Aut (Staff)

ME 516 Tribology - Friction, Lubrication and Wear
Covers the science of surfaces interacting via dry, lubricated, and mixed contact. Fundamental aspects include the Reynolds Equation, thermal-tribology, friction, and wear. The course will conclude with a team project which will require computer programming. Credit units: 3 ECTS Credit Units: 6.

ME 521 Advanced Thermodynamics

ME 523 Molecular Simulation of Materials
The purpose of this course is to expose engineering students to the theory and implementation of numerical techniques for modeling atomic-level behavior. The main focus is on molecular dynamics and Monte Carlo simulations. Students will write their own simulation computer codes, and learn how to perform calculations in different thermodynamic ensembles. Consideration will be given to heat transfer, mass transfer, fluid mechanics, mechanics, and materials science applications. The course assumes some knowledge of thermodynamics and computer programming. Credit units: 3 ECTS Credit Units: 6.

ME 550 Continuum Mechanics
This course introduces the fundamental concepts and tools that are needed in advanced courses on mechanics. After an overview of tensor calculus, the kinematics of deformation will be discussed followed by the concepts of stress, strain, linearization, objectivity and the balance laws for mass, momentum and energy. Additionally, materials modeling aspects such as constitutive laws and material symmetry will be covered with applications to solid and fluid mechanics. Credit units: 3 ECTS Credit Units: 4. Aut (İ. Temizer)

ME 551 Mechanics and Materials
This course covers how solid engineering materials respond to mechanical and thermal loadings. The physical mechanisms associated with design-limiting behavior of engineering materials, especially stiffness, strength, toughness, and durability, will be introduced. Testing procedures used to quantify basic mechanical properties characterize material response will be outlined. A fundamental understanding for materials selection in mechanical design is aimed. Credit units: 3 ECTS Credit Units: 6.

ME 552 The Finite Element Method
The finite element method is a powerful technique for the numerical solution of partial differential equations describing engineering problems. In this class, the fundamentals of the finite element method including the weighted residual method, shape functions, numerical integration, assembly and error analysis will be introduced by solving 1-D linear second order elliptic equations. The technique will be extended to 2D and 3D elliptic problems. Advanced topics including fourth order equations, time-dependent parabolic and hyperbolic partial differential equations and non-linear problems will be covered. The method will be applied to problems in applied mechanics, elasticity, vibrations, heat conduction, and others. The background required for the class is calculus, linear algebra and differential equations. Credit units: 3 ECTS Credit Units: 6. Spr (İ. Temizer)

ME 555 Cellular Biomechanics
This course discusses how mechanical quantities and processes such as force, motion, and deformation influence cell behavior and function, with a focus on the connection between mechanics and biochemistry. Specific topics include: (1) the role of stresses in the cytoskeleton dynamics as related to cell growth, spreading, motility, and adhesion; (2) the generation of force and motion by motor molecules; (3) stretch-activated ion channels; (4) protein and DNA deformation; (5) mechanochemical coupling in signal transduction. If time permits, we will also cover protein trafficking and secretion and the effects of mechanical forces on gene expression. Emphasis is placed on the biomechanics issues at the cellular and molecular levels; their clinical and engineering implications are elucidated. Credit units: 3 ECTS Credit Units: 6.

ME 556 Advanced Manufacturing
This course focuses on modeling of material removal processes, including the turning, milling, boring, and drilling processes. The course also includes introduction on economics of material removal, non-traditional
DEPARTMENT OF MECHANICAL ENGINEERING

material removal processes, stability of machining processes, tool wear and tool life, dimensional and surface metrology, and experimental methods in manufacturing. A term project that may involve experimentation is an integral part of the course. Credit units: 3 ECTS Credit Units: 4.

ME 561 Vibration of Linear and Dynamic Systems
The subject area for this course is mechanical vibration, at a level appropriate for first-year graduate students. Classical techniques in mechanical vibration are developed for the modeling and analysis of discrete and continuous linear systems. Continuous systems are described within the broader context of operator theory to emphasize the physical and mathematical analogies with discrete systems. Specific topics include: Discrete systems. Equations of motion for multiple degree of freedom systems through Lagrange's method; linearization about equilibrium; symmetry and definiteness properties; free vibration; matrix eigenvalue problems; orthogonality; Rayleigh quotient; generalized coordinates; transient and forced response through modal analysis. Continuous systems. Classical rod, shaft, string, beam, membrane and plate models; Hamilton's principle; equations of motion and boundary conditions through variational methods; essentials of functional analysis; exact solution of eigenvalue problems; response through modal analysis and Green's function methods; global discretization; Galerkin's method; essential and suppressible boundary conditions; Kamke quotient; introduction to elastic wave propagation. Credit units: 4 ECTS Credit Units: 8.

ME 565 Dynamics
This course covers kinematics of particles and rigid bodies; dynamics of a particle, systems of particles and rigid bodies; central force fields, orbits and trajectories variable mass systems; Lagrange's equations of motion; Hamilton's Principle; variational methods; and applications to dynamics problems and the fundamentals of gyroscopes. Credit units: 3 ECTS Credit Units: 6. Aut (M. Çağmakić)

ME 566 Acoustics
Introduction to oscillations, waves, and sound generation and propagation. General concepts such as quantitative measures of sound, plane waves, and acoustic energy density and intensity. Perception of sound. Derivation of wave equation. Reflection, transmission and refraction of sound. Normal modes: vibrating membranes, and sound in a rectangular enclosure; room and duct acoustics. Acoustic horns. Absorption and attenuation of sound waves. Acoustic waves in spherical co-ordinate systems. Credit units: 3 ECTS Credit Units: 6. Spr (A. Akay)

ME 575 Micro/Nano Robotics
This course focuses on the design, modeling, fabrication, and control of miniature mobile robot and micro/nano-manipulation systems for graduate and upper level undergraduate students. It provides an overview of the state-of-the-art micro- and nanoscale sensors, actuators, manipulators, energy sources, robot design, and control methods. It requires active student participation, interaction, and in-class discussions. In addition to the basic background, it includes many case studies of current miniature robots and micro/nano-systems, challenges and future trends, and potential applications. The course requires a final project involving novel theoretical and/or experimental ideas for micro/nano-robotic systems with a team of students. Depending on the equipment availability, these projects can also involve hands-on experience and experimental demonstrations. Credit units: 4 ECTS Credit Units: 8.

ME 578 Vehicle Control Systems
Design and analysis of vehicle control systems such as cruise control, traction control, active suspensions and advanced vehicle control systems for Intelligent Vehicle-Highway Systems (IVHS). Human factor considerations such as driver interfaces. Fuel Cell and Hybrid Electric Vehicle Control Systems. Credit units: 3 ECTS Credit Units: 6. Aut (M. Çağmakić)

ME 579 Adaptive Control Systems
Course topics include control systems with undetermined or time-varying parameters, theory and application of self-tuning and model reference adaptive control for continuous and discrete-time deterministic systems, Methods for estimation and control, stability of nonlinear systems, adaptation laws, and design and application of adaptive control systems. Credit units: 3 ECTS Credit Units: 6. Spr (M. Çağmakić)

ME 581 Computer Aided Design
This course is the first section of the two-semester sequence on computational engineering. Students will learn how computation and information technologies are rapidly changing the way engineering design is practiced in industry. The course covers the theories and applications of the measurement, representation, modeling, and simulation of three-dimensional geometric data used in the engineering designed process. Students taking this course are assumed to have knowledge of the first course in computer programming. Credit units: 4 ECTS Credit Units: 8.

ME 584 Mechatronics Design
Course topics include design of hardware and software architectures for mechatronics systems, hardware-in-the-loop systems, teleoperation and networked mechatronic systems, design of human machine interfaces, introduction to micro and nano-mechatronics systems. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ME384 or equivalent.
ME 590  Mechanical Engineering Seminar
This is a seminar course for graduate students. Faculty and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the supervisors and the students. Credit units: None ECTS Credit Units: 4. Aut (Staff)

ME 599  Master's Thesis
Credit units: None ECTS Credit Units: None. Spr (Staff)

ME 612  Turbulent Flow
Course content emphasizes basic equations of turbulent flow, Reynolds stresses, semi-empirical and phenomenological theories of turbulence, similarity theory, and eddy viscosity as well as turbulence production, dissipation, and scaling laws. In addition, applications to confined flows, boundary layers, convective heat transfer and jet mixing, and introduction to more complex closure schemes and statistical methods in turbulence are explored. Credit units: 4 ECTS Credit Units: 8.

ME 615  Microfluidics
This course offers an introduction to the emerging field of microfluidics with an emphasis on chemical and life sciences applications. During this course students will examine the fluid dynamical phenomena underlying key components of "lab on a chip" devices. Students will have the opportunity to learn practical aspects of microfluidic device operation through hands-on laboratory experience, computer simulations of microscale flows, and reviews of recent literature in the field. Throughout the course, students will consider ways of optimizing device performance based on knowledge of the fundamental fluid mechanics. Students will explore selected topics in more detail through a semester project. Major course topics include pressure-driven and electrokinetically-driven flows in microchannels, surface effects, micro-fabrication methods, micro/nanoparticles for biotechnology, biochemical reactions and assays, mixing and separation, two-phase flows, and integration and design of microfluidic chips. Students are assumed to have an undergraduate level of knowledge in fluid mechanics (comparable to 24-231). Compared to the undergraduate course, graduate students will conduct an additional project, more extensive homework and attend an extra hour of recitation. Credit units: 4 ECTS Credit Units: 8.

ME 630  Advanced Heat Transfer
This course is open to students from all areas of engineering, although an undergraduate background in heat transfer is assumed. This class is an appropriate preparation for the doctoral qualifying exam. Topics to be covered include: mathematical formulation of heat transfer problems, heat conduction, thermal radiation, hydraulic boundary layers, and laminar and turbulent convection. Problems and examples will include theory and applications drawn from a spectrum of engineering design problems. Credit units: 4 ECTS Credit Units: 8.

ME 631  Conductive Heat Transfer
This course is open to students from all areas of engineering, although a graduate background in heat transfer is assumed, such as the material covered in Advanced Heat Transfer. This course focuses on application of exact and approximate analytical methods to problems of conduction heat transfer. This course also covers numerical techniques in heat conduction, Covered topics include steady periodic problems, melting and solidification, enthalpy formulation, parametric estimation, and the Boltzmann Transport Equation. Examples will be drawn from a spectrum of engineering application. Credit units: 2 ECTS Credit Units: 4.

ME 632  Convective Heat Transfer
This course is open to students from all areas of engineering, although a graduate background in heat transfer is assumed, such as the material covered in Advanced Heat Transfer (24-730). This course focuses on the fundamentals of convective heat transfer. Topics covered in this course are: laminar and turbulent heat transfer, high speed flow, natural convection, and experimental techniques. Examples will be drawn from a spectrum of engineering application. Credit units: 2 ECTS Credit Units: 4.

ME 634  Small Scale Heat Transfer
This course is open to students from all areas of engineering, although a graduate level background in heat transfer is assumed, such as the material covered in Advanced Heat Transfer (24-730). This course focuses on the unique heat transfer effects in micro and nano scales. This course includes mathematical modeling of small scale heat transfer, review of microfabrication techniques, thermometry, electrical and optical techniques for thermal conductivity measurements, and thermophysical properties of gasses and solids. Examples will be drawn from a spectrum of thermal engineering applications in microelectronics and instrumentation. Credit units: 2 ECTS Credit Units: 4.

ME 635  Heat Transfer in Biology and Medicine
Course objectives include: studying applications of heat transfer to biological systems, reviewing biomedical instrumentation related to thermal therapy, and developing mathematical techniques for bioheat transfer analyses. Syllabus includes: introduction to heat transfer in biological systems, mathematical modeling of bioheat transfer, cryopreservation, cryosurgery, hyperthermia and thermal ablation, thermal regulation in the human body, and measurements of thermophysical properties of biomaterials. Credit units: 2 ECTS Credit Units: 4.
ME 652 Intro to Solid Mechanics II
This is the second course in a two-part professionally oriented course sequence covering a variety of important problems in solid mechanics. Topics covered typically include anisotropy, energy methods and finite elements, contact problems, fracture mechanics and plasticity. As in the first course in the sequence, emphasis is placed on not only mechanics theory and classical solutions, but also on their application in finite element modeling of applied engineering problems. This course builds on concepts from the first course, so that it or a similar course on elasticity theory is a prerequisite. Credit units: 4 ECTS Credit Units: 8.

ME 657 Nano/Micro Manufacturing
This is a survey-type course in different techniques of nano/micro-scale manufacturing. A wide range of topics from lithography, laser processes, mechanical micro-manufacturing, measurement techniques, ultrasonic micromachining, micro-electrodischarge machining, micro-electrochemical machining, e-beam and ion-beam machining, and micro-stereolithography techniques are surveyed. For each technique, the physical principles of the technique, material capability, geometric capability, and other advantages/disadvantages are discussed. Students are required to complete a final project. Credit units: 4 ECTS Credit Units: 8. Aut (S. Filiz)

ME 660 Acoustics
This course covers physics and theory of sound generation, radiation and transmission in mechanical systems. The theoretical developments begin with one-dimensional wave theory and its applications to propagation of sound in different media and to interaction of sound with structures. Solutions of wave equations in 3-D are developed for the classical radiation and scattering problems as well as transmission in wave guides. Students are exposed to criteria concerning noise effects on people. Laboratory exercises will cover measurement and analysis of sounds waves. Credit units: 4 ECTS Credit Units: 8.

ME 671 Linear Systems
Topics include review of classical feedback control; solution of differential and difference equations; Laplace and Z-transforms, matrix algebra, and convolution; state variable modeling of dynamic continuous and discrete processes; linearization of nonlinear processes; state variable differential and difference equations; computer-aided analysis techniques for control system design; state variable control principles of controllability, observability, stability, and performance specifications; trade-offs between state variable and transfer function control engineering design techniques; and design problems chosen from chemical, electrical, and mechanical processes. Credit units: 4 ECTS Credit Units: 8.

ME 699 PH.D. Dissertation
Credit units: None ECTS Credit Units: None.
The Faculty of Humanities and Letters comprises five departments:

- American Culture and Literature
- Archaeology
- English Language and Literature
- Philosophy
- Turkish Literature

The departments of American Culture and Literature, Archaeology, English Language and Literature, and Philosophy all have Bachelor of Arts (B.A.) programs. In addition, the Department of Turkish Literature offers graduate programs leading to Master of Arts (M.A.) and Doctor of Philosophy (Ph.D.) degrees, while the Department of Archaeology and History of Art has an M.A. program.

The Faculty also houses a number of non-degree-granting units which offer university-wide service courses in First Year English and Composition, Foreign Languages (French, German, Italian, Japanese, Russian and Spanish), History of the Turkish Republic and Turkish Language and Literature. The Cultures, Civilizations and Ideas program offers a year-long intensive course to sophomore students.

**ACADEMIC STAFF**

İlknur Aka, Instructor  
B.A., German Language and Literature, Hacettepe University, 1982.

Varol Akman, Professor  
Artificial intelligence, logic, philosophy of language, philosophy of mind, pragmatics, the Internet and society.

Konul Aliyeva, Instructor  
Ph.D., Modern Turkish, Ankara University, 2005.

İstvan Aranyosi, Assistant Professor  

İsmail Aşkoğlu, Instructor  

Alişa Ayas, Visiting Professor  

Sema Aydın, Instructor  
M.A., German Language and Literature, Hacettepe University, 1989.

Louise Barry, Instructor  
Ph.D., French Literature, Emory University, 2002. Aesthetics, cultural history and literature.

Julian Bennett, Assistant Professor  
Ph.D., Archaeology, University of Newcastle upon Tyne, 1991. Roman provinces and frontier studies, cultural heritage, archaeological drafting and surveying.

Sandrine Berges, Assistant Professor  

Yehezkel S. Berkovski, Visiting Assistant Professor  
Ph.D., Philosophy, Oxford University, 2005. Logical positivism, philosophy of logic, Kant, possible worlds, philosophy of science.
Ahmet Beyati, Instructor  
Ph.D., Management, University of Baghdad, 1994. Arabic.

Arzu Bezgin, Instructor  

Dennis Bryson, Assistant Professor  

Ayşe Candogan, Instructor  

William Coker, Instructor  
M.Phil., Comparative Literature, Yale University, 2008. German Literature and Intellectual history.

Benni Claasz Coockson, Instructor  

Berna Cordan, Instructor  

Costantino Costantini, Instructor  
Ph.D., Comparative Literature, Emory University, 2001. Classics, French and Italian Literature, theory.

Nur Bilge Criss, Assistant Professor  
Ph.D., History, George Washington University, 1990. Modern History, Ottoman History, Turkish Foreign Policy, Contemporary History, Cold War History.

Gülay Çayan, Instructor  
B.A., German Language Teaching, Hacettepe University, 1992.

Ayşe Çelikkol, Assistant Professor  
Ph.D., Rice University, 2006. 19th-century British and American literature, liberalism, Marxist criticism.

Hilmi Demir, Assistant Professor  

E. Lale Demirtürk, Associate Professor  

Marianella Gutierrez Erdem, Instructor  
B.A., Spanish Language Teaching, Corazon de Maria University, 1970.

Denis Ferhatovic, Visiting Assistant Professor  
Ph.D., English, Yale University, 2010. Poetry from the Middle Ages and beyond, the indication of word and image, postcolonial literature and theory, mysticism, translation.

Esra Findik, Assistant Professor  
Ph.D., Library Information Sciences, Hacettepe University, 1985. Etiquette and modern business manners, business writing techniques in Turkish.

Margaret France, Visiting Assistant Professor  

Charles Gates, Senior Lecturer  
Ph.D., Classical Archaeology, University of Pennsylvania, 1979. Aegean Bronze Age, Greek art and archaeology, Byzantine art and archaeology.
Marie-Henriette Gates, Associate Professor
Ph.D., Ancient Near Eastern Languages and Literatures, Yale University, 1976. Archaeology of Mesopotamia, archaeology of Egypt, archaeology of Syria and Palestine, archaeological method and theory.  
Ali Turan Görgü, Instructor  
M.A., Teaching of Turkish, Gazi University, 1997.  
Sevil Güner, Instructor  
Talat S. Halman, Professor  
Daren I. Hodson, Instructor  
Ph.D., Comparative Literature, University of Utah, 1995. Composition and Rhetoric, Eighteenth Century Literature, Philosophy and Culture, Contemporary Culture.  
Craig Ireland, Assistant Professor  
Ph.D., Theory and Epistemology of Literature, Université de Montréal, 2000. Social and literary theory, public sphere theory, Western Marxism, Cultural Studies, 18th to 20th-century Western intellectual and cultural history.  
Mehmet Kalpaklı, Assistant Professor  
Ph.D., Turkish Literature, University of Washington/Istanbul University, 1992. Ottoman literature and cultural history, Near Eastern languages and literature, modern Turkish literature, theory of literature, use of computers for humanities.  
Engin Karacaören, Instructor  
Ph.D., Spanish Language and Literature, Ankara University, 2002.  
N. Megan Kelley, Instructor  
Ph.D., American History, York University, 2006. 20th century American History, film studies, Gender studies, cultural studies.  
Valerie Kennedy, Assistant Professor  
Paul Elliot Kimball, Instructor  
Edward Kohn, Assistant Professor  
Ezel Kural-Shaw, Visiting Professor  
Gül Kurtulus, Instructor  
Ph.D., English Literature, Bilkent University, 1997. Modern drama, 16th and 17th century English Literature, literary theory and criticism, Modern British and American short fiction.  
Christopher Love, Visiting Assistant Professor  
Ph.D., Comparative Literature University of Michigan, 2009. Ancient Greek epic and traged, modern adaptations, contemporary film and episodic television.  
Laurent Mignon, Assistant Professor  
Ph.D., Modern Turkish Literature, London University, 2002. 19th and 20th century’s Turkish literature, literary translations, travel literature.
Jacques Morin, Instructor
Ph.D., Classics, McGill University, 1991. Greek and Roman art and archaeology, Aegean prehistory.

Nurdane Mumcu-Öz, Instructor
M.A., Turkish Language and Literature, Ankara University, 2002.

Mukaddes Mutluer, Instructor
B.A., German Language and Literature, Hacettepe University, 1976.

Mustafa Nakeeb, Visiting Assistant Professor
Ph.D., Philosophy, State University of New York at Buffalo, 1999. History of Philosophy, Ancient Philosophy (Plato), Ancient Historiography, Philosophy of History.

Saeko Ohashi, Instructor

Kurt Ozment, Visiting Assistant Professor
Ph.D., Comparative Literature, University of California, 2007. Aesthetics, literary theory, poetry.

Sare Öz, Instructor
B.A., Turkish Literature, Gazi University, 1960.

Himmet Umur, Ph.D., Renaissance English Literature, University of London (King’s College), 1974.

GENERAL COURSES

HUMANITIES COURSES

HUM 121 The Mediterranean World to 1600
The course examines the dynamics of humans, time, and space in the shaping of cultures and civilizations in the three continents bordering the Mediterranean Sea. Topics include interdisciplinary themes that connect with one another through the medium of history. Fields such as archaeology, art architecture, drama, geography, and religion become integrated to develop student skills in analysis, critical thinking, and self-expression. Credit units: 3 ECTS Credit Units: 6.

HUM 122 The Mediterranean World and Beyond, 1600 to the Present
The aim of this course is to make students aware of issues and questions, encourage them to seek answers, and follow ramifications by focusing on the scientific revolution, French Revolutionary era and nationalism, industrialization, imperialism, colonialism, Darwin-Marx-Freud, “modernization” models and variations, globalization of concerns (such as ecology, communication and implications) and the issue of post-modern. Credit units: 3 ECTS Credit Units: 6, Prerequisite: HUM 121.

HUM 321 The Enlightenment and the French Revolution
The Enlightenment also known as the Age of Reason, represents the spreading of trust in science and scientific methodology and the intent to apply that knowledge towards the improvement of humankind. The writings of the period manifest a critical spirit aimed at reforming society and its institutions. From encouragement of technology to emphasis on human rights, this period shapes our views of modernity. Writings of the period focus on issues that are still significant today: nature of the representative government, tolerant secularism, reform of the penal system, free trade, ethics, and theory of knowledge. Credit units: 3 ECTS Credit Units: None.

COURSE DESCRIPTIONS

HUM 111 Cultures, Civilizations and Ideas I
This half of the year-long course “Cultures, Civilizations, and Ideas” introduces students to the study of culture and civilization through close reading of primary texts in the ancient traditions of the Near East and the Mediterranean. It also introduces students to more modern critical readings and discussion of the value and weight of this tradition. The course aims to provide students with an understanding of the ancient roots of literary craft and philosophical thought, and to enhance the student’s ability in interpretative and critical reasoning. Successful completion of the course requires careful and timely reading of assigned texts, essay writing, and active participation in class discussion. Grading is based on a course project, a mid-term examination or term-paper, comprehensive final examination, and class participation. Required texts include: Epic of Gilgamesh; Freud: Civilization and its Discontents; Homer: Iliad; Sophocles: Theban Plays; Plato: Republic; and a course reader of other shorter works and critical essays. Credit units: 3 ECTS Credit Units: 4, Prerequisite: ENG 102. Aut (L. Barry, W. Coker,

HUM 112 Cultures Civilizations and Ideas II
The second half of the year-long course "Cultures, Civilizations and Ideas", continues the study of culture through examination of texts through the periods of the Late Middle Ages, the Renaissance, Enlightenment, and up to modern times. The course focuses on several themes, most importantly, the concepts of Modernity and Knowledge, Individualism, Cross-Cultural Contact, Social Order and Disorder. As in HUM 111, close reading and discussion of primary texts is the vehicle for the course. Grading is based on a course project, a mid-term examination or term-paper, comprehensive final examination, and class participation. Required authors include, among others: Machiavelli, Shakespeare, Descartes, Rousseau, Hegel, Marx, Kafka. Credit units: 3 ECTS Credit Units: 4, Prerequisite: HUM 111 or HUM 121. Aut (K. S. Sorrell) Spr (L. Barry, W. Coker, C. Costantini, D. Ferhatovic, M. France, D. I. Hodson, P. E. Kimball, C. Love, K. Ozment, K. S. Sorrell)

HUM 291 Selected Topics in the Humanities
These courses are designed to allow students to explore and focus on various topics in the Humanities and Social Sciences in depth and detail, and from an interdisciplinary perspective. Such courses have the objective of furthering the critical reading, writing, and analytic skills fostered in other CCI courses. These courses will engage in study of themes, issues, or concepts from fields such as Comparative Literature, Philosophy, History, Art History, Film Studies, Political Thought, and many other disciplines. Two separate sections of CCI Selected Topics courses will be offered every Spring Semester. Courses will be taught in seminar format, and are open to all Bilkent students as a general elective. Credit units: 3 ECTS Credit Units: 6.

HUM 331 Humanities and Social Science Honors Seminar
This seminar is restricted to students who have a cumulative grade point average of 3.30 or higher. The seminar is designed to provide students with a sense of basic concepts and theoretical approaches which are common to advanced research in the humanities and social sciences. Though the specific content of the seminar will change from one year to the next, each seminar will present important readings and texts from several disciplines (philosophy, psychology, sociology, literary theory, etc.). Students will discuss their work with one another in seminar meetings, and also in one-on-one meetings with the seminar leader throughout the semester. Each student will complete a term paper on a topic of his or her choice related to the issues covered in the seminar, and will leave the course with a polished piece of academic writing which they can use in applications to graduate school, as well as a detailed letter of recommendation from the seminar instructor. Credit units: 3 ECTS Credit Units: None.

TURKISH UNIT

COURSE DESCRIPTIONS

TURK 101 Turkish I
The meaning and nature of language; importance of language in society; language-culture relationship; world languages and Turkish; history and the present state of Turkish; Turkish languages; phonetic features of Turkish; structure of Turkish; punctuation and style; introduction to speech and composition. Credit units: 2 ECTS Credit Units: 1, Aut (İ. Aşikoğlu, B. Cordan, N. Çetiner, A. T. Görgü, S. Gözcü Ezen, E. Güler, G. Tuzcu, O. İkinci, A. Kaya, L. Müftüoğlu, S. Öz, A. Özer, A. Şendöl, Ü. Tan, B. Taşkıran, M. Temizyürek, V. Yazıcı) Spr (İ. Aşikoğlu, N. Çetiner, A. T. Görgü, S. Gözcü Ezen, E. Güler, G. Tuzcu, O. İkinci, A. Kaya, A. Özer, A. Şendöl, Ü. Tan, B. Taşkıran, M. Temizyürek)
TURK 102  Turkish II
Basic principles of speech and composition; rules and forms of oral expression: addresses, lectures, panels, etc.; introduction to Turkish literature; analysis of selected texts from contemporary Turkish literature; introduction to ‘Dîvan’ literature; language of the Ottoman period, selected poems and prose texts; reading and oral interpretation of selections from Turkish and world literature; exercises in composition and report writing. Credit units: 2 ECTS Credit Units: 1. Aut (B. Cordan, S. Gözçü Ezen, E. Güler, G. Tuzcu, O. İkinci, A. Kaya, A. Özer, A. Şendöl, Ü. Tan, M. Temizyürek, V. Yazıcı) Spr (İ. Aşırkoğlu, B. Cordan, N. Çetiner, E. Fındık, A. T. Gürüş, S. Gözçü Ezen, E. Güler, G. Tuzcu, O. İkinci, A. Kaya, L. Mütluoğlu, S. Öz, A. Özer, A. Şendöl, Ü. Tan, B. Taşkiran, M. Temizyürek, V. Yazıcı)

TURK 111  Turkish as a Second Language I
The aim is to help the students comprehend spoken and written Turkish, express their ideas in written and oral form, and to acquaint them with an understanding of Turkish life and culture. Credit units: 3 ECTS Credit Units: 6. Aut (N. Mumcu-Öz) Spr (N. Mumcu-Öz)

TURK 112  Turkish as a Second Language II
Sequel to TURK 111. Basic principles of speech and composition. Exercises in oral and written expression. Analysis of selected texts from Turkish literature and media. Credit units: 3 ECTS Credit Units: 6. Aut (N. Mumcu-Öz) Spr (N. Mumcu-Öz)

TURK 113  Turkish as a Second Language III
The objective of the course is to provide the students with further skills and confidence in oral and written expression and to make them familiar with more complicated texts from different areas of Turkish intellectual life. Credit units: 3 ECTS Credit Units: 6. Aut (Staff) Spr (N. Mumcu-Öz)

TURK 114  Basic Turkish IV
The objective of the course is to provide the students with further skills and confidence in oral and written expression and to make them familiar with more complicated texts from different areas of Turkish intellectual and cultural life. Credit units: 3 ECTS Credit Units: 6.

TURK 211  Intermediate Turkish I
This intermediate course builds on students’ knowledge and usage of grammar previously acquired by improving especially their reading, writing and speaking skills. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

TURK 381  Advanced Turkish I
This course emphasizes on advanced use of the four basic language skills (reading, writing, speaking and listening). Students will be expected to comment on various articles, books (novels, stories, poetry) they read and multimedia materials they listen to or watch; both verbally and in writing. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

TURK 382  Advanced Turkish II
In this course, the students will participate in activities designed to improve all of the basic language skills. Development of verbal expression skills will be particularly emphasized and in this respect, students shall design a play to be staged at the end of the semester. Credit units: 3 ECTS Credit Units: 6. Spr (A. Tunaböyük)

HISTORY OF TURKISH REPUBLIC UNIT

N. B. Criss (Coordinator), A. Ayas.

COURSE DESCRIPTIONS

HISTR 201  History of Turkish Republic I
This course covers the nature and identity of the Ottoman Empire and its many legacies to the Republic such as modernization and intellectual movements. The focus is on the place of the Empire in international politics and its efforts to integrate with the European state system and public law from the early 19th century to World War I; why the Ottomans chose to join WWI; Turkey’s War of Independence and formation of the Republic. Credit units: 2 ECTS Credit Units: 1. Aut (Staff) Spr (Staff)

HISTR 202  History of Turkish Republic II
The second part of this course focuses on the political/diplomatic history of the early Republic, Atatürk’s reforms and principles of statecraft: Turkey between two world wars; World War II and Ankara’s active neutrality; transition to multi-party democracy; the Korean War and membership in NATO; domestic and foreign policies from 1946 to 1980. Credit units: 2 ECTS Credit Units: 1. Aut (Staff) Spr (Staff)
FOREIGN LANGUAGES UNIT

E. Soyupak (Coordinator)

Chinese: S. E. Tuğlu.

Italian: A. Bezin, A. Candoğan, Ö. Özduran, R. Radicchi, Ö. Saçak.

Russian: L. Alyeksyeyenková, N. Hüseyin, G. Tanrikulu.

Arabic: A. Beyatlı.

Persian: A. Miandji.

FOREIGN LANGUAGE COURSES

The Foreign Languages Unit offers basic- and intermediate-level courses in German, French, Italian, Japanese, Russian, Spanish, Chinese, Arabic and Persian. Advanced level courses as well as special-purpose courses emphasizing language skills in various professions are also offered.

ADVANCED LEVEL COURSES

FRE 381/382  Communication Skills in French I / II
GER 381/382  Communication Skills in German I / II

LANGUAGE COURSES FOR SPECIFIC PROGRAMS

The following courses are designed for the students of the School of Tourism and Hotel Management and the Vocational School of Hotel and Travel Services only. The main focus is on tourism related matters.

GER 161/162/163/164  Basic German I / II / III / IV
JAP 161/162/163  Basic Japanese I / II / III
RUS 161/162/163/164  Basic Russian I / II / III / IV

The following courses are designed for the students of the Graduate Program in Turkish Literature and Archaeology. Particular emphasis is given to text comprehension, and translation into Turkish.

FRE 401/402  Readings in French I / II
GER 421/422  Readings in German I / II

The following intensive language courses are offered in the summer semester to all students. These courses are designed to equip students with the knowledge and usage of grammar and with special emphasis on reading, writing and speaking skills.

GER 400/410  Intensive German I / II
FRE 400/410  Intensive French I / II
RUS 400/410  Intensive Russian I / II
FRL 430/431  Intensive Arabic I / II
ITA 400/410  Intensive Italian I / II
SPA 400/410  Intensive Spanish I / II
**DEPARTMENT OF AMERICAN CULTURE AND LITERATURE**

The Department of American Culture and Literature offers a program leading to the Bachelor of Arts degree. The department offers a course selection that examines the United States in all its complexity, integrating literature, culture, and history. This interdisciplinary program will not only introduce students to the study of the United States but will also develop critical and creative thinking skills that will enable students to reflect upon their own culture and its history and literature. The newly revised curriculum seeks to ground students in the skills of close reading and textual analysis. Further, it asks students to consider works in their historical and cultural contexts, illustrating the complicated social relations that exist between writer, text, history, and reader. In recognition of the demands of contemporary professional and academic life, the program now requires courses in the natural and social sciences. The program, as is true of most other programs in the humanities, does not offer vocational training per se but rather develops fluency in English, analytical skills, and ability in written expression that will prepare students for success in their professional lives and in further academic study.

MINOR PROGRAM

The Minor Program in American Culture and Literature takes an interdisciplinary approach to the study of the United States, its people, and its culture. The program allows students from any academic background to explore the main themes and ideas of American literature, film, theater, poetry, and history. Such ideas include gender, race, ethnicity, and other forms of identity. Moreover, the program will allow students to increase their fluency in English, as courses emphasize developing their reading, writing, and analytical skills. At the end, students should have a much better understanding of what the term &Amershell;AmericanI È means, as courses and instructors seek to replace a superficial understanding of America with a deeper, more layered, and more nuanced understanding.

Prerequisite Courses:
A minimum grade of B- in ENG 102

Open to Students from All Departments

COURSE DESCRIPTIONS

AMER 115 Methods and Texts I
This course gives students the critical methods necessary to interpret a variety of social texts. The primary mode of organization is around genre. A unit on poetry will teach students to identify poetic forms and to scan lines; a unit on fiction will address such issues as narrative voice, characterization, and symbolism; a unit on drama will examine the dimensions of staging and performance; a unit on film will teach students to approach texts in two and three dimensions; a unit on music will examine harmony, musical form, and performance; and a unit on nonfiction prose will examine the status of objectivity in source materials. Other major issues concern the distinction between literal and figurative language, terms for literary studies, and the linguistic diversity of the United States. Students will also learn how to develop a bibliography and how to cite sources using established styles. Credit units: 3 ECTS Credit Units: 7. Aut (M. Šašnik)

AMER 116 Methods and Texts II
This course continues the work of AMER 115. The primary mode of organization is around genre. A unit on drama will examine the dimensions of staging and performance. A unit on film will teach students how to analyze the formal development of a shot sequence. A unit on the novel will continue the study of the formal components of fiction. Credit units: 3 ECTS Credit Units: 7. Prerequisite: AMER 115 or AMER 117. Spr (M. Šašnik)

AMER 195 Introduction to American Studies I
This course provides an introduction to the interdisciplinary study of American culture and literature. Through consideration of exemplary moments and problems in the history of the United States, students will consider how different disciplines (history, cultural studies, textual criticism, political science, or sociology) provide interpretive strategies for American studies. In addition, students will be asked to consider how these disciplinary approaches might be combined or integrated into an interdisciplinary method. Throughout the course, a foundation of knowledge in American geography, political systems, demography, institutions, economics, and social structure will be established so as to create the possibility of further study. Tutorial support will be provided. Credit units: 3 ECTS Credit Units: 7. Aut (N. M. Kelley, C. Rivera)

AMER 196 Introduction to American Studies II
This course continues the work of AMER 195 in building a foundation for the interdisciplinary study of the United States. In this semester, students will study such as education, political systems, gender, race, and class in
greater depth. Specifically, students will examine primary documents to develop their understanding of these topics. Tutorial support will be provided. Credit units: 3 ECTS Credit Units: 7, Prerequisite: AMER 195. Spr (C. Rivera)

AMER 207 American Texts and Contexts I
This course provides an interdisciplinary node of connection between the survey in history and the survey in literature. Drawing from exemplary moments and problems in American culture from the reign to the Civil War, the course asks students to relate a variety of primary sources to broader contextual issues. This course will be writing intensive, with tutorial support provided. Credit units: 4 ECTS Credit Units: 6, Prerequisite: AMER 118 and AMER 196. Aut (C. Rivera)

AMER 208 American Texts and Contexts II
This course provides an interdisciplinary node of connection between the survey in history and the survey in literature. Drawing from exemplary moments and problems in American culture from the Civil War to the present, the course asks students to relate a variety of primary sources to broader contextual issues. This course requires writing intensively, with tutorial support provided. Credit units: 4 ECTS Credit Units: 6, Prerequisite: AMER 207. Spr (E. L. Demirtürk)

AMER 293 American History I
A study of the history of the United States, with particular attention to the colonial era, the American Revolution, the early national period, and the Civil War. Credit units: 3 ECTS Credit Units: 6, Prerequisite: AMER 118 and AMER 196. Aut (Staff)

AMER 294 American History II
A study of the history of the United States, beginning with the Reconstruction era and devoting particular attention to the Gilded Age, the Great Depression, the two World Wars, and the Cold War. Credit units: 3 ECTS Credit Units: 6, Spr (D. Bryson)

AMER 303 Film Studies in American Culture to 1960
This course is designed to introduce students to American film studies and cultural history, including issues pertaining to aesthetic analysis, film genres and issues of representation—from the beginnings of film history until 1960. Credit units: 4 ECTS Credit Units: None. Aut (N. M. Kelley, C. Rivera)

AMER 304 Film Studies in American Culture Since 1960
This course is designed to introduce students to American film history and culture, including issues pertaining to aesthetic analysis, film genres, and issues of representation from 1960 to the present. Credit units: 4 ECTS Credit Units: None. Spr (N. M. Kelley, C. Rivera)

AMER 343 American Theater
A study of selected 20th century plays, movements, and issues raised by the study of theater, including its relationship to mass cultural forms, state support, and documentary truth. Writers will include Lorraine Hansberry, Arthur Miller, Eugene O'Neill, Marc Blitzstein, Arthur Arend, Luis Valdez, and Anna Deavere Smith. Credit units: 3 ECTS Credit Units: 6. Aut (M. Šantić)

AMER 357 American Intellectual History I
This course will deal with the intellectual history of the United States from the colonial era to the Civil War. It will explore such topics as the Puritan tradition, republican ideology in America, Tocqueville and democracy, the Transcendentalists, the debate over slavery, views on the role of women in the new republic, and antebellum social science. Primary texts by John Winthrop, Benjamin Franklin, Thomas Paine, Thomas Jefferson, James Madison, Alexis de Tocqueville, Ralph Waldo Emerson, Henry David Thoreau, William Lloyd Garrison, David Walker, Frederick Douglass, Sarah Grimke, Catharine Beecher, Margaret Fuller, Horace Bushnell, Henry C. Carey, and George Fitzhugh will be read and discussed in the course. Credit units: 3 ECTS Credit Units: 6. Aut (D. Bryson)

AMER 358 American Intellectual History II
This course will deal with the intellectual history of the United States from 1865 to the present. It will explore such topics as pragmatism, the plight of African Americans and their struggle for civil rights and economic betterment, the American social sciences, intellectuals and the public sphere, feminist thought, trends in American literary studies and cultural studies, debates over multiculturalism, the controversy over the “clash of civilizations”, and recent American thought on the philosophy and history of science. Writers to be considered include: Lester Frank Ward, William Graham Sumner, Charlotte Perkins Gilman, W.E.B. Du Bois, William James, John Dewey, Margaret Mead, Gunnar Myrdal, Henry R. Luce, Henry Wallace, J.K. Galbraith, Milton Friedman, Martin Luther King Jr., Malcolm X, Lionel Trilling, Susan Sontag, Betty Friedan, Gloria Anzaldúa, Hannah Arendt, Herbert Marcuse, Edward Said, Samuel Hultingon, Russell Jacoby, T.S. Kuhn, and Walter Benn Michaels. Credit units: 3 ECTS Credit Units: 6. Spr (D. Bryson)
AMER 374  **American Poetry**  
This course studies the social and formal development of poetic expression in the United States, with particular attention given to Bradstreet, Wheatley, Whitman, Longfellow, Crane, Pound, Eliot, Hughes, Brooks, Lowell, Frost, and Rich.  
**Credit units: 3 ECTS Credit Units: 6. Spr (M. Şanlı)**

AMER 383  **American Novel to 1900**  
Introducing the novel as a literary form, the course offers a history of the development of the novel in America. Students are expected to apply various approaches to the reading of any selected novel or novels. Authors may include Hawthorne, Melville, Twain, S. Crane, H. James, R. Hall, K. Chopin, R.H. Davis, E. Wharton, C. Perkins Gilman, K.A. Porter, A. Smedley.  
**Credit units: 3 ECTS Credit Units: 6. Aut (E. L. Demirtürk)**

AMER 384  **American Novel From 1900**  
A study of novels covering the period from 1900 to the present. Selections can include works by E. Hemingway, F.S. Fitzgerald, W. Faulkner, J. Steinbeck, W. Cather, T. Dreiser, J. Smiley, and “popular” novels, novels by women, African-American, Native American, and ethnic writers.  
**Credit units: 3 ECTS Credit Units: 6. Spr (E. L. Demirtürk)**

AMER 404  **The 1950s**  
Both in terms of actual events and in terms of US self-perception, the era known as “the 1950s” marks several important watersheds in US social, cultural and economic history. The course examines a range of topics, including US foreign policy, the suburban boom, the domestic retreat of women, the emergence of youth culture and rock’n roll, Disneyland, the rise of television, McCarthyism, and responses to the era: civil rights, the Beat poets, and intellectual debates about social conformity and “the end of ideology.”  
**Credit units: 3 ECTS Credit Units: 6.**

AMER 409  **The Great Migration Novel**  
**Credit units: 3 ECTS Credit Units: 6.**

AMER 418  **Contemporary American Short Story**  
This course aims to introduce students to contemporary American short stories. While requiring students to analyze the elements of short story, the course will also strive to explore contemporary American short stories by focusing on their diverse styles, themes and their regional and national heritages.  
**Credit units: 3 ECTS Credit Units: 6.**

AMER 427  **Topics in Theory for American Culture**  
This course offers an introduction to critical and cultural theory with specific reference to problems in American Studies. Students will be encouraged to think critically about issues concerning narrative form, knowledge and power, culture, “common sense,” gender, race, and hegemony within the context of American culture and history. Selections from Barthes, Benjamin, Lyotard, Foucault, Gramsci, Bederman, Wiegman, Haraway, Jackson Lears, Denning, and others will be read for the course.  
**Credit units: 3 ECTS Credit Units: 6. Aut (A. Çelikkol)**

AMER 428  **Novels of Toni Morrison**  
Nobel-winning African-American woman novelist Toni Morrison’s work deserves closer attention with the increasing popularity she has enjoyed. The course will explore how history and memory play a pivotal role in the survival of her black women characters, whose lives are determined by racial, classist, and sexist boundaries. The course will further explore the role of community and cultural heritage for women characters, especially, to cross
“places” and to define new meanings of home in transgressing boundaries. Excerpts from Morrison’s essay and interviews will be given as handouts in association with the discussions of novels. Credit units: 3 ECTS Credit Units: 6.

AMER 429 Orientalism and American Culture 1860-1925
The geographic focus will be on American perceptions of the “the Near East.” The course examines a wide range of genres and artifacts from high culture to popular and material culture, placing them in their dual historical context (American and Near Eastern). Genres and artifacts include gothic literature, travel narratives, war novels, correspondence and missionary narratives, museum and world fair representations of the Near East, Orientalism in Victorian architecture, performances, and movies, advertisements, and magazine articles. In addition, students will read theoretical texts to frame their approach to the material. Credit units: 3 ECTS Credit Units: 6.

AMER 430 The Thirties: the Great Depression and the New Deal
This course will examine the nineteen-thirties, a crucial decade in twentieth-century United States history. We will examine the causes and consequences of the Great Depression, the New Deal of President Franklin D. Roosevelt, and the political, cultural, and intellectual developments of this era. The course will emphasize a historical approach to the thirties, but will also examine the literature, film, art, and music of this decade. Credit units: 3 ECTS Credit Units: 6. Aut (D. Bryson)

AMER 434 Cold War Culture and Modernization
This course will explore the culture of the early Cold War (1950-60) in an international context of modernization narratives. The Cold War invented many cosmopolitan cultural forms, subjects, and narratives, with the express aim of the global circulation of American ideas and ideals of modernity. The global modernity of the 50s is a product of American social sciences, area studies, development theories, public relations and advertisement/propaganda campaigns. In this course we will explore the ways in which this project was appropriates and subverted in various local practices and discourses. Reading include official documents from US National Archives and various Turkish archives, modernization theories, and other background material on the cultural Cold War. Credit units: 3 ECTS Credit Units: 6.

AMER 436 Media Communications Culture
This interdisciplinary course examines the history, sociology, and theory of media and communications in the American context. Our focus will be on the ways that diverse media and technologies—orality, literacy, print, radio, television, film, digital media—shape and transform human communication. Topics to be covered may include: the role of media and technology in the development of mass culture; the corporatization of media and culture; forms of media critique; digital media and the laws of cyberspace; media, ideology, and the public sphere; the poetics of online communication; multimedia communication; media, nationalism and minority cultures; media, gender and sexuality; media globalization, and the future of democracy; news media, advertising; and computer-mediated communications; communication networks; and the internet. Credit units: 3 ECTS Credit Units: 6.

AMER 437 American Film in Context
This course examines a wide variety of Hollywood and independent American films in their artistic, technical, social, and economic context. The focus will be on the vast range of filmmaking styles that have emerged in the United States over the past century. Films by D.W. Griffith, Charlie Chaplin, Orson Wells, Alfred Hitchcock, Billy Wilden, John Ford, Martin Scorsese, Francis Ford Coppolla, Woody Allen, Robert Altman, Stan Brakhage, John Waters, Jim Jarmusch, David Lynch, John Samples, Spike Lee, the Coen Coen Brothers, Quentin Tarantino, Hal Hartley, Steven Soderberg, Spike Jonze, and Todd Solondz will be studied. Credit units: 3 ECTS Credit Units: 6.

AMER 438 The Self in American Culture and History
This course will examine the manner in which the “self” has been constructed in American (and more generally Western) culture from a historical perspective. We will examine how various American (as well as non-U.S.) writers, social scientists, and philosophers have dealt with the self—as well as how the self has been experienced and perceived by Americans in general—during the nineteenth and twentieth centuries. The following will be issues of special concern: the transition from “character” to “personality” in the early twentieth century; the cultural history of emotional expression and management; social scientific knowledge and the construction of the self; gender and self; the emergence of the modern emphasis on self-realization; the phenomena of “multiple personality”; and the significance of “memoro-politcs” in the contemporary world. The most important goal of the course will be foster a critical sense of the way in which the self is not a naturally given entity, but is produced within specific cultural and historical contexts. Credit units: 3 ECTS Credit Units: 6.

AMER 439 The Art and Business of the Short Story
What, if anything, makes a short story and not a sketch, an unfinished novel, or a prose poem? Must short stories achieve unity of effect, consciousness of their own artistry, reveal character rather than build it, or capture a slice of life? Is there any truth in the cliche that the short story is the only original American art form, and if not, what symbolic work is performed by that cliche? Why have publishers and creative writing workshops extolled the genre’s virtues for 100 years? We will read short stories and short story criticism by Edgar Allan Poe, Mary Wilkins Freeman, Anton Chechov, Edith Wharton, O. Henry, Saul Bellow, Philip Roth, Raymond Carver, Louise Erdrich, Bobbie Ann Mason, and recent unknown authors. Although we will study the stories’ themes,
AMER 440  American Society and Globalization
This course will examine the content and context of such global concepts as global economy, global village, IN-GOs, communications society, technology revolution and multiculturalism with American and global perspectives. Specific references will be made to contemporary global events including the social changes that took place in the 20th century and issues with the rise of the U.S. plays in a global society. Particular attention will be paid to the elements of perspective consciousness, global interconnectedness, cross-cultural understanding, and global history. Students are expected to apply and evaluate global issues with cross-cultural inquiry in individual and group projects. Credit units: 3 ECTS Credit Units: 6.

AMER 441  Culture in its Historical Contexts
To discuss culture is itself a cultural practice. This course, then, will consider recent cultural concerns about self-identity and social memory while at the same re-situating such concerns in their social and economic context. This is an interdisciplinary course that involves the reading of literary and philosophical texts. Although no prior background in philosophy or history is required, it is expected that students be familiar with writing documented research papers at the 4th year level. Credit units: 3 ECTS Credit Units: 6.

AMER 445  Modern American Drama
The plays studied will concern issues such as family conflicts in Eugene O’Neill’s Long Day’s Journey into Night, August Wilson’s Fences as well as moral choices in Arthur Miller’s The Crucible, Susan Glaspell’s Trifles, and Lorraine Hansberry’s A Raisin in the Sun. Each play will be studied in its historic context, including Thornton Wilder’s Our Town and Lawrence and Lee’s Inherit the Wind. Students will explore dramatic choices through exams and by producing and analyzing selected scenes from the plays. Credit units: 3 ECTS Credit Units: 6.

AMER 447  Topics in Cultural Studies
This course introduces students to comparative analytical tools and diverse archival material for reading contemporary culture and institutions. Readings will be framed by theories of transnationalism and cosmopolitanism and will offer new paradigms for thinking about multi-sited cultural production and the global circulation of textual and visual forms. The course will enable a rethinking of modernity, postmodernity, mobility, borders and boundaries. Credit units: 3 ECTS Credit Units: 6.

AMER 448  American Pragmatism
The purpose of this course is to examine the contribution of American Pragmatism to intellectual thought and contemporary criticism. We will read during the first two-thirds of the semester the writing of two “classical” American Philosophers, William James and John Dewey, as well as selected texts from the intellectual forefather of American Pragmatism, Ralph Waldo Emerson. Pragmatism offers, among other things, distinctive accounts of knowledge, ethics, social progress, democracy, the individual, social conflict, self-expression, the scientific method, culture, and education. We will examine many of these in detail and then in the last portion of the semester turn to contemporary advocates of Pragmatism (such as Richard Rotry, Cornel West, and Richard Posner) in order not only to identify lines of continuity and break between classical and contemporary pragmatism, but also to critically assess the contributions of each to ongoing social inquiry and criticism. Credit units: 3 ECTS Credit Units: 6. Spr (K. S. Sorrell)

AMER 449  Modernity and Visuality
Different understandings of “the modern” emerged across national cultures in the early decades of the 20th century. Modernization meant constant innovations, industrialization of production, consumerism, urbanization in social life everywhere. Modernism implied a certain form of global artistic production that questioned representation. However, across national cultures the processes and concepts embedded in modernity had different specular languages. That is to say, “the modern” was expressed with different symbols, images, and social spectacles in the US, Germany, France and Turkey. The purpose of the course is to compare the visual regimes of modernity so as to understand how “the modern” is experienced in different geographies. Credit units: 3 ECTS Credit Units: 6.

AMER 450  Representations of the City
This course considers the experience of living in the modern and postmodern city in selected texts by Puerto Rican, African-American, and Turkish writers. Our emphasis will be on the ways in which these writers have portrayed the disadvantages and promises of urban life. In view of these texts we will be looking at the different ways the urban experience is represented in different cultures. The film screenings, written essay assignments and presentations will provide us with the vital historical, social and political backdrop upon which we will build our understanding of each text. Credit units: 3 ECTS Credit Units: 6. Aut (E. L. Demirtürk)

AMER 451  Ethnic Literature
The literature produced by the ethnic subculture in America will be examined with special emphasis on its characteristics. Major writers’ works from various groups (Jewish, Native-American, Chicano, Asian American) will be discussed. Credit units: 3 ECTS Credit Units: 6.
AMER 456  Race and Media in the U.S.
This course will critically examine the role of the media in enabling or challenging the social constructions of race in American society. It will take an interdisciplinary approach to analyzing the issue of race mainly focusing on its media representations. In covering races, readings in the course will primarily address the experiences of African Americans under the light of the Whitestudies. However, this course will center on experiences of African Americans, who lived on both sides of the racial divide both as black and white people at different stages of their lives as well as those who ‘pass for white.’ We will be watching a variety of films all through the semester: TV series such as the Jeffersons, Shirley Temple movies with Bill ‘Bojangles’ Robinson, S. Pollier’s Guess Who is Coming to Dinner, and more contemporary movies will be discussed. Since race and gender in this course will be viewed as interlocking social systems, we will discuss gender and class, when the need arises for it in our discussions. The reading materials include a textbook: We will read Robert M. Entman & Andrew Rojecki, The Black Image in the White Mind: Media and Race in America (Chicago: The University of Chicago P, 2000), while the course package will include articles on critical work, based on a cultural studies approach to race, gender, and class in the media. Credit units: 3 ECTS Credit Units: 6.

AMER 458  History of American Presidential Campaigns
Every four years the United States picks its president. Campaigns for the presidency have ranged from a few drunken, raucous, and even violent weeks in the nineteenth century, to the very sophisticated and year-long “packaging” of the presidency today. This course will look at the evolution of American presidential campaigns, with an emphasis on the changing “political culture” in the United States. As well as looking at key texts, the class will explore the media of American politics, from newspapers and political cartoons, to radio, television, and the dawn of internet campaigning. In particular we will focus on the current presidential campaign in the United States, as the Democrats and Republicans pick their candidates for 2008. Credit units: 3 ECTS Credit Units: 6. Spr (E. Kohn)

AMER 459  Race and Ethnicity in American Culture
This course presents a comparative study of the culture and writings of major ethnic groups in the US. Students will be exposed to the cultural expression and the processes of identity formation for various groups, including Latino/as, Native Americans, African Americans and Italian-, Irish-, and Asian Americans. Students will study key texts in the field. Topics may include theories of assimilation, integration, and colonization, conceptual models such as “whiteness,” and the “melting pot,” and historical responses to immigration, such as ethnicide, eugenics, and repatriation, as backdrop to the complex roles played by race and ethnicity in the US. Credit units: 3 ECTS Credit Units: 6. Aut (N. M. Kelley)

AMER 460  Contemporary Native American Writers
A study of the fiction and poetry of Native American writers covering the period from 1945 to the present. Selections may include works by Sherman Alexie, Joseph Bruchac, Louise Erdrich, Joy Harjo, N. Scott Momaday, and Leslie Marmon Silko, as well as other contemporary Native American writers. Credit units: 3 ECTS Credit Units: 6.

AMER 461  The History of the Book in America
This course examines the history of the book in America as both a subject of scholarly inquiry, and as a distinctive academic discipline. For well over fifty years now, Book History has occupied an interdisciplinary place in the academy on either side of the Atlantic, and we will spend the semester considering the various subjects of study pursued by practitioners, together with the scholarly methodologies they employ to that end. Accordingly, we begin with an in-depth look at the book in early America, paying special attention to its role in the religious and popular cultural life of the colonies. Democratization will be our theme as we move to the nineteenth century of a new United States: the proliferation of print, and rise of authorship as a profession, highlight this section of the course. From there, we press forward into the twentieth century and beyond. What the modern, postmodern, and media revolutions have meant for books will occupy our thoughts as we bring the course to a close. Along the way, we will examine books not only as literary texts to be read, and material objects to be handled, but as cultural sites that reveal much about the social, economic, and ideological contexts that produced them. Credit units: 3 ECTS Credit Units: 6.

AMER 462  Transatlantic Currents in American Women's Fiction and Poetry
Credit units: 3 ECTS Credit Units: None.

AMER 466  Contemporary African-American Women Writers
Contemporary African American women writers may include major works by N. Larsen, Z.N. Hurston, T. Morrison, T. McMillan, A. Walker and G. Naylor. Credit units: 3 ECTS Credit Units: 6.

AMER 467  The Early American Metropolis
This course examines the urban United States during the “long” nineteenth century. Although we will focus on contemporary literary depictions of the city, students can also expect to supplement their studies of the urban written word with a critical consideration of a variety of alternate “texts,” including the built environment, painting, engraving, and photography. A close attention to historical context will inform all readings and discussions. Our aim is to reconstruct the full diversity of American metropolitan life - including the multiple perspectives of race,
class, region, gender, and ethnicity - both as it was experienced and interpreted at a defining moment in the modern U.S. Credit units: 3 ECTS Credit Units: 6.

**AMER 469 American Law Culture and Society**
Landmark cases in American law not only reflect the cultural values and social institutions of their time, they often dramatically transform them. In this course we will examine famous cases involving such important social issues as slavery, segregation, personal privacy, freedom of speech, capital punishment, torture, prostitution, medical experiments, and education. We will try to understand the conflicts that provoked these confrontations and bring our own judgement to bear on the results. We will also discuss distinctive theories of law that both emerged from and governed the career of these cases. Credit units: 3 ECTS Credit Units: 6. Aut (K. S. Sorrell)

**AMER 470 Introduction to Advanced Academic Writing**
This course provides students with an intensive overview of the academic research and writing process and is particularly recommended as preparation for students who anticipate applying to graduate school in the future. Students will write one major research paper over the course of the semester with classroom units dedicated to each step of the writing process: brainstorming, formulation of a thesis, research and selection of appropriate academic sources, organization and outlining, full citation of sources in both MLA and Chicago style, through proofreading, and so on. Outside samples of ‘good’ and ‘bad’ academic writing will be analyzed in course discussions and peer editing will be heavily utilized throughout the semester. Credit units: 3 ECTS Credit Units: 6.

**AMER 471 Reading De Tocqueville**
This course will be devoted to reading *Democracy in Amerika* Alexis de Tocqueville. This is the classic study of American culture and society, based on the travels and observations of de Tocqueville in the United States during the 1830s. We will focus on volume 2 of de Tocqueville’s book -which deals with cultural issues such as the role of individualism in America life- but will also examine selected passages and topics from volume 1. Commentaries on and other writings pertinent to the Tocqueville will also be read, including writings by Robert Bellah, Sheldon Wolin, Richard Handler, Abraham Eisenstadt, Winfried Fluck, and others. Credit units: 3 ECTS Credit Units: 6.

**AMER 472 Writing for the Internet Age**
Effective writing demands analysis of audience needs, mastery of content and purpose, and appropriate style, even with the new media of the last fifty years which have affected education, business, government and family life. Writing assignments include letters, email, webpages and blogs. Credit units: 3 ECTS Credit Units: 6.

**AMER 475 American Culture and Politics in the 1970’s**
Credit units: 3 ECTS Credit Units: None.

**AMER 492 Gender Studies in American Culture**
This course offers an introduction to the critical role that gender has played in the structure of American society. It examines theories of gender and society as they have evolved in recent years. Students consider how feminism and other gender-sensitive critical practices help us to understand problems in U.S. society. Credit units: 3 ECTS Credit Units: 6. Spr (N. M. Kelley)
DEPARTMENT OF ARCHAEOLOGY

Teaching and research activities of the department concentrate on the archaeology, history and art of Anatolia, the Mediterranean, and the ancient Near East. Students will have opportunities to take part in excavations and surveys conducted by department members at the multi-period sites of Hacimusalar-Elmalı (Antalya) and Kinet Höyük-Dörtol (Hatay).

UNDERGRADUATE PROGRAM

The aim of the undergraduate program in the Department of Archaeology is to provide a thorough and comprehensive understanding of archaeology, ancient history and art. The curriculum includes practical as well as academic work. There will be field trips to museums and sites in Turkey, and students will have the opportunity to participate in departmental survey/excavation projects; arrangements might also be made for students to take part in excavations and expeditions sponsored by other institutions.

The first two years of the program embrace a wide range of essential introductory subjects designed to familiarize the student with the background material required for the more specialized subjects offered over the following two years. In the third and fourth years, besides the compulsory courses, the student has the opportunity to choose elective topics in his or her field of particular interest. One of the options in the fourth year is supervised study on a topic of the student's own choice, at the end of which the student will produce a short dissertation. This particular elective will be offered to students who would like to continue with graduate studies in the field of archaeology or related subjects. Every student is required to take at least one ancient language (Greek and Latin are offered). A basic knowledge of ancient Greek or Latin is invaluable for those students who decide to specialize in Greek or Roman art and archaeology, or ancient history.

At the end of the program the student will emerge with a good knowledge and comprehension of most aspects of Near Eastern, Mediterranean, and European art and archaeology from the Prehistoric period onwards. Emphasis will of course be placed on Anatolian civilizations since the environment at Bilkent provides an ideal opportunity for first-hand familiarity with the ancient sites and monuments of this country.

The Minor Track in Archaeology aims to provide students with a useful and appreciated background for many careers different from hardcore archaeology, such as publishing, tourism, communications, law, management and finance, international relations, and government service. The Minor track is designed to equip candidates with both broad and in-depth knowledge in Pre-Classical and Classical archaeology, its current research objectives, methodologies and applications, to supplement their Major studies in a firm and enduring way.

Prerequisite Courses: None

Open to Students from All Departments

GRADUATE PROGRAMS
Master of Arts in Archaeology

The Department of Archaeology offers a graduate program leading to the M.A. degree. The program focuses on the archaeology and art of Anatolia from the Prehistoric to the Medieval period, within its Mediterranean and Near Eastern context. Instruction is primarily through courses that encourage independent research, and emphasis is placed on individuality of thought as well as a thorough knowledge of the field and the application of critical methods to archaeological problems.

**Admission:** Applicants are normally expected to have an undergraduate major in archaeology, history of art, anthropology, or a related subject, and must demonstrate a proficiency in English. Students from other disciplines are also eligible for the program, providing they remedy deficiencies in their academic background by completing a year of preparatory courses prior to beginning the Master’s program. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

**Degree Requirements:** The M.A. offered by the department focuses on the archaeology and art of Anatolia. The program requires students to complete (generally over three semesters) a minimum of 27 units of course work (a total of at least 9 courses), comprising core courses in Archaeological Method and Theory, The Interpretation of Art Historical Materials, Research Directives in Anatolian Art and Archaeology and/or Ethnoarchaeology, and a minimum of three seminars in at least two of the following subjects: Pre-Classical, Classical and Medieval Art and Archaeology. A range of seminar topics is offered within each specified period, and these are varied each semester according to the needs of the students and the specialties of the instructors. Students who wish to concentrate on Classical Archaeology are required to take Ancient Greek or Latin, or both. Medieval specialists have the opportunity to study Ottoman Turkish and Paleography (offered through the History Department). Students who wish to supplement their academic background are permitted to attend undergraduate lecture courses and seminars either as auditors or for extra credit.

By the end of the second year the student will complete a Master’s thesis in a specialized field of study. Participation in an approved field project is also an integral part of the program, and by the second year at the latest a reading knowledge of French or German must be demonstrated through examination.

### Course Descriptions

#### HART 102 Introduction to Research Skills
Examination of a theme concerning the art, architecture, and archaeology of the Mediterranean basin and the Near East, with emphasis on developing the skills essential for successful university study: reading scholarly works, taking notes, identifying research problems, writing papers (both short reports and longer research papers), giving oral presentations, and taking part in discussions. The topic examined will vary from year to year, depending on the interests of the instructor. 

Credit units: 3 ECTS Credit Units: 6. Spr (J. Bennett)

#### HART 111 Introduction to Archaeology
This course provides background material essential for any student of archaeology, covering such topics as the history of archaeological research and excavation, major archaeological discoveries of past centuries, modern excavating, surveying and recording techniques, dating methods, identification of sites and the topographical factors involved in locating ancient settlements. 

Credit units: 3 ECTS Credit Units: 4. Aut (J. Bennett)

#### HART 117 Ways of Seeing: Approaches to Art and Architectural History
A thematic introduction to great works of art and architecture, techniques of analysis, and methods of interpretation. Examples studied will be taken from cultures around the world, ancient, medieval, and modern, with the majority coming from the western tradition. Themes explored will include: form; style; iconography (the subject matter of art); images of the sacred; architecture and ritual; politics and art; landscapes and natural settings; private architecture: the house; and perspectives from sociology, Marxism, feminism, and semiotics. 

Credit units: 3 ECTS Credit Units: 4. Aut (C. Gates)

#### HART 118 Survey of European Art and Architecture
An introduction to the art and architecture of Western Europe and America from the Middle Ages through the 20th century. 

Credit units: 3 ECTS Credit Units: 6.

#### HART 120 Human Evolution and World Prehistory
This course is a survey of the human prehistory of Africa, Europe and Asia from the first hominids to the Mesolithic period, with particular emphasis on morphological evolution, environment and cultural developments. 

Credit units: 3 ECTS Credit Units: 6. Spr (J. Morin)
HART 125 Archaeological Illustration
This course offers the first principles and basic skills required for archaeological illustration: drawing artifacts, buildings and reconstructions, producing artwork for publication, and drawing in the field during survey work and excavation. Credit units: 3 ECTS Credit Units: 4.

HART 126 Archaeological Planning or Planning and Drawing in the Field
Further development and practice of the skills introduced in HART 217. Credit units: 3 ECTS Credit Units: 5.

HART 202 Introduction to Mesopotamian and Egyptian Archaeology
This course will survey the ancient civilizations of Mesopotamia (modern Iraq) and Egypt at the time of their greatest achievements (4000-550 BC), from the invention of writing and the engineering of the pyramids, to large-scale urbanism and far-flung economic networks. An archaeological focus on settlement patterns, architecture and artifacts will document how the cultures of these two regions evolved, and what interconnections may have linked them. Credit units: 3 ECTS Credit Units: 6. Aut (M. Gates)

HART 208 Roman Art and Archaeology
A historical survey of the visual arts and architecture of Rome and Italy studied in cultural and political context, from the Etruscans to the fall of Rome. Credit units: 3 ECTS Credit Units: 6.

HART 212 Introduction to Classical Archaeology
This course surveys major aspects of the materials cultures of Ancient Greece and Rome, beginning with the Iron Age of Greece and concluding with the decline of the Western Roman Empire: their architecture, their arts, their economic and social development in urban and rural settings, as well as the way in which scholars have approached the field over its history. Equal weight is given to the development of Classical Greece, its Hellenistic expansion, and the Roman domination of the Mediterranean. Credit units: 3 ECTS Credit Units: 6. Spr (I. Özgen)

HART 219 Anatolian Archaeology, Neolithic to the Iron Age
An introduction to the ancient sites and monuments of Anatolia and its relations with the surrounding cultures from the beginning of urban civilization (ca. 7th millennium BC) to the Early Iron Age. Credit units: 3 ECTS Credit Units: 6. Aut (I. Özgen)

HART 220 Anatolian Archaeology, Classical and Byzantine
An introduction to the ancient sites and monuments of Anatolia and its relations with the surrounding cultures from the Archaic to the Byzantine period. Credit units: 3 ECTS Credit Units: 6.

HART 221 Great Discoveries from the Ancient World
Archaeologists find and study a wide range of things - from preserved footprints to frozen bodies, from fossilised skulls to battlefield relics, from cities lost in the jungle to those buried by falling ash. Specifically designed for the non-archaeologist, this course demonstrates how discoveries like these as well as the study of the many monuments left to us by ancient societies have revolutionised our knowledge of man's past. Specifically designed for non-archaeologists, the course examines and assesses some of the more important archaeological discoveries and monuments that have helped change our view of the past, including some of the more famous and well-known 'finds', such as Tutankamun's Tomb and Troy, as well as several of the less-well known 'discoveries and monuments', as with the site of Custer's Last Stand and the Easter Island statues. Credit units: 3 ECTS Credit Units: 6. Aut (J. Bennett)

HART 222 Mesopotamian Archaeology
The history, archaeology and art of the Ancient Near East from the Akkadian period (late 3rd millennium BC) through the Persian conquest (539 BC). Credit units: 3 ECTS Credit Units: 8.

HART 225 Cultural Anthropology
Survey of the basic data and methods of research in the material culture of ancient societies in historical context, illustrating the principles of cultural behavior. Exploration of selected basic concepts and theories of contemporary anthropology. Current problems in relation to materials from the Old World. Credit units: 3 ECTS Credit Units: 8.

HART 227 Greek Archaeology
An introduction to the archeology and cultures of ancient Greece, From the Neolithic to Hellenistic periods. Credit units: 3 ECTS Credit Units: None.

HART 231 Ancient Greek I
Introduction to ancient Greek for beginning students. The course will emphasize both grammar and reading. Credit units: 3 ECTS Credit Units: 8. Aut (J. Morin)

HART 232 Ancient Greek II
Completion of the grammar and vocabulary acquisition started in Ancient Greek I. Credit units: 3 ECTS Credit Units: 8. Spr (J. Morin)
HART 239  Latin I
Introduction to Latin for beginning students. The course will emphasize both grammar and reading. Credit units: 3 ECTS Credit Units: 6. Aut (A. C. Abuagla)

HART 240  Latin II
Completion of the grammar and vocabulary acquisition begun in Latin I. Credit units: 3 ECTS Credit Units: 6. Spr (A. C. Abuagla)

HART 241  Great Discoveries from the Ancient World
Archaeologists find and study a wide range of things—from preserved footprints to frozen bodies, from fossilised skulls to battlefield relics, from cities lost in the jungle to those buried by falling ash. Specifically designed for the non-archaeologist, this course demonstrates how discoveries like these as well as the study of the many monuments left to us by ancient societies have revolutionised our knowledge of man’s past. Specifically designed for non-archaeologists, the course examines and assesses some of the more important archaeological discoveries and monuments that have helped change our view of the past, including some of the more famous and well-known ‘finds’, such as Tutankhamun’s Tomb and Troy, as well as several of the less-well known ‘discoveries and monuments’, as with the site of Custer’s Last Stand and the Easter Island statues. Credit units: 3 ECTS Credit Units: 6.

HART 300  The Roman Empire Under Trajan
This course is specifically designed to provide students with little or no previous knowledge of Roman history or archaeology with an understanding of how the Roman Empire appeared and functioned at its apogee. It will begin with an overview of political events and developments from 31 BC, when Octavian became undisputed ruler of Rome, to AD 97, the year that Nerva adopted Trajan as his heir and successor. Then follows a more detailed review of the historical and archaeological evidence for cultural and social aspects of the Roman Empire during Trajan’s reign, with a particular emphasis on the evidence available from the eastern Roman provinces, and especially from modern Turkey. From this, students will learn how a reliable account of the period can only be established by combining the limited historical record with the evidence of archaeology, epigraphy and numismatics. On successful completion of the course, therefore, the student will not only have a detailed knowledge of the cultural achievements of the period, but will have also developed an awareness of historiographical methods and issues, and how archaeology substantially improves on the available documentary record. Credit units: 4 ECTS Credit Units: 6.

HART 303  Greek Sculpture
The course will concentrate on the development of Greek sculpture with special emphasis on the state of research, on new interpretations of images and on the methodology of interpretation. Credit units: 3 ECTS Credit Units: 6.

HART 305  Byzantine and Islamic Art and Archaeology
A survey of art, architecture, and archaeology of the Mediterranean and Near East in the medieval and early modern periods from Constantine the Great to the 18th century. Focus will be on the art and architecture of the Late Roman and Byzantine empires in Italy and the eastern Mediterranean basin and of Islamic states from the Umayyad and Abbasid caliphates to the Ottoman, Safavid, and Mughal empires. Credit units: 3 ECTS Credit Units: 6. Aut (C. Gates)

HART 306  Hellenistic and Roman Sculpture
A survey of Hellenistic and Roman sculpture from 300 BC to the Constantinian period (ca. 300 AD). The major artistic achievements of the Romans – portraiture, historical narratives and the stylistic changes from the idealized to the realistic. Credit units: 3 ECTS Credit Units: 6.

HART 307  Monumental Painting
The arts of wall painting and mosaics in the Greek world and Italy from the Archaic period to the third century AD. Credit units: 3 ECTS Credit Units: 6.

HART 308  Greek Vase Painting
A survey of Greek vase painting from the Geometric period (ca. 9th century BC) to the 4th century BC with special attention to Attic vase painting of the Archaic and Classical periods. Credit units: 3 ECTS Credit Units: 6.

HART 310  Archaeological Surveying and Planning
A practical course offering an introduction to survey procedures in the recording of sites and field surveys. Chain surveying, gridding, contouring and leveling are all covered by this course as they are basic to the accurate recording of all kinds of archaeological evidence. Credit units: 3 ECTS Credit Units: 6. Spr (B. C. Cookson)

HART 311  Archaeological Drawing and Planning in the Field
This course offers the first principles and basic skills required for archaeological illustration: drawing artifacts, buildings and reconstructions, producing artwork for publication, and drawing in the field during survey work and excavation. Credit units: 3 ECTS Credit Units: 6.
HART 313 European Prehistory
Survey of human prehistory in Europe from the earliest humanoid cultures to the beginnings of advanced civilizations. Paleolithic and Mesolithic cultures; Neolithic and Bronze Age cultures. Credit units: 3 ECTS Credit Units: 6.

HART 314 Archaeology of Iran
A detailed examination of the archaeology of Iran from the time of the earliest civilizations to the Achaemenian period. Credit units: 3 ECTS Credit Units: 6.

HART 315 Greek Architecture
A survey of Greek building from ca. 700 BC to the 1st century BC. The Greek architectural tradition and its historical development will be emphasized (the history and nature of Doric and Ionic orders and of “Aeolic” and Corinthian styles). Materials, techniques and procedures of construction will also be covered. Sanctuary architecture provides the core material of the course but military, funerary, and ceremonial monuments will also be considered. Credit units: 3 ECTS Credit Units: 6.

HART 316 Roman Architecture
A survey of Roman architecture, from the Etruscans to the Constantinian period (ca. 300 AD) throughout the Roman world, with an emphasis on the architecture of the Republic and the early Roman Empire. Credit units: 3 ECTS Credit Units: 6. Spr (J. Bennett)

HART 317 Archaeology of Troy
A broad-based investigation into the problem of the origin and development of the Homeric city of Troy. The written and archaeological sources and the extent and the limitations of the data will be emphasized. The class will discuss the relationships between epic, history and archaeological evidence. Credit units: 3 ECTS Credit Units: 6. Aut (T. Zimmermann)

HART 318 Archaeology of Syria and Palestine
The archaeology of the Levant and its relationship with surrounding cultures from the beginning of urban civilization to ca. 1200 BC. Credit units: 3 ECTS Credit Units: 6.

HART 319 Bronze Age in Iran
A detailed examination of the archaeology of Iran during the Bronze Age. Credit units: 3 ECTS Credit Units: 6.

HART 320 Orientalizing Period
A survey of the trends in Greek arts, crafts and techniques between the early 8th and 6th centuries BC, emphasizing their connection with the artistic traditions of the Near East (Anatolia, the Levant, Egypt) and the Near Eastern contribution to the development of Greek culture, both material and intellectual. Credit units: 3 ECTS Credit Units: 6.

HART 321 Islamic Art and Architecture I
Islamic Art and Architecture of the Middle East and North Africa from the 8th through the 13th centuries. Credit units: 3 ECTS Credit Units: 6.

HART 322 Hittite Archaeology
Topics include the origin, the rise and the development of the Hittite state and civilization. Topography, settlement, history, urban growth, organization and civic administration, public religion, commercial and political activities and art will be considered. Credit units: 3 ECTS Credit Units: 6. Aut (I. Özgen)

HART 324 Near Eastern and Anatolian Glyptic
This course will survey the glyptic arts (seal carvings) of the Near East and Anatolia from their beginning in the Uruk period (late 4th millennium BC) down to the Iron Age in Anatolia and Mesopotamia (1st millennium BC). The seals, their representations and associated texts will be examined to highlight our understanding of the administration and social structure they reflect. Credit units: 3 ECTS Credit Units: 6.

HART 325 Bronze Age in Anatolia
The archaeology of Anatolia between 3000 and 1200 BC and its relationship with surrounding cultures - the Aegean, the Levant and the Near East, and Egypt. The data examined are primarily archaeological, but textual evidence will also be considered. Emphasis on questions of “style” and “regionality” in the analysis of art works serving as evidence for interaction in the late Bronze Age in the eastern Mediterranean. Credit units: 3 ECTS Credit Units: 6.

HART 326 The Aegean Bronze Age
The prehistoric cultures of the Aegean area, concentrating on Minoan Crete, Troy, the Aegean Islands, and Mycenaean Greece. Credit units: 3 ECTS Credit Units: 6.

HART 330 Egyptian Art and Archaeology
A survey of the art and archaeology of ancient Egypt, from the Predynastic Period to the end of the New Kingdom (4000-1100 BC). The course will emphasize major monuments of architecture, sculpture, relief and painting. Questions of stylistic change and historical context will be considered, as well as cultural relations with neighboring civilizations. Credit units: 3 ECTS Credit Units: 6.
HART 333  Ancient Greek III
Selections from Greek literature (such as Homer, Hesiod, Xenophon Aeschylus, Sophocles, Euripides, Plato, Herodotus and Thucydid). Credit units: 3 ECTS Credit Units: 6, Prerequisite: HART 231 and HART 232.

HART 334  Ancient Greek IV
Selections from Greek literature (such as Homer, Hesiod, Xenophon Aeschylus, Sophocles, Euripides, Plato, Herodotus and Thucydid). Also, an introduction to Epigraphy. Credit units: 3 ECTS Credit Units: 6, Prerequisite: HART 333.

HART 335  Monuments of Babylon
Babylon, named The Gate of the Gods, was by 600 BC the ancient world’s largest city, and home to two of its “ancient wonders.” Situated in today’s southern Iraq, Babylon’s urban plan, palaces, temples, museums, housing and lifestyle are known from the Greek historian Herodotus and other visitors, from the Old Testament, from Babylonian texts, and especially from a century of excavations at the site and its surroundings. This course will examine major aspects of this remarkable ancient city, with a focus on balancing the written and archaeological evidence. Credit units: 3 ECTS Credit Units: 6. Aut (M. Gates)

HART 338  Hittite Texts I
The course teaches students how to read the Hittite cuneiform script. Some elementary historical texts will be read to introduce students to this genre of cuneiform literature. Credit units: 3 ECTS Credit Units: 6.

HART 340  Archaeology of Ionia
A detailed survey of the archaeology and history of Ionia from the Bronze Age through the Classical period. Special emphasis will be placed on urban development of the major Ionian centers, political and religious institutions, and cultural and artistic productions, as well as their exchanges with the wider Mediterranean and Anatolian world. Credit units: 3 ECTS Credit Units: 6.

HART 342  Hittite Grammar I
Credit units: 3 ECTS Credit Units: None.

HART 343  Latin III
Completion of the grammar points of the Latin language and an introduction to original texts. Also, an introduction to Epigraphy. Credit units: 3 ECTS Credit Units: 6, Prerequisite: HART 239 and HART 240. Aut (A. C. Abuagla)

HART 344  Latin IV
Readings and discussions of many of the works of Roman literature. Emphasis will be on correct translation of the Latin, with attention to genre and narrative technique, and to building facility in reading Latin. Selections from writers such as Plautus, Vergil, Cicero, Caesar, Lucretius, Petronius and Ovid will be read in the original. Credit units: 3 ECTS Credit Units: 6, Prerequisite: HART 343. Spr (A. C. Abuagla)

HART 345  Preclassical Anatolian Archaeology Study Tour
A one month course surveying the archaeology of Turkey (ancient Anatolia) in the classroom and on site. A week of introductory lectures at the Bilkent campus will prepare for 3 weeks visiting sites and museums. This course will cover the evolution of Anatolian cultures from the first farming communities in the Neolithic period (10th millennium BC) through the Bronze and Iron Age Kingdoms of the Hittites (2nd millennium BC) and Phrygians (1st millennium BC). Major archaeological sites like Neolithic Çatalhöyük, Hittite Hattusas and Phrygian Gordion will be among the many places included in the study trip itinerary. Credit units: 3 ECTS Credit Units: None.

HART 350  Classical Byzantine-Selcuk Anatolian Archaeology Study Tour
A one month course surveying the art and archaeology of Turkey (ancient Anatolia) in the classroom and on site. A week of introductory lectures at the Bilkent campus will prepare for 3 weeks visiting sites and museums. This course will focus on Anatolia’s architectural and urban brilliance as part of the classical, Greco-Roman world (500 BC to 400 AD); and examine how the Byzantine and Seljuk states adapted and transformed these patterns in the centuries that followed. Sites include great cities of antiquity such as Pergamon and Ephesus; Byzantine monastic communities at Alahan and in Cappadocia; and Konya, the Seljuk capital. Credit units: 3 ECTS Credit Units: None.

HART 351  Monuments of Athens
The monuments of Athens from the Archaic period through the Hellenistic and Roman periods, considering stylistic developments and historical and cultural context. Credit units: 3 ECTS Credit Units: 6.

HART 352  Monuments of Rome
A detailed study of the monuments of Rome in relation to its topography and urban development. Stylistic characteristics and innovations in architecture and arts. Credit units: 3 ECTS Credit Units: 6.

HART 353  Introduction to Akkadian
Introduction to Akkadian for beginning students. No previous knowledge of a foreign language is needed. The course is particularly recommended to archaeology students whose interests lie in Bronze Age Mesopotamia and Anatolia. Credit units: 3 ECTS Credit Units: 6. Spr (S. F. Adalõ)
HART 360  Ancient Mesoamerican Civilizations  
A survey of the civilizations of Mesoamerica from earliest human settlement to the Spanish conquest, with emphasis on the art and archaeology of the great states: Olmec, teotihuacan, Maya, Toltec, and Aztec. Credit units: 3 ECTS Credit Units: 6.

HART 365  Ancient Cities  
A study of urban developments from the Neolithic period onwards, covering in particular cities of the Near East, Egypt, the Aegean, Greece and the Roman world. Credit units: 3 ECTS Credit Units: 6.

HART 368  Introduction to Hittitology  
This course aims to provide an introduction to the field of Hittitology and its contemporary concerns. A survey of the beginnings of Hittitology is followed by an overview of Hittite cuneiform orthography and an introduction to the current tools of the field. Hittite history and the main features of their society are then outlined. The course introduced students to the texts used to study Hittite political history, mythology, culture, religion and literature. Credit units: 3 ECTS Credit Units: 6.

HART 370  Iron Age Sculpture of the Near East  
Attention is focused on the major sculptural groups of the Anatolians, Assyrians, Neo-Babylonians and Persians. Credit units: 3 ECTS Credit Units: 6. Spr (I. Özgen)

HART 371  Achaemenian Art and Archaeology  
A discussion of the arts and archaeology of the Achaemenian period. The particular focus will be on the sites of Iran and Anatolia. Credit units: 3 ECTS Credit Units: 6.

HART 372  Archaeology of Phoenicia  
Detailed survey of Phoenician art and archaeology in its historical and economic context. There will be particular emphasis on the influences and relationships, especially in the fields of trade and art, between the Phoenicians and the rest of the Mediterranean and Near Eastern World. Credit units: 3 ECTS Credit Units: 4.

HART 403  Greek Sanctuaries  
This course examines the religious, political and social uses of one of the most important institutions of the Greek world, together with the architecture, sculpture, pottery and offerings found in sanctuaries. Credit units: 3 ECTS Credit Units: 6.

HART 409  Museum Practices and the Preservation of Cultural Heritage  
Study of various aspects of museum work. Management principles, cataloging and care of art objects, exhibitions and acquisitions, administrative procedures, and museum architecture will be emphasized. Specialist lecturers and visits to museums and their facilities. Credit units: 3 ECTS Credit Units: 6. Aut (B. C. Coockson)

HART 411  Greek and Roman Portraiture  
From the origins of classical sculpture in the Archaic Period, sculptors continued to improve and refine their methods and approaches to produce portraiture which represented real people of their time, and which reflected the spirit of their age. This course follows the development of classical portraiture from its beginnings to the late Roman period, with an emphasis on Roman portraiture, to establish its origins and originality, and to examine its role in contemporary society. Credit units: 3 ECTS Credit Units: 6.

HART 412  Museum Education  
This course will investigate the role of museums as institutions with a pedagogical mission. The focus is on the relation between the visitor and the collection on display. By means of mediation, a visit to a museum can be a learning experience in many dimensions (knowledge, self-understanding, taste, cultural competence). The theoretical aspects, history, recent publications and practical possibilities of museum education are discussed. The Museum of Anatolian Civilizations will serve as the field of educational research and experimentation. Credit units: 1 ECTS Credit Units: 2.

HART 414  The Archaeology of Vernacular Architecture  
This course surveys the ancient and contemporary construction of traditional buildings like farm complexes and village houses in Anatolia and the Middle East. The application of different building materials and techniques is discussed in context with modern archaeological fieldwork, in terms of what archaeologists might find or trace of such constructions after their deterioration. Credit units: 3 ECTS Credit Units: 6. Aut (B. C. Coockson)

HART 421  Archaeological Conservation  
Archaeological conservation provides a framework of ethical and practical knowledge for the conservation and preservation of archaeological materials and sites. Theoretical and laboratory topics will also be discussed. Credit units: 3 ECTS Credit Units: 6.

HART 422  Conservation for Field Archaeologists  
This course will give hands-on training for basic finds' conservation in the field. It will take place over a 3-week period, with 14 hours of class and laboratory training. Credit units: 1 ECTS Credit Units: 2.

HART 423  Cities, Monuments and Landscapes of Classical Anatolia  
Scattered throughout the modern Republic of Turkey, ancient Anatolia, are the very visible remains of some 100 and more sites and monuments that help illuminate the history and in particular the architectural developments.
of the Classical period in this region. This course will examine several of these sites and their hinterlands to explain what we can learn from the archaeological remains about changing social and economic systems in the Classical period, roughly 600 BC - AD 300. The course takes a chronological approach to the subject, so that developments in contemporary social and economic systems can be explored and explained at the individual sites. As such, a particular emphasis is placed on how the architectural remains at such sites help us understand their varying degrees of prosperity in the Classical period. However, although the course will naturally focus mainly on such well-known places as Priene, Pergamum and Ephesus, it will also examine what can be learnt from the remains at several less-well known sites, like Patara, Oinoanda, and Ankara. 

**HART 424 Religion and Society in the Ancient Near East**
This course will examine formal and private religion practiced by the ancient civilizations of Mesopotamia, the eastern Mediterranean, Anatolia and Egypt. Topics to be covered include religious settings (temples, shrines and outdoor cult places), iconography referring to deities and cults, and ancient texts that explain cult practices and religious beliefs. Lectures, class discussions and student presentations. 

**HART 426 Ancient Technologies and Materials**
This course aims to provide students with a general understanding of the natural sciences (mainly chemistry and physics) contribution to enhance traditional archaeological methodologies. Issues like 14C-dating and Dendrochronology will be in focus as well as Sediment Analysis, X-Ray, lead Isotope- and Spectral Analysis, Laser-Raman-Spectroscopy and FTIR-Spectroscopy. The second part of this course is then devoted to ancient technological innovations and advances in engineering, and their contribution contemporary materials science. 

**HART 430 Readings in Near Eastern Art and Archaeology**
This course will investigate the most recent issues and scholarship on a topic in the field of Near Eastern art and archaeology. Subject to be announced in the schedule of classes.

**HART 434 Landscape Archaeology**
This course examines the relationship between geomorphology and ancient settlement, with emphasis on the development of coastal landforms, changes in sea levels, the evolution of carstic landforms and fluvial geomorphology. 

**HART 435 Selected Topics in Anatolian Art and Archaeology**
Weekly 3-hour seminar with assigned readings, reports and a research paper on a specialized topic to be selected by the instructor. It will cover specific cultural periods, regions or issues in Anatolian Art and Archaeology.

**HART 436 Archaeological Method and Theory**
Readings and a series of discussions focusing on research problems designed to give the student an understanding of the different approaches to the historical study of works of art and archaeology.

**HART 437 Neolithic and Chalcolithic Periods in Anatolia**
An examination of the aceramic Neolithic cultures of Southeast Anatolia and the ceramic Neolithic cultures of the South and Southwest Anatolian plateau and their Chalcolithic successors.

**HART 440 Readings in Anatolian Art and Archaeology**
This course will investigate the most recent issues and scholarship on a topic in the field of Anatolian art and archaeology. Subject to be announced in the schedule of classes.

**HART 453 Palaeolithic Archaeology in Eurasia and the Near East**
The science of our ancestors' most ancient cultural period (ca. 2.600.000 - 10.000 BCE) is tremendously dynamic branch of archaeology, with an ever-growing body of new, sensational insights into the dawn of man, its dispersal, biological and socio cultural evolution. This seminar is designed to make students familiar with prominent finds and features of the Eurasian and Near Eastern Palaeolithic. Topics include lithic and bone working technologies, artwork, and the archaeology of caves and open air shelters. special attention will be eaually paid to the contribution of neighbouring sciences (Geology, Geochemistry, Palaeozoology and -anthropology, Genetics) to reconstruct a more comprehensive picture of our earliest past.

**HART 454 Introduction to Sumerology**
The course is an introduction to the study of Sumerian language, documents, history and culture. A history of the discovery of the Sumerian civilization is followed by an overview of Sumerian history and the main features of Sumerian society. The course familiarizes students with the corpus of Sumerian texts in the fields of literature, mythology, religion, economy and political history. The significance of Sumerology for other fields of study, especially Assyriology and Hittitology, is explained. The question of Sumerian origins is explored alongside an assessment of the role of the Sumerians in the history of civilizations.
HART 474  Neo-Assyrian Art and Archaeology
The Neo-Assyrian Empire (10th-7th century BC) represents a high moment in the long history of Ancient Near Eastern civilizations. This course covers notable aspects of its architecture, arts and settlement systems as preserved in the archaeological record. Credit units: 3 ECTS Credit Units: 6. Spr (I. Özgen)

HART 489  Senior Conference
A project emphasizing archaeological research on a specific topic in any field of art and archaeology supplemented with oral presentations. Credit units: 3 ECTS Credit Units: 6.

HART 490  Supervised Study
Independent research under the supervision of a faculty member whose special competence coincides with the area of a student's interest. Consent of the supervising faculty member and of the major advisor is required. Credit units: 3 ECTS Credit Units: 6.

HART 491  Readings From Near Eastern Texts
This course will focus on the translation of Near Eastern texts. Knowledge of Akkadian will be a prerequisite. Credit units: 3 ECTS Credit Units: 6. Aut (S. F. Adalı)

HART 492  Readings From Greek/Latin Texts
This course will focus on selected readings from original sources. Credit units: 3 ECTS Credit Units: 6.

HART 494  Readings From Greek/Latin Texts II
Reading ancient Greek or Latin authors in their original language. This course requires familiarity with the ancient language beyond the department's 2-year ancient language curriculum. Credit units: 3 ECTS Credit Units: 6.

GRADUATE COURSES

HART 501  Issues in Archaeological Theory
This course will examine contemporary debates in archaeological methodology, analysis and interpretation. Emphasis will be placed on the techniques for applying theoretical models to fieldwork and analytical research. Credit units: 3 ECTS Credit Units: 6. Aut (J. Morin)

HART 503  Issues in Conservation and Preservation
Introduction to the basic methods of conservation of objects, architecture, and historical and archaeological sites; conservation and cultural preservation in their socio-economic contexts; laws and ethics of cultural preservation; and international perspectives on conservation and cultural preservation. Credit units: 3 ECTS Credit Units: 6.

HART 504  Interpretation of Art Historical Materials
A historical survey of different approaches to the analysis of art and architecture. Credit units: 3 ECTS Credit Units: 6. Aut (C. Gates)

HART 505  Cultural Ecology
Cultural adaptation, with emphasis on the systematic interaction of environment, technology and social organization among hunter-gatherers, nomadic herders and peasant farmers. Credit units: 3 ECTS Credit Units: 6.

HART 506  Ethnoarchaeology
The history, method and theory of ethnoarchaeology, with case studies of the use of ethnography in archaeological interpretation and theory-building. Credit units: 3 ECTS Credit Units: 6.

HART 507  Pre-Classical Art and Archaeology
These classes will be conducted with readings and discussion on key issues of Anatolian art and archaeology from the Prehistoric period to the Iron Age. Credit units: 3 ECTS Credit Units: 6. Aut (I. Özgen)

HART 508  Issues in Pre-Classical Art and Archaeology
These classes will be conducted with readings and discussion on key issues of Anatolian art and archaeology from the Prehistoric period to the Iron Age. Credit units: 3 ECTS Credit Units: 6. Spr (T. Zimmermann)

HART 509  Classical Art and Archaeology
Classes conducted with readings and discussion on key issues of Anatolian art and archaeology from the Greek, Hellenistic and Roman periods. Credit units: 3 ECTS Credit Units: 6. Aut (J. Morin) Spr (Staff)

HART 510  Issues in Classical Art and Archaeology
Classes conducted with readings and discussion on key issues of Anatolian art and archaeology from the Greek, Hellenistic and Roman periods. Credit units: 3 ECTS Credit Units: 6. Spr (D. Tezgör-Kassab)

HART 515  Readings in Near Eastern Archaeology
Graduate tutorial in Near Eastern Archaeology, on a topic to be chosen by the instructor. Credit units: 3 ECTS Credit Units: 6.

HART 516  Supervised Research in Near Eastern Archaeology
Independent study, on a topic relevant to the student's specialized research field in Near Eastern archaeology. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)
HART 517  Readings in Anatolian Archaeology
Graduate tutorial in Anatolian Archaeology, on a topic to be chosen by the instructor. Credit units: 3 ECTS Credit Units: 6.

HART 518  Supervised Research in Anatolian Archaeology
Independent study, on a topic relevant to the student's specialized research field in Anatolian archaeology. Credit units: 3 ECTS Credit Units: 6.

HART 519  Research Directions for Anatolian Archaeology and Art
A team-taught proseminar to introduce research perspectives and sources, with one topic per week, on periods (Neolithic, Ancient Near East and Egypt, Iron Age Near East, Bronze Age Europe/Mediterranean, Greece, Rome, Byzantium, Islamic world) and themes (Science in Archeology, Ancient Languages and Epigraphy, Ethnoarchaeology, Ceramics and Artificial Analyses). Credit units: 3 ECTS Credit Units: 6. Aut (M. Gates)

HART 521  Problems in Medieval Art and Archaeology
Classes conducted with readings and discussion on key issues of Anatolian art and archaeology of the Byzantine, Islamic, Seljuk and Ottoman periods. Credit units: 3 ECTS Credit Units: 6.

HART 523  Medieval Art and Archaeology
Classes conducted with readings and discussion on key issues of Anatolian art and archaeology of the Byzantine, Islamic, Seljuk and Ottoman periods. Credit units: 3 ECTS Credit Units: 6.

HART 524  Issues in Medieval Art and Archaeology
Classes conducted with readings and discussion on key issues of Anatolian art and archaeology of the Byzantine, Islamic, Seljuk and Ottoman periods. Credit units: 3 ECTS Credit Units: 6.

HART 530  Conservation for Field Archaeologists
This course will give hands-on training for basic finds' conservation in the field. It will take place over a 3-week period, with 14 hours of class and lab. training. Credit units: 1 ECTS Credit Units: 2.

HART 532  Introduction to Hittitology
The course covers Hittite history, religion and literature; it also discusses the history of Hittitology (Hittite studies). Credit units: 3 ECTS Credit Units: 6.

HART 536  Hittite Grammar I
The course is an introduction to the Hittite language spoken in Anatolia in the 2nd mill. BC, and one of the oldest among the Indo-European languages. The students will be introduced to basic grammar and syntax, in order to understand the language. Credit units: 3 ECTS Credit Units: 6.

HART 538  Hittite Texts I
The course teaches students how to read the Hittite cuneiform script. Some elementary historical texts will be read to introduce students to this genre of cuneiform literature. Credit units: 3 ECTS Credit Units: 6.

HART 551  Ancient Greek I
Introduction to ancient Greek for graduate students. The course will emphasize both grammar and reading. Credit units: 3 ECTS Credit Units: 6. Aut (J. Morin)

HART 552  Ancient Greek II
Completion of the grammar and vocabulary acquisition started in Ancient Greek I. Credit units: 3 ECTS Credit Units: 6. Prerequisite: HART 551.

HART 553  Ancient Greek III
Selections from Greek literature, and an introduction to epigraphy. Credit units: 3 ECTS Credit Units: 6.

HART 554  Ancient Greek IV
Selections from Greek literature, and an introduction to epigraphy. Credit units: 3 ECTS Credit Units: 6. Prerequisite: HART 553.

HART 563  Latin I
Introduction to Latin for graduate students. Basic points of grammar will be covered and reading skills developed. Credit units: 3 ECTS Credit Units: 6. Aut (A. C. Abuagla) Spr (A. C. Abuagla)

HART 564  Latin II
Continuation of the grammar and development of reading skills introduced in Latin I. Credit units: 3 ECTS Credit Units: 6. Prerequisite: HART 563. Spr (A. C. Abuagla)

HART 583  Latin III
Selections from Latin literature and an introduction to epigraphy. Credit units: 3 ECTS Credit Units: 6. Prerequisite: HART 564. Aut (A. C. Abuagla)

HART 584  Latin IV
Selections from Latin literature, prose composition, and an introduction to numismatics. Credit units: 3 ECTS Credit Units: 6. Prerequisite: HART 583.
HART 588  Readings From Greek/Latin Texts II
Reading ancient Greek or Latin authors in their original language. This course requires familiarity with the ancient language beyond the department’s 2-year ancient language curriculum. Credit units: 3 ECTS Credit Units: 6.

HART 599  Master's Thesis
Credit units: None ECTS Credit Units: 24. Aut (Staff) Spr (Staff)
DEPARTMENT OF ENGLISH LANGUAGE AND LITERATURE

UNDERGRADUATE PROGRAM

Through a study of major authors, literary works and movements, the undergraduate program in English Literature and Language helps students to achieve a mature understanding of themselves and the world, and to learn to read critically and analytically, write clearly and persuasively, reason soundly and express themselves intelligently in English. In addition to giving a solid foundation in English Literature and Culture, the curriculum emphasizes critical thinking, communication skills and intellectual growth.

The department curriculum comprises the analysis, study, and discussion of: various types of literature, origins and characteristics of myth; classical, biblical, Norse and Celtic mythology; literary terms and movements; periods of English literature from Old and Middle English literature through Renaissance, 17th C., 18th C., the Romantic Period, the Victorian age, to the present; English history; British society and culture; American literature; world literature, and theory and practice of criticism. The courses which emphasize class practice, exercise and drills are: composition, translation, reading and oral interpretation, and research techniques.

Apart from department courses, students will be able to take elective courses from a wide variety of subjects offered by the other departments of the University, notably in foreign languages, social sciences, computer programming, and fine arts. This wider distribution of courses will provide the students with opportunities to broaden their culture, contribute to a desirable balance of intellectual interests, and prepare them for more specialized studies in the future.

The Minor Program in English Language and Literature aims at providing a wide range of courses which deal with various topics in English literature, history and culture. In-depth analysis and discussion of literary genres, terms and movements form the basis of the program. Current trends in literature can be studied, but courses also cover mythology, as various periods in English Literature, from Middle English literature to the Renaissance, the seventeenth century, the Neoclassical Age, the Victorian and Romantic periods and the present. Since our courses emphasize writing and speaking skills, students will gain fluency in English as well as good understanding of the texts within their historical and social contexts. One of the ultimate aims of the program is to consider the place of British culture and literature in relation to the formation of world literatures.

Prerequisite Courses:

A minimum grade of B- in ENG 102
Open to Students from All Departments

COURSE DESCRIPTIONS

ELIT 109 Translation I (English-Turkish)
Aims to use English passages for translation to help students improve their reading comprehension, enlarge their vocabulary, and deepen their awareness and understanding of different usage and structures. Credit units: 3 ECTS Credit Units: 4. Aut (G. Kurtulus)

ELIT 112 Translation II (Turkish-English)
Sequel to ELIT 109. Designed to help students practice their written English through translation of various texts in Turkish allowing them to use different grammatical structures. Credit units: 3 ECTS Credit Units: 4. Spr (G. Kurtulus)

ELIT 115 Oral Expression Discussion and Presentation I
This course aims to help students improve their speaking skills in an intellectual context. Through extensive drills and practice, students will be familiarized with ways and methods of oral expression, meaningful, persuasive and coherent speech, and discussion and presentation. Course material will include topics and relatively short or excerpted texts in a wide spectrum of areas such as humanities, social sciences, history, philosophy, psychology, science and technology, the arts, music, and media. Credit units: 3 ECTS Credit Units: 4. Aut (L. Raw)

ELIT 130 Selections from English Literature (to the Restoration)
Designed to familiarize students with the major works and authors of English literature from its beginnings to the Restoration. The works to be introduced may include Beowulf; Canterbury Tales; Sir Gawain and the Green Knight; Piers Plowman; Medieval lyrics, ballads, and plays; Morte Darthur; Utopia; 16th century sonnets, and lyrics; The Faerie Queene; Dr. Faustus; Metaphysical and Cavalier Poetry; Paradise Lost essays by Bacon; Leviathan. Credit units: 3 ECTS Credit Units: 5. Spr (S. Taşkın)

ELIT 139 Appreciation of Literature
An introduction to the study and appreciation of three major literary genres: drama, fiction and poetry. Credit units: 3 ECTS Credit Units: 5. Aut (H. Umurç)

ELIT 141 British History
This course aims to cover British history from the times of Beowulf to the present, with particular emphasis on the modern era. The focus will be on the social, economic, and political dimensions of the various historical periods covered. Credit units: 3 ECTS Credit Units: 5. Aut (S. Taşkın)

ELIT 205 Oral Expression Discussion and Presentation II
This course aims to enhance students' interest in using different methods of oral expression in order to improve their speaking skills through extensive drills and practice as well as using topics related to humanities, philosophy, the arts, music and media. Credit units: 3 ECTS Credit Units: 6. Aut (S. Taşkın)

ELIT 208 Critical Reading
This course aims to help students develop their critical, interpretative and reading skills by the study and analysis of selected non-literary texts. Credit units: 3 ECTS Credit Units: 6.

ELIT 224 World Mythology
An introduction to the origins and characteristics of myth and the study of mythic motives and themes found in world mythology with emphasis on classical myths. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

ELIT 225 British Society and Culture
An introduction to life and society in Britain from the Middle Ages to the 19th century. This course will be conducted both by the teaching staff of the department and by guest speakers specializing on various aspects of the subject. Credit units: 3 ECTS Credit Units: 6. Aut (A. Çelikkol)

ELIT 242 Introduction to Drama
An introduction to the study of drama based on a selection of works including Greek tragedy and modern classics. Credit units: 3 ECTS Credit Units: 6. Spr (G. Kurtulus)
ELIT 262 The English Novel (19th Century)
A study of the major English novelists of the 19th century. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ELIT 139. Spr (V. Kennedy)

ELIT 265 Introduction to the Novel
This course introduces students to the study of the novel in English, placing emphasis on formal qualities such as language, structure, plot, character, theme, and setting. The course offers a bridge between earlier courses introducing students to literary study more broadly, and later courses, in which the novel is studied in period and thematic contexts. Texts for study may be taken from any period or sub-genre of the novel. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ELIT 139. Aut (V. Kennedy)

ELIT 270 Poetry
An introduction to poetry through selected examples written in English. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

ELIT 281 The Short Story
An introduction to the short story through selected examples from British, American, and world writing. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 139. Aut (V. Kennedy)

ELIT 351 Shakespeare I (Comedies, Romances, Problem Plays)
This course aims to develop students' skills in textual analysis and criticism of Shakespeare's romantic comedies, romances, and problem plays. Credit units: 3 ECTS Credit Units: 7, Prerequisite: ELIT 109 and ELIT 137 and ELIT 139. Aut (S. Taşkınpınar)

ELIT 352 Shakespeare II (Tragedies, Roman Plays, Histories)
A study of Shakespeare's tragedies, Roman plays, and histories. Credit units: 3 ECTS Credit Units: 7, Prerequisite: ELIT 112 and ELIT 130 and ELIT 138. Spr (G. Kurtulus)

ELIT 355 Major Writers of the Renaissance
A study of major works by principal dramatists other than Shakespeare; 16th century lyrics and sonnets; Metaphysical and Cavalier poetry, and Milton. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ELIT 109 and ELIT 137 and ELIT 139. Aut (G. Kurtulus)

ELIT 356 Major Writers of the Neoclassical Period
A study of selections from the major works of such writers as Dryden, Addison, Steele, Swift, Pope, Dr. Johnson, and Boswell. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 112 and ELIT 130 and ELIT 141. Spr (G. Kurtulus)

ELIT 361 Modern British Fiction I (to the 1950s)
A survey of developments in British fiction from the beginning of the 20th century to the 1950s. Major authors might include Conrad, Woolf, Joyce, D.H. Lawrence, E.M. Forster, Waugh and Orwell. Credit units: 3 ECTS Credit Units: 7, Prerequisite: ELIT 109 and ELIT 137 and ELIT 139. Aut (A. Çelikkol)

ELIT 362 Modern British Fiction II (1950s to present)
A study of developments in British fiction in the second half of the 20th century, such as post-modernism, feminist issues, and the campus novel. Authors may include Golding, Fowles, Beckett, Durrell, Lessing, Murdoch, Drabble, Weldon, Roberts, K. Amis, Lodge, Bradbury, Barker, Winterson, etc. Credit units: 3 ECTS Credit Units: 7, Prerequisite: ELIT 112 and ELIT 130 and ELIT 141. Spr (V. Kennedy)

ELIT 373 Modern Poetry By Women
The course will study in detail representative examples of poetry by women from the 1950s to the present. The authors studied will include H.D., Sylvia Plath, Anne Sexton, Adrienne Rich, Marilyn Hacker, Fleur Adcock, Moyra van Duyn, Sharon Olds, Marge Piercy, Judith Wright, Tzu Pheng Lee, Adelia Prado, and Margaret Atwood. The course will aim to look at the poems in relation to their historical context and consider the development of themes and issues particular to women's poetry. Since most of this poetry is written in free verse the course will also pay attention to the techniques of free verse and will ask which are the best methods of analysis for this type of poetry. Students will be encouraged to write their own poetry (in English), if they wish. Credit units: 3 ECTS Credit Units: None.

ELIT 411 History of English Language
This course is designed to develop students' critical awareness of English Language by studying the original texts starting from the Old English period till present. The physical changes in the language's systems within the rich framework of social, political, and cultural history will be explored. The course will not only concentrate on the particular history of English, but also on the linguistic and social consequences which resulted from the collision and intermingling of cultures due to conquest, trade, and migration. Credit units: 3 ECTS Credit Units: 5.
ELIT 413 Writing and Autobiography
The course will explore autobiographical writing through the study of autobiographies, confessions and diaries. Alongside these, autobiographical elements in literary writings such as lyric and narrative poetry and the novel will be considered. We will explore such questions as the relationship between autobiography and fiction, the importance of memory in the creation of autobiographical texts and how identities and the self are represented in autobiographical writings. Credit units: 3 ECTS Credit Units: 6.

ELIT 423 Theory and Practice of Criticism
A historical survey of literary criticism with emphasis on the 20th century. Methods of critical analysis will be illustrated in the light of selected texts. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 223 and ELIT 261 and ENG 201. Aut (H. Umunc)

ELIT 438 Selected Topics
The course will cover any genre, movement, writer or topic not included in the curriculum. The coverage of the course will be determined according to the needs of the students and to the recent developments in literary studies. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 242 and ELIT 262 and ENG 214. Spr (A. Çelikkol)

ELIT 441 British Drama I (from the Restoration to the 1950s)
A study of British Drama from the Restoration to the 1950s including works by such writers as Dryden, Congreve, Gay, Behn, Pinero, Sheridan, Goldsmith, Wilde, Priestley, Shaw, Eliot, Synge and O’Casey. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 223 and ELIT 261 and ENG 201. Aut (G. Kurtulus)

ELIT 442 British Drama II (from the 1950s to present)
Sequel to ELIT 441. Dramatists to be studied may include Beckett, Bolt, Osborne, Wesker, Pinter, Shaffer, Arden, Stoppard, Churchill, Bond, Wertenbaker and Daniels. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 242 and ELIT 262 and ENG 214. Spr (G. Kurtulus)

ELIT 450 Introduction to Popular Culture
The aim of the course is to study basic theories, approaches and topics within popular culture. The course will examine different methods of popular culture, research and theories on which they are based. There will be in-depth study of international and global aspects of everyday and popular culture such as consumer culture, mass media, entertainment, migration, technology. Credit units: 3 ECTS Credit Units: 6.

ELIT 457 Major Writers of the Victorian Period
Selections from the principal works of such writers as Tennyson, Browning, Carlyle, Ruskin and Arnold. Credit units: 3 ECTS Credit Units: 6. Aut (V. Kennedy)

ELIT 462 Single Author Study
The course will be concerned to consider the writer’s writings in relation to themes including his/her concern with personal relationships and his/her representation of them in his/her novels. With its detailed focus on one author, the course will enable students to study the ways in which themes and concerns appear and reappear through the body of a writer’s work, within and across different genres. Credit units: 3 ECTS Credit Units: 6.

ELIT 463 Post-Colonial Fiction
A study of recent fiction written in English by authors coming from former colonies of the British Empire. Works by such authors as Chinua Achebe, Buchi Emecheta, V.S. Naipaul, Salman Rushdie, Hanif Kureishi, Kamala Markandaya, R.K. Narayan and Anita Desai may be discussed. Post-colonial theory will also be studied through the texts of Edward Said, Frantz Fanon, Homi Bhabha, Gayatri Spivak and Ngugi wa Thiong’o. Credit units: 3 ECTS Credit Units: 6. Spr (V. Kennedy)

ELIT 471 Romantic Poetry
A study of selections from the major works of such poets as Wordsworth, Coleridge, Byrom, Shelley and Keats. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 223 and ELIT 261 and ENG 201. Aut (S. Taşkin)

ELIT 473 Modern Poetry
A study of the dominant trends and major poets in Britain, the U.S.A., and Europe. Credit units: 3 ECTS Credit Units: 6.

ELIT 474 20th Century Poetry
A study of the dominant trends and major poets of the 20th century. Poets to be studied may include Hardy, Owen, Sassoon, Yeats, T.S. Eliot, MacDiarmid, Graves, Auden, Thomas, MacNeice, Larkin, Gunn, Hughes, Harrison and Heaney. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ELIT 242 and ELIT 262 and ENG 214. Spr (S. Taşkin)
DEPARTMENT OF PHILOSOPHY

The Department of Philosophy is one of the younger departments at Bilkent. Established in late 2002, it offers a B.A. degree in philosophy. Plans for the M.A. and the Ph.D. degree programs are in progress.

The aim of the department is threefold: (i) by exploring influential philosophical arguments and ways of arguing, the department intends to impart upon the students the intellectual resources to discern lines of thought and courses of action that are defensible as opposed to ill-considered; (ii) the department aims to foster background capabilities—self-reliance, judging well when decision-making, creativity in problem-solving, adaptability, argumentative acumen and so forth—that complement and are essential to the good use of vocational skills; (iii) by investigating abstract problems and arguments in depth and by adopting an analytic stance the department aims to provide students with a solid platform from which to pursue graduate studies in philosophy.

The curriculum is broad-based in that the students are required to complete courses in a number of academic fields other than philosophy, i.e., physics, biology, computers, mathematics, statistics, economics, languages, literature, and history. Because the curriculum provides each student with a substantive grounding in these fields, the student is able to constructively challenge the way they are practiced from a position of authority rather than from a position of hearsay. Besides, several of the courses (e.g., languages, statistics, computer programming, etc.) aim to develop specific skills that are essential to the workplace. In the meantime, the philosophy courses on their own provide a more than sufficient basis from which to pursue graduate work in philosophy. As a result, the critical mass of philosophical understanding is established whilst at the same time each student's future career options are not foreclosed due to unnecessary over-specialization at an early stage.

The department places a premium upon: (i) discussion-based class work, encouraging the students to be actively part of the learning experience; (ii) essay-based assessment (complemented by a drafting process and a series of essay tutorials); (iii) tutorials and ongoing feedback; (iv) trusting the students to come to terms with the original texts, rather than asking them to work from watered-down commentaries on those texts; (v) the development of each student's ability to pursue independent research (culminating in the fourth year where a thesis is completed on a chosen topic under the supervision of a faculty member).

The Philosophy Undergraduate Program and Course Descriptions can be found at the following address: http://www.phil.bilkent.edu.tr

**MINOR PROGRAM**

Professor Tom Nagel (New York University) regards fundamental research on nine core areas – how we know anything; other minds; the mind-body problem; the meaning of words; free will; right and wrong; justice; death; the meaning of life – as the essential responsibilities of a philosopher. The
best way to become skilled at philosophy is to think about these topics analytically and in the tradition
of rational inquiry.

Since its inception, the Department of Philosophy has hosted numerous distinguished analytic philosophers
as short- or long-term visitors. The staff members, while pursuing diverse interests
within the discipline, also subscribe to the analytic vision. The Minor Program in philosophy should
arm a student who completes its course requirements with an indispensable background (and tricks
of the trade) needed for advanced study. The courses in the Program study the original philosophical
works in the foregoing areas mentioned by Nagel.

**Prerequisite Courses:** None

**Open to Students from All Departments**

**COURSE DESCRIPTIONS**

**UNDERGRADUATE COURSES**

**PHIL 101 | Introduction to Logic**
A self-contained introduction to the basic notions of logic, including language, truth, argument, consequence,
proof, and counter example. Both propositional logic and predicate logic are studied (their syntax plus semantics),
with an emphasis on translating English sentences into logical symbols. A contemporary software package such
as Tarski’s World may be used to construct derivations of valid arguments. **Credit units: 3 ECTS Credit Units: 6.**
**Aut (V. Akman)**

**PHIL 102 | Ancient Philosophy**
This course introduces the thought of ancient philosophers focusing on questions about the purpose of philosophy,
the nature of knowledge, virtue and the good life. **Credit units: 3 ECTS Credit Units: 6.**
**Spr (S. Berges)**

**PHIL 103 | Introduction to Philosophy I**
The course raises and examines central problems in theoretical philosophy such as: Is there a world of things that
exists independently of human thought and sensation? How can we know the difference between appearance
and reality? How does our mind and the physical world relate? How can we know whether there are other
minds? Do we freely choose our actions or are they pre-determined? Those problems are investigated through
a close reading of influential texts in the history of philosophy. **Credit units: 3 ECTS Credit Units: 6.**
**Spr (S. Berges)**

**PHIL 104 | Introduction to Philosophy II**
The course raises and examines central problems in practical philosophy such as: Is there a single true morality?
To what extent is morality conventional? How can we know what is the right and wrong thing to do? Why should
I do the right thing? What is it to live one’s life well? Those problems are investigated through a close reading of
influential texts in the history of philosophy. **Credit units: 3 ECTS Credit Units: 6.**
**Spr (Y. S. Berkovski)**

**PHIL 201 | Epistemology**
This course addresses several of the central problems of contemporary epistemology, such as: conceptions of
epistemic justification; skeptical arguments and responses to them; foundationalism and coherentism; external-
philosophy and internalism; causal theories of knowledge; rationality and cognitive relativism; naturalised epistemology.

Credit units: 3 ECTS Credit Units: 6. Aut (S. Wigley)

**PHIL 202 Ethics**
This course endeavors to appraise critically the moral sense, deontological, utilitarian and intuitionist accounts of morality. In so doing it asks: Do our value judgments merely reflect our subjective preferences or are they based on an objective reality? Is there a single ultimate value? Should we be guided by reason or passion, altruism or egoism? Should we determine a person's worth based on the consequences of their actions or the motives for their actions? Does maximizing overall happiness respect the individual? Credit units: 3 ECTS Credit Units: 6. Spr (U. Steinvorth)

**PHIL 203 Rationalists**
This course introduces the rationalist tradition in philosophy through the works of Descartes, Leibniz, and Spinoza. We will look at these philosophers' responses to questions about substance, perception, thought, identity and causality. Credit units: 3 ECTS Credit Units: 6. Aut (L. Vinx)

**PHIL 204 Empiricists**
This course introduces the works of empiricist philosophers Locke, Berkeley, and Hume focusing on the nature of substance, perception, and thought, and philosophical problems about identity and causality. Credit units: 3 ECTS Credit Units: 6. Spr (H. Demir)

**PHIL 241 Social and Political Philosophy I**
What is to live one's life well? Is there a single true morality? How can we know what is the right and wrong thing to do? Why should I do the right thing? These problems and more are examined through a close reading of influential texts in the history of philosophy. The course is mutually supported by the co-requisite course ENG 241 Sophomore Academic English I. Credit units: 3 ECTS Credit Units: 6. Aut (I. Aranyosi, S. Berges, Y. S. Berkovski, U. Steinvorth, L. Vinx, S. Wigley, W. Wringe)

**PHIL 242 Social and Political Philosophy II**
Should we be guided by reason or passion, altruism or egoism? Is the idea of forcing someone to be free a contradiction? Should there be limits on what justice can demand in order to bring about the best consequences? These questions and more are examined through a close reading of influential philosophical texts. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHIL 241. Spr (I. Aranyosi, S. Berges, Y. S. Berkovski, H. Demir, U. Steinvorth, L. Vinx, S. Wigley, W. Wringe)

**PHIL 301 Political Philosophy**
When, if at all, is coercion justified? When is it justified to disobey? In what sense should I be free in a political community? Is the idea of forcing someone to be free a contradiction? These questions and more are examined through a close reading of influential philosophical texts. Credit units: 3 ECTS Credit Units: 6. Spr (S. Wigley)

**PHIL 302 Social and Legal Philosophy**
What should be the relationship between the individual and the state? Must we be embedded in the social world in order to be free? How can we justify rules of justice? Should there be limits on what justice can demand in order to bring about the best consequences? Those questions and more are examined through a close reading of influential philosophical texts. Credit units: 3 ECTS Credit Units: 6. Spr (L. Vinx)

**PHIL 303 Kant**
This course is based around a close and critical reading of Kant's *Critique of Pure Reason*. We concentrate on assessing Kant's response to the possibility that the world studied by science is in some sense mind-dependent and/or mind-constructed. More specifically, we consider his distinction between a *priori* and a *posteriori* knowledge and analytic and synthetic judgments, his argument for *synthetic a priori* truths, his transcendental deduction of the categories and his transcendental idealism. Credit units: 3 ECTS Credit Units: 6. Aut (W. Wringe)

**PHIL 304 Philosophy of Science**
It is often assumed that science is a paradigm of rational inquiry. In this course we look at a number of recent accounts of scientific rationality which try to give good grounds for this assumption. We also consider the closely related question of scientific realism: when do we have good grounds for thinking that the objects described in scientific theories really exist? Credit units: 3 ECTS Credit Units: 6. Aut (Y. S. Berkovski)

**PHIL 305 Intermediate Logic**
This course builds on PHIL 101 - Introduction to Logic, and focuses on the uses and limitations of formal techniques in the study of language and argument. Topics to be covered will include: Further study of propositional and predicate calculus, including discussion of completeness, soundness and decidability results; set-theoretic and semantic paradoxes; introduction to modal and intuitionistic logic; logic and computability. Credit units: 3 ECTS Credit Units: 6. Aut (Y. S. Berkovski)
PHIL 306 Philosophy of Language
We discuss key concepts such as: truth, meaning, reference, logical form, speech act and metaphor. In addition we critically assess various theories that aim to show what it is for a statement to be true. As preparation, the course commences with a brief recap of key aspects of logic. Credit units: 3 ECTS Credit Units: 6. Spr (I. Aranyosi)

PHIL 308 Philosophy of Mind
This course introduces students to key issues in contemporary philosophy of mind. We start by looking at dualist, materialist and functionalist responses to the mind/body problem, and consider a range of further issues about personal identity, consciousness and intentionality. A key guiding issue is, ‘To what extent, and in what ways can the human mind be compared to a computer?’ Credit units: 3 ECTS Credit Units: 6. Spr (W. Wringe)

PHIL 401 Metaphysics
Focusing on a selection of key texts, this course examines core topics in contemporary metaphysics, such as: truth, existence, universals and particulars, causality, modality, perception, knowledge, the a priori, identity, anomalous monism, supervenience, vagueness, and time. Credit units: 3 ECTS Credit Units: 6. Aut (I. Aranyosi)

PHIL 402 Aesthetics
This course examines key debates in the Philosophy of Art, such as the definition of art, the ontology of artworks, the nature and scope of the aesthetic, expression, representation, interpretation, appreciation, aesthetic value and the value of art, creativity, art and ethics. Credit units: 3 ECTS Credit Units: 6. Spr (S. Berges)

PHIL 403 Senior Thesis I
The aim of PHIL 403 and PHIL 404 is the gradual development of each student's ability to carry out independent research. In PHIL 403, the student starts to work on a thesis addressing a chosen philosophical topic under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

PHIL 404 Senior Thesis II
The aim of PHIL 403 and PHIL 404 is the gradual development of each student's ability to carry out independent research. In PHIL 404, the student writes and defends in front of a jury a thesis addressing the chosen philosophical topic. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHIL 403. Spr (Staff)

PHIL 405 Advanced Philosophy of Language
A continuation of PHIL 306 - Philosophy of Language, delving into advanced material. Credit units: 3 ECTS Credit Units: 6.

PHIL 406 Advanced Philosophy of Mind
A continuation of PHIL 308 - Philosophy of Mind, delving into advanced material. Credit units: 3 ECTS Credit Units: 6.

PHIL 407 Medieval Philosophy
This course gives an overview of philosophy during the middle ages (500-1400) while situating it within a broad social and cultural context. We consider major figures such as St. Augustine, St. Anselm, and St. Thomas, and study some of the main themes of medieval philosophy: the relationship between faith and reason, the existence of God and abstract entities, the nature of human knowledge. Credit units: 3 ECTS Credit Units: 6.

PHIL 408 Nineteenth Century Philosophy
This course covers the progress of thought in Europe after Kant. It focuses on the following topics: the study of culture and the human sciences, the rise and fall of idealism, historicism, modernity, critical philosophy after Kant. Emphasis is placed upon the work of authors like Schopenhauer, Hegel, Dilthey, Feuerbach, Kierkegaard, and Nietzsche. Credit units: 3 ECTS Credit Units: 6.

PHIL 409 Introduction to Phenomenology
Phenomenology is frequently regarded as movement of thought with methods contrasting the methods of science and analytic philosophy. It has been an intellectual force in Europe, influencing psychology, sociology, theology, and aesthetics. Its philosophical foundations are primarily due to Husserl. In addition to being an epistemological program, Husserlian phenomenology is also a theory about the nature of human consciousness and experience, focusing on intentionality and the role of meaning. This course concentrates on Husserl’s work and important extensions contributed by his student Heidegger. Credit units: 3 ECTS Credit Units: 6.

PHIL 410 History of Analytic Philosophy
In this course we examine the history of analytic philosophy starting with the foundational contributions of Frege and Russell. We discuss logical atomism, logical empiricism, Wittgenstein’s earlier and later work, ordinary language philosophy, Quine, and Kripke’s theory of reference. Credit units: 3 ECTS Credit Units: 6.

PHIL 411 What is a Mind?
A topical introduction to philosophy of mind guided by the following questions: What are the major properties and functions of a mind? And in what terms do we think of minds? The course offers a systematic survey of philosophical theories of mind. We begin with the legacy of earlier centuries – mind/body dualism, consciousness, self, and free will – then turn to the first scientific response to this legacy – behaviorism and the rise of scientific
psychology – and examine the major theoretical positions and debates it generated in the 20th century, such as reductive physicalism, functionalism and the computer model of the mind, eliminative materialism, instrumentalism, and commonsense psychology. Credit units: 3 ECTS Credit Units: 6.

PHIL 412 Philosophy of Mathematics
This course covers several classical and contemporary problems in the philosophy of mathematics, such as: mathematical truth, the nature of proof, mathematical intuition, the foundations of mathematics, and mathematical knowledge. Credit units: 3 ECTS Credit Units: 6.

PHIL 413 Foundations of Cognitive Science
We start from two major paradigms in contemporary cognitive science – the wide and the narrow paradigms. The narrow paradigm, which has been the more popular, is concerned with how information is encoded and computed, particularly in human minds. The main rival theories within the narrow paradigm are the symbol-system view and connectionism. The wide paradigm takes minds to be more than information processors, to come in a variety of kinds, and to operate relative to a variety of parameters – teleological, regulatory, environmental, and social. According to the wide paradigm even information processing has to be reexamined in the light of such parameters. Credit units: 3 ECTS Credit Units: 6.

PHIL 414 Consciousness
The main questions of this class are the following: What is consciousness and why it matters? Why is consciousness puzzling if not mysterious? Is consciousness one phenomenon or many? The grand divide: the relatively easy problem (how it works) versus the really hard problem (how it feels like) and their derivatives. What mechanisms and competencies underpin consciousness? Where in the brain is consciousness located? Who are the possessors of consciousness, phylogenetically and ontogenetically? Does it come in degrees or is it an all-or-nothing property? Are there different forms of consciousness? Why has consciousness evolved? How does it develop in ontogeny? The class is interdisciplinary and will therefore examine both philosophical positions and arguments as well as the latest scientific theories and data about consciousness. Credit units: 3 ECTS Credit Units: 6.

GRADUATE COURSES

PHIL 521 History of Political and Educational Philosophy
The course introduces students to philosophical thinking about the relation between human nature, society and education. It focuses on the study of key texts in the history of philosophy and educational thought including Aristophanes, Plato, Descartes, Voltaire, Mill and Russell. There is strong emphasis on the development of students critical reasoning skills. Students are encouraged to think about the implications of the views discussed for their own pedagogical practice. Credit units: 3 ECTS Credit Units: 6. Aut (U. Steinworth) Spr (U. Steinworth)
DEPARTMENT OF TURKISH LITERATURE

T. S. Halman (Chair), M. Kalpakli, L. Mignon, N. Tezcan, S. Tezcan, H. Yavuz.

Part-time: K. Emiroğlu, Ö. Oğuz.

The Department of Turkish Literature, which offers graduate degrees, has admitted its first students to the M.A. program in the 1998-1999 academic year. The Ph.D. program for the graduates of the M.A. program and other qualified candidates started in 2001.

The graduate programs are designed to encompass all periods and genres of oral and written Turkish literature from its beginnings until the present day. Present fields of concentration are: Ottoman Literature, 19th Century Literature and 20th Century Literature.

Unlike many of the traditional departments in this field, the Department of Turkish Literature encourages free and creative thinking, emphasizing research, analysis, interpretation, and criticism. Aiming at enhancing the standards of Turkish literary studies and universalizing the field, the Department underscores proficiency in several languages and encourages theoretical, interdisciplinary, and comparative approaches.

The language of instruction for courses in the Department is Turkish, except in instances where a non-Turkish visiting professor might prefer to teach in English.

Master of Arts in Turkish Literature

The duration of the M.A. program is three years, including a prep year, during which students take courses designed to introduce them to various aspects of literature and to strengthen their proficiency in Ottoman Turkish and foreign languages.

Admission

For entering the M.A. program applicants must be graduates of four-year undergraduate programs, preferably in literature. Applications will be evaluated on the basis of the applicant's scholastic record, ALES results, level of proficiency in Turkish and English, a composition designed to assess his/her ability to critically analyze literary texts, and an interview.

Degree Requirements

Candidates for the M.A. degree are required to complete at least 33 units of credit beyond the preparatory year and to prove their competence in Turkish, Ottoman, and English. Some students may be exempted from English and/or Ottoman depending on their proficiency levels. The candidates may be required to learn additional languages according to their fields of concentration: Persian and/or Arabic for Ottoman Literature; French and/or German for 19th Century Literature and 20th Century Literature. Candidates should prepare and defend a Master's thesis. They should maintain a minimum GPA of 3.00 throughout their studies. Language courses and thesis writing are without credit.

The doctoral program in Turkish Literature is initiated in 2001. Applicants to the program are required to hold an M.A. degree in Turkish Literature or related fields from Bilkent or other universities. To be admitted to the program, applicants from other universities may be required to take written and/or oral exams. The duration of the doctoral program is normally 3.5 years.

Doctoral students must complete course work of at least 24 credit hours with a minimum GPA of 3.00 and fulfill all language requirements before they present their written dissertation proposals and take the comprehensive written and oral exams. The research proposal for the dissertation must be approved by the Department before the candidates may take the comprehensive exams. These exams are designed to evaluate the candidate's expertise in his/her area of concentration and research proposal for the dissertation. The candidate is eligible to take the orals after passing the written exam. Following the successful completion of these requirements, the candidates will conduct research and proceed with the writing of their dissertation, which should embody original research and make a substantial contribution to Turkish literary scholarship. Candidates must successfully defend their dissertation before a committee of the faculty.

Bilkent University will award the successful doctoral candidates the degree of “Doctor of Philosophy in Turkish Literature”.

#### COURSE DESCRIPTIONS

**PREP YEAR COURSES**

**EDEB 401 Introduction to Turkish Literature I**

Designed to give the student an overview of Turkish Literature, the course will deal with earliest poems, the Orkhon Inscriptions, major early works (Divan-i Lughat’t-Türk, Kutadgu Bilig, Dede Korkut, etc.), highlights of Seljuk Literature (especially Yunus Emre), and the most important works of Divan poetry and prose (from the 14th century to the mid-19th century). *Credit units: 3 ECTS Credit Units: 6. Aut (S. Tezcan)*

**EDEB 402 Introduction to Turkish Literature II**

This course will provide an overview of Turkish literature from the Tanzimat era to the present. Emphasis will be on the development of such literary genres as the novel, short story, drama, poetry, essay, and criticism in the modern era. The ethical and aesthetic arguments of major literary movements, key literary debates, and the social impact of literature will be discussed and evaluated. Readings will include major works in various genres. *Credit units: 3 ECTS Credit Units: 6. Spr (L. Mignon)*

**EDEB 403 Theories of Literature**

This course will provide a wide-ranging theoretical background for the practice of literary criticism. A general survey of western literary history, literary movements, genres, and key terms, will be followed by the examination of modern literary/critical theories, including formalist, structuralist, post-structuralist, Marxist, feminist, and psychoanalytical approaches. Readings (in Turkish) will include selections from Aristotle, Barthes, Benjamin, Derrida, Eagleton, Escarpit, Freud, Genette, Jameson, Lukacs, Ong, and Todorov among others. Students will write reading reports, make a presentation, and write a term paper on a selected topic. *Credit units: 4 ECTS Credit Units: 6. Spr (L. Mignon)*

**EDEB 405 Written Expression**

This course aims at enhancing the appreciation and control of written Turkish at a high level. It will equip the students with the fundamental skills of writing and editing. After a review of the basic elements of composition (thesis, organization, style, tone), the techniques of narration (summary, paraphrase, quotation), the rules of punctuation, citation, etc., numerous examples of printed works will be discussed in class. Regular writing and rewriting assignments will be given. Emphasis will be on non-fictional prose, including scholarly and critical writing. *Credit units: 3 ECTS Credit Units: 6. Aut (Staff)*
EDEB 411 Ottoman Turkish I
This course will introduce the students to the Ottoman script and teach them the fundamentals of Ottoman-Turkish grammar through readings and writing exercises. Credit units: 4 ECTS Credit Units: 8. Aut (K. Emiroğlu)

EDEB 412 Ottoman Turkish II
This course will enhance the students’ comprehension of the Ottoman script and the fundamentals of Ottoman-Turkish grammar through readings and writing exercises. Credit units: 3 ECTS Credit Units: 6. Spr (K. Emiroğlu)

EDEB 413 Theoretical History of Western Civilization
In this course, western civilization, from preliterate societies to modern times, will be examined theoretically. Political, economic, religious, technological and artistic transformations on various levels are to be dealt with from different theoretical points of view. Ancient Greek and Roman contributions with respect to philosophy and law are also on the agenda of this course. Historical backgrounds of Humanism, Renaissance, Scientific Revolution, Reformation, Enlightenment and Romanticism are, inter alia, part of the basic problematic to be discussed. Furthermore, numerous important questions will be raised, among them: ‘Are primitive/civilized differences tenable?’, ‘On what basis can there be periodization of human history?’, and ‘How the human mind passes from myth to Logos?’ Credit units: 3 ECTS Credit Units: 6. Aut (H. Yavuz)

EDEB 414 Introduction to Folk Literature
This course will offer an historical survey of the major genres of Turkish folk literature including poetry, folktale, the epic, and folk humor. Students will be introduced to significant scholarly works in the field as well. Credit units: 3 ECTS Credit Units: 6. Spr (Ö. Öğüz)

EDEB 416 Criticism
This course aims at furnishing the students with a critical understanding of the development of the theory and practice of literary criticism in Turkey since Ottoman times. Readings will include selections from the works of such writers as Atac, Cemal Süreyya, Fethi Naci, Gürbilek, Moran, Parla, Tanpınar, and Yavuz. Assignments will include regular reading reports, a class presentation, and a term paper. Credit units: 4 ECTS Credit Units: 8. Spr (H. Yavuz)

EDEB 419 The Turkish Short Story
The origins of the contemporary short story in Turkish literature may be found in Aziz Efendi’s Muhayyelât, a late 18th-century work, which is considered a bridge between the story-telling tradition in the East and the modern short story. In this course, the development of the modern Turkish short story will be examined in historical context, especially with regard to its generic transformation, and in terms of comparisons of style and content among various works by modern authors. Credit units: 3 ECTS Credit Units: 6. Aut (L. Mignon)

EDEB 424 Introduction to Divan Literature
Taking off from the question, “What kind of literature is Divan literature?” this course aims to introduce the aesthetic structure and understanding of divan literature, regarding both form and contents, and to see how they are different from those of today. Our primary topic is poetry: we examine Aruz metrics, the rules of rhyme, and verse forms; we also discuss figures of speech and subtleties of expression. Credit units: 3 ECTS Credit Units: 6. Aut (N. Tezcan)

EDEB 425 Research and Writing
This course offers an introduction to the methods of academic research. Students will be acquainted with academic resources (research libraries, reference books, catalogs, dictionaries). They will be equipped with the fundamental skills of writing and editing. Techniques of narration and methods of citation will be emphasized. Regular writing assignments will be given. Credit units: 4 ECTS Credit Units: None.

EDEB 430 Yunus Emre
Recent research 13th-century Anatolian Turkish literature focuses on two poets: Sultan Veled and Yunus Emre. The latter has reached up through the centuries with his unique poetic language and sensibility, as well as through his imitators, and overall, as an inexplicable phenomenon. Generations of scholars have sought to reexamine and reinterpret Yunus Emre’s poems, which testifies to their intriguing quality. The course aims to deal with several poems by Yunus Emre and their scholarly interpretations. Credit units: 3 ECTS Credit Units: None.

EDEB 434 Introduction to Divan Literature II
Ottoman literature endured for 600 years. Its classical epoch ended in the 16th century and its transformation began in the 17th century. This transformation and reorientation period lasted into the 18th century and ended with westernization in the 19th century. In this course we shall examine and discuss the lyric poetry, mesnevis and prose works. Credit units: 3 ECTS Credit Units: 6. Spr (N. Tezcan)

GRADUATE COURSES

EDEB 503 Ottoman Divan Literature
This course will cover the most important genres of Ottoman Divan literature including poetry (gazel, kaside, mesnevi) and prose (tezkires, chronicles, risales). It will prepare the students for a broader critical understanding of Ottoman literature. Credit units: 3 ECTS Credit Units: 6. Aut (N. Tezcan)
EDEB 504 Turkish Folk Literature
This course will concentrate on diverse types of Turkish oral literature – folk poems and tales, epics and narratives, anecdotes and satirical pieces, riddles and lyrics from Anatolia. Credit units: 3 ECTS Credit Units: 6. Spr (O. Oguz)

EDEB 505 Turkish Literature 1839-1922 I
This course will examine the major developments in Turkish literature from the Tanzimat era to the founding of the Republic. Emphasis will be on the inception and transformation of various literary genres including the novel, the essay, poetry, drama and criticism. The contest between tradition and modernity, debates concerning literariness and the place of literature within society, and the social impact of the literature of the period will be among the key areas of investigation. Readings will consist of the major works of significant writers and poets, as well as secondary literature, including, A.H. Tanpınar’s XIX. Asır Türk Edebiyatı Tarihi. Credit units: 3 ECTS Credit Units: 6. Aut (L. Mignon)

EDEB 506 Literature of the Republic
This course will offer an overview of the major developments in Turkish literature from the establishment of the Republic to the present. Significant literary movements and important changes in major genres (especially those in poetry, drama, short story, the novel, and criticism) will be examined through texts representing the landmarks of 20th century Turkish literature. Critical appraisal of the historiography of the period is also part of the course. Credit units: 3 ECTS Credit Units: None.

EDEB 507 Turkish Poetry
Following a brief overview of the process of change in Turkish poetry from Tanzimat (reforms period) until the Republic, this course will survey and discuss movements, changing ideological and aesthetic approaches, the correlation between modern poetry and Republican enlightenment from 1923 until the present day. It will also make a critical analysis of modern poetry in conjunction with literary theories. Credit units: 3 ECTS Credit Units: 6. Aut (H. Yavuz)

EDEB 510 Turkish Literature 1839-1922 II
This course will examine the major developments in Turkish Literature from the Tanzimat era to the literature from the Tanzimat to the founding of the Republic. Emphasis will be on the inception and transformation of various literary genres including the novel, the essay, poetry, drama and criticism. The contest between tradition and modernity, debates concerning literariness and the place of literature within society, and the social impact of the literature of the period will be among the key areas of investigation. Readings will consist of the major works of significant writers and poets. Credit units: 3 ECTS Credit Units: 6. Spr (L. Mignon)

EDEB 511 Ottoman Turkish III
This course will enhance students’ comprehension of Ottoman texts from all periods and genres. Credit units: 3 ECTS Credit Units: 6. Aut (K. Emiroğlu)

EDEB 512 Ottoman Turkish IV
This course aims at furnishing students with an understanding of problematic Ottoman texts. Credit units: 3 ECTS Credit Units: 6. Spr (K. Emiroğlu)

EDEB 513 Sufi Literature
The course is designed to study the literary output of Turkish Sufism from Ahmet Yesevi in the 12th century to Seyh Galip in the 18th century. Following a precis of the mystical spirit in other religions and Islam (especially in Arab and Persian culture), it concentrates on Mevlâna Celâleddin Rumi and Yunus Emre, on the tekke literature of the sects (which evolved in Anatolia since the 13th century), culminating in the Divan and folk Sufi traditions. Readings are mainly in poetry (including selections from the major mesnevis), but several prose pieces too are on the reading list. The course also deals with Sufi themes in Turkish literature from the Tanzimat until the present. Credit units: 3 ECTS Credit Units: None.

EDEB 514 Seminar on Divan Literature
History of Ottoman literature from the 17th to the end of the 19th century. This course will cover the most important genres of Ottoman Divan literature including poetry (gazel, kaside, mesnevi) and prose (tezkires, chronicles, râsales). It will prepare the students for a broader critical understanding of Ottoman Literature. Credit units: 3 ECTS Credit Units: 6. Spr (M. Kalpaklı)

EDEB 518 Poetry and Translation
The aim of this course will be to show how our total understanding of a poem is influenced by the language it is written in and how our perception changes not only as we translate but afterwards when we review the translated text. We will also analyze how imagery can shift with language influence our perception of the poem. We shall also be reviewing translation techniques as well as comparing our translations to existing translations and criticizing these and our own translations in terms of accuracy, imagery and sound and if whether the general mood of the translation reflects the original. It must be remembered that no two impressions of a work of art will be the same. Therefore, every person’s translation is bound to be different. After all “interpretation” is a synonym for translation. However, in translating literature, as well as anything else, there are limits to interpretation which are imposed by the original text. We shall endeavor to learn how to keep within these limits. The general focus
will be on two writers; Thomas Hardy and T.S. Eliot. The former as both poet and novelist, the latter as poet and essayist. **Credit units: 3 ECTS Credit Units: 6.**

**EDEB 522 Readings in Old Anatolian Turkish**
This course will introduce the students to Old Anatolian Turkish through readings of original texts. It will focus on the unique grammatical aspects of Old Ottoman. **Credit units: 3 ECTS Credit Units: None.**

**EDEB 523 13th Century Literature**
13th century Anatolia witnessed an efflorescence of Islamic mysticism, sects, humanistic ideals, a new type of Islamic life and architecture, and folk humor and satire. It was an age dominated by such figures as Mevlâna Cemşeddin Rumi, Hacı Bektaş Veli, Yunus Emre, Nasreddin Hoca and others. This course will deal with Seljuk culture and literature. Readings will include selections from Rumi's Divan, Mesnevi, Rubaiyat, Yunus Emre's poetry and Nasreddin Hoca anecdotes, etc. **Credit units: 3 ECTS Credit Units: None.**

**EDEB 524 The Turkish Novel**
This course will examine the transformation of the social, psychological and aesthetic parameters of the Turkish novel from its inception in the latter part of the 19th century to its most recent examples. Areas of interest will include: the relationship of the early novels with traditional narratives; the questions concerning the social representativeness of novels; the formal changes in the tradition of novel writing, and critical responses to key novels. Readings will include major samples of such subtypes of the Turkish novel as the historical novel, philosophical novel, village novel, nature novel, and modernist novel as well as several critical books and essays. **Credit units: 3 ECTS Credit Units: 6. Aut (L. Mignon)**

**EDEB 526 Divan Literature Through Texts**
In this course several sample texts of Ottoman Divan literature, including those in the forms of münazara, sakinname, şehrengiz, dibace, and tezkire, will be read and discussed. Emphasis will be on comprehending the special vocabulary of these texts and the unique way of thinking they express. **Credit units: 3 ECTS Credit Units: 6. Spr (N. Tarkan)**

**EDEB 530 Literary Translation**
Organized essentially as a workshop, this course will familiarize students with techniques of translating Turkish literary texts into English. It is designed for students with proven proficiency in English. Texts will include verse and prose from most periods of Turkish literary history, certainly Divan, folk, Tanzimat and modern literature. Selections may vary depending upon individual needs related to the field of specialization and/or thesis topic. This course will train students in literal translation as well as in doing creative - and hopefully publishable - versions. **Credit units: 3 ECTS Credit Units: 6.**

**EDEB 532 The Emergence and the Development of the Short Story in Western Literatures**
General characteristics of the short story as literary genre with specific reference to mainly German, American, Russian, and French short stories of the nineteenth century. Identifying and evaluating those aspects of the short story that make it a work of literature. Understanding and appreciating the complex structure formed by the dynamics between the author, narrator, place, time, and the characters. Readings will be in Turkish and English. **Credit units: 3 ECTS Credit Units: 6.**

**EDEB 533 Turkish Immigrant Literature**
This course will discuss the emergence and development of Turkish immigrant literature in Western Europe, mainly in Germany, France, the U.K. and the Netherlands. Emphasis will be on literary genres such as poetry, the novel and the short story written either in Turkish or in the local languages. The influence of Turkish and local literatures on those new texts will be among the key areas of investigation. Readings will consists of the works of significant writers and poets, whenever possible the original Turkish, German, English or French texts or their Turkish translations. **Credit units: 3 ECTS Credit Units: None.**

**EDEB 534 Advanced Reading in English**
Starting off with a survey of the semantic features of English syntax, this course aims to provide proficiency in advanced readings within a short space of time. Readings in original literary and critical texts. **Credit units: 3 ECTS Credit Units: None.**

**EDEB 591 Thesis Seminar I**
This course is designed to guide the Master's students in their thesis work. Research methods, literature review, elaboration of topics, and organization of material will be discussed in periodic meetings. Presentation in departmental seminars may be requested. **Credit units: 2 ECTS Credit Units: 10. Aut (Staff)**

**EDEB 592 Thesis Seminar II**
This course is designed to guide the Master's students in their thesis work. Research methods, literature review, elaboration of topics, and organization of material will be discussed in periodic meetings. Presentation in departmental seminars may be requested. **Credit units: 2 ECTS Credit Units: 10. Spr (Staff)**

**EDEB 599 Master's Thesis**
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)
EDEB 602  Old Uygur Literature
The subject of this seminar is the Old Uygur Literature that developed in East Turkistan (Sinkiang) around 850-1400 C.E. Old Uygur is the second Turkic literary language, following that of Orhun-Yenisey Turkic. Since it was in continuous use for over 500 years, it became a classic literary language. Even after the Islamization of East Turkistan, Old Uygur continued to be to be taught farther east in Buddhist religious centers (such as Dunhuang) until the middle of the 17th century, and books continued to be produced in this language. Old Uygur Literature, which was introduced in outline in the Masters preparatory class entitled “Introduction to Old Turkic Literature,” will be studied more comprehensively in this seminar (genres, works, Old Uygur literary terminology, known authors, translators, etc.). The majority of prose texts in this literature are Buddhist and Manichaean texts that were translated into Turkic from various languages. After a brief review of Old Turkic, we will read samples of both the prose texts, which are translations, and the poetic texts, which are original compositions. We will also discuss the influence of the Old Uygur literary language on the Islamic Turkic literary languages, and the influence of Old Uygur literature on the Islamic Turkic literatures.  
Credit units: 3 ECTS Credit Units: 6.

EDEB 603 Seminar on Yunus Emre
This doctoral seminar will deal with the emergence of Anatolian Sufism and its earliest poetic expression in the work of Yunus Emre. It will be based primarily on close critical readings of Yunus’ verses, problems of biography and authenticity, his aesthetics and pantheism, the influence of his ideas and spirituality on later periods. On a comparative basis, the seminar will attempt to shed light on how Yunus Emre resembles or differs from other Sufi poets and European mystics and humanists.  
Credit units: 3 ECTS Credit Units: None.

EDEB 605 East and West in Turkish Literature
From the Orhun Inscriptions to Orhan Pamuk, Turkish Literary history has transpired over a vast geographic area from Eastern Asia to western Europe. Its hallmarks include orientations and dis-orientations, cultural retentions and intellectual tensions. This seminar will explore and the west. (not to exclude the south) It will deal with all periods and genres, but will heavily concentrate on fiction, modern poetry, criticism, and dramatic writing.  
Credit units: 3 ECTS Credit Units: None.

EDEB 606 Sufi Seminar
In this seminar Islamic mysticism, orthodox as well as heterodox, will be discussed with special reference to Sufi poetry and its history. Especially the question that, in the absence of systematic philosophical tradition, can mysticism work in loco parentis as a systematic world-view will be dealt with. other topics like the theoretical basis of Sufi symbolism will also be on the agenda.  
Credit units: 3 ECTS Credit Units: 6. Spr (H. Yavuz)

EDEB 607 Modernism in Turkish Literature
This course will deal mainly with the repercussions of political and social aspects of Modernism qua Western-ization in the Ottoman and Republican Turkish Literature. But, Modernism as a transformation of literature itself, especially in the field of poetry will also be critically investigated.  
Credit units: 3 ECTS Credit Units: 6. Aut (H. Yavuz)

EDEB 608 Critical Approaches to Turkish Literature
This course is designed to reevaluate modern Turkish (Republican) literature from a theoretical point of view. Theories such as Marxism and Psychoanalysis (Freudian and Lacanian), and philosophical currents (Phenomenology and Existentialism, among others) will be brought to bear upon related texts to produce new critical understanding.  
Credit units: 3 ECTS Credit Units: 6. Spr (H. Yavuz)

EDEB 609 Oghuz Khan Narratives
In this seminar, the focus of study will be the tales and narratives concerning Oghuz Khan, the legendary ancestor of the Oghuz tribe. Currently, there are various extant texts written in Eastern Turkic, Anatolian Turkish, and Persian, all of which are quite different from one another. The oldest of these is believed to date back to the 13th century. Some of the texts may have been reworked and significantly altered in subsequent centuries, using older examples as a basis. Some of these texts were written in prose and some of them in verse. Some of them have been entirely preserved, while others are in a fragmentary state. In these narratives, the birth, life, and death of Oghuz Khan are narrated, together with the story of this defeating his enemies, conquering the world, and subsequently dividing his conquests up among his sons. In some, the narrative moves from legendary history through to historical centuries and continues with factual, historical events. These narratives contain a number of old epic motifs, folk etymologies, and similar elements. In the seminar, we will study the Turkish texts in the original language and the Persian texts in translation, and we will analyze the narratives from the literary point of view. Among the subjects that will be accored particular importance is to distinguish between the motifs taken into the narratives from old epics and those that were added later.  
Credit units: 3 ECTS Credit Units: 6. Aut (S. Tezcan)

EDEB 615 Love in Turkish Literature
Organized in seminars, this course will examine varying approaches to the theme of love in Turkish literature from the era of the Tanzimat to the present day. Though the focus will be mainly on poetry, other literary genres such as the novel, the short story and drama too will be considered. The impact of social change and ideological conflict on the narration of love and desire will be a key area of investigation.  
Credit units: 3 ECTS Credit Units: 6.
EDEB 616 Comparative Modern Turkish and Arabic Literature
Organized in seminars, this course will explore the varying approaches of modern Turkish and Arab writers to themes and concepts such as love, exile, nationalism, Orientalism, Occidentalism, religion, and realism. Though the focus will be mainly on twentieth century poetry, other literary genres such as the novel, the short story, and drama too will be considered. A cross-disciplinary approach will be encouraged as links between literature and other art-forms will be explored. Readings will consist of the works of significant writers and poets, the original Turkish and whenever possible the Turkish translations of Arabic texts. Credit units: 3 ECTS Credit Units: 6. Spr (L. Mignon)

EDEB 618 Introduction to Semantics
A study of the fundamental principles of semantics with specific reference to semantics of Turkish through concrete, systematic, hands-on, interactive approach. A detailed investigation of different theories of meaning, and topics such as sense and reference, implications and implicatures, definitions, form and meaning in language, and metaphor and other analogue transfers of meaning commonly used in literary styles. Credit units: 3 ECTS Credit Units: None.

EDEB 619 World Fiction
This seminar will critically survey and discuss several major 20th century novels and many modern short stories translated into Turkish. It will examine the cultural contexts of the novels and short stories, the way they reflect their times and respective societies, their fictional techniques, aesthetic and ethical concerns, and influences (if any) on Turkish fiction. Relevant theories will also be analyzed. Credit units: 3 ECTS Credit Units: 6. Aut (T. S. Halman)

EDEB 620 Seminar on Evliya Celebi and the Seyahatname
The Seyahatnâme (“Book of Travels”) the first and finest example of a unique genre of Ottoman literature - is not merely a travel guide but is at the same time a work of literature. It contains rich narrative elements that are included in the conveying of information, the description of observations and experiences, and the reflection of value judgments. This seminar critically examines the ideas that have been proposed concerning when, where and how the Seyahatnâme was written; and evaluates the text editions and the important researches that have been made until now. We read selected passages of the work and discuss its contents, structure, scope, and literary features. Using examples of true or false or exaggerated information contained in the Seyahatnâme we investigate preconceptions regarding the work and discuss its value today. Credit units: 3 ECTS Credit Units: 6. Spr (N. Tezcan)

EDEB 621 Seminar on the Mesnevi in Divan Literature
The seminar provides a historical perspective on the Mesnevi genre from the thirteenth century onward, and examines how it ceded its place to the novel and short story as Turkish literature opened to the West in the nineteenth century. We take a topical approach, and discuss the origin of the Mesnevi genre and the way in which it assumed a Turkish (or Anatolian) dress. We also read selected mesnevis examining such features as structure, plot, authors’ apologies, character, folk tale elements, societal value judgments, and local elements; compare these with the techniques and understanding of the Western novel. Credit units: 3 ECTS Credit Units: 6. Aut (N. Tezcan)

EDEB 622 Folk Poetry Seminar
During the Folk Poetry Seminar, Turkish oral poetry beginning with the bard (ozan) tradition and continuing with the “minstrel” (âşık) and “folk poetry” tradition of the Islamic and modern period is critically examined. Differences between the forms of written and oral works, arguments on orality and originality, performance of folk poetry, critical edition methods and folk poetry themes in the cultural heritage or in national literature, including class literature will be analyzed through the works of such major poets as Yunus Emre, Karacaoğlan, Kürroğlu, Pir Sultan Abdal, Dadalöğlu, Aşık Vey sel. Credit units: 3 ECTS Credit Units: 6.

EDEB 623 The Dede Korkut Oguznames
How an ancient heroic epic of the Oğuz came to be written down in twelve episodes, with variations, in the Eastern Anatolia - Azerbaijan region, in the fifteenth century. Manuscripts of the work and history of scholarship. Dede Korkut (Korkut Ata) as legendary bard and soothsayer. Language, linguistic and philological problems. Style, subject matter, heroes. The place of the Book of Dede Korkut in Turkish literature. Anatolian folk tales that resemble the stories in the Book of Dede Korkut Samples of the Oguznames will be studied and analyzed from various perspectives. Credit units: 3 ECTS Credit Units: 6. Spr (S. Tezcan)

EDEB 624 Heroic Religious Epics
This course will basically deal with the topic of heroic Islamic epics, which were composed in Anatolia during XIV. and XV. centuries and later, or translated from Arabic and Persian in the same time period (Danışmendnâme, Saltuknâme, Battalnâme usw.). Works like Vâliyesnâmes and Menâkıbnâmes will also be studied and samples from various texts elucidated. Credit units: 3 ECTS Credit Units: 6.

EDEB 625 Short Story in Western Literature
The rise of the modern short story as a literary genre in Europe and the United States in early nineteenth century and its development in French, Russian and English literatures. Understanding the literary characteristics of the
short story through in-depth reading and criticism of the works of major authors of the genre. Readings will be done mainly in Turkish translations. **Credit units:** 3 ECTS **Credit Units:** None.

**EDEB 699** Ph.D. Dissertation

*Credit units: None* **ECTS Credit Units:** None. *Aut (Staff) Spr (Staff)*
The Faculty of Law offers a broad set of courses concerning all challenging dimensions of contemporary law. The curriculum is structured to provide the students not only with knowledge in classical and substantial areas like constitutional law, administrative law, civil law, commercial law and criminal law, but also with basic professional information in other fields requiring an international perspective of specialization like competition law, intellectual and industrial property law, international commercial arbitration, European Union law and international business law. The courses consisting of the Turkish positive law with national character are given in Turkish while some others representing an international character and/or which could be learned in a foreign language like philosophy, international human rights law, international business law, European Union law etc. are given in English.

The basic philosophy of the Faculty is not to be a “school of a profession” but to have a character of a forum where the students could gain, in addition to basic professional knowledge, a scientific legal approach to follow and participate in the permanent development of the world facing the challenge of globalisation. The Faculty is conscious of the fact and the graduate program is structured in such a way that the students shall have the opportunity to gain and develop the ability of determining, searching for and achieving the appropriate information they need.

**ACADEMIC STAFF**

_Tekin Akilloğlu_, Adjunct Professor

_Murat Atalı_, Assistant Professor

_Zühtü Aytaç_, Visiting Professor

_Sahir Çörtoglu_, Adjunct Professor

_Haluk Emiroğlu_, Adjunct Associate Professor

_Ömer Faruk Erdem_, Assistant Professor

_M. Ali Erten_, Adjunct Professor

_Ece Göztepe Çelebi_, Assistant Professor

_Osman B. Gürzumar_, Professor

_Ahmet Rüchen İlgi_, Visiting Professor
Ph.D., Law, Ankara University, 1962. Labour and Social Security Law, Negotiation of Flexibility, Comparative Labour Law in the EU, Comparative Industrial Relations in the EU.

_Tuğrul Katöloğlu_, Visiting Associate Professor

_Cengiz Koçhisarioğlu_, Visiting Professor
Ph.D., Civil Law, Lausanne University, 1982. Introduction to Law, Civil Law, Property Law.
Erden Kuntalp, Adjunct Professor

Kamil Mutluer, Adjunct Professor

Erdal Onar, Visiting Professor

Ergun Özbudun, Professor

Elvin Evrim Özcan, Assistant Professor
Ph.D., Public Law, Gazi University, 2009. Administrative Law, Basic Concepts of Law, Regulation of Electricity in Turkey.

Gülüm Öçelik, Assistant Professor

Hamdi Pınar, Assistant Professor

Sami Selçuk, Adjunct Professor

Lale Sirmen, Adjunct Professor
Ph.D., Civil Law, Ankara University, 1975, Property Law, Consumer Law.

Turgut Tan, Professor

Bilgin Tiryakioğlu, Adjunct Professor

Nevzat Toroslu, Visiting Professor

Aslı E. Gürbüz Usluel, Assistant Professor

PART-TIME ACADEMIC STAFF

Şebnem Akipek, Ph.D., Civil Law, Ankara University, 1998. (Associate Professor at Ankara University)

Sahin Ardiyök, LL.M., Chicago University, 2004.

Sertac Hami Başeren, Ph.D., Public Law, Gazi University, 1987. (Professor at Ankara University)

Kemal Başlar, Ph.D., International Law, Nottingham University, 1995. (Associate Professor at National Police Academy)

Vedat Buz, Ph.D., Private Law, Ankara University, 1996. (Professor at Ankara University)

Yükseł Ersoy, Ph.D., International Law, Ankara University, 1976. (Professor Emeritus, Ankara University)

**Bettina Susanne Heiderhoff**, Ph.D., Civil Law, University of Leipzig, 1997. (Professor at University of Hamburg)

**Halim Baha Karabudak**, Economics, Middle East Technical University, 1985.

**İsmail Kirca**, Ph.D., Commercial Law, Ankara University, 1995. (Professor at Ankara University)

**Johann Kindl**, Ph.D., Civil Law, Universität Augsburg, 1992. (Professor at Westphalian Wilhelms University Münster)

**Hans-Heiner Kühne**, Ph.D., Public Law, Universitaet des Saarlandes, 1969. (Emeritus Professor at Trier University)

**Muhammet Özkes**, Ph.D., Civil Procedure, Dökuz Eylül University, 1998. (Professor at Gediz and Dökuz Eylül Universities)

**Kerem Cem Sanlı**, Ph.D., Law, Marmara University, 2006. (Assistant Professor at Bilgi University)

**Hans-Bernd Schaefer**, Ph.D., Economics, University of Bochum, 1970. (Emeritus Professor at University of Hamburg)

**İlmutluhan Seiçuk**, LL.M., Queen Mary University, 2002.

**Kemal Şanocak**, Ph.D., Private Law, Ankara University. (Professor at Ankara University)

**Haluk Toroslu**, LL.M., Ankara University Faculty of Law, 2007.

**Sinan Utku**, Ph.D., Philosophy, Hacettepe University, 1999. (Associate Professor at Ankara University)

**Ceren Ünal**, LL.M., Computer and Communications Law, Queen Mary, University of London, 2002.

**Saim Üye**, Ph.D., Legal Sociology and Philosophy, Ankara University, 2003. (Assistant Professor at Ankara University)

The rapid improvement of the relationship between law and economics brought multidisciplinary studies into the centre of 21st century legal education and practice. In today's world, where interaction between law and economics has become clearer under the light of the developments in relation to globalisation, the need for experts, who not only know the legal framework of market economy well, but also can comprehend the economic effects of legal rules and analyze the economic sides of different legal regimes, is growing. In order to meet this need, it is important to train university degree holders in economics as well as law.

Recent and rapid approximation of the objectives of law and economics that had been considered totally diverse academic fields for many years indicates some important points about the relationship between law and economics. Investors require experts, who can interpret the legal rules by taking economic points of view into consideration and comment on a certain economic behaviour in the contexts of different legal systems, rather than standard legal consultancy. Competition Law and the Law of Economic Regulation are the most significant ones of the law fields prominent regarding this perspective.

Main purpose of the LL.M. Programme of Bilkent Law Faculty is to provide students with expertise on the legal framework of market economy as well as in the fields of Competition Law and Economic Regulation and with ability to adopt the interaction between law and economics in modern practice of these disciplines.

### COURSE DESCRIPTIONS

#### UNDERGRADUATE COURSES

**LAW 101 Introduction to Law**

Law and social order; the sources of law and the hierarchy of the norms; characteristics of common law and the continental legal systems; main branches of public and private law; organisation of the Turkish judicial system; the application of norms and the methods of interpretation; transactions and rights. (in Turkish) Credit units: 3 ECTS Credit Units: 3. Aut (T. Akıllioğlu, S. Çiçek, H. Emiroğlu, C. Köşkarslan)

**LAW 102 Roman Law**

The subject of Roman Law and its importance in legal education; comparative study of Roman Law; historical introduction and the sources of Roman Law; law of persons and family law (slavery, citizens and non-citizens, the Roman family, corporations); Law of Actions - classification of actions; Law of Property (the law of things, classification of res, possession, ownership, modes of acquisition, servitudes, real securities); Law of Obligations: law of contracts (real, literal, verbal and consensual contracts); quasi contracts (condicito-negotiorum gestio); law of delicts (Furtum-Ratina-Iniuria-Damnum iniuria datum); quasi delicts; transfer and discharge of obligations. (in Turkish) Credit units: 3 ECTS Credit Units: 3. Spr (H. Emiroğlu)

**LAW 103 Constitutional Law I**

This course deals with the general principles of constitutional law, Ottoman- Turkish constitutional developments, and the structure and functioning of the Turkish constitutional system based on the 1982 Constitution. Particular attention will be given to questions of constitutional justice. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Aut (E. Güzeltpe Çelebi, E. Onar)
LAW 104 Constitutional Law II
This course will deal with the structure and functions of governmental institutions in Turkey with special emphasis on constitutional justice. (in Turkish) Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAW 103. Spr (E. Güztepe Çelebi, E. Onar)

LAW 105 Civil Law-I: Introduction to Civil Law-Basic Concepts-Law of Persons
Subject matter, historical background, sources and application of civil law; Basic Concepts: Right, acquisition of rights and legal transactions; good faith (bona fides); protection of rights; Natural Persons: Beginning and end of personality, capacities, protection of personality; Legal Persons. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Aut (M. A. Erten, O. B. Gürzumar, C. Koçhisarlıoğlu)

LAW 106 Civil Law II: Family Law
Law of Marriage: Engagement (the legal nature, conditions for a valid engagement, legal effects of engagement, end of engagement); marriage (the legal nature, conditions for a valid marriage, general legal effects of marriage and matrimonial property systems, dissolution of marital bond and its legal consequences); legitimacy (affinity); establishment of legitimacy, adoption, annulment of legitimacy, recognition, paternity suit, legal effects of legitimacy and especially the parental power (patria potestas); Family in broader sense; Guardianship (guardianship in technical sense, curatorship, statutory advisors). (in Turkish) Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAW 105. Spr (M. A. Erten, C. Koçhisarlıoğlu)

LAW 201 Law of Obligations I
Concepts of “obligational relationship” and “obligation”, sources of obligations, formation and validity of legal transactions; particularly contracts, representation, torts and unjust enrichment. (in Turkish) Credit units: 3 ECTS Credit Units: 6, Prerequisite: LAW 105. Aut (V. Buz, E. Kuntalp)

LAW 202 Law of Obligations II
Performance of obligations, violation of obligations and its consequences, cease of obligations and some specialties related to obligations; namely conditional obligation, joint obligation, transfer of debt and assignment of obligation. (in Turkish) Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAW 201. Spr (V. Buz, E. Kuntalp)

LAW 203 Criminal Law I
Legality, sources and application of the criminal laws; General theory of crime; elements of a crime; Actus reus and defenses; superior orders, necessity; Mens rea and crimes of negligence; mistake and ignorance of the laws. (in Turkish) Credit units: 3 ECTS Credit Units: 6. Aut (T. Katoglu, S. Selçuk, N. Toroslu)

LAW 204 Criminal Law II
Different aspects of a crime; accomplishment, assistance after the offence, criminal attempt; Criminal responsibility; infancy, insanity; Theories of punishment; nature of punishment. Consequences and suspension of punishment. Amnesty; New perspectives in criminal law. (in Turkish) Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAW 203. Spr (T. Katoglu, S. Selçuk, N. Toroslu)

LAW 205 Administrative Law I
Basic political and legal principles of Turkish administrative law; structural and functional aspects of central and local administrations, Rule-making power of administration. Unilateral administrative acts and contracts. Legal regime of public personnel and public domain. (in Turkish) Credit units: 3 ECTS Credit Units: 6. Aut (T. Akkilloğlu, E. E. Özcuan, T. Tan)

LAW 206 Administrative Law II
Basic principles of judicial control of administration. Organization of administrative courts and Council of State; Judicial remedies (action for annulment and full remedy action); Liability of the administration and its agents. (in Turkish) Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAW 205. Spr (T. Akkilloğlu, E. E. Özcuan, T. Tan)

LAW 208 Basic Concepts of Law
Introduction to legal terminology, translation of legal texts, definition and analysis of legal terms. Credit units: 2 ECTS Credit Units: 3. Spr (A. E. Gürbüz Usluel)

LAW 301 Civil Procedure I
Courts’ structure, competence and venue, status of the plaintiff and the defendant, filing the lawsuit, submissions exchange, the trial, investigation, oral trial and judgment. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Aut (M. Atali)

LAW 302 Civil Procedure II
The proof of claims, burden of proof, evidence, legal remedies, intermediate appeal and appeal procedures, arbitration. (in Turkish) Credit units: 3 ECTS Credit Units: 5, Prerequisite: LAW 301. Aut (Staff) Spr (M. Atali)

LAW 303 Public International Law
This course offers a survey of a branch of law dealing with the normative factor of international relations the source of which are the international agreements and international customary law. Topics include also the
jurisdictional aspects of international law and the settlement of disputes. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Aut (S. H. Baseren, K. Başlar)

**LAW 304 Private International Law**
A course offering an insight into the conflict of laws and international procedure law. (in Turkish) Credit units: 3 ECTS Credit Units: 4. Spr (G. Özçelik, B. Tiryakioglu)

**LAW 305 Civil Law III: Law of Property I**
This course offers a study of possession and land register. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Prerequisite: LAW 105. Aut (S. Çö我妈lu, C. Koçhisarlioğlu, L. Sirmen)

**LAW 306 Civil Law III: Law of Property II**
This course offers a study of ownership and limited real rights (servitudes, mortgage, pledge and land charges). (in Turkish) Credit units: 3 ECTS Credit Units: 5. Prerequisite: LAW 105 and LAW 305. Spr (S. Çö我妈lu, C. Koçhisarlioğlu, L. Sirmen)

**LAW 307 Commercial Law I**
This course offers a comprehensive study of law of commercial enterprises. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Aut (Z. Aytac, H. Pınar, A. E. Gürbüz Uslu)

**LAW 308 Commercial Law II**
This course deals with law of partnerships and corporations. (in Turkish) Credit units: 3 ECTS Credit Units: 3. Prerequisite: LAW 307. Spr (Z. Aytac, H. Pınar)

**LAW 309 Law of Obligations (Special Part)**
This course deals with certain types of classical agreements specifically regulated in Turkish Code of Obligations and various types of agreements a lawyer may face with in modern business life. (in Turkish) Credit units: 2 ECTS Credit Units: 3. Prerequisite: LAW 201 and LAW 202. Aut (M. A. Erten, E. Kuntalp)

**LAW 351 American Law of Contracts**
After a general and historical introduction, the course will cover standard topics such as the concept of consideration as a basis for enforceability of promises, formation of the contract through offer and acceptance, interpretation of contracts, impossibility, breach of contract and remedies. The course will employ the case-study method, and, as a result, students will develop case-reading and understanding skills that should be useful for any further study of the law of common-law systems. Credit units: 2 ECTS Credit Units: 4. Aut (S. Utku)

**LAW 352 Business Law**
A course offering a survey of the rules and regulations protecting the environment. (in Turkish) Credit units: 2 ECTS Credit Units: 4. Aut (S. Çö我妈lu)

**LAW 353 Modern Contracts Law**
This course deals with all legal aspects of contracts newly introduced to the legal field due to the increase in international relations, technological developments and globalization. (in Turkish) Credit units: 2 ECTS Credit Units: 4. Spr (E. Kuntalp)

**LAW 354 Environmental Law**
A course offering a survey of the rules and regulations protecting the environment. (in Turkish) Credit units: 2 ECTS Credit Units: 4. Aut (S. Çö我妈lu)

**LAW 355 History of Turkish Law**
Jewish legal system, a brief overlook to European legal history, basic principles of Islamic Law, Ottoman legal institutions and the Romanisation of Ottoman Law from Tanzimat to 1926. Credit units: 2 ECTS Credit Units: 4. Aut (I. Ortaylı)

**LAW 356 Comparative Private Law**
A study and comparative analysis of various legal systems, focusing on the main features of private law. Credit units: 2 ECTS Credit Units: 4.

**LAW 357 Anglo-American Law**
Anglo-American legal system in the global community; American legal profession; legal history of the Anglo-American legal system; the common law tradition; legislative power; statutory interpretation; federalism; use of precedent / stare decisis; the adversary process and jury trials; Bill of Rights; selected topics (torts; contracts; corporations; etc.) Credit units: 2 ECTS Credit Units: 4. Aut (G. Gürkaynak)

**LAW 358 Criminal Law (Special Part)**
Particular crimes as homicide, assault, sexual offences, theft and related offences, offences of damage to property, offences against constitutional and public order, public health, forgery. Credit units: 2 ECTS Credit Units: 3. Prerequisite: LAW 203 and LAW 204. Spr (T. Katoğlu, N. Toroslu)

**LAW 359 Comparative Private Law**
A study and comparative analysis of various legal systems, focusing on the main features of private law. Credit units: 2 ECTS Credit Units: 4. Aut (H. Emiroğlu)
LAW 360  **Public Finance**
This course investigates government activities, taxing and spending. The emphasis of the course will be microeconomic of analysis of expenditure and taxing activities. It covers topics as public goods, political economy and externalities.  
*(Credit units: 2 ECTS Credit Units: 4. Spr (K. Mutluer))*

LAW 365  **Legal Philosophy**
After focusing on the relationship between law, philosophy and science, the scope and subject of legal philosophy is going to be determined. Then, the doctrine of natural law—the oldest legal school—will be analysed according with its Greek origin and contractualists, while evaluating the criticism against legal philosophy on ground of being metaphysical under modern epistemology. Lastly, the concept of legal justice, as the natural consequence of legal positivism, which is alleged to represent scientificality and impartiality in legal theory, will be analysed.  
*(Credit units: 2 ECTS Credit Units: 4.)*

LAW 366  **Legal Sociology**
Firstly, the sociological currents, which influenced and penetrated legal theory will be described as an introduction; while concentrating on the history and cultural reasoning of these currents, followed by a focus on the methodology and meaning of the sociological analysis of law, with references to the Introduction to Law course. Afterwards, the sources of law, which represent the biggest contribution of the sociological approach will be analysed, with a particular focus on the works of important scholars. Finally, reaching to a balanced sociological definition of law under the light of this information will be attempted.  
*(Credit units: 2 ECTS Credit Units: 4. Aut (S. Öyme))*

LAW 370  **Comparative Constitutional Law**
In this lecture seminar, the historical development of the modern constitutional state which is the result of the European law tradition will be taken on a comparative basis. Thus the foundations of the modern constitutional state will be considered within the context of the theory of constitution in which main characteristics and functions of the nation-state will be explored. The jurisprudence of the Turkish Constitutional Court on specific topics is to be held on a comparative way with some European constitutional courts. The European Union as a new form of political organization is discussed regarding its new constitutional problems and questions.  
*(Credit units: 2 ECTS Credit Units: 4. Spr (E. Öztürk)) *

LAW 374  **Parliamentary Law**
This course deals with the concept of parliament, and its historical background, formation of the legislative body. Unicameral or bicameral systems, electoral systems, size of the parliaments and the time between two elections will be examined. Particular attention will be given to Turkish Parliament, and its functions, legal statutes of members (i.e. representing the nation, parliamentary immunity, termination of membership) are dealt with.  
*(Credit units: 2 ECTS Credit Units: 4. Spr (E. Onar))*

In this course these subjects are dealt with: Constitutionalism in the Ottoman era; the Constitution of 1876 as the first Constitution of Ottoman Empire; the amendments of 1909 to the 1876 Constitution; the Constitution of 1921 during the War of Independence; the Constitution of 1924 as the first Constitution of the Turkish Republic after its foundation in 1923; some major amendments to the 1924 Constitution; the drafting process of the Constitution of 1961 and the characteristics of the Constitution; the amendments of 1971 to the 1961 Constitution; the drafting process of the Constitution of 1982 and the characteristics of the Constitution; some major amendments to the 1982 Constitution.  
*(Credit units: 2 ECTS Credit Units: 4. Aut (E. Onar))*

LAW 376  **Selected Topics in English Law**
This course aims to introduce some basic concepts and terminology of English law. In this regard, firstly, origins of the Common Law system, its area of application and advantages and disadvantages of this system shall be evaluated and the law-making institutions, sources, precedent, acts of parliament and statutory instruments, the relationship between common law and statutory law and the rules of construction shall be covered. The court structure and the hierarchy of courts shall have an emphasis, concentrating on the competences of different courts in criminal and civil justice as well as the rules of civil and criminal procedure. The judiciary and the legal profession in England shall also be covered. English law of contracts shall be another part of the course where formation of contracts, essential elements of a valid contract, classification of contracts, discharge of contracts and remedies for breach are to be dealt with.  
*(Credit units: 2 ECTS Credit Units: 4. Spr (G. Öztekin)) *

LAW 380  **The Basis of Legal Thinking**
In the rule making and legal practice great thinkers had always an influential role. Shortly, every legal system is based on political and philosophical thoughts. Some of known publications are above mentioned for further reading. The purpose of this course is to develop student skill of learning and writing. It is clear that that purpose is common with legal philosophy and methodology. Obviously, this course does not pretend to exhaust the matter. Without depending on any given discipline like philosophy, sociology or methodology, some classical texts of legal thinking are given to reader following by a short explanation. The matter is divided in two sections as legal theory and legal language. Students are required to write a student article at the end of the course.  
*(Credit units: 2 ECTS Credit Units: 4. Spr (T. Akillioglu))*
LAW 401 Commercial Law III
This course deals with the subjects of negotiable instruments law. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Aut (İ. Kırca)

LAW 402 Commercial Law IV
This course deals with the subjects of insurance law. (in Turkish) Credit units: 3 ECTS Credit Units: 5. Spr (K. Şenocak)

LAW 403 Civil Law IV; Inheritance Law
Intestate succession, testate succession, reserved portion. A course dealing with a branch of law which regulates the passage of rights and debts of a person at his death. (in Turkish) Credit units: 3 ECTS Credit Units: 4, Prerequisite: LAW 105. Aut (Ş. Akipek)

LAW 405 International Human Rights Law
This course covers the general principles of international human rights law and deals especially with European Human Rights Convention and with some selected decisions of European Court of Human Rights. The definition of human rights, the basic mechanisms for enforcing human rights and the role of the political realities in promoting human rights are some of the topics. Credit units: 3 ECTS Credit Units: 4. Spr (T. Akıllıoğlu, H. Kühne)

LAW 406 International Business Law
A course dealing especially with international business transactions. Credit units: 3 ECTS Credit Units: 4. Spr (J. Kindl)

LAW 407 Tax Law
This course comprises the principles of tax law, taxation process, income tax, corporation tax, value added tax, real estate tax, inheritance tax, tax penalties, conflicts of taxation and some other taxes in the Turkish system. (in Turkish) Credit units: 3 ECTS Credit Units: 3. Aut (K. Mutluerg)

LAW 408 Competition Law
Competition law is the area of public law, which aims to enhance and preserve competitive conditions in markets. The main subjects given in this course are anti-competitive agreements and concerted practices, cases of abuse of dominant position, mergers and acquisitions, procedural rules applied in competition law practice. The concept of money (economic and legal aspect of money, functions of money, types of money), monetary system (the establishment of monetary system, national monetary system, international monetary system), money market (financial market in general, money market, money market intermediaries and money market instruments), monetary obligations (national currency obligations, foreign currency obligations). 
Credit units: 2 ECTS  Credit Units: 4. Aut (O. R. Güner)

LAW 442  Law of Carriage
Credit units: 2 ECTS  Credit Units: 4.

LAW 443  Foreign Investment Law
Courses include both international and national dimensions of foreign investment law. At international level courses focus on following subjects: The principles of international law about foreign investments from colonial period to this century, international protection of investments, international regulations in the field of foreign investments, international safeguards for taking foreign property/investments, international standards for expropriation and nationalization of foreign investment and dispute settlement procedure in the field of foreign investments. At national level, courses include national investment regulations of Turkey, role of international conventions on protection and encouragement of foreign investments in Turkey. 
Credit units: 2 ECTS  Credit Units: 4. Aut (B. Tiryakioğlu)

LAW 445  Advertising Law
Advertising regulations in the European Union, advertising under unfair competition law, consumer law and other laws in Turkey, misleading and comparative advertising, TV specific and product specific advertisement regulations, sanctions against unfair advertising and self-control mechanisms. 
Credit units: 2 ECTS  Credit Units: 4. Aut (H. Pınar)

LAW 447  Moot Court I
The aim of the Moot Court Course is to help students to present a case, in a clear and convincing way, and to refute clearly and convincingly with good arguments, the case presented by the opposite party. The course is designed as a combination of tutorials and mooting. Course basically deals with the issues concerning International Commercial Arbitration. 
Credit units: 2 ECTS  Credit Units: 2. Aut (B. Tiryakioğlu)
is designed as a combination of tutorials and mooting. Course basically deals with the issues concerning International Commercial Arbitration. Credit units: 2 ECTS Credit Units: 4. Spr (B. Tiryakioğlu)

**LAW 449 Protection of Cultural Heritage**
This course focuses on the legal protection of cultural heritage and different legal remedies foreseen for that purpose. Credit units: 2 ECTS Credit Units: 4.

**LAW 451 Moot Court III**
The aim of the Moot Court Course is to help students to present a case, in a clear and convincing way, and to refute clearly and convincingly with good arguments, the case presented by the opposite party. The course is designed as a combination of tutorials and mooting. Course basically deals with the issues concerning International Commercial Arbitration. Credit units: 2 ECTS Credit Units: 4. Aut (B. Tiryakioğlu)

**LAW 452 Moot Court IV**
The aim of the Moot Court Course is to help students to present a case, in a clear and convincing way, and to refute clearly and convincingly with good arguments, the case presented by the opposite party. The course is designed as a combination of tutorials and mooting. Course basically deals with the issues concerning International Commercial Arbitration. Credit units: 2 ECTS Credit Units: 4. Spr (B. Tiryakioğlu)

**LAW 453 EU Private International Law**
This course focuses on the legislation and discussions on private international law in the EU, dealing mainly with EU Citizenship Law, the third country nationals in the EU and the EC Conflict of Laws. In this regard, historical background and current legal basis of the EU citizenship and the rights of Union citizens; legal situation of the third country nationals including the Turkish citizens in the EU; internal and external competence of the EC on conflict of laws and related Community legislation will be covered. Besides legislation at European level, relevant decisions of the European Court of Justice will be given special attention. Credit units: 2 ECTS Credit Units: 4.

**LAW 454 Consumer Law**
This course deals with the legal rules which have been specifically designed to protect consumers’ interest. Consumer protection as a public policy was first introduced by Article 172 of the 1982 Constitution which grants the State the authority to take all measures taken was the adoption of The Law on the Protection of the Consumer. With the Law on the Protection of the Consumer, a special body of law, characterised by a consistent policy and aimed at the protection of consumers’ interest was established. The course concentrates on the issues governed by the Law on the Protection of the Consumer, such as deficiencies in goods acquired and services provided, consumer contracts namely doorstep selling, installment sales, sales through campaigns, packet tours, time sharing, distance contracts, consumer credits, consequently consumer information and consumer redress. Credit units: 2 ECTS Credit Units: 4. Spr (L. Sirmen)

**LAW 456 Contemporary Governmental Systems**
This course deals with the concept of governmental systems, relationships between the legislative and executive branches of state power. Presidential, parliamentary, and semi-presidential systems are dealt with. Particular attention will be given to semi-presidential system, and different types of it (i.e. “premier-presidential system”, “president parliamentary system”, and “parliamentary with president system”). Also two different systems which are rarely seen, “Convention government (Régime d’assemblée)”, and “direct election of prime minister” will be examined. Credit units: 2 ECTS Credit Units: 4.

**LAW 458 Citizenship and Individual Rights in the EU**
This course deals with the concept of EU citizenship, the legal status of the EU citizens as well as of the third country nationals residing in the EU. In the first part of the course, the development of the concept of EU citizenship shall be discussed and the provisions of the Founding Treaties on EU citizenship as well as the secondary legislation applicable to EU citizens and their family members will be evaluated. In the second part of the course, within the framework of immigration policy provided under Article 79 of the Treaty on the Functioning of the European Union and under the related secondary legislation, the rights of the third country nationals shall be dealt with. Lastly, the legal status of the Turkish nationals residing in the EU who are considered as third country nationals shall be assessed, taking the provisions of Ankara Agreement of 1964, the Additional Protocol of 1973 and the decisions of the Association Council into consideration. Credit units: 2 ECTS Credit Units: 4.

**LAW 460 Legal Aspects of EU-Turkey Relations**
The relationships between Turkey and the European Union have a long history, dating back to the end of 1950s. Since then, the nature of this relationship as well as the place of Turkey in the EU have been frequently discussed. This course aims to concentrate on the legal aspects of this relationship: The historical background, Ankara Agreement of 1964 that establishes an association between Turkey and the EU, its characteristics, the institutions, Additional Protocol of 1973 and the decisions of the Association Council shall be first points of discussion. In this regard the most important decisions of the Court of Justice of the European Union on the position of Turkish nationals in the EU shall be deeply evaluated. Besides, accession negotiations shall be another major point of discussion, where the main documents of this process, such as the decisions of different European Council meetings and the progress reports on Turkey shall be assessed. Credit units: 2 ECTS Credit Units: 4. Spr (G. Özçelik)
LAW 491 Selected Topics in Turkish Law I
Common law and statutes relating to business with special reference to contract law and sale of goods; the law relating to business organizations, and other areas of law relevant to commerce including banker and customer, hire purchase insurance and bankruptcy; the industrial law, the law concerning the contract of employment; trade unions; Legal aspects of international trade; the process and function of governmental regulation of free enterprise. (Course open for students of the Faculty of Economics, Administrative and Social Sciences) (in Turkish) Credit units: 3 ECTS Credit Units: 4. Aut (Ö. F. Erdem)

Regulation and de-regulation, financial markets and globalization of business. Access to world markets and related regulations. (Course open for students of the Faculty of Economics, Administrative and Social Sciences) (in Turkish) Credit units: 3 ECTS Credit Units: 4. Spr (Ö. F. Erdem)

LAW 493 Introduction to Law
This course is designed to acquaint students basic definitions, concepts, sources and branches of law. It covers wide range of topics including constitutional law, administrative law, public international law, civil law, property law and law of obligations. Credit units: 2 ECTS Credit Units: 4.

GRADUATE COURSES

LAW 501 Economic Analysis of Law
Economic analysis of law (or the doctrine of law and economics) is in today's world considered the most influential research in foreign legal systems. This course aims to introduce this legal thought to students and to explain them how it is to be applied in some basic fields of Turkish Law. Economic analysis of law can be defined as the application of economic theory (theories of behaviour) to the legal rules and institutions. In this context, some basic terminology like rational choice theory, economic efficiency, social welfare and Coase theorem will be explained in the first part of the course. In the second part, the method of economic analysis will be applied in criminal law, laws of corporal property, contracts, consumer protection and mainly torts. The course language is English. Credit units: 3 ECTS Credit Units: 6. Aut (K. C. Sanlı, H. Schaefer)

LAW 503 Economics of Competition
Competition law regulates the economic activities; but the operation of competition law has important differences from what is traditionally called legal regulation or regulation. The regulation has a nature peculiar to industry. Direct and regular determination of prices is related with product standards or barriers to entry - exit from the market. Competition law, on the other hand, has application that covers the whole economy. It focuses on certain fundamental rules that aim good and efficient solutions for the society by enabling competitive interaction among firms. Interventions of authorities and proceedings, which may come into question in case of violation of these fundamental competition rules, are exceptional in nature. The main goal of this course is to introduce the theoretical approaches and basic techniques of economic analysis to graduate students in Turkey, where subjects of competition law and policy have developed parallel to the progressions in EU. The course language is English. Credit units: 3 ECTS Credit Units: 6. Aut (H. B. Karabudak)

LAW 504 Competition Law
Main theme of this course is substantive competition law concerning the related topics of public and private law. Thus, conditions for an act of an undertaking to become subject of administrative and private law sanctions because of being in violation of competition law will be elaborated. Decisions of Turkish Competition Authority, Turkish Council of State, European Union Commission, European Court of Justice and, as far as sufficient, American Supreme Court are to be discussed. While examining the consequences of competition breaches in private law related decisions of Turkish Court of Cassation and foreign supreme courts will also be considered. The adequateness of the sanctions with regard to competition economy and policy and the relationship between competition law and economic regulation are other important subjects of the course. Credit units: 3 ECTS Credit Units: 5. Spr (G. Gürkaynak, O. B. Gürzumar)

LAW 505 Economic Regulation and Law
This course has four main parts: In the first part, information about basic pricing theory will be given and the essential terminology that is going to be used in the other parts will be explained. In the second part, traditional approaches in regulation law, which focus on the relationship between market defects and regulation, will come into question. In the third part, it will be examined together with the results of positive regulation theory how the relationship between regulation and politic processes forms the law of regulation. In the fourth part, the methods of application of regulation in related markets will be analysed. The course language is English. Credit units: 4 ECTS Credit Units: 6. Aut (S. Ardiyok)

LAW 506 Energy Policy and Law
In this course, legal aspects of Electricity, Natural Gas, Petroleum and LPG services and activities as the main research topics of the energy sector and the powers of Turkish Energy Market Regulatory Authority (EMRA) are going to be studied. In this context, for each sector licence, tariff and monitoring mechanisms will be examined. The differences between current legal statuses arose within new regulations and the previous regulations and
legal problems of the transition period going are to be assessed. Thereto relevant decisions of EMRA and current situation of competition complications within the energy sector will be analysed from a legal perspective. Credit units: 3 ECTS Credit Units: 5. Spr (S. Ardyok)

**LAW 507** Public Economic Law

In this course, the characteristics and sources of ‘public economic law’ that can be briefly defined as the law of the state intervention in the economy will be examined. In the second part of the course, the fundamental principles of public economic law, like right to property, freedom of enterprise and rule of law will be explained. In the third part, public organisation in the economy area will come into question. In the fourth part the public law framework of the market economy as well as the transition period from interventionist state to regulatory state (incentive granting state) will be examined. Main subjects of the fifth part are the privatisation of public economic enterprises, the legal mechanisms of public-private partnership in public services and the regulation of sectors. Credit units: 2 ECTS Credit Units: 6. Aut (T. Tan)

**LAW 508** Telecommunications Law

This course is composed of two parts. Topics that are going to be studied in the first part are: (i) Basic terms and concepts of telecommunications, history of telecommunications law and economic substances of telecommunications regulations, (ii) Comparative study of European Union Communications Law and Turkish telecommunications regulations and especially access and interconnection, universal service obligations and privacy, (iii) Intercourse of telecommunications law and regulations with other codes and especially the competition law, (iv) Attitudes in Turkish and European Union regulations and basics of Turkish telecommunications regulation in the context of telecommunications law’s future. In the second part, legal framework of access and interconnection arrangements is going to be examined. Credit units: 3 ECTS Credit Units: 5. Spr (I. Selçuk)

**LAW 509** Term Project

Term project is a non-credit program activity stipulated by the Regulation for Graduate Education of the Council of Higher Education for the post-graduate programs with no thesis. The students are required to be successful at the term project in order to obtain the Diploma. Within this activity, the students should accomplish a research project, internship and a similar assignment under the supervision of an academic instructor and submit their projects in the form of a written report or a research document to the related academic instructor. Subject of the project: It should be related to one of the first-term courses. The project supervisor can be any of the academic instructors lecturing at the program. Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

**LAW 510** Banking Regulation Law

Banks have a major importance in the economics of a country. Fulfilling the functions of the banks, especially accepting small amounts of money for deposit and directing this source towards credits for the development of the country, is very crucial for economic welfare. Profitable functioning of banking services depends on the regulation of this sector by an independent regulatory agency. This task lies within the responsibility of Banking Regulation and Supervision Agency (BRSA) in Turkey. BRSA is an independent regulatory agency, of recent date, given extensive supervision powers of banking services performs its duties within the terms of Banking Law. Legal grounds of the powers of BRSA, how these powers should be exerted and their legal consequences are going to be examined in this course. Credit units: 3 ECTS Credit Units: 5. Spr (S. Ardyok)

**LAW 520** Capital Markets and Market Abuse

In this course, first market and price formation mechanisms, then breaches in these mechanisms, insider trading and manipulation acts are going to be examined under the heading “Abuse of Capital Markets and Regulation Approach”. Subsequently transition to the market oriented approach and the principles of the EU Directive No. 2003/6 and its regulation approach are going to be analysed. Price formation mechanisms should be introduced in the survey of market-oriented approach. At this point, financial theories of efficient markets and conduct explaining price formation mechanisms in legal and financial terms are going to be studied and the term abuse of the market is going to be outlined. All in all, sanctions applied in case of abuse of the market are going to be examined market oriented and appropriateness of these sanctions is going to be discussed in accordance with criminal and legal liability. Credit units: 3 ECTS Credit Units: 4. Spr (Staff)

**LAW 524** Banking and Criminal Law

Dimensions of criminal regulations of banking activities and types of related criminal offences are within the scope of this course. In this context, definitions of criminal offences especially in terms of Banking Law No. 5411, Law of Bank and Credit Cards No. 5464 and Turkish Criminal Code No. 5237, which guarantee the organization of banking activities and safeguard the interests of banks and customers, are going to be studied. Criminal liability of governors and employees of the banks, Banking Regulation and Supervision Agency (BRSA) and the Savings Deposit Insurance Fund (SDIF) are also going to be considered. Credit card applications by using misleading information or document, forgery in credit cards or bankcards according to Law of Bank and Credit Cards are within the framework of this course. Criminal offences such as bank fraud or fraud by bank employees; fraud by Internet and IT, bank and credit cards theft or forgery will also be elaborated in this course. Credit units: 3 ECTS Credit Units: 4.
LAW 526 Negotiation of Flexibility
This course discusses the extent to which the labour market is becoming more flexible, as well as the role which collective bargaining is playing, or can't play, in the process of introducing this flexibility in its widest meaning including bipartite and tripartite negotiations at the national, sectoral, enterprise and shop-floor levels. Main topics of the course are: Types of flexibility (pay, working time and work organization flexibility); means of flexibility (legislation, collective bargaining, contracts of employment, employers’ unilateral action); the role of the state and the bargaining structure; the position of the social partners; outcomes of negotiations over flexibility; some basic issues concerning trade-offs in flexibility bargaining at the central, sectoral and enterprise levels; over job security; redundancy alternatives, working-time and workers’ life styles; shorter hours to expand employment. The course language is English. Credit units: 3 ECTS Credit Units: 4. Spr (A. R. Isık)

LAW 528 International Law and Economics
International Law and Economics is going to be considered as a fragment of International Law and in this context, International Law principles are going to be examined that directly affect the international economic relations. Special attention will be given to the topics such as new international economic order, effect of nationalization, protection of the environment, immunity of the state and international sanctions. Besides, bilateral economic relations among states, the role of international organizations in international economic relations, the United Nations, GATT and International Monetary Fund are going to be taken into account. Furthermore, individual in International Law and Economics, rights of the state, property rights of foreigners, international investment and the resolution of disputes in international investment as well as the use of economic power as a sanction in international relations are the topics that will be examined. The course language is English. Credit units: 3 ECTS Credit Units: 4.

LAW 530 Unfair Competition
Regulation of the unfair competition in the European Union, in Switzerland, in Germany and in Turkey; relation to the other right zone, especially to the competition law and law of the intellectual property; faithfully and belief; confusion, protection of know-how and against the abuse of fabrication secrets or business secrets; non-observance of work conditions; special cases of the unfair competition through advertising, sponsorship; sanction in the right of the unfair competition and consumer right. Credit units: 3 ECTS Credit Units: 4. Spr (H. Pınar)

LAW 532 Current Issues in Economics of Anti Trust and Regulation
Regulation of unfair competition in the European Union, Switzerland, Germany and Turkey; relationship with other branches of law, particularly with competition law and intellectual property law; principle of honesty; dilusion, protection of know-how and trade secrets; specific cases of unfair competition through advertising and non-compliance to work conditions; sponsorship; sanctions under unfair competition law and consumer law. Credit units: 3 ECTS Credit Units: 4. Spr (H. Pınar)

LAW 534 Patent Law
This class will provide an introduction to patent law and patent systems. Although U.S. patent law and cases will be the central focus, the class will also cover the international patent system as a whole, and consider the patent laws of other jurisdictions. Substantive topics will include the patent system as a social contract, the requirements for patentability, patent disputes and litigation, the interface of patent law and competition law, the international patent system, and technology transfers and licensing. The class will use the case method, which will require students to be prepared to discuss assigned cases in class. Credit units: 3 ECTS Credit Units: 4.

LAW 536 Law and Economics of Media: an Antitrust Perspective
Media industries, incorporating double sided markets and having different structure of marginal costs based on information, differ from the markets described in classical economic theory. Likewise, entry into broadcasting markets and ownership are regulated since television and radio frequencies are scare resources, and the industry has an important role for the freedom of speech and affecting public opinion. The subject of this course is to analyze the law and economics of media industries from an antitrust perspective; and after an introduction to the economics of media, regulation of the industry and application of antitrust rules in three different jurisdictions, namely Turkey, the US, the EU will be studied comparatively. Credit units: 3 ECTS Credit Units: 4. Spr (Staff)

LAW 501 Civil Law (Real Securities)
This course deals with the securities which create rights in rem. A security is a resource which a creditor is furnished with to use in case of debtor’s failure in his obligation. Securities can be classified in terms of the rights created thereby as personal securities and real securities. Personal securities create rights in personam which can be asserted only against persons who have given the securities. Unlike personal securities, real securities create rights in rem which can be asserted against third person. If the debtor fails to fulfill his obligation, the creditor whose debt has been assured by a real security can request from the competent execution office a foreclosure whereby the property charged is sold in satisfaction of this debt. Since, the creditor takes priority to exercise his right to the exclusion of other ordinary claims in this procedure, real securities are accepted as very effective in use especially in the banking law. This course is concerned with the legal provisions regarding the creation, the effects and the termination of real securities over immovable and movable property as well as the relevant judicial practice. Credit units: 3 ECTS Credit Units: 6. Spr (L. Sirmen)
LAW 603 Invalidity and Violation Actions in Law of Trademarks
Topics such as Signs suitable for registration as trademarks, grounds for refusal of registration and their types; grounds and legal consequences of invalidity decisions; rights conferred by a trademark, sanctions against violation of those rights shall be assessed taking the provisions of the EU Directives as well as the legislation of Germany, Switzerland and Turkey into consideration from a comparative perspective. Credit units: 3 ECTS Credit Units: 6.

LAW 605 Constitutional Law (Constitutional Judiciary I)
In this course judicial review of the constitutionality of legislation is dealt with. Following topics will be examined: Concept of constitution, and classification of it: Written-unwritten, and rigid-flexible constitutions; hierarchy of laws; types of judicial review: Centralized or decentralized; access to centralized judicial review: Preventive control or repressive control?; decisions: Inter partes or erga omne?, ex tunc or ex nunc? Credit units: 3 ECTS Credit Units: 6.

LAW 607 Administrative Law I (Privatization Regulation of Energy Sector)
Privatization will be analyzed as transferring ownership of public enterprises from public sector to private sector and providing public services by private sector via different models including public private partnership methods such as Build-Operate-Transfer and Transfer of Operational Rights. After examining legal and administrative development of the energy sector regulated by the Constitutional Court and the Council of State will be discussed. The governance structure of the energy sector had changes in Turkey by mid-1980s. Turkey as many developing countries, started enabling the private sector to participate in the energy industry. In this context the regulation of energy sector will be examined as a consequence of liberalization due to European Union process. Credit units: 3 ECTS Credit Units: 6.

LAW 609 Criminal Law
Different aspects and current problems of criminal law will be elaborated in this course. Problems concerning sources and application of the criminal laws; current debates on the general theory of crime such as different opinions concerning actus reus, mens rea and defences, mistake and ignorance of the laws shall be covered. Credit units: 3 ECTS Credit Units: 6.

LAW 611 Environmental Liability Law
This course primarily deals with the applicable rules of liability arising from violations of provisions regarding the enjoyment of ownership right and relevant restrictions set forth by the general legislation on environmental protection. Polluter's liability provided by the Environment Law will be particularly focused on and a comparative analysis on the provisions and conditions of this liability will be made under the light of the latest developments in liability law and the economic impacts of liability. Credit units: 3 ECTS Credit Units: 6.

LAW 613 ECHR Law
European Convention on Human Rights and Turkish domestic law; Characteristics of the European Convention on Human Rights and its organs; Classification and Effects of the Decisions of the European Court of Human Rights regarding Turkey; Effects of the decisions on Turkish domestic law; Situations that are faced in practice; Matters that should be dealt with in Turkish domestic Law. Credit units: 3 ECTS Credit Units: 6.

LAW 615 Doctrine of Innominate Contracts
This course shall cover issues including how could the gaps in innominate contracts, which are established on the principle of freedom of contract in our Law of Obligations, be filled because of their being unregulated; whether there is a possibility of using the legislative provisions on nominate contracts as a tool in filling the gaps in innominate contracts; and since the solution of this problem significantly connected with "typus" regulation, the characteristics of the "typus" will also be explained. Credit units: 3 ECTS Credit Units: 6. Spr (E. Kuntalp)

LAW 617 General Methodology of Private Law
This course aims to give information on the methodological approaches regarding formation of law, sources, interpretation, filling the gaps in law, way of thinking in law, reasoning in law, legal logic, legal tools, techniques in law; rational implementation of law; fundamental rules of law; general principles of law, systematic of law, comparative law, preparation of scientific work and in this regard scientific research methods and principles, writing seminars, articles, thesis, legal writings and assessment of judicial decisions and preparation of record cards regarding these as well as to give the opportunity to students for the preparation and presentation of papers. Credit units: 3 ECTS Credit Units: 6. Spr (C. Koçhisarioglu)

LAW 619 Comparative Constitutional Law
The classical topics of constitutional law within singular nation-states like sovereignty, the rule of law or structural models of the state organization have been changed rapidly in the last decades. In this course, the historical development of the modern constitutional state which is the result of the European law tradition will be taken on a comparative basis into consideration. Thus the foundations of the modern constitutional state will be considered within the context of the theory of constitution in which main characteristics and functions of the nation-state will be explored. The jurisprudence of the Turkish Constitutional Court on specific topics is to be covered on a comparative way with the Turkish and English written academic literature, decisions of some European constitutional courts and the jurisprudence of the European Court of Human Rights. Furthermore, the European Union as a new form of political organization is discussed regarding its new constitutional problems
and questions. The seminar is structured as a lecture seminar. The students have to read weekly one or two articles on each selected topic in the Syllabus and have to write a one-page abstract on each of these articles (the average of the grades given to the abstracts will be the result of the midterm exam). The final exam will be a take-home which should be a 15-20 pages paper on a selected topic within the lecture. Credit units: 3 ECTS Credit Units: 6.

**LAW 621 Alternative Dispute Resolution**

This course aims to examine the means of settling legal and commercial disputes by alternative dispute resolution without recourse to a trial. Two main methods of settling disputes by way of trial are state's judiciary and arbitration. However, there also exist various methods of alternative dispute resolution without a trial, some of which have gained importance recently. Some of these methods are already regulated in our legal system whereas some others are at the stage of proposal. In this course firstly general and theoretical framework of the main methods of alternative dispute resolution in civil judiciary shall be dealt with, then the ones that provided and proposed shall be assessed. Credit units: 3 ECTS Credit Units: 6.

**LAW 623 Lex Mercatoria**

Lex Mercatoria is the Latin expression used for trading principles applied by merchants throughout Europe in medieval times, meaning literally "Merchant Law". It evolved as a system of custom and best practice which was enforced through a system of merchant courts along the main trade routes. It functioned as the international law of commerce. Lex Mercatoria is sometimes applied in international disputes between commercial entities. Mostly those disputes are decided by arbitrators who sometimes are allowed (explicitly or impliedly) to apply lex mercatoria principles. Therefore, some legal practitioners assume that there is a whole set of legal principles named "Lex Mercatoria" in international or transnational commercial law. Credit units: 3 ECTS Credit Units: 6.

**LAW 625 Selected Topics in English Law**

This course aims to introduce some basic concepts and terminology of English law. In this regard, firstly, origins of the Common Law system, its area of application and advantages and disadvantages of this system shall be evaluated and the law-making institutions, sources, precedent, acts of parliament and statutory instruments, the relationship between common law and statutory law and the rules of construction shall be covered. The court structure and the hierarchy of courts shall have an emphasis, concentrating on the competences of different courts in criminal and civil justice as well as the rules of civil and criminal procedure. The judiciary and the legal profession in England shall also be covered. English law of contracts shall be another part of the course where formation of contracts, essential elements of a valid contract, classification of contracts, discharge of contracts and remedies for breach are to be dealt with. Credit units: 2 ECTS Credit Units: 4.

**LAW 627 International Business Law**

A course dealing especially with international business transactions. Credit units: 3 ECTS Credit Units: 6.

**LAW 629 International Human Rights Law**

This course covers the general principles of international human rights law and deals especially with European Human Rights Convention and with some selected decisions of European Court of Human Rights. The definition of human rights, the basic mechanisms for enforcing human rights and the role of the political realities in promoting human rights are some of the topics. Credit units: 3 ECTS Credit Units: 6.

**LAW 631 EU Substantive Law**

This course mainly deals with the law of the internal market. In this regard the primary and secondary sources regulating the free movement of persons, goods, capital and services are dealt with, with special emphasis on the decisions of the Court of Justice of the EU. Credit units: 2 ECTS Credit Units: 4.

**LAW 690 Basic Elements of Rule and Democracy and Their Consequences For State Action**

The seminar takes basic features of modern constitutionalism as a starting point and relates them to the different branches of state action, i.e. legislation, administration and judicial control, including their interrelationship, and in a comparative perspective. The focus is not on theoretical problems, however, but on the practical consequences of those principles for different state authorities and organs. Certain qualities of state action which are widely accepted in theory as required by constitutional law (and sometimes also public international law), like legitimacy, transparency, reliability, proportionality, liability, and others, will be critically reflected in various contexts (and cases). General principles of constitutional law have to be brought to life in the routine of state action. They are not only a matter of constitutional courts, but need implementation by all those who apply the law. Credit units: 3 ECTS Credit Units: 6, Spr (Staff)

**LAW 691 Secured Transactions -National and International Aspects**

At all times creating security rights was a fundamental interest of all people that credited money to their business partners. The merchant delivering goods wanted to secure the payment of the price, the contractor building a home or the banker giving a loan to the customer, all of them need to secure their claims. All national laws have provided instruments which meet that need. Due to the internationalization and globalization of trade and financial affairs such national laws did not suffice anymore. Therefore transnational solutions were developed in the last decade that are intended to amend or even replace the national laws. The seminar will in a first step deal with the different security rights, their legal features and principles (e.g. publicity) as well as their economic function. It will
then compare some of the national concepts and their developments (in particular in Switzerland and Germany) followed by the analysis of new regional concepts (Law of European Union). Finally the new transnational rules will be discussed, as proposed by the European Bank of Development and Restructure, by Unidroit and by Uncitral (Legislative Guide on Secured Transactions). Needless to say that due to the great Financial Crisis the creation of security right by “secured transaction” has become an issue of paramount importance. **Credit units:** 3 ECTS Credit Units: B. Spr (Staff)
The Faculty of Music and Performing Arts comprises two academic departments:

- Music
- Performing Arts

Bilkent University Faculty of Music and Performing Arts was founded in 1986 as one of the first three faculties of the University. With the exception of the state conservatories, it is the first faculty in Turkey offering higher education in the fields of music and performing arts.

The Music Department of the Faculty offers training in most artistic fields, including composition, piano, string and wind instruments, as well as opera and rhythmic music. The Theater department offers programs in acting, directing and opera directing.

The Faculty aims to train artists who are creators, interpreters, educators and researchers in their respective fields, to take part in and contribute to international events and to provide an environment for creativity, interpretational excellence and research.

A pioneer in its work methods in Turkey, the Faculty of Music and Performing Arts is fast becoming an "International Art Center" with its programs ranging from preschool to proficiency in art (Doctor of Musical Arts) and its professional ensembles and artistic organizations. Among some activities of the Faculty are the Early Music Training Program, Music Preparatory Primary and High Schools, the Bilkent Youth Symphony Orchestra, Bilkent Youth Choir, the Bilkent Youth Theater, the Bilkent Symphony Orchestra and the Bilkent International Anatolian Music Festival.

The public and universal identity of art necessitates the early and dynamic integration of art education with the society and the international art world. Aiding the appreciation of music in Turkey and actively participating and contributing to the artistic world nationally and internationally, are among the primary objectives of the Faculty.

DEPARTMENT OF MUSIC

The Faculty's departments are today internationally renowned for their excellence in education, international artistic ensembles and activities. Since it's founding the main objective has been to train artists, educators and researchers with high creative and interpretative skills in various fields of music.

In addition to the undergraduate and graduate programs, preparatory primary and high schools for music were also founded with the aim of starting music education at the earliest possible age. In order to expand music education to everyone, regardless of age and profession, programs such as the Early Music Training Program for children and "Part-time Music Education" have been ongoing since its founding. The Graduate School of Music and Performing Arts was established to provide graduate education through its Master's and Proficiency in Art (doctorate) level programs.

The Music Department offers Bachelor of Music-B.M., Master of Music-M.M, Proficiency in Art/Doctor of Music-D.M.A. degrees in the following programs and fields:

- Theory and Composition Option - B.M., M.M., D.M.A.
  - Music Theory, Composition
- Instrument Option - B.M., M.M., D.M.A.
  - Piano, Classical Guitar, Percussion, Violin, Viola, Violoncello, Double Bass
  - Flute, Oboe, Clarinet, Bassoon, Horn, Trumpet, Trombone, Tuba
- Singing Option - B.M., M.M.

Amongst numerous artistic activities of the faculty are the "International Chopin Piano Competition" 1999 and the "International Theater Meeting" 1998. Since 2001, the students of the music department won many prizes in national and international competitions including "Sarasate", "Palmeres 30. Concours International de Musique et d'Art Sonore Electroacoustiques", IBLA, Charles B. Olson Young Composers Competition. In 2003, the Bilkent Youth Choir won a gold medal in the 21st International Preveze Choir Contest and achieved the runner-up position in the 33rd Florilege Vocal de Tours 2004 competition in France.

Bilkent Symphony Orchestra

The Bilkent Symphony Orchestra was founded in September 1993 as an original artistic project of the Bilkent University, developed by the Faculty of Music and Performing Arts, the orchestra is composed of experienced artists in the Faculty from various countries as well as Turkish and foreign
young artists, who continue their studies at "masters" and "proficiency in art" (doctorate) levels, at the Institute. With these characteristics the Bilkent Symphony Orchestra, consisting of 90 proficient artists from 12 different countries, is the first private, academic and international artistic group in Turkey.

Starting as a "Sinfonietta" the Symphonic orchestra now has the identity of an "Ensemble of Orchestras" comprising the "Bilkent Chamber Orchestra" and an "Ensemble of String Instruments". With a minimum of 50 concerts a year and the participation of Turkish and foreign conductors, soloists and choirs, the ensemble of Orchestras has distinguished itself through the recording, television and radio broadcasting of its numerous performances. Through events such as "Bilkent Concert Series", "Turkish Composers Week", "Education Concerts" and "The Bilkent Anatolia Music Festival", the orchestra aims to bring a wide range of activities to large audiences; to spread the appreciation of music at the national level through its tours; to undertake international activities and develop cooperation with institutions abroad organizing such events; to help gain permanent academic staff at the Faculty; and to form a bridge of artistic communication with other countries. Along these objectives the orchestra has toured to Italy, Germany, Belgium, Portugal, Switzerland and recently to Japan. The orchestra has recorded over 40 CD's with labels such as BMP and EMI.

MINOR PROGRAM

The program is designed to offer a single track combining applied training and studies in music. Applied courses consist of individual studies on instrument performance and stage performance practices. These courses are carried out one on one with FMFA faculty and artists. Skills to be acquired and experience to be gained from applied courses are expected to be of influence on personal development of students in other areas as well. Potential of musical development of each student sets the standard for each course. Courses on music studies subjects are also offered to supplement the applied courses and to offer scholarly knowledge on the science of music. Applied courses are scheduled with the instructor to suit the availabilities of each student. Other courses are taken together with Music major students.

Prerequisite Courses: None

Open to Students from All Departments

GRADUATE PROGRAM

The aim of the graduate program is to train professional artists in the areas of performance and creativity, and to prepare them for further development in the fields of music education, research and musicianship. Candidates should possess a good undergraduate degree in one of the major subject areas and be successful in the entrance examination. Since 1997 the recording production of two compact discs comprising solo, accompanied and chamber repertoire per student has become mandatory for graduation. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

The students will have the opportunity to study and develop under the direction of internationally renowned Turkish and foreign artists at the Faculty, and to display the knowledge and experience they acquire in recitals and concerts. These public performances are organized by the Faculty of Music and Performing Arts to equip the student with advanced professional experience thereby widening their horizons in the artistic world.

</table>
MSC 100  Concert/Recital I
Annual concert presenting works from fall and spring semesters. The event is arranged and held by students.
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

MSC 101  Department Seminar I
Organized with the contribution of faculty, students, guest speakers to aid students in developing skills on verbalizing music, following current trends in composition, learning to approach music from different perspectives, getting to meet living composers and hear them talk about their own music. Credit units: None ECTS Credit Units: None. Aut (G. Altay, T. F. Pöğün, O. Türkmen) Spr (Staff)

MSC 102  Department Seminar II
Credit units: None ECTS Credit Units: None. Prerequisite: MSC 101. Aut (Staff) Spr (Staff)

MSC 103  Orchestra/Chorus/Ensemble I
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Bilkent Youth Virtuosi. Students take part in one of the orchestras and are chosen to the Bilkent Youth Virtuosi. The course is realized with weekly rehearsals. Each orchestra rehearses an average of 84 hours per semester. The FMPA chorus is Bilkent Youth Chorus. Selected repertoire listing consisting of a-cappella,
accompanied, and cantata, oratorio, operatic forms to be performed progressively through weekly rehearsals. The Bilkent Youth Chorus rehearses an average of 56 hours per semester. The FMPA ensemble is the Bilkent Youth Chamber Music Ensemble consisting of a variety of performance majors from different tracks. Selected repertoire listings varying from baroque to contemporary music to be performed throughout the semesters. Credit units: 2 ECTS Credit Units: 3. Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (I. Metin, F. O. Orhon)

MSC 104  Orchestra/Chorus/Ensemble II
The FMPA orchestras are the Bilkent Youth Symphony Orchestra and the Faculty Concert Strings. Students take part in one of the symphonic orchestras and are chosen to the Concert String Orchestra. The course is realized with weekly double rehearsals at the Bilkent Concert Hall. Each ensemble rehearses an average of 84 hours per semester. Credit units: 2 ECTS Credit Units: 3. Prerequisite: MSC 103. Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)

MSC 111  Composition I
Introduction to composition. Single musical idea applications for choices of solo instruments. Composition dossier consisting of pieces with total duration no less than 5 minutes must include piece for piano solo. Students are expected to analyze their works before a jury at the final examination. Credit units: 5 ECTS Credit Units: 6. Aut (T. F. Pöğün)

MSC 112  Composition II
Compositions for small-scale chamber music ensembles such as duos or trios. Introduction to composing contrasting material from single musical ideas. Dossier of pieces with total duration no less than 5 minutes. Students are expected to analyze their works before a jury at the final examination. Credit units: 5 ECTS Credit Units: 6. Prerequisite: MSC 111. Spr (T. F. Pöğün)

MSC 113  Orchestration I
The orchestra, past and present. Ensemble structures of orchestras. Knowledge of instruments. Basic acoustic principles. The Divisions and subdivisions of the orchestral instruments according to various principles. Basic characteristics of the string, woodwind, brass and percussion section instruments. Detailed historic and technical inquiry into the characteristics of instruments belonging to these sections. Basics of scoring techniques. Bowed string instruments, as group and individually. Plucked string instruments. Scoring for strings - transcription and instrumentation. Credit units: 2 ECTS Credit Units: 4. Aut (F. O. Orhon)

MSC 114  Orchestration II
The woodwind ensemble. Individual woodwinds. Scoring for woodwind and woodwind with string combinations. Introduction to Brass Instruments. Scoring for a pre-classical orchestra - transcription and instrumentation. Credit units: 2 ECTS Credit Units: 4. Prerequisite: MSC 113. Spr (F. O. Orhon)
MSC 171  Techniques and Materials of Tonal Music I
Aural and analytical skills necessary to define and analyse music composition and theory. Rudimentary theory, harmony, counterpoint and basic form. Terminology of music theory and some basic musical concepts, elements of music, musical composition as paradigm (rudimentary theory); basic principles of functional harmony, simple harmonic progressions, cadence types (harmony); introduction to modality and renaissance counterpoint in accordance with the species system (counterpoint). Credit units: 3 ECTS Credit Units: 7. Aut (G. Altay)

MSC 172  Techniques and Materials of Tonal Music II
Basics of diatonic harmony, diatonic modulation, secondary functions and non-chord tones (harmony); complete species system on renaissance counterpoint, counterpoint with mixed values and simple imitation techniques (counterpoint). Credit units: 3 ECTS Credit Units: 7. Prerequisite: MSC 171. Spr (G. Altay)

MSC 173  History of Western Music I

MSC 174  History of Western Music II

MSC 181  Ear Training I

MSC 182  Ear Training II

MSC 183  Keyboard Skills I
Basic to intermediate skills of piano playing. Piano as an auxiliary instrument. Sight reading at the piano. Basic methods of realization as defined by O. Gartenlaub. Selected repertoire listing to be performed progressively throughout the semesters. Credit units: 2 ECTS Credit Units: 3. Aut (E. Önal Çubukçu, N. Skhvitardze, A. G. Sürmen) Spr (N. Skhvitardze)

MSC 184  Keyboard Skills II
Further study to enhance the skills gained in MUSS 251 on a new repertoire. Credit units: 2 ECTS Credit Units: 3. Prerequisite: MSC 183. Aut (N. Skhvitardze) Spr (E. Önal Çubukçu, N. Skhvitardze)

MSC 200  Concert/Recital II
A yearly recital project for the instrument and Singing option students. May be given for spring or fall semesters of the senior undergraduate academic year. Credit units: None ECTS Credit Units: None. Prerequisite: MSC 100. Aut (Staff) Spr (Staff)

MSC 201  Department Seminar III
Credit units: None ECTS Credit Units: None. Prerequisite: MSC 102. Aut (Staff) Spr (Staff)
**MSC 202** Department Seminar IV  
**Credit units:** None  
**ECTS Credit Units:** None  
**Prerequisite:** MSC 201.  
**Aut (Staff) Spr (Staff)**

**MSC 203** Orchestra/Chorus/Ensemble III  
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Faculty Concert Strings. Students take part in one of the symphonic orchestras and are chosen to the Concert String Orchestra. The course is realized with weekly double rehearsals at the Bilkent Concert Hall. Each ensemble rehearses an average of 84 hours per semester.  
**Credit units:** 2  
**ECTS Credit Units:** 3  
**Prerequisite:** MSC 203.  
**Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)**

**MSC 204** Orchestra/Chorus/Ensemble IV  
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Faculty Concert Strings. Students take part in one of the symphonic orchestras and are chosen to the Concert String Orchestra. The course is realized with weekly double rehearsals at the Bilkent Concert Hall. Each ensemble rehearses an average of 84 hours per semester.  
**Credit units:** 2  
**ECTS Credit Units:** 3  
**Prerequisite:** MSC 203.  
**Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)**

**MSC 211** Composition III  
Composition for small-scale chamber music ensembles such as quartets. Analysis of similar structures from a broad chronology corresponding with own work. Dossier including completed works of contrasting and related musical ideas with total duration no less than 7 minutes. Students are expected to defend their works at the final jury in terms of intellectual approach, composition technique, orchestration, style, form and related criteria.  
**Credit units:** 5  
**ECTS Credit Units:** 6  
**Prerequisite:** MSC 112.  
**Aut (T. F. Pöggün)**

**MSC 212** Composition IV  
Composition for large-scale chamber music ensembles of at least five musicians. Dossier including completed works of at least one single movement with total duration no less than 10 minutes. Students are expected to defend their works at the final jury in terms of intellectual approach, composition technique, orchestration, style, form and related criteria.  
**Credit units:** 5  
**ECTS Credit Units:** 6  
**Prerequisite:** MSC 211.  
**Spr (T. F. Pöggün)**

**MSC 213** Orchestration III  
**Credit units:** 2  
**ECTS Credit Units:** 4  
**Prerequisite:** MSC 114.  
**Aut (I. Metin)**

**MSC 214** Orchestration IV  
**Credit units:** 2  
**ECTS Credit Units:** 4  
**Prerequisite:** MSC 213.  
**Spr (I. Metin)**

**MSC 231** Instrument III  
The course aims to develop musicality and mechanical facilities. To help gain an understanding for the compositional formations of the pieces by establishing a feel for form and harmonic fundamentals. To help the student acquire the habit of working on both the whole and the details of pieces thus establishing micro and macro understanding of the piece. Selected repertoire listing to be performed progressively throughout the semester.  
**Credit units:** 5  
**ECTS Credit Units:** 11  
**Prerequisite:** MSC 132.  

**MSC 232** Instrument IV  
The continuation of further studies on a new repertoire with the aim to achieve the artistic-technical goals presented in MUSS 103.  
**Credit units:** 5  
**ECTS Credit Units:** 11  
**Prerequisite:** MSC 231.  

**MSC 233** Chamber Music III  
Performance of the classic era repertoire consisting of works by Beethoven, Mozart and Schubert. Group study on the pieces towards achieving professionalism in the technique of ensemble playing.  
**Credit units:** 3  
**ECTS Credit Units:** 6  
**Prerequisite:** MSC 134.  
**Aut (Staff) Spr (Staff)**

**MSC 234** Chamber Music IV  
Performance of the classic era repertoire consisting of works by Schubert and Beethoven. Group study on the pieces towards achieving brilliance in balance and unity of the ensemble.  
**Credit units:** 3  
**ECTS Credit Units:** 6  
**Prerequisite:** MSC 233.  
**Aut (Staff) Spr (Staff)**

**MSC 251** Singing Voice III  
**Credit units:** 5  
**ECTS Credit Units:** 11  
**Prerequisite:** MSC 152.  
**Aut (K. Davran, Z. M. Gökçoğlu, E. Hristova)**
MSC 252  Singing Voice IV  
Credit units: 5 ECTS  Credit Units: 11, Prerequisite: MSC 251.  Spr (K. Davran, Z. M. Gökoğlu, G. Şekeranber)

MSC 253  Opera Studies I  
Cornerstone works of opera repertoire are performed in collaboration with Bilkent Youth Symphony Orchestra.  
Credit units: 1 ECTS Credit Units: None.  Aut (G. Çeliktas)

MSC 254  Opera Studies II  
Cornerstone works of opera repertoire are performed in collaboration with Bilkent Youth Symphony Orchestra.  
Credit units: 1 ECTS Credit Units: None.  Prerequisite: MSC 253.  Spr (G. Çeliktas)

MSC 271  Techniques and Materials of Tonal Music III  
Chromatic harmony, chromatic modulation, introduction to mode mixtures and complex progressions of secondary functions (harmony); baroque counterpoint, imitation techniques, invention and fugue (counterpoint).  
Credit units: 3 ECTS Credit Units: 7.  Prerequisite: MSC 172.  Aut (G. Altay)

MSC 272  Techniques and Materials of Tonal Music IV  
Mode mixtures, enharmonic spellings and modulation to further regions, complex harmonic progressions and further elements of harmonic regions (harmony); basic formal concepts, period, sentence, small ternary and binary forms (form and analysis).  
Credit units: 3 ECTS Credit Units: 7.  Prerequisite: MSC 271.  Spr (G. Altay)

MSC 273  History of Western Music III  
Credit units: 3 ECTS Credit Units: 6.  Prerequisite: MSC 174.  Aut (O. Türkmen)

MSC 281  Ear Training III  
Principles of theoretical analysis. Melodic elaboration. Altered chords and chromaticism. Modulation cont. Style and music. Modes (antique, national etc.) Musical media and special designations. Written and aural exercises on these subjects. Dictation of difficult two period one-part, two-part, three part and four-part 16 measure dictées containing mixed rhythms, syncopation, agогy; Homophonic style including all the intervals with diatonic and chromatic modulation to relative keys and modulation to remote keys. Intermediate reading skills. Mixed keys.  
Credit units: 3 ECTS Credit Units: 6.  Prerequisite: MSC 182.  Aut (M. Nowotna, L. A. Subasheva)

MSC 282  Ear Training IV  
Twentieth century materials of music. Designations. Graphic notation. Recapitulation of music theory subjects. Colloquium. Written and aural exercises on these subjects. Dictation of very difficult two period one to four-part 16 measure dictées containing mixed rhythms, syncopation, agogy; Polyphonic style including all the intervals with diatonic and chromatic modulation to relative keys, modulation to remote keys, enharmonic modulation. Advanced reading skills.  
Credit units: 3 ECTS Credit Units: 6.  Prerequisite: MSC 281.  Spr (M. Nowotna)

MSC 283  Keyboard Skills III  
Progress of the skills acquired in the previous year. Progress of technique. The use of piano as an auxiliary instrument. Selected repertoire listing to be performed progressively throughout the semester.  
Credit units: 2 ECTS Credit Units: 3.  Prerequisite: MSC 194.  Aut (E. Onal Çubukçu, N. Skhvitaridze, A. G. Sürmen)

MSC 284  Keyboard Skills IV  
Basic to intermediate skills of piano playing. Piano as an auxiliary instrument. Sight reading at the piano. Basic methods of realization as defined by O. Gartenlaub. Selected repertoire listing to be performed progressively throughout the semesters.  
Credit units: 2 ECTS Credit Units: 3.  Prerequisite: MSC 283.  Spr (E. Onal Çubukçu, N. Skhvitaridze, A. G. Sürmen)

MSC 297  History of Opera I  
Opera as an art form. Effects that influenced the preparation of opera and initial performances. Theatre and Music in Antique Art. Primitive marks of Opera in the Middle Ages. First impressions of opera in Renaissance.

MSC 298 History of Opera II

MSC 300 Concert/Recital III
Credit units: None ECTS Credit Units: None, Prerequisite: MSC 200. Aut (Staff) Spr (Staff)

MSC 301 Department Seminar V
Credit units: None ECTS Credit Units: None, Prerequisite: MSC 202. Aut (Staff) Spr (Staff)

MSC 302 Department Seminar VI
Credit units: None ECTS Credit Units: None, Prerequisite: MSC 301. Aut (Staff) Spr (Staff)

MSC 303 Orchestra/Chorus/Ensemble V
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Faculty Concert Strings. Students take part in one of the symphonic orchestras and are chosen to the Concert String Orchestra. The course is realized with weekly double rehearsals at the Bilkent Concert Hall. Each ensemble rehearse an average of 84 hours per semester. Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 204. Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)

MSC 304 Orchestra/Chorus/Ensemble VI
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Faculty Concert Strings. Students take part in one of the symphonic orchestras and are chosen to the Concert String Orchestra. The course is realized with weekly double rehearsals at the Bilkent Concert Hall. Each ensemble rehearse an average of 84 hours per semester. Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 303. Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)

MSC 311 Composition V
Vocal music composition and/or large chamber music ensemble consisting of at least eight musicians. Analysis of similar structures from a broad chronology corresponding with own work as well as current trends in composition. Dossier including completed work(s) with total duration no less than 15 minutes. Students are expected to defend their works at the final jury in terms of intellectual approach, composition technique, orchestration, style, form and related criteria. Credit units: 5 ECTS Credit Units: 6, Prerequisite: MSC 212. Aut (O. Türkmen)

MSC 312 Composition VI
As the core of composition studies in general becomes apparent at this stage, composition for large-scale music ensembles with an emphasis on achieving own original musical language is expected. Dossier including completed work(s) with total duration no less than 15 minutes. Students are expected to defend their works at the final jury in terms of intellectual approach, composition technique, orchestration, style, form and related criteria as well as own musical language. Credit units: 5 ECTS Credit Units: 6, Prerequisite: MSC 311. Aut (Staff) Spr (O. Türkmen)

MSC 315 Score Reading I
Introduction to score notion and its realization. Notion of ancient clefs. Realization of one and two part music by ancient clefs. Idea of transposition. Basic idea of transposing instruments and actual sounding. Realization of one and two part music with transposing instruments. Introduction to sight reading music with more than two parts. Realization of easy to moderate difficulty scores with three and four parts from repertoire by both ancient clefs and transposing instruments where only up to two transposing instruments co-exist. Realization of simple chamber music scores up to four parts. Credit units: 3 ECTS Credit Units: 5. Aut (M. Karabey)

MSC 316 Score Reading II
Idea of following musical lines in scores. Realization of music with four parts with crossing parts. Extended sight reading with five parts both by ancient clefs and transposing instruments where only up to two different transposing instruments co-exist. Realization of examples from repertoire up to moderate difficulty with five parts. Sight reading of multiple transposing scores. Basic idea of different transposition utilization. Realization of scores with difficult transposing parts. Examples from brass and wind parts from late romantic works where at least three different transposing instruments co-exist. Credit units: 3 ECTS Credit Units: 5, Prerequisite: MSC 315. Spr (M. Karabey)
**MSC 321 Polyphony and Fugue**
Contrapuntal practices of the Baroque era, with special emphasis on imitation techniques and the "Art of Fugue". The style of J. S. Bach, his predecessors, contemporaries, and followers. Regular assignments, including composition exercises, as well as the analysis of short compositions in the related styles are compulsory. **Credit units: 3 ECTS Credit Units: 5, Prerequisite: MSC 272. Aut (G. Altay)**

**MSC 322 Post-Tonal Music I**
Composition and music processes of 20th century post-tonal music. The accessibility of it by understanding issues such as pitch organization, rhythm and meter, form, texture, and aesthetics. **Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 373. Spr (G. Altay)**

**MSC 323 Form and Analysis I**

**MSC 324 Form and Analysis II**

**MSC 326 Conducting I**

**MSC 331 Instrument V**
The course aims to improve stylistic understanding by the introduction of the instrumental repertoire of various historical periods. To achieve a high level of musicality and technique in interpretation. To help gain physical and psychological ease during stage performance. Selected repertoire listing to be performed progressively throughout the semester. **Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 232. Aut (G. Altay, G. Aziz, E. Güngördu, J. Lupu, A. Məhsunəzədə, S. Stavreva Markova, E. Şen, M. Türdiev) Spr (H. H. Dalkılıç, J. Lupu, E. Şen)**

**MSC 332 Instrument VI**
The continuation of further studies on a new repertoire with the aim to achieve the artistic-technical goals presented in MUSS 105. **Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 331. Aut (G. Aziz, H. H. Dalkılıç, E. Gnezdilova, G. Körtül, J. Lupu, E. Şen) Spr (G. Altay, E. Enacar Baykal, E. Güngördu)**

**MSC 333 Chamber Music V**
Performance of the early romantic era repertoire consisting of works by Schubert, Schumann and Mendelssohn. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: MSC 234. Aut (Staff) Spr (Staff)**

**MSC 334 Chamber Music VI**
Analytic analysis of the repertoire and interpretation styles of the romantic and contemporary chamber music repertoire. Brahms's chamber compositions. **Credit units: 3 ECTS Credit Units: 6, Prerequisite: MSC 333. Aut (Staff) Spr (Staff)**

**MSC 351 Singing Voice V**
**Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 252. Aut (K. Davran, Z. M. Gökoğlu, G. Şekeranber)**

**MSC 352 Singing Voice VI**
**Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 351. Aut (G. Şekeranber) Spr (K. Davran, Z. M. Gökoğlu, G. Şekeranber)**
MSC 373  History of 20th Century Music

MSC 374  Traditional Turkish Music and Divan Music
Brief history of traditional Turkish Music and Divan Music. Basic knowledge and recognition of fundamental concepts such as makam, seyr, usul and some traditional musical forms. General analysis of the selected repertoire and aural exercises on related subjects Credit units: 2 ECTS Credit Units: 3. Spr (G. Altay)

MSC 383  Keyboard Skills V
Applied studies on string, wind, brass and percussion instruments. Basic skills of performance mechanics. Extended information on the instrument and its capabilities. Selected repertoire listing to be performed progressively throughout the semesters. Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 283. Aut (N. Skhvitaridze) Spr (N. Skhvitaridze)

MSC 384  Keyboard Skills VI
Applied studies on string, wind, brass and percussion instruments. Basic skills of performance mechanics. Extended information on the instrument and its capabilities. Selected repertoire listing to be performed progressively throughout the semesters. Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 383. Aut (A. G. Surmen) Spr (N. Skhvitaridze)

MSC 400  Graduation Project Concert
A dossier consisting of all works presented in the composition course juries must include music for solo instruments, small and large-scale chamber ensembles, vocal music and orchestral music. The dossier including works totaling no less than one hour should be presented to the jury 10 working days prior to the graduation project concert. The composition student must organize a concert covering selection of his compositions. Credit units: 1 ECTS Credit Units: 1, Prerequisite: MSC 412 or MSC 432 or MSC 452. Aut (Staff) Spr (Staff)

MSC 401  Department Seminar VII
Credit units: None ECTS Credit Units: None. Prerequisite: MSC 302. Aut (Staff) Spr (Staff)

MSC 402  Department Seminar VIII
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

MSC 403  Orchestra/Chorus/Ensemble VII
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Faculty Concert Strings. Students take part in one of the symphonic orchestras and are chosen to the Concert String Orchestra. The course is realized with weekly double rehearsals at the Bilkent Concert Hall. Each ensemble rehearses an average of 84 hours per semester. Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 304. Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)

MSC 404  Orchestra/Chorus/Ensemble VIII
The FMPA orchestras are the Bilkent Youth Symphony Orchestra, The Bilkent Preparatory Symphony Orchestra and the Bilkent Youth Virtuosi. Students take part in one of the orchestras and are chosen to the Bilkent Youth Virtuosi. The course is realized with weekly rehearsals. Each ensemble rehearses an average of 84 hours per semester. The FMPA chorus is Bilkent Youth Chorus. Selected repertoire listing consisting of a-cappella, accompanied, and cantata, oratorio, operatic forms to be performed progressively through weekly rehearsals. The Bilkent Youth Chorus rehearses an average of 56 hours per semester. The FMPA ensemble is the Bilkent Youth Chamber Music Ensemble consisting of a variety of performance majors from different tracks. Selected repertoire listings varying from baroque to contemporary music to be performed throughout the semesters. Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 403. Aut (E. Hristova, I. Metin, F. O. Orhon) Spr (E. Hristova, I. Metin, F. O. Orhon)
MSC 411 Composition VII
Composition of a large-scale genuinely creative work for orchestra. Dossier to include advanced sketches including orchestral fragments of work in progress. Students are expected to present thorough domination on their work and use appropriate technical jargon while they defend their work at the final jury in terms of intellectual approach, composition technique, orchestration, style, form and related criteria as well as own musical language. Credit units: 5 ECTS Credit Units: 6, Prerequisite: MSC 312. Aut (Staff)

MSC 412 Composition VIII
The work submitted at the final jury of composition vii should be completed. The work should portray originality and advanced skills on compositional technique, form and orchestration. Students are expected to present thorough domination on their work and use appropriate technical jargon while they defend their work at the final jury in terms of intellectual approach, composition technique, orchestration, style, form and related criteria as well as own musical language. Credit units: 6 ECTS Credit Units: 8, Prerequisite: MSC 411. Aut (T. F. Pog˘un)

MSC 415 Score Reading III

MSC 416 Score Reading IV

MSC 421 Post - Tonal Music II
Centricity, referential collections, serialism and further developments from 1940's onwards with an analytical point of view. Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 322.

MSC 425 Conducting II

MSC 431 Instrument VII
The course aims to achieve maturity in every aspect of interpretation. Analysis of style and interpretation through the study of detail on pieces. To help gain physical and psychological ease during stage performance of rather difficult and long masterpieces. Selected repertoire listing to be performed progressively throughout the semester. Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 332. Aut (G. Aziz, A. Babacan, H. H. Dalkılıç, E. Enacar Baykal, S. Gayıbı, M. A. Gürmuşoğlu, S. K. Korad, A. Mecidi) Spr (H. H. Dalkılıç, E. Gnezdilova, K. Koniarov, E. Şen)

MSC 432 Instrument VIII
The continuation of further studies on a new repertoire with the aim to achieve the artistic-technical goals presented in MUSS 107. Preparation and rehearsal of the graduation repertoire also including a must piece that is chosen by the graduation jury and submitted to each student two weeks prior to the graduation concert. Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 431. Aut (H. H. Dalkılıç, E. Enacar Baykal, S. K. Korad) Spr (G. Aziz, A. Babacan, H. H. Dalkılıç, E. Enacar Baykal, K. Koniarov, S. K. Korad, E. Onay, M. Turdiev)

MSC 433 Chamber Music VII
Introduction to the chamber music compositions of Turkish Composers. Beethoven's late quartets. Study and practices with the aim of achieving maturity in stage performance. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MSC 334. Aut (Staff) Spr (Staff)

MSC 434 Chamber Music VIII
Analytic analysis and interpretation of the contemporary chamber music repertoire consisting of compositions by Dvořák, Shostakovich, Ravel, Debussy, Webern, Bartok, Saygun, Erkin. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MSC 433. Aut (Staff)
MSC 451 Singing Voice VII
Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 352. Aut (K. Davran, E. Hristova)

MSC 452 Singing Voice VIII
Credit units: 5 ECTS Credit Units: 11, Prerequisite: MSC 451. Spr (K. Davran, G. Şekeranber)

MSC 453 Opera Studies III
Cornerstone works of opera repertoire are performed in collaboration with Bilkent Youth Symphony Orchestra.
Credit units: 1 ECTS Credit Units: None, Prerequisite: MSC 254. Aut (Çeliktas)

MSC 454 Opera Studies IV
Cornerstone works of opera repertoire are performed in collaboration with Bilkent Youth Symphony Orchestra.
Credit units: 1 ECTS Credit Units: None, Prerequisite: MSC 453. Spr (Çeliktas)

MSC 459 Opera Studies V
Cornerstone works of opera repertoire are performed. Credit units: 1 ECTS Credit Units: 1, Prerequisite: MSC 454. Aut (Staff)

MSC 460 Opera Studies VI
Cornerstone works of opera repertoire are performed. Credit units: 1 ECTS Credit Units: 1, Prerequisite: MSC 459. Spr (Staff)

MSC 473 Contemporary Turkish Music
Introduction to the historic development of the national art in general from the Independence War until present. A brief look into the Revolutions of Atatürk from the artists point of view. Musical creativity of various Turkish composers. Observations on Turkish folkloric materials and their transformations in the works of the "Turkish Five" union and other Turkish composers. Turkish composers following different currents.
Credit units: 2 ECTS Credit Units: 3, Prerequisite: MSC 374. Aut (G. Altay)

MSC 901 Music Appreciation I
Credit units: 3 ECTS Credit Units: 5. Aut (Staff)

MSC 902 Music Appreciation II
Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 901.

MSC 903 Ear Training for Non-Majors I
Fundamental properties of sound, elementary acoustics. basic structural elements of music. Music notation: time and pitch, rhythm, meter, tempo, musical time, staff, solfege syllables, accidentals. designation of pitch, duration, tempo, expressions and dynamics. Intervals and scales. methods of musical dictation: Basic reading skills. one part solo solfege. sol and Fa keys.
Credit units: 2 ECTS Credit Units: 4. Aut (L. A. Subasheva) Spr (L. A. Subasheva)

MSC 904 Ear Training for Non-Majors II
Chords. designation of chords. Written and aural exercises on these subjects. Dictation of two period one-part, two-part 16 measures dictees containing mixed rhythms, syncopation. Introduction to collective solfege. The solo and collective musical reading and simultaneous sight singing of repertoire consisting of these musical criteria.
Credit units: 2 ECTS Credit Units: 4. Aut (L. A. Subasheva) Spr (L. A. Subasheva)

MSC 911 Individual Music Studies
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone.
Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 903. Spr (L. A. Subasheva)

MSC 912 Individual Music Studies II
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone.
Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 911. Aut (S. Bezhani, S. Defne) Spr (A. Azikveya Atesoğlu, S. Bezhani, K. Davran, A. Mösüsüoğlu, G. Şekeranber, L. Volkov)

MSC 912 Individual Music Studies III
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone.
Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 912. Aut (E. Ernacar Baykal) Spr (S. Bezhani, Z. Zempleni)
MSC 922 Individual Music Studies IV
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone. Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 921. Spr (E. Enacar Baykal)

MSC 931 Individual Music Studies V
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone. Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 922. E. Enacar Baykal

MSC 932 Individual Music Studies VI
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone. Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 921. Spr (E. Enacar Baykal)

MSC 941 Individual Music Studies VII
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone. Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 931. Spr (E. Enacar Baykal)

MSC 942 Individual Music Studies VIII
To aid the multi-disciplinary education aim of the University, the instrument courses are offered to all non-majors as elective courses. Students wishing to enroll go through an admission process in which their music abilities are examined. The course is offered for various instruments including flute, clarinet, trumpet and trombone. Credit units: 2 ECTS Credit Units: 4, Prerequisite: MSC 941.

MSC 950 Music of Igor Stravinsky
Studies on the composer's works with consideration of four different periods: Early pieces, Russian Phase, Neo-Classicism and Serialism. A broad review of the Western history of Music thorough Stravinsky’s face to face dialogues with Machaut, Monteverdi, Giovanni Gabrieli, Gesualdo, Bach, Mozart, Pergolesi, Gluck, Beethoven, Tchaikovsky and Verdi. During this unique voyage the student witnesses his philosophical questions on ontology, expressionism and Apollon/Dionysos controversy. Credit units: 3 ECTS Credit Units: 4. Spr (O. Türkmen)

MSC 951 Symphonies of Gustav Mahler

MSC 952 Studies on Modality
A clear definition of modality provides/requires a deeper understanding of tonality. Review of the theory and ear training of modes. Analyzing examples from Machaut, Dufay, Josquin, Greig, Mussorgsky, Debussy, Bartok, Samuel Barber. Credit units: 3 ECTS Credit Units: 4, Prerequisite: MSC 172. Aut (O. Türkmen)

MSC 953 Studies on Just Intonation
Sound, sound-wave, frequency, pitch, wave-shape, timbre, spectrum, sine-wave, complex tone, overtone series, harmonic and inharmonic sound, noise, harmonic ratios, consonance-dissonance, beating, harmonic map, comma, comma types, temperament, brief history of the history of temperaments. Credit units: 2 ECTS Credit Units: 2, Prerequisite: MSC 172.

MSC 954 Improvisation Ensemble
Students experience different musical situations that range from totally free improvisation to controlled compositions using graphic notation. These experiences supply not only a deeper comprehension of timbre, texture, rhythm, harmony but also, develop a clear idea about the distinction of organized and intuitive process of composition. Credit units: 2 ECTS Credit Units: 2.

MSC 955 Notation
Does notation reflect the actual composition that we have in mind? How much does music notation affect the actual performance? Can we increase our musical communication skills through notation? A brief historical overview on music notation. Basic notation principles and contemporary notation styles. The course focuses on handwriting skills (no notation software will be used). Credit units: 2 ECTS Credit Units: 2.

MSC 956 Source Readings in Music
Discussion group based on important writings and speeches in music history from ancient Greece through the twentieth century. Anthological readings on music and musical concepts throughout the ages. Active participation is required. Credit units: 2 ECTS Credit Units: 2.
MSC 957  Modern Music Before 1945
Music of fin de siecle and pre-war period in Europe and U.S.A. Observation of the artistic and socio-cultural environment of the related period. Samples of a broad spectrum of musical life in the twentieth century, including orchestral, choral, band, chamber music, and solo repertoire, both instrumental and vocal. Credit units: 2 ECTS
Credit Units: 2

MSC 958  Modern Music After 1945
A socio-historical view on the music of post-war generation in Europe and U.S.A. Focus on the major trends (such as of avant-gardism) and technical developments in music (such as serialism) of the related period. Credit units: 2 ECTS
Credit Units: 2, Prerequisite: MSC 957.

MSC 959  Introduction to Electronic Music I
A brief history of the electronic music from the end of the nineteenth century till today. Introduction to sound generation and sound processing, getting acquainted with electronic music instruments and repertoire. Credit units: 2 ECTS
Credit Units: 2.

MSC 960  Introduction to Electronic Music II
Extension of the listening repertoire. Basics of sound generation and sound processing. Making a short tape composition by use of editing and/or sampling music software. Credit units: 2 ECTS
Credit Units: 2, Prerequisite: MSC 959.

MSC 961  Rey,Erkin,Saygun,Akses and Their Piano Works
General information on the musical styles of Rey, Erkin, Saygun and Akses. Observation on the development of the piano literature among these national composers. Detailed analysis and discussion group on the style and performance of the selected repertoire. Credit units: 2 ECTS
Credit Units: 2, Prerequisite: MSC 272.

MSC 962  Performance Anxiety
Performance Anxiety, a subtype of social phobia is a broad and interesting research area as well as a phenomena that musicians experience. Theoretical background of Stage Performance Anxiety. Practical approaches to the process. Psychological, behavioral and cognitive factors that trigger SPA. Barlow's Model of Anxiety, Rapee and Heimberg's Cognitive-Behavioral Model of Social Phobia. Current trends on handling SPA. Credit units: 3 ECTS
Credit Units: 4.

MSC 963  Music Theory in Performance Practice
Research on relations between performance and analysis. Opening new possibilities for such interaction. Analysis for performance through the study of formal models and practice with performers. Performance practice in relation to historical and contemporary context. Lecture recitals. Credit units: 3 ECTS
Credit Units: 4, Prerequisite: MSC 272. Spr (G. Altay)

MSC 964  Applied Instrument Pedagogy I
Methodology of individual course teaching, syllabi and repertoire planning, instrument training practice. Pedagogic applications for various age groups. Communication practices. Assessment principles in applied performance. Credit units: 2 ECTS
Credit Units: 1, Prerequisite: MSC 964.

MSC 965  Applied Instrument Pedagogy II
Credit units: 2 ECTS
Credit Units: 1, Prerequisite: MSC 965.

MSC 966  Applied Instrument Pedagogy III
Credit units: 2 ECTS
Credit Units: 1, Prerequisite: MSC 966.

MSC 967  Applied Instrument Pedagogy IV
Credit units: 2 ECTS
Credit Units: 1, Prerequisite: MSC 966.

MSC 968  Piano Literature
Survey of instruments historic development and its repertoire with emphasis on cornerstone works. Comparative listening to master artists renditions their interpretations and style practices. Building programs for concerts, recitals, recordings, competitions. Credit units: 2 ECTS
Credit Units: 3.

MSC 969  Introduction to Schenkerian Analysis
Analysing examples from classical and romantic repertoire; Beethoven Piano Sonatas, Mozart Piano Sonatas, Hugo Wolf Songs, Brahms intermezzos in order to create a perspective that students perceive different layers of musical structure. Credit units: 3 ECTS
Credit Units: 3, Prerequisite: MSC 272.

MSC 970  Research Diary
Students record their observations, questions and a list of sources as a diary during a period of a research on a certain topic for the whole semester. Suggested topics: - Evolution of keyboard instruments, - History of concerto, - Reception of Liszt's symphonic poems, - Quotation in different periods, - Rethoric in Baroque and classical periods. Credit units: 3 ECTS
Credit Units: 3, Aut (G. Altay)

MSC 971  Gestalt Approach to Music
Exercises an awareness, phenomenology, expression, impression. Learning to discover ways to be in the moment while performing. Developing a holistic. Understanding and growing through genuine contact made...
through forms of expression. Understanding the relation between contact and performance. Exercises an metaphor making and how it effects the interpretation. Credit units: 3 ECTS Credit Units: 3. Aut (E. Şen)

**MSC 972 Gestalt Approach to Music II**
The aim of Gest-2 is to adapt the skills which are developed in the first months to express oneself through music. Students experiment and discover ways to be “in the moment” while they perform. Having developed new ways of expression and communication in Gest-1, it is expected now to engage in their profession with the embodied skills of awareness, contact and expression. Students are encouraged to risk uniqueness and the new in themselves, to express NOT to impress but to make themselves “present” as they are, through their profession. Working with shame, introjects about making music, and several other interruptions to contact are theoretical and group process themes to develop. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MSC 971. Spr (E. Şen)
## DEPARTMENT OF PERFORMING ARTS

S. K. Korad (Acting Chair), N. Gachava.

COURSE DESCRIPTIONS

THR 101  Fundamentals of Acting I
This course is an introduction to the elements of performance, including exercises in concentration, sensory awareness, relaxation, communication, imagination, observation. It is based on the development of theatrical creativity through objectives, obstacles, action, conflict, spontaneity. It aims to develop an understanding of the dramatic situation. Credit units: 4 ECTS Credit Units: 8. Aut (C. Emüler, E. Koçakdemir)

THR 102  Fundamentals of Acting II
This module is the continuation of Fundamentals of Acting I and it emphasizes developing creative expression through theatre exercises, improvisations and scenes. It aims at preparing and presenting scenes in class, preparing written scenes and character analyses, attending plays, and writing performance critiques. Credit units: 4 ECTS Credit Units: 8. Prerequisite: THEA 101 or THR 101. Spr (C. Emüler, E. Koçakdemir)

THR 103  Voice and Speech I
Devoted to the examination and practice of the basic principles of breathing, resonance, articulation, diaphragm support, pitch, rhythm and expressiveness, placement and diction. Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Ersönmez)

THR 104  Voice and Speech II
The course aims to help students integrate voice, breath, and text. It concentrates on the formation of the individual sounds of spoken Turkish and the development of ability to speak clearly, expressively and without impediments. Credit units: 3 ECTS Credit Units: 6. Prerequisite: THEA 103 or THR 103. Spr (Ö. Ersönmez)

THR 105  Movement and Combat I
The course is based on fundamentals of theatrical stage movement. This course is designed to increase the physical power and range of the student through control, balance, stretching and flexibility exercises. Credit units: 3 ECTS Credit Units: 7. Aut (U. Enisten Acun, A. Tayla)

THR 106  Movement and Combat II
The course provides an introduction to unarmed theatrical fighting. Basic principles belonging to the single rapier and dagger are studied while developing safe and effective performance technique. Unarmed stage combat explores falls, kicks, punches and slaps. Credit units: 3 ECTS Credit Units: 7. Prerequisite: THEA 107 or THR 105. Spr (U. Enisten Acun, A. Tayla)

THR 107  Dance I
This module aims to develop students’ tap dance techniques, based on the style known as rhythm tap which emphasizes fundamental skills and rhythms, time steps, flash footwork, short combinations and styling. Credit units: 2 ECTS Credit Units: 3.

THR 108  Dance II
In this course the emphasis is on developing on-stage choreography. The course aims to develop pre-dancing warm-up exercises for balance and body alignment. Turns, spins, and focus are introduced and coordination with precision tap combinations is established. Credit units: 2 ECTS Credit Units: 3. Prerequisite: THEA 144 or THR 107. Aut (D. Çağ)

THR 111  Phonetics I
The aim of the course is to teach the students the basic rules of clear articulation concerning the speech sounds and to analyze the function and also the movement of speech organs in order to attain perfect diction as an actor. Credit units: 2 ECTS Credit Units: 4. Aut (F. N. Ekmeckioğlu)

THR 112  Phonetics II
The course mostly focuses upon the articulation of phonemes (vowels and consonants) and the importance of stress and intonation while working on certain poems and theatrical texts. Credit units: 2 ECTS Credit Units: 4. Spr (F. N. Ekmeckioğlu)

THR 151  Fundamentals of Directing I
The course is based on investigation of role of the director in theatrical production and theories of play direction and fundamental consideration of directorial analysis. It helps students in text analysis, determining the purpose...
of the writing and it focuses on the conceptual as well as the practical phases of directing a play beginning with the question: What moved the playwright to tell this story? Credit units: 4 ECTS Credit Units: None.

**THR 152 Fundamentals of Directing II**
The course explores the concepts of action and change, emphasis and action, practical use of the Six Aristotelian Elements of Drama, the dramatic question, theme and idea, conflict analysis, interpretation, genre and style, tempo and rhythm, values of stage space, levels in the creative process, The Method of Physical Actions. Credit units: 4 ECTS Credit Units: None, Prerequisite: DIR 103 or THR 151.

**THR 201 Acting I**
The course aims to explore experientially and analytically the foundation of the acting process based on Stanislavski's System and The Method of Physical Actions. It is based on characterization, roles, special problems, and application of acting techniques through exercises and two-character scenes from the Ancient Greek and Realist plays. Credit units: 4 ECTS Credit Units: 8, Prerequisite: THEA 102 or THR 102. Aut (M. Erdemli, M. Keskin Bayur)

**THR 202 Acting II**
Sequel to Acting I. The course aims to explore experientially and analytically the foundation of the acting process based on Stanislavski’s System and The Method of Physical Actions. It is based on characterization, roles, special problems, and application of acting techniques through exercises and three or more character scenes from the Ancient Greek and Realist plays. Credit units: 4 ECTS Credit Units: 8, Prerequisite: THEA 201 or THR 201. Spr (M. Erdemli, M. Keskin Bayur)

**THR 203 Voice and Speech III**
The course is a continuation of the first-year work, which now becomes integrated into the rehearsal of the second-year acting studio. Development of the student’s vocal instrument as an integrated organic function of self and character. Credit units: 3 ECTS Credit Units: 6, Prerequisite: THEA 104 or THR 104. Aut (Ö. Ersönmez)

**THR 204 Voice and Speech IV**
Credit units: 3 ECTS Credit Units: 6, Prerequisite: THEA 203 or THR 203. Spr (Ö. Ersönmez)

**THR 205 Movement and Combat III**
Techniques of broadsword and small sword are covered in this course. Safe and realistic fighting for stage is emphasized. Students have the opportunity to create their own fight scenes under the supervision of the instructor. Credit units: 3 ECTS Credit Units: 7, Prerequisite: THEA 108 or THR 106. Aut (U. Enisten Acun, A. Tayla)

**THR 206 Movement and Combat IV**
This course is based on presentation skills and choreography. Students work on and incorporate their learned skills into classical, text-based, physical and devised performance projects and finally to a graduation project. Credit units: 3 ECTS Credit Units: 7, Prerequisite: THEA 207 or THR 205. Spr (U. Enisten Acun, A. Tayla)

**THR 227 History of Theater I: Origins to Renaissance**
A study of the origins and development of theatre from ancient civilizations through the Renaissance. The course aims to emphasize the idea of theatre, the development of dramatic forms, the evolution of theatre architecture, the relationship between actor and audience, and productions of these historical periods in the western theatre. Credit units: 3 ECTS Credit Units: 5. Aut (F. Ataman)

**THR 228 History of Theater II: Renaissance to 20th Century**
A study of development of western theatre from the 17th century to the 20th century. The course aims to emphasize the idea of theatre, the development of dramatic forms, the evolution of theatre architecture, the relationship between actor and audience, and productions of these historical periods in the western theatre. Credit units: 3 ECTS Credit Units: 5. Spr (F. Ataman)

**THR 251 Directing I**
The course is based on discussion and the analysis of the chosen play. It aims to determine the facts, the main conflict and the specialties of characters and the relationships. The course helps to form students’ own styles through evaluating values and analysis. It aims to develop relationship between director and actor. A scene for twenty minutes of a play is expected from each student. Credit units: 4 ECTS Credit Units: None, Prerequisite: DIR 104 or THR 152. Aut (N. Gachava)

**THR 252 Directing II**
This course is a study and practice of directing techniques including composition, dramatization, rhythm, organizational procedures, and rehearsal process. Students are familiarized with directorial vision by the careful examination of plays and utilizing an Aristotelian based mode of analysis. The course aims to explore director's tools using specific scenes from dramatic texts or one act plays. Credit units: 4 ECTS Credit Units: None, Prerequisite: DIR 203 or THR 251. Spr (N. Gachava)
THR 301  Acting III  
This course aims to cover historical theories and techniques of styles of acting: from the neoclassical periods to contemporary styles.  Credit units: 4 ECTS  Credit Units: 10, Prerequisite: THEA 202 or THR 202.  Aut (C. Emüler, E. Küçüköffmürcü)

THR 302  Acting IV  
Credit units: 4 ECTS  Credit Units: 10, Prerequisite: THR 301.  Spr (C. Emüler, E. Küçüköffmürcü)

THR 303  Voice and Speech V  
The course focuses on building power and range by developing breath muscles of the ribs and diaphragm, limbering the resonators of the chest, mouth, teeth, sinus, nasal, and skull, and finally, work on the entire range of the voice.  It aims to help students work through spoken text through their own creative writing, sonnets, and monologues, dialogues, which are all rehearsed and performed.  Credit units: 3 ECTS  Credit Units: 6, Prerequisite: THEA 204 or THR 204.  Aut (Ö. Ersönmez)

THR 327  History of Theater III: 20th Century  
This course aims to examine the development of avant-garde art and theatre within historical conditions in terms of spheres of interest (consciousness of environment and community, globalization, multiculturalism, relationship of technology and human being etc.).  It is based on defining the properties of contemporary art movements on samples on focusing on the preparation of basic facilities of the lecture, analyzing historical conditions, spheres of interest of the 20th century art and defining art terminologies.  Credit units: 3 ECTS  Credit Units: 5.  Aut (F. Ataman)

THR 331  Textual Interpretation and Analysis I  
A close study of dramatic texts and source material, with emphasis on dramaturgical praxis, including an overview of the history/theory of dramaturgy from Ancient Greece to Renaissance.  Credit units: 3 ECTS  Credit Units: None, Prerequisite: THEA 320 or THEA 419 or THEA 420 or THR 228.  Aut (Ö. Özer)

THR 332  Textual Interpretation and Analysis II  
The course aims to make analysis of dramatic texts, with special emphasis on play structure, plot, character, dialogue, ideas, and various other elements essential to effective theatrical interpretation and realization from Renaissance to Realism.  Credit units: 3 ECTS  Credit Units: None, Prerequisite: THR 331.  Spr (Ö. Özer)

THR 342  Design Portfolio I  
This course is based on preparation of complete designs and drawings for “Directing Productioº and it helps the students to prepare a design portfolio and rsum under the guidance.  Credit units: 3 ECTS  Credit Units: None.  Spr (S. Akınç)

THR 351  Directing III  
This course is the application of stage directing techniques to the production of a short play or project.  Rehearsal techniques and directorial approaches for pre-planning directing project are studied.  Credit units: 4 ECTS  Credit Units: None, Prerequisite: THR 252.  Aut (N. Gachava)

THR 362  Junior Directing Project  
Students direct one-act play or project.  It is based on the rehearsal planning, performance psychology and fundamentals of stage.  Further study of rehearsal planning is part of this course.  Credit units: 5 ECTS  Credit Units: None, Prerequisite: THR 351.  Spr (N. Gachava)

THR 390  Summer Practice  
Credit units: None  Credit Units: None.

THR 428  History of Turkish Theater  
This module focuses on the changes and evolution of Turkish Theatre from 1839 to the present and Traditional Turkish Theatre.  Credit units: 3 ECTS  Credit Units: None, Prerequisite: THEA 219 or THEA 220 or THEA 319 or THR 227.  Spr (F. Ataman)

THR 431  Textual Interpretation and Analysis III  
A survey of some diverse ways of analyzing scripts for dramatic production.  The course aims to define different roles and different tools, and aims to choose from a veritable smorgasbord of methods.  It is based on theatrical interpretation and realization from Realism to Avantgarde.  The course explores critical methods based on psychoanalysis, cognitive science, Marxism, the various feminisms, and historicism.  Credit units: 3 ECTS  Credit Units: None.  Aut (Ö. Özer)

THR 432  Textual Interpretation and Analysis IV  
A survey of some diverse ways of analyzing scripts for dramatic production.  This module aims to define different roles and different tools, and aims to choose from a veritable smorgasbord of methods.  It is based on theatrical interpretation and realization from Realism to Avantgarde.  The courses explores critical methods based on psychoanalysis, cognitive science, Marxism, the various feminisms, historicism.  Credit units: 3 ECTS  Credit Units: None.  Spr (Ö. Özer)
THR 435  Set and Costume Design I  
Credit units: 3 ECTS  Credit Units: None, Prerequisite: THEA 320 or THEA 419 or THEA 420 or THR 228. Aut (S. Akınçı)

THR 436  Set and Costume Design II  
Credit units: 3 ECTS  Credit Units: None. Spr (S. Akınçı)

THR 441  Design Portfolio II  
This course is based on preparation of complete designs and drawings for “Senior Directing Project I” and it helps the students to prepare a design portfolio and résumé under the guidance. Credit units: 3 ECTS  Credit Units: None, Prerequisite: THR 342. Aut (S. Akınçı)

THR 442  Design Portfolio III  
This course is the preparation of complete designs and drawings for “Senior Directing Project II” and it helps the students to prepare a design portfolio and résumé under the guidance. Credit units: 3 ECTS  Credit Units: None, Prerequisite: THR 441. Spr (S. Akınçı)

THR 451  Senior Project I  
The course requires working with a director and being in whole process to constitute a play. Credit units: 5 ECTS  Credit Units: 12. Aut (Staff)

THR 452  Senior Project II  
Sequel to Senior Project I. The course requires working with another director and being in whole process to constitute a play. Credit units: 5 ECTS  Credit Units: 12, Prerequisite: THEA 401 or THR 451. Spr (D. Çağ)

THR 461  Senior Directing Project I  
This course requires the production of a play. It is a public, fully-designed presentation directed by a senior directing student with the following goals: To publicly realize a playwright’s purpose for a live audience; to tell entire theatrical story with a beginning, progression and ending; to work as a team with actors and design team to shape a cohesive and coherent theatrical presentation; to extend practical understanding of theatre as a collaborative process. The course is based on rehearsal planning, performance psychology and fundamentals of stage. Further study of rehearsal planning is part of the course. Credit units: 5 ECTS  Credit Units: None, Prerequisite: THR 362. Aut (N. Gachava)

THR 462  Senior Directing Project II  
This course requires the production of a play. It is a public, fully-designed presentation directed by a senior directing student with the following goals: To publicly realize a playwright’s purpose for a live audience; to tell an entire theatrical story with a beginning, progression and ending; to work as a team with actors and design team to shape a cohesive and coherent theatrical presentation; to extend practical understanding of theatre as a collaborative process. The course is based on rehearsal planning, performance psychology and fundamentals of stage. Further study of rehearsal planning is part of the course. Credit units: 5 ECTS  Credit Units: None, Prerequisite: THR 461. Spr (N. Gachava)
The Faculty of Science comprises four academic departments:

- Chemistry
- Mathematics
- Molecular Biology and Genetics
- Physics

The Departments of Chemistry, Mathematics, Molecular Biology and Genetics, and Physics offer both graduate and undergraduate programs leading to B.S., M.S. and Ph.D. degrees. In addition, there is an interdisciplinary graduate program that offers M.S. and Ph.D. degrees in the area of Materials Science and Nanotechnology.

At the undergraduate level, the Faculty admits a small number of highly qualified students to each program. The undergraduate curricula are designed to prepare the students for graduate study by providing a strong background in the general area of study with further opportunities of developing a deeper knowledge in various areas of emphasis.

The graduate programs aim to develop students into scientists who can pursue original and creative research. Graduate education in the Faculty is an inseparable part of the research activity which aims to produce significant scientific output at the international level.

The faculty also offers a number of service courses to students from other faculties.

**ACADEMIC STAFF**

**Kamil Can Akcahi**, Assistant Professor  

**Engin Umut Akkaya**, Professor  
Ph.D., Chemistry, The Ohio State University, Columbus 1989. Molecular and Supramolecular Synthetic Chemistry and Exploration of Emerging Functions.

**Atilla Aydönli**, Professor  
Ph.D., Condensed Matter Physics, University of Virginia, 1981. Raman and photoluminescence in compound semiconductor structures, physics of nanostructures, physics and technology of optoelectronic devices, surface physics, beam-solid interactions.

**Laurence J. Barker**, Associate Professor  
Ph.D., Mathematics, Oxford University, 1992. Finite groups, representation theory, local and clifford theory, G-algebras, G-posets.

**Mehmet Bayındır**, Assistant Professor  
Ph.D., Physics, Bilkent University, 2002. Microstructured fibers and fiber devices, photonic band gap materials, left-handed metamaterials, materials for infrared optics, synthetic optoelectronic devices, nonlinearity in amorphous semiconductors, nanophotonics, fiber based sensors

**Erman Bengü**, Assistant Professor  
Ph.D., Materials Science, Northwestern University, 2000. Neutral and ion-beam deposition systems, fundamentals of nucleation and growth of BN-nanotubes, ion and electron beam irradiation on BN and growing cubic-BN films, computational methods for the analysis of X-ray Reflectivity data.

**Ceyhun Bulutay**, Associate Professor  
Rengül Çetin-Atalay, Associate Professor

Salim Çiraci, Professor

Ömer Dağ, Professor

Günes Davenport, Instructor
Ph.D., Electronics, Birmingham University, 1982. Underwater acoustics, applied mathematics.

Savaş Dayanık, Assistant Professor
Ph.D., Industrial Engineering and Operations Research, Colombia University, 2002. Stochastic processes and modeling, stochastic dynamic programming, stochastic optimal control. Applications to financial engineering, statistics, and operations management.

Alexandre Degtiarev, Associate Professor

Hilmi Volkan Demir, Associate Professor

Ebru Erbay, Assistant Professor

Atilla Ercelbi, Professor
Ph.D., Condensed Matter Physics, Middle East Technical University, 1980. Polaronics and bipolarons, electron-phonon interactions, excitons, low dimensional systems.

Gülçay Ertas, Instructor
Ph.D., Chemistry, Middle East Technical University, 2003. Surface enhanced Raman Spectroscopy (SERS), magnetic microparticles, evaluation of the SERS substrate, use of synthetic biopolymers for metal extraction.

Hasan N. Erten, Professor
Ph.D., Nuclear Chemistry, Massachusetts Institute of Technology, 1971. Nuclear and radiochemistry, nuclear fission, nuclear structure and spectroscopy, radioactive waste studies, dating of lake sediments.

Aurelian Gheondea, Associate Professor

Alexandre Gontcharov, Associate Professor

Ahmet M. Gülöglu, Assistant Professor
Ph.D., Mathematics, Ohio State University, 2005. Analytic number theory, automorphic forms.
Oğuz Gülseren, Associate Professor
Ph.D., Condensed Matter Physics, Bilkent University, 1992. Theoretical Solid State Physics, nanoscience, metal nanowires, carbon nanotubes, exotic superconductors high pressure-high temperature properties of metals, phonons and vibrational spectra.

Ali Güre, Assistant Professor
Ph.D., Cornell University, Graduate School of Medical Sciences, 1995. Tumor serology and epigenetics.

İhsan Gürsel, Associate Professor
Ph.D., Biomaterials and Biology, Middle East Technical University, 1995. Innate immunity, immunothreapy, drug delivery, nanobiotechnology.

Metin Gürses, Professor
Ph.D., Physics, Middle East Technical University, 1975. General relativity, string theory, integrable systems, partial differential equations.

Dilek Güvenç, Instructor

Tuğrul Hakioğlu, Associate Professor

Fatih Ömer İdiz, Assistant Professor

Margarita Kantcheva, Associate Professor

Hakki Turgay Kaptanoğlu, Associate Professor

Salih Karadağ, Instructor

Azer Kerimov, Associate Professor

Alexandre Klyachko, Visiting Professor
Ph.D., Mathematics, Saratov State University, 1973. Algebra, algebraic geometry, number theory, models of classical finite groups, integer and modular representations, vector-bundles and moduli spaces.

Coşkun Kocabas, Assistant Professor
Ph.D., Physics, University of Illinois at Urbana-Champaign, 2007.

Mehfaret Kocatepe, Professor

Özien Konu, Assistant Professor
Ph.D., Biology, Texas Tech University, 1999. Microarray data analysis, gene networks in nicotine’s pharmacological effects, zebrafish genetics.

Yosum Kurtulmaz, Instructor
Ph.D., Mathematics, Middle East Technical University, 1998. Ring theory, number theory, formal concept analysis.
Zeki C. Kuruoğlu, Professor

Uğurhan Muğan, Professor

Mehmet Özgür Oktel, Associate Professor

Ekmel Özbay, Professor

Tayfun Özçelik, Professor

Emrah Özensoy, Assistant Professor

Ümit Özger, Instructor

Mehmet Öztürk, Professor

Aydan Pamir, Instructor
Ph.D., Mathematics, Middle East Technical University, 1992. Numerical analysis, computer programming, applied mathematics, effective teaching in mathematics.

Ulrike Salzner, Associate Professor
Ph.D., Chemistry, Universität Erlangen, 1993. Computational chemistry, quantum chemistry, band structure calculations, band gap engineering, polymer chemistry.

Sinan Sertoğ, Professor
Ph.D., Mathematics, University of British Columbia, 1984. Algebraic geometry.

Müfit Sezer, Assistant Professor
Ph.D., Mathematics, Purdue University, 2003. Invariant theory, commutative algebra.

Şefik Süzer, Professor
Ph.D., Chemistry, University of California, Berkeley, 1976. Electron, ion and photon spectroscopic analyses of gases, solids and surfaces.

Bilal Tanatar, Professor

Uygar H. Tazebay, Assistant Professor
Ph.D., Universite de Paris XI, 1998. Hormonal regulation of the Na+/iodide symporter, sodium or proton coupled symporters, amino acid transport and amino acid catabolism in lower eukaryotes.

Okan Tekman, Lecturer
Ph.D., Mathematics, University of Minnesota, 1992. Automorphic forms, special values of L-functions.
Dönüş Tuncel, Assistant Professor

Bülent Ünal, Assistant Professor
Ph.D., Mathematics, University of Missouri, 2000. Differential geometry, Riemannian geometry, pseudo-Riemannian geometry and Lorentzian geometry, global analysis on manifolds, general relativity and quantum field theories.

Özgün Ünlü, Assistant Professor

Cemal Yalabık, Professor

Ergün Yaçın, Associate Professor
Ph.D., Mathematics, University of Wisconsin-Madison, 1998. Cohomology of groups, finite group actions on topological spaces, geometric structures associated to groups.

Hamza Yeşilyurt, Assistant Professor

İşik Yuluğ, Associate Professor

Natalia Zheltukhina, Instructor
Ph.D., Mathematics, Bilkent University, 2002. Analytic properties of entire functions, zero distributions.
DEPARTMENT OF CHEMISTRY

The Chemistry Department provides graduate and undergraduate courses in basic and applied areas of Chemistry. The undergraduate program offers the B.S. degree and the graduate program leads to M.S. and Ph.D. degrees in Chemistry. Current research areas are solid-state chemistry, organometallic chemistry, nuclear chemistry, molecular spectroscopy, theoretical chemistry, polymer and surface chemistry. Research in progress include studies of nuclear fission, radiochemical dating studies, sorption studies of radioactive wastes, synthesis and characterization of inorganic materials, liquid crystals, adsorption, catalysis and mechanism of heterogeneous reactions, quantum theory of chemical reactions, few-body problems in chemistry and physics, modification and characterization of material surfaces, theoretical design of conducting polymers, mechanism of diastereoselection in organic reactions, protein conformations, optical studies of molecular aggregates, cage compounds, polymer chemistry, structure-property -performance relationships, electrochemistry and fuel cells. Laboratory facilities include teaching and modern research laboratories for nuclear, electro, solid-state and surface chemistry.

UNDERGRADUATE PROGRAM

The undergraduate program aims to equip students with basic chemical knowledge and experimental skills so that they can contribute to modern scientific and technological developments. The program is designed to lead to a professional career or advanced study in chemistry.

MINOR PROGRAM

Chemistry is a fundamental study encompassing the knowledge of structural and functional diversity of our material world at atomic and molecular level. The achievements of chemistry span from synthesis of pharmaceuticals and agricultural products to new materials, solar cells, superconductors, clean fuels. Chemistry impacts many disciplines in the fields of engineering, technology, biology, physics, medicine, and plays a central role in the solution of important problems related to health and environment.

The new minor program in chemistry is designed for undergraduate students from the Science and Engineering Faculties who intend to pursue a professional career in interdisciplinary fields in which a sound knowledge of chemistry is important.

Prerequisite Courses:

PHYS 101 General Physics I
PHYS 102 General Physics II
MATH 101 Calculus I
MATH 102 Calculus II

Open to Students from

Faculty of Engineering
Faculty of Science

## GRADUATE PROGRAMS

The graduate program is tailored to develop research skills of students so that they can pursue original and creative research at the highest level. Current research areas include nuclear chemistry, organic and inorganic chemistry, polymer chemistry, theoretical and computational chemistry and surface chemistry. The experimental facilities include a Multichannel Analyzer together with α, β, and γ counters, Raman, FTIR, UV-Vis-NIR Spectrometer, AAS, GC, GC/MS, ESCA, XRD, POM, SEM, BET, Fluorometer, AFM, and Electrochemical instruments.

### Master of Science in Chemistry

**Admission:** Applicants are required to have a B.S. degree in Chemistry, Chemical Engineering or a related field. Students with a B.S. degree in other areas of science and engineering may also apply. However, such students are first accepted as special students and only after acquiring the necessary background in Chemistry are admitted to the graduate program. All applicants must be fluent in written and oral English. Evaluation of applicants is based on their ALES scores, past academic record, reference letters, and the interview at Bilkent University. Applicants who cannot take the ALES exam will be evaluated based on their GRE scores. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements.)

**Degree Requirements:** In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The normal duration of M.S. study is 4 semesters. However, this duration may be extended for up to two more semesters subject to the approval of the Graduate Institute.

### Doctor of Philosophy in Chemistry

**Admission:** Applicants must have an M.S. degree in Chemistry or a closely related field and must take the graduate program entrance examination at Bilkent, given at the end of Spring Semester each year. Applicants who cannot take the entrance examination at Bilkent, will be evaluated based on GRE scores. Satisfactory knowledge of English is required. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements.)

**Degree Requirements:** Twenty-four credit units of course work beyond the M.S. level or forty-eight credits of course work beyond the B.S. level is required. The Ph.D. candidate is expected to pass an English examination, a qualifying examination and thesis proposal. Preparing and defending a dissertation based on original research is the essence of the program. The normal duration of Ph.D. study is 8 semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, subject to the approval of the Graduate Institute, these durations may be extended for up to two more semesters.

## COURSE DESCRIPTIONS

### UNDERGRADUATE COURSES

**CHEM 100 General Chemistry**

CHEM 101 Principles of Chemistry I
A basic course in chemical systems, stoichiometry, structural and physical properties of matter, chemical equilibria, ionic equilibrium, chemical thermodynamics, electrochemistry, chemical kinetics. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 6. Aut (E. Özencsoy, U. Salzner, Ş. Süzer) Spr (D. Tunçel)

CHEM 102 Principles of Chemistry II
Atomic theory and molecular structure. Covalent, ionic and metallic bonding. Structure of metals, ceramics, and polymers. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 6. Prerequisite: CHEM 101. Spr (E. Özencsoy, U. Salzner, Ş. Süzer)

CHEM 120 Orientation for Chemistry Majors I
Introduction to the aspects of the "current chemistry and chemical research" for first year chemistry majors. Students will be introduced to the department and its members. Faculty members and students meet once a week for discussions and presentations to introduce a variety of subject areas. Credit units: 1 ECTS Credit Units: 2. Aut (Ş. Süzer)

CHEM 201 Materials Science and Technology

CHEM 206 Introductory Concepts in Evolution
Brief history of the idea of biological evolution. Natural selection, variation and biogeography, homology and comparative biology, understanding fossil evidence, evidence from biochemistry and molecular biology. Scientific method and pseudo-scientific arguments, common misconceptions about evolution. Credit units: 3 ECTS Credit Units: 6. Spr (E. U. Akkaya)

CHEM 211 Analytical Chemistry I
Fundamental principles and theories of analytical chemistry. Qualitative and quantitative analysis by gravimetric, volumetric and electrochemical methods. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 102. Aut (G. Ertas)

CHEM 212 Analytical Chemistry II
Modern instrumental methods of chemical analysis based upon electrochemical and spectroscopic methods. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 102 and CHEM 211. Spr (G. Ertas)

CHEM 220 Orientation for Chemistry Majors II
Faculty members and students meet once a week for discussions and presentations to introduce the research areas of each faculty member. Students are expected to become familiar with their prospective academic life as chemist. Credit units: 1 ECTS Credit Units: 2.

CHEM 231 Organic Chemistry I
Basic principles of organic chemistry. A survey of the principal classes of organic compounds. Synthesis and characteristics reactions of various functional groups. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 102. Aut (D. Tunçel)

CHEM 232 Organic Chemistry II
Modern physical organic chemistry with emphasis on mechanistic and spectroscopic methods. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 102 and CHEM 231. Spr (D. Tunçel)

CHEM 233 Principles of Organic Chemistry I

CHEM 234 Principles of Organic Chemistry II
Modern physical organic chemistry with emphasis on mechanistic and spectroscopic methods. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CHEM 233.

CHEM 323 Physical Chemistry I
Chemical thermodynamics. Solution and phase equilibria. Electrochemistry. Solid and liquid states. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 102 and MATH 102. Aut (E. Özencsoy)
CHEM 324  Physical Chemistry II
Chemical kinetics. Transport phenomena. Surface chemistry. Chemistry of macromolecules. (Laboratory work is obligatory). Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 323. Spr (H. N. Erten)

CHEM 325  Principles of Physical Chemistry I

CHEM 326  Principles of Physical Chemistry II
Chemical kinetics. Transport phenomena. Surface chemistry. Chemistry of macromolecules. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CHEM 323 or CHEM 325. Spr (H. N. Erten)

CHEM 327  Quantum Chemistry I
Wave functions. Time-independent Schrödinger equation. formalism, one, two and three dimensional systems, angular momentum. H-like systems. Credit units: 4 ECTS Credit Units: 7. Prerequisite: MATH 220 and MATH 240 and PHYS 102. Aut (Z. C. Kuruoğlu)

CHEM 328  Quantum Chemistry II

CHEM 341  Inorganic Chemistry I
The nature of chemical bond. Shapes of molecules. Acid-Base chemistry. Chemistry in aqueous and nonaqueous solutions. Hydrogen bonding. General properties of the elements in the periodic table. (Laboratory work is obligatory.) Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 102. Aut (M. Kantcheva)

CHEM 342  Inorganic Chemistry II
Bonding, stereochrmistry and spectra of coordination compounds. Electronic, magnetic and optical properties of solids. (Laboratory work is obligatory.) Credit units: 4 ECTS Credit Units: 7. Prerequisite: CHEM 341. Spr (M. Kantcheva)

CHEM 399  Summer Practice
The minimum time for this practice is 6 weeks (30 working days). The main objective is to work in an industrial laboratory on the areas of Chemistry. Credit units: None ECTS Credit Units: None. Aut (G. Ertas) Spr (G. Ertas)

CHEM 421  Principles and Chemical Applications of Thermodynamics

CHEM 422  Introduction to Statistical Thermodynamics

CHEM 450  Applied Quantum Chemistry
Quantum mechanical calculations of various properties of molecules using semi-empirical as well as ab-initio methods. Credit units: 3 ECTS Credit Units: 6. Aut (U. Salzner)

CHEM 456  Advanced Instrumental Analysis
The course objective is to study and discuss the principles, instrumentation and applications of modern instrumenental methods, including spectroscopic techniques such as AAS, ICPMS, FTIR, Raman spectroscopy, Luminescence Spectroscopy, Mass Spectrometry. Credit units: 3 ECTS Credit Units: 6. Spr (G. Ertas)

CHEM 460  Environmental Chemistry
Chemical problems related to environment. Energy balance of earth, ozone in the upper atmosphere, greenhouse effect, micrometeorology. SO$_2$ and CO$_2$ cycles, photochemical smog, aerosols, trace elements in the environment, particle size distribution. Credit units: 3 ECTS Credit Units: 6. Aut (H. N. Erten)
CHEM 461  Biochemistry
Basic discussion of the structure and properties of biomolecules with special emphasis on proteins, enzymatic catalysis, membrane assembly and functions, bioenergetics. Credit units: 3 ECTS Credit Units: 6.

CHEM 470  Polymer Chemistry

CHEM 472  Industrial Chemistry
Industrial chemicals and their manufacturing processes with special emphasis on their economic aspects. Credit units: 3 ECTS Credit Units: 6.

CHEM 490  Structure and Reactivity of Organic Compounds
Biomolecules, heterocyclic amines, sulfur compounds, neighboring group participation in S_n reactions, polymers, carbenes, 2-D NMR, mass spectrometry, lithium enolates, transition metal organometallic compounds, and pericyclic reactions. Credit units: 3 ECTS Credit Units: 6.

CHEM 491  Senior Project I
A project on a specific topic in an area of chemistry to be carried out by the student under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Aut (S. Sützer)

CHEM 492  Senior Project II
A project on a specific topic in an area of chemistry to be carried out by the student under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Spr (S. Sützer)

GRADUATE COURSES

CHEM 503  Chemical Kinetics

CHEM 504  Group Theory and its Chemical Applications
Group theory, molecular symmetry, ligand field theory. Applications: symmetry aspects of MO theory, spectroscopy of transition metal complexes, metal-ligand bonding, molecular vibrations and symmetry. Credit units: 3 ECTS Credit Units: 6.

CHEM 505  Nuclear and Radiochemistry

CHEM 506  Chemical Thermodynamics

CHEM 507  Statistical Thermodynamics

CHEM 511  Quantum Chemistry I

CHEM 513  Environmental Radiochemistry

CHEM 515  Molecular Spectroscopy

CHEM 521  Surface Chemistry I
The central idea of this course is to describe the present state of modern surface science within a context dictated by chemistry. The course offers understanding of the surface phenomena at molecular-level and their relation
to the various surface processes. It is focused on the properties of the solid-gas and solid-liquid interfaces and could be interest to students of chemical, physical and engineering science. Credit units: 3 ECTS Credit Units: 6. Aut (M. Kantcheva)

CHEM 523 Concepts in Materials Science
Fundamental concepts in materials science will be covered. These topics include plastic deformation of crystalline solids and dislocations theory, defects in solids, diffusion phenomena, interfaces and kinetics of phase transformations. Nucleation and growth phenomena will also be covered. Several metallic, ceramic and polymeric systems will be investigated as case study examples. Credit units: 3 ECTS Credit Units: 6. Aut (E. Bengü)

CHEM 531 Advanced Organic Chemistry I
The important classes of organic reactions and methods by which chemists obtain information about chemical processes. The primary focus of the course is on reaction mechanisms. The experimental evidence upon which mechanistic ideas are built will be emphasized. This course will also emphasize heterolytic reactions. Credit units: 3 ECTS Credit Units: 6.

CHEM 532 Advanced Organic Chemistry II
Physical Organic Chemistry: MO theory, population analysis, frontier orbital theory, pericyclic reactions, transition states, reactive intermediates, understanding reaction mechanisms. Credit units: 3 ECTS Credit Units: 6.

CHEM 537 Supramolecular Chemistry
The course introduces general principles of molecular recognition, complex formation and host design, with emphasis on thermodynamics of multi-site host-guest complexation and nature of supramolecular interactions. Structure, properties, and synthesis of major categories of cation-, anion-, and neutral molecule-binding hosts are discussed, and crystal structures of enzyme-inhibitor complexes are analyzed from the point of view of the basic concepts of host-guest chemistry. Credit units: 3 ECTS Credit Units: 6. Aut (E. U. Akkaya)

CHEM 541 Advanced Inorganic Chemistry I
Electronic spectra of complexes, reaction mechanism of d-block complexes, d- and f-block organometallic compounds, inorganic chains, rings, cages and clusters, catalysis and characterization of catalytic materials. Credit units: 3 ECTS Credit Units: 6. Spr (M. Kantcheva)

CHEM 542 Advanced Inorganic Chemistry II

CHEM 551 Special Topics in Physical Chemistry I
Credit units: 3 ECTS Credit Units: 6. Spr (E. Özesson)

CHEM 552 Special Topics in Physical Chemistry II
Credit units: 3 ECTS Credit Units: 6.

CHEM 555 Applied Quantum Chemistry
The hydrogen molecule: valence bond theory, the nature of the chemical bond; Hartree-Fock theory for molecules, basis sets, Koopmans’ theorem, population analysis; electron correlation, density functional theory, perturbation theory, configuration interaction, multireference methods, applications. Credit units: 3 ECTS Credit Units: 6.

CHEM 561 Special Topics in Inorganic Chemistry I
Credit units: 3 ECTS Credit Units: 6.

CHEM 562 Special Topics in Inorganic Chemistry II
Credit units: 3 ECTS Credit Units: 6.

CHEM 571 Special Topics in Organic Chemistry I
Credit units: 3 ECTS Credit Units: 6.

CHEM 572 Special Topics in Organic Chemistry II
Credit units: 3 ECTS Credit Units: 6. Spr (E. U. Akkaya)

CHEM 573 Polymer Chemistry I
Basic concepts of polymer science. Condensation, free radical, ionic, and coordination polymerizations. Synthesis, molecular structure, properties and uses of some common commercial polymers. Credit units: 3 ECTS Credit Units: 6. Aut (D. Tuncel)

CHEM 574 Polymer Chemistry II

CHEM 580 Advanced Photochemistry
Introduction to photochemistry, light-matter interactions, basic and advanced experimental techniques, radiative and nonradiative processes, light induced chemistry, electron and proton transfer, organic photochemistry,
inorganic photochemistry, photoelectrochemistry, supramolecular photochemistry, femtochemistry, laser-tissue interactions, photodynamic therapy, fluorescence imaging. Credit units: 3 ECTS Credit Units: 6.

CHEM 581 Special Topics in Analytical Chemistry I
Credit units: 3 ECTS Credit Units: 6.

CHEM 582 Special Topics in Analytical Chemistry II
Credit units: 3 ECTS Credit Units: 6.

CHEM 584 Surface Coatings
Introduction to polymer chemistry; Synthesis and applications of alkyd, polyester, amino, phenolic, polyurethane, epoxy, silicone and acrylic resins; Synthesis and applications of emulsion polymers, water dispersible, reducible and soluble polymers, solvents; pigments and additives. Credit units: 3 ECTS Credit Units: 6.

CHEM 590 Biomolecules and Other Advanced Topics
Biomolecules, heterocyclic amines, sulfur compounds, neighboring group participation in $S_n$ reactions, polymers, carbenes, 2-D NMR, mass spectrometry, lithium enolates, transition metal organometallic compounds, and pericyclic reactions. Credit units: 3 ECTS Credit Units: 6.

CHEM 591 Graduate Seminar I
This is a graduate (MS) seminar course. The instructor and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the instructor and the students. Credit units: None ECTS Credit Units: None. Aut (§. Süber) Spr (§. Süber)

CHEM 599 Master's Thesis
Credit units: None ECTS Credit Units: 24. Aut (§. Süber) Spr (§. Süber)

CHEM 691 Advanced Seminar I
This is a graduate (PhD) seminar course. The instructor and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the instructor and the students. Credit units: None ECTS Credit Units: None. Spr (§. Süber)

CHEM 699 Ph.D. Dissertation
Credit units: None ECTS Credit Units: 24. Aut (§. Süber) Spr (§. Süber)
The Department of Mathematics offers undergraduate and graduate courses that lead to B.S., M.S. and Ph.D. degrees in Mathematics as well as undergraduate and graduate courses to all departments of the university.

The department emphasizes both pure and applied mathematics. Research in the department covers algebra, algebraic topology, algebraic geometry, functional analysis, algebraic number theory, analysis of nonlinear systems and general relativity.

### UNDERGRADUATE PROGRAM

The undergraduate program in Mathematics aims to prepare students for an advanced degree in mathematics to which end it admits a small number of highly qualified and motivated students each year. The program is designed to give the students a good background in all areas of mathematics. It consists of four series of courses in analysis, algebra, geometry and differential equations.

*Technical Elective Course* denotes any 300 or higher level mathematics, science or engineering course or with the consent of the advisor.

### MINOR PROGRAM

The minor program in mathematics is designed to give the students a short view of what constitutes modern mathematics beyond the more computational Calculus courses. The mathematics courses
taken by students in other disciplines are usually geared towards using certain methods. However, one might also want to understand the reasons, mechanisms, and the axiomatic structure underlying the results. For this, one must also learn the proofs of mathematical theorems and obtain from them further mathematical results. This is what is generally considered doing mathematics.

In the minor program, students take 4 required courses, 2 from each of mathematics’ two classical well-established areas, algebra and analysis. They form a well-balanced introduction to modern mathematics. They are also essential for an understanding of more advanced courses in these and other areas, two of which should be taken as electives. A good selection of electives would include courses in other areas as well so that students would have an idea of some of the newer developments in modern mathematics. The purpose is not to specialize in a narrow area, but rather to broaden one’s understanding.

**Prerequisite Courses:**
- MATH 102 Calculus II
- MATH 106 Introduction to Calculus II
- MATH 114 Multi Variable Calculus
- MATH 116 Intermediate Calculus III

**Open to Students from**
- Faculty of Business Administration
- Faculty of Engineering
- Faculty of Science
- Department of Computer and Instructional Technology Teacher Education
- Department of Economics
- Department of Philosophy
- Department of Psychology

**GRADUATE PROGRAMS**

The aim of the program is to develop students into mathematicians who can pursue original and creative research. The program emphasizes research in pure and applied mathematics. At present,
research in the graduate program is focused on algebraic number theory, algebraic geometry, algebraic topology, functional analysis, non-linear differential equations and general relativity.

Master of Science in Mathematics

Admission: Applicants to the program should have a B.S. degree in Mathematics (or in science or engineering, but with sufficient preparation in mathematics) and must be proficient in English. Evaluation of applicants is based on their ALES scores, past academic record and the interview at Bilkent University. The evaluation of the applicants who cannot take the ALES exam will be based on their GRE scores. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

Degree Requirements: Those admitted to the M.S. program have to complete course work of a minimum 24 credit hours, four courses of which are must courses. They should have minimum cumulative grade point average of 3.00, write and defend a thesis. The normal duration of M.S. study is 4 semesters. However, this duration may be extended for up to two more semesters subject to the approval of the Graduate Institute.

Doctor of Philosophy in Mathematics

Admission: Applicants must have an M.S. or B.S. degree in Mathematics (or in relevant areas of science or engineering) and must be proficient in English. Evaluation of applicants is based on their ALES scores, past academic record and the interview at Bilkent University. The evaluation of the applicants who cannot take the ALES exam will be based on their GRE scores. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

Degree Requirements: Twenty-four credit units of course work beyond the M.S. level or forty-eight credits of course work beyond the B.S. level is required four courses of which are must courses. The Ph.D. candidate is expected to have minimum cumulative grade point average of 3.00, a qualifying examination and thesis proposal. Preparing and defending a dissertation based on original research is the essence of the program. The normal duration of Ph.D. study is 8 semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, subject to the approval of the Graduate Institute, these durations may be extended for up to two more semesters.

---

**COURSE DESCRIPTIONS**

**UNDERGRADUATE COURSES**

**MATH 101 Calculus I**

**MATH 102 Calculus II**
- Sequences and series of numbers, power series, Taylor series. Quadratic curves, polar coordinates. Analytic geometry $\mathbb{R}^2$, in vector-valued functions, TNB frame. Functions of several variables, partial derivatives, free and constrained extrema. Multiple integrals and applications. Line integral, Green's theorem. Surface integral, divergence theorem, Stokes' theorem. **Credit units: 4 ECTS Credit Units: 7, Prerequisite: MATH 101 or MATH 113. Aut (H. Yılmazlı) Spr (M. Kocatepe, A. Pamir, O. Tekman, B. Uğur, N. Zheltukhina)**

**MATH 103 Introductory Mathematics**

**MATH 105 Introduction to Calculus I**

**MATH 106 Introduction to Calculus II**

**MATH 107 Elements of Business Mathematics**
- Study of linear equations, quadratic equations. Applications of equations. Polynomial, rational, exponential, logarithmic functions with emphasis on graphing techniques. Geometric series, compound interest, present and future value. Exponential and logarithmic functions. **Credit units: 3 ECTS Credit Units: 6.**

**MATH 108 Elementary Business Statistics**
- Organization and description of data. Applications using EXCEL. Basic probability topics. Discrete random variables and their probability distributions. Expected value, variance and standard deviation. The binomial distribution of the mean. Central Limit Theorem and its applications. **Credit units: 3 ECTS Credit Units: 6.**
MATH 109 Statistics for Mass Media
Statistical methods and their applications in social sciences and mass communication. Introduction to distributions, variances and deviations. Sampling concepts and introduction to sampling sizing. Credit units: 3 ECTS Credit Units: 6.

MATH 110 Discrete Mathematics

MATH 111 Intermediate Calculus I

MATH 112 Intermediate Calculus II

MATH 113 Single Variable Calculus

MATH 114 Multi Variable Calculus

MATH 116 Intermediate Calculus III

MATH 119 Statistics for Lawyers
This course introduces students of law the basic ideas of probability and statistics. Topics covered include data evaluation and analysis, conditional probabilities, distributions, Bayesian methods, sampling, confidence intervals, hypothesis testing and elementary regression analysis. Credit units: 3 ECTS Credit Units: 3. Aut (A. Gontcharov, B. Ünal) Spr (Staff)

MATH 123 Abstract Mathematics I

MATH 124 Abstract Mathematics II

MATH 132 Discrete and Combinatorial Mathematics
Fundamental principles of counting including rules of sums and product, permutations and combinations. Fundamentals of logic and integers including mathematical induction, recursive definitions, prime numbers, greatest common divisor, cartesian products and relations, pigeonhole principle, partial orders, equivalence relations and partitions. The principle of inclusion and exclusion. Sums and recurrence relations: first and second order linear recurrence relations, finite and infinite calculus, infinite sums. Integer functions including floor and ceiling appli-
cations and recurrences, and the modulo operation. Generating functions including the method of generating functions for solving recurrences and exponential generating functions. Introduction to graph theory including graph isomorphism, Euler tours, Hamiltonian paths and cycles, planar graphs, and graph coloring. **Credit units:** 3 ECTS **Credit Units:** 6, **Prerequisite:** MATH 101 or MATH 111 or MATH 113. Spr (A. M. Güloğlu, M. Sezer, Ö. Ünlü)

**MATH 202 Complex Analysis**
Algebra of complex numbers, topology of the complex plane. Analytic functions, Cauchy-Riemann equations, power series. Complex line integrals, Cauchy theorem, Cauchy integral formula, Taylor series. Mean value property, Liouville theorem, isolated zeros, uniqueness theorem, maximum modulus principle. Isolated singularities, singularities at infinity, Laurent series. Residues, evaluation of improper integrals. **Credit units:** 3 ECTS **Credit Units:** 6, **Prerequisite:** MATH 102 or MATH 114. Spr (U. Muğan)

**MATH 206 Complex Calculus and Transform Techniques**

**MATH 211 Discrete Mathematics and Modern Algebra**
Fundamental principles of counting including rules of sum and product, and permutations and combinations. Fundamentals of logic and integers including mathematical induction, recursive definitions, prime numbers, greatest common divisor, and the fundamental theorem. Cartesian products and relations, the pigeonhole principle, partial orders, equivalence relations and partitions. Rings and modular arithmetic. Boolean algebra and switching functions. Groups, coding theory, and Polya's method of enumeration. **Credit units:** 3 ECTS **Credit Units:** 6.

**MATH 213 Advanced Calculus I**
The real number system, least upper bound property. Sequences in R, Cauchy sequences, limsup and liminf. Limit and continuity in R, uniform continuity. Differentiation in R. Riemann integral in R, fundamental theorem of calculus. Infinite series of numbers, absolute convergence. Sequences and series of functions, uniform convergence, power series. **Credit units:** 3 ECTS **Credit Units:** 6, **Prerequisite:** MATH 114 and MATH 123. Aut (E. Yalcın)

**MATH 214 Advanced Calculus II**
Euclidean spaces, topology of R^n. Differentiability on R^n, differentials, inverse and implicit function theorems. Riemann integral on R^n, Jordan regions, change of variables. Vector calculus, curves and surfaces, Green, Gauss, Stokes theorems **Credit units:** 3 ECTS **Credit Units:** 6, **Prerequisite:** MATH 213. Spr (E. Yalcın)

**MATH 215 Mathematical Analysis**
The real number system. The complex field. Finite, countable, uncountable sets. Metric spaces. Compact sets, connected sets. Sequences, cauchy sequences. Series of numbers, summation by parts. Continuity, uniform continuity. Continuity and compactness, continuity and connectedness. Sequences and series of functions, uniform convergence. Uniform convergence and continuity/integration/differentiation. **Credit units:** 3 ECTS **Credit Units:** 6, **Prerequisite:** MATH 102 or MATH 106 or MATH 114 or MATH 116. Spr (A. Gontcharov)

**MATH 220 Linear Algebra**
Introduction to matrices. Fields and vector spaces, linear transformations, change of basis. Linear equations, existence and classification of solutions, Gaussian elimination and LU decomposition. Characteristic equation of a matrix: eigenvalues, eigenvectors and the Jordan form. Numerical techniques for computing eigenvalues and eigenvectors. Inner product spaces, quadratic forms. **Credit units:** 3 ECTS **Credit Units:** 6. **Prerequisite:** MATH 223. Spr (Staff)

**MATH 221 Linear Algebra I**
Vector spaces, linear transformations. Eigenspaces (generalized eigenpaces), determinants, canonical forms, Jordan forms. **Credit units:** 3 ECTS **Credit Units:** 6. Aut (B. Ünal)

**MATH 222 Linear Algebra II**
Inner product spaces, bilinear forms, quadratic forms, adjoint operators, multilinear forms, tensor and exterior products. **Credit units:** 3 ECTS **Credit Units:** 6. **Prerequisite:** MATH 223. Spr (Staff)

**MATH 225 Linear Algebra and Differential Equations**
Systems of linear equations, Elimination methods, matrices and matrix operations. Invertible matrices, determinants. Vector spaces, basis and dimension. Inner product spaces, orthogonality, orthogonal basis, rank and nullity. Eigenvalues and eigenvectors, systems of differential equations, matrix-valued functions. First and second order linear differential equations, n-th order linear differential equations, method of undetermined coefficients, variation of parameters. **Credit units:** 4 ECTS **Credit Units:** 7. **Prerequisite:** MATH 102. Aut (Y. Kurtulmacı, U. Muğan) Spr (V. Kurtulmacı, B. Ünal)
MATH 227  Introduction to Linear Algebra
Introduction to matrices, basic definitions and properties. Linear equations; inverse and rank of a matrix; existence and classification of solutions; Gaussian elimination. Characteristic equation of a matrix; eigenvectors, eigenvalues. Numerical techniques. Applications. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 106. Aut (Ö. Oral) Spr (Ö. Oral)

MATH 230  Probability and Statistics for Engineers
Basic concepts of probability (sample spaces and events, permutations, combinations, conditional probability and independence). Discrete and continuous random variables, their probability distributions, expected value and distribution parameters. Discrete probability distribution functions (Binomial, geometric, negative binomial, Poisson distributions). Continuous probability distributions (uniform, normal, exponential, gamma and X^2 distributions). Joint Distributions, Conditional Distributions. Independent Random Variables. Correlation. The sampling distribution of sample mean, Central Limit Theorem and its applications. Estimation. Confidence Intervals, Hypothesis Testing. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 102 or MATH 112 or MATH 114. Aut (D. Gümüş)

MATH 240  Differential Equations

MATH 241  Engineering Mathematics I

MATH 242  Engineering Mathematics II

MATH 250  Introduction to Probability
Basic concepts of probability, expectation, and variance, covariance, distribution functions, bivariate marginal and conditional distributions. The Binomial and related distributions, the Poisson Process, the Exponential and Gamma distributions, the Normal distribution, the distributions of sample statistics, the Law of Large Numbers, and the Central Limit Theorem. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 102 or MATH 114 or MATH 112 (with MATH 116 corequisite). Aut (A. Kerimov) Spr (Ö. Güler)

MATH 253  Introduction to Number Theory
Divisibility, congruences, quadratic reciprocity, arithmetical functions, irrational numbers, simple continued fractions, Diophantine equations. Credit units: 3 ECTS Credit Units: 6. Spr (H. Yeşilyurt)

MATH 255  Probability and Statistics
Basic concepts of probability, expectation and variance distribution functions Bayes’ formula marginal and conditional distributions the distributions of sample statistics law of large numbers central limit theorem introduction to hypothesis testing. Credit units: 3 ECTS Credit Units: 6, Prerequisite: MATH 102. Aut (L. Onural) Spr (E. Çetin, L. Onural)

MATH 260  Introduction to Statistics

MATH 262  Statistical Methodology
nonparametric tests. Biological and medical science applications using a statistical software such as MINITAB or SAS. Credit units: 3 ECTS Credit Units: 6. Spr (A. Kerimov)

**MATH 264 Statistics for Social Sciences**  
Introduction to statistics with special emphasis on the utilization of statistical methods in social sciences: Organization of data, measures of center and variability. Basic probability concepts. Discrete and continuous random variables and their distributions. Inferences about the mean. Applications using statistical computer programs. Credit units: 3 ECTS Credit Units: 6. Aut (D. Gökmen) Spr (Staff)

**MATH 291 Summer Project I**  
A project on a specific topic in an area of mathematics to be carried out by the students under the supervision of a faculty member. Credit units: None ECTS Credit Units: None.

**MATH 300 A Concise History of Mathematics**  
The emergence and development of mathematical ideas and techniques during the last few millennia starting with the early Egyptian papyri and ending with the twentieth century mathematics. Tracing the philosophical and cultural setting of mathematics through some concrete problems which include the unit fractions, perfect numbers, Diophantine equations, ruler and compass constructions, polynomial roots, limits, infinity and some unsolved problems of elementary mathematics. Credit units: 3 ECTS Credit Units: 6.

**MATH 302 Complex Analysis II**  

**MATH 310 Topology**  
Topological spaces, connected and compact spaces, continuous functions, product spaces, the Tychonoff theorem, separation axioms, separation by continuous functions, complete metric spaces, applications. Fundamental group and covering spaces: homotopy, fundamental group, covering spaces. Credit units: 3 ECTS Credit Units: 6.

**MATH 313 Real Analysis I**  

**MATH 314 Real Analysis II**  

**MATH 315 Fourier Analysis**  

**MATH 316 Orthogonal Functions**  

**MATH 318 Fourier Transform and Wavelets**  

**MATH 319 Interpolation and Approximation**  

**MATH 323  Algebra I**
Groups, subgroups, normal subgroups and quotient groups. Homomorphisms and automorphisms. Cayley's theorem, permutation groups, symmetry. Sylow's theorems and classification of finite groups of small order using Sylow's theorems. Structure of finite abelian groups. Classical linear groups. Credit units: 3 ECTS Credit Units: 6. Aut (E. Yalcin)

**MATH 324  Algebra II**
Rings and ideals. Euclidean rings. Modules. Fields, extension fields, construction with straightedge and compass. Elements of Galois theory. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MATH 323. Spr (Ö. Unl)

**MATH 325  Representation Theory**

**MATH 333  Exterior Calculus**
Exterior powers of a vector space, exterior product, inner product, the Hodge star operator. Exterior calculus on Euclidean space: Tangent space, differential forms, operations on differential forms, exterior derivative, pullback of a differential form. Submanifolds; Immersion and submersions, parametrizations. Surface theory: Moving frames, the structure equations, orthonormal frame of a surface, the fundamental forms. Integration on manifolds: Volume forms and orientation and orientation of boundaries. Stoke's theorem. Connections on vector bundles: Connections via vector-valued forms, curvature of a connection, metric connection. Credit units: 3 ECTS Credit Units: 6.

**MATH 336  Polynomial Algebra**
The theory of Groebner basis and related concepts. Use of mathematical software, Maple, Macaulay. Integer programming, combinatorics of magic squares and error correcting codes. Credit units: 3 ECTS Credit Units: 6.

**MATH 337  Introduction to Soliton Theory**
The Korteweg-de Vries equation, properties of the KdV solutions, integrability of the KdV equation, initial value problem for the KdV equation, inverse scattering theory, the Lax method, multi-soliton solutions, geometrical approach to integrable models, the Toda lattice, Zakharov-shabat formulation. Credit units: 3 ECTS Credit Units: 6.

**MATH 340  Mathematical Foundations of Statistical Mechanics**

**MATH 345  Differential Geometry I**
Euclidean spaces and differential forms, frames, calculus on surfaces. Shape operators. Gaussian and mean curvatures. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MATH 214. Aut (Staff)

**MATH 346  Differential Geometry II**
Intrinsic geometry of surfaces, Riemannian geometry. Geodesics, Gauss-Bonnet theorem. Global structure of surfaces. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MATH 345. Spr (A. Degtiarev)

**MATH 354  Algebraic Number Theory**
Algebraic numbers, quadratic and cyclotomic fields, factorization, ideals, geometric methods, Dirichlet's units theorem, binary quadratic forms, Fermat's last theorem. Credit units: 3 ECTS Credit Units: 6.

**MATH 391  Summer Project II**
A project on a specific topic in an area of mathematics to be carried out by the students under the supervision of a faculty member. Credit units: None ECTS Credit Units: None.

**MATH 414  Functional Analysis**

**MATH 415  Analysis of Differentiable Functions**
Credit units: 3 ECTS Credit Units: 6.
MATH 417 Introduction to Number Theory
Congruences and residues; continued fractions; approximation of irrationals; quadratic fields, some Diophantine equations; arithmetical functions; the series of primes. Credit units: 3 ECTS Credit Units: 6.

MATH 418 Diophantine Approximations

MATH 430 Introduction to Complex Geometry
Vector bundles. Sheaf theory and sheaf cohomology. Kähler manifolds. Chow rings. Lefschetz (1,1)-theorem. The hodge conjecture, i.e. the (p,p) version of Lefschetz's theorem. Credit units: 3 ECTS Credit Units: 6

MATH 453 Algebraic Number Theory

MATH 491 Senior Project I
A project on a specific topic in an area of mathematics to be carried out by the students under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Aut (A. Gheondea)

MATH 492 Senior Project II
A project on a specific topic in an area of mathematics to be carried out by the students under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Aut (A. Gheondea) Spr (A. Gheondea)

GRADUATE COURSES

MATH 500 Mathematical Analysis
Credit units: 3 ECTS Credit Units: 6. Aut (A. Gheondea)

MATH 501 Real Analysis I

MATH 502 Real Analysis II

MATH 503 Complex Analysis I
MATH 504 Complex Analysis II

MATH 505 Introduction to Complex Geometry
Vector bundles. Sheaf theory and sheaf cohomology. Kähler manifolds. Chow rings. Lefschetz (1,1)-theorem. The hodge conjecture, i.e. the (p,p) version of Lefschetz’s theorem. Credit units: 3 ECTS Credit Units: 6. Aut (S. Sertöz)

MATH 520 Applied Linear Algebra

MATH 523 Algebra I
Monoids, groups, Sylow theorems, categories, functors, rings, homomorphisms, commutative rings, localization, modules, direct sums of modules, free modules, annihilators, dual spaces, homology sequences of complexes, Euler characteristic, Jordan-Hölder theorem, polynomial rings, Noetherian rings, field extensions, Galois theory, extensions of rings, representations of finite groups. Credit units: 3 ECTS Credit Units: 6. Aut (M. Sezer)

MATH 524 Algebra II
Tensor algebra, modules of finite length, semi local rings, Jacobian radical, Azumaya diagrams, perfect rings, duality theorem. Quasi-Frobenius rings, semi-primitive rings, nil radical, decomposition theorems. Credit units: 3 ECTS Credit Units: 6. Spr (M. Sezer)

MATH 525 Group Representations

MATH 526 Young Tableaux and Representations of the Symmetric Group

MATH 527 Topics in Representation Theory
Credit units: 3 ECTS Credit Units: None.

MATH 528 Invariant Theory

MATH 530 Global Class Field Theory

MATH 533 Differential Geometry
Credit units: 3 ECTS Credit Units: None.

MATH 534 Differential Geometry II
Differentiable manifolds, multilinear algebra, Exterior Differential Calculus, Connections, Riemannian Geometry, Lie groups and Moving frames, Complex manifolds, Finsler Geometry. Credit units: 3 ECTS Credit Units: 6.
MATH 535  Topology of Algebraic Varieties

MATH 543  Methods of Applied Mathematics I
Functions spaces, orthogonal polynomials and Fourier analysis, generalized functions. Ordinary differential equations, Green's function, Sturm-Liouville problem, hypergeometric functions. Perturbation methods, regular perturbations, singular perturbations, boundary layer analysis, the WKB approximation. Credit units: 3 ECTS Credit Units: 6. Aut (M. G"urses)

MATH 544  Methods of Applied Mathematics II

MATH 550  Probability and Statistics

MATH 551  Topics in Number Theory

MATH 553  Ergodic Theory

MATH 556  Codes on Algebraic Curves

MATH 581  Topics in Nonlinear Partial Differential Equations I
Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the Advisor.

MATH 583  Topics in Mathematical Physics I
Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the Instructor.

MATH 584  Topics in Mathematical Physics II
Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the Instructor.

MATH 585  Topics in Ordinary Differential Equations I
Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the Instructor.

MATH 597  Graduate Seminars in Mathematics I
Each graduate student who enrolls must present at least one one-hour talk about his/her research topic. Attendance to the seminars is mandatory. Credit units: None ECTS Credit Units: None. Aut (E. Yalcin) Spr (E. Yalcin)

MATH 598  Graduate Seminars in Mathematics II
Each graduate student who enrolls must present at least one one-hour talk about his/her research topic. Attendance to the seminars is mandatory. Credit units: None ECTS Credit Units: None. Aut (E. Yalcin) Spr (E. Yalcin)

MATH 599  Master's Thesis
Credit units: None ECTS Credit Units: 24. Aut (M. Kocatepe) Spr (M. Kocatepe)
MATH 603  Value Distribution Theory

MATH 604  Entire Functions

MATH 605  Topics in Functional Analysis I
Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the Instructor. Spr (A. Gheondea)

MATH 611  Algebraic Topology I
Categories and functors, homotopy of paths, homotopy of maps, fundamental groups, higher homotopy groups, homology of complexes, chain homotopy, standard simplices, the singular complex, singular homology, excision theorem, Mayer-Vietoris sequences, applications of homology. Credit units: 3 ECTS Credit Units: 6. Aut (E. Yalçın)

MATH 618  Topics in Algebraic Topology II
Credit units: 3 ECTS Credit Units: 6.

MATH 624  Compact Lie Groups

MATH 625  Homological Algebra
The course starts with standard material on homological algebra and continues with a special interest topic with instructor's consent such as special applications and calculations in algebraic topology, algebraic geometry or cohomology of groups. The standard part includes material on modules, categories, extensions of modules, derived functors and spectral sequences. Credit units: 3 ECTS Credit Units: 6. Spr (E. Yalçın)

MATH 626  Cohomology of Groups

MATH 633  Algebraic Geometry I
Transcendental theory; Complex algebraic varieties, line bundles and divisors, Riemann surfaces as algebraic curves, Hurwitz's theorem, Riemann-Roch theorem, uniformization, surfaces, Kodaira dimension, main classification theory of surfaces via birational theory, Chern classes, fixed point theorems, residues, spectral sequences. Credit units: 3 ECTS Credit Units: 6.

MATH 650  Topics in Probability Theory
Credit units: 3 ECTS Credit Units: 6. Prerequisite: Consent of the Instructor.

MATH 654  Analytic Number Theory
Integer points, trigonometric sums, infinite products, entire functions, the gamma function, the Riemann zeta-function, zeros of the zeta-function, the prime number theorem, Dirichlet L-functions, primes in arithmetic progressions, the circle method, the Goldbach conjecture, Waring's problem. Credit units: 3 ECTS Credit Units: 6.

MATH 699  Ph.D. Dissertation
Credit units: None ECTS Credit Units: 24. Aut (M. Kocatepe) Spr (M. Kocatepe)
DEPARTMENT OF MOLECULAR BIOLOGY AND GENETICS

The Department of Molecular Biology and Genetics provides undergraduate and graduate courses in basic and applied areas of molecular biology and genetics. The undergraduate program offers B.S. degree in Molecular Biology and Genetics and the graduate program leads to M.S. and Ph.D. degrees in Molecular Biology and Genetics. The department is equipped with modern facilities for gene analysis, cell biology, protein chemistry, recombinant DNA technology and animal experiments. The education is research oriented. The undergraduate program concentrates initially on basic knowledge in life sciences and related fields, followed by a specialized training in molecular biology and genetics. Research laboratories of the department are used for graduate student training and for the senior projects for undergraduate students. The main research activities of the department are on molecular genetics, molecular biology, molecular cell biology, molecular virology, molecular immunology, structure-function relationship of proteins and new biotechnologies.

UNDERGRADUATE PROGRAM

The undergraduate program aims to equip students with basic knowledge in life sciences with special emphasis on molecular biology and genetics. The education program in the first two years concentrates on basic knowledge in biology, genetics and microbiology in addition to physics, chemistry and mathematics. The last two years are dedicated to a specialized training in molecular biology, molecular cell biology and biotechnology. Theoretical courses are completed with laboratory courses with hands-on experiments.

| MBG 485 DNA Damage and Repair Mechanisms            | 3 / 6                  |
| MBG 487 Special Techniques in Molecular Genetics    | 3 / 6                  |
| MBG 488 Introduction to Human Genetics              | 3 / 6                  |
| MBG 489 Genetics and Biology of Cancer              | 3 / 6                  |

### Minor Program

MBG minor program aims to provide introductory knowledge in life sciences with the selected emphasis on Molecular Biology and Genetics. The curriculum in the minor program provides a foundation in basic areas with the following aspects; the structure and expression of genes, biochemistry of proteins, cell signaling, development, the basis of inherited diseases, molecular biology of cancer, biotechnology, genomics and bioinformatics. Students are required to take four fundamental courses. "Biology I and II" provide essential knowledge about molecules of the life, central dogma, DNA, RNA, proteins, organization of the cell, and embryogenesis and genetic diseases. These courses also provide an introduction to cell division and differentiation, molecular biology methods, recombinant DNA technology, and biotechnology, which help prepare the students for advanced courses. The "Principles of Genetics" course covers Mendelian genetics, theory of inheritance,
genetic mapping, and population genetics topics in general. Finally, "Molecular Biology of the Cell" investigates how the molecular mechanisms, which are studied in the other courses, serve the cells. These courses will supply the knowledge for the minor candidates who will choose two advanced courses offered from our department related to their specific interests. Additional advanced courses can be selected according to the students' specific needs toward their future career. The department appoints an advisor for students in the program. All elective courses are subject to advisor approval.

Prerequisite Courses: None

Open to Students from
- Faculty of Business Administration
- Faculty of Education
- Faculty of Engineering
- Faculty of Art, Design, and Architecture
- Faculty of Law
- Faculty of Science
- Department of Economics
- Department of Psychology
- Department of Archaeology

GRADUATE PROGRAMS

The graduate programs are organized to provide an excellent training in basic and applied research areas of molecular biology and genetics. The main research activities of the department are on molecular genetics (genetic predisposition to cancer, tumor suppressor genes, gene-disease associations), molecular biology (regulation of transcription, differential expression), molecular cell biology (cell cycle, apoptosis, signal transduction), molecular virology (hepatitis B and hepatitis C viruses), structure-function relationship of proteins and new biotechnologies (recombinant proteins, monoclonal antibodies).
Master of Science in Molecular Biology and Genetics

Admission: Applicants are required to have a B.S. degree in molecular biology and genetics, biology, or a related field. Students with a B.S. degree in chemistry, chemical engineering, physics or a related field may also apply. However, such students may be requested to take several undergraduate courses in molecular biology and genetics to acquire necessary background in the field. All applicants must be fluent in written and oral English. Evaluation of applicants is based on ALES scores, past academic record, reference letters and their performance in the entrance examination given at Bilkent University at the end of Spring Semester each year. Applicants from foreign countries who cannot take ALES and entrance exam will be evaluated based on past academic record, reference letters and GRE scores. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements.)

Degree Requirements: In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The normal duration of M.S. study is 4 semesters. However, this duration may be extended for up to two more semesters subject to the approval of the Graduate Institute.

Doctor of Philosophy in Molecular Biology and Genetics

Admission: Applicants are required to have a M.S. degree in molecular biology and genetics, biology or a related field. Students with degrees such as M.D. or veterinary M.D. may also apply to the program. All applicants must be fluent in written and oral English. Evaluation of applicants is based on ALES scores, past academic record, reference letters and their performance in the entrance examination given at Bilkent University at the end of Spring Semester each year. Applicants from foreign countries who cannot take ALES and entrance exam will be evaluated based on past academic record, reference letters and GRE scores. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements.)

Degree Requirements: Twenty-four credit units of course work beyond the M.S. level or forty-eight credit units of course work beyond the B.S. level is required. The Ph.D. candidate is expected to pass an English examination (KPDS for Turkish citizens, TOEFL for foreign students), a qualifying examination and thesis proposal. Preparing and defending a dissertation based on original research is the essence of the program. The normal duration of Ph.D. study is 8 semesters for students with M.S. degree and 10 semesters for students with B.S. degree. However, subject to the approval of the Graduate Institute, these durations may be extended for up to two more semesters.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

MBG 101  Biology I
Molecules of the life, central dogma (DNA, RNA, protein), organization of the cell, embryogenesis and genetic diseases. Credit units: 4 ECTS Credit Units: 7. Aut (A. Güre)

MBG 102  Biology II
Introduction to cell division and differentiation introduction to the molecular biology methods, recombinant DNA technology, biotechnology. (Laboratory work is obligatory) Credit units: 4 ECTS Credit Units: 7, Prerequisite: MBG 101. Spr (K. C. Akçaali)

MBG 105  Principles of Biology
This course is for students from the Physics, Chemistry and Mathematics Departments. Molecules of life, organization of the cell, chromosomes and cell division, patterns of inheritance, evolution, recombinant DNA technology, genetic diseases. Credit units: 3 ECTS Credit Units: 5. Aut (Staff)

MBG 110  Introduction to Modern Biology
This course is for students from Faculty of Engineering. Molecules of life, organization of the cell, chromosomes and cell division, genetics, molecular genetics, recombinant DNA technology, genetic diseases, evolution, animal development, biotechnology. Credit units: 3 ECTS Credit Units: 6. Aut (E. Erbay, T. Özçelik) Spr (R. Çetin-Atalay, E. Erbay, İ. Gürsel)
**MBG 209  Principles of Genetics**
Transmission genetics, gene and chromosomal mutations, linkage and mapping, molecular genetic applications, population and quantitative genetics, molecular evolution, model organism genomics and bioinformatics.  
*Credit units: 3 ECTS Credit Units: None. Aut (Ö. Konu)*

**MBG 210  Genetics**
Mendelian genetics, chromosome theory of inheritance, linkage, genetic mapping in eukaryotes and prokaryotes, chromosomal mutations, gene mutations, molecular genetics, population genetics, quantitative genetics, molecular evolution.  
*Credit units: 4 ECTS Credit Units: 7. Aut (Ö. Konu)*

**MBG 222  Fundamentals of Molecular Genetics**
Molecular biology of gene regulation, fundamentals of DNA repair and recombination, detailed analysis of transposition and recombination in eukaryotes, molecular mechanisms of eukaryotic and prokaryotic protein synthesis.  
*Credit units: 3 ECTS Credit Units: 6. Spr (U. H. Tazebay)*

**MBG 223  Molecular Genetics**
Mechanism of protein synthesis, usage of the genetic code, protein localization, the structure of genetic material, regulation of transcription, recombination, repair, and transposition in bacteria, an introduction to gene rearrangements. (Laboratory work is obligatory)  
*Credit units: 4 ECTS Credit Units: 7. Spr (U. H. Tazebay)*

**MBG 231  Techniques Used in Molecular and Cellular Biology**
Basic techniques in molecular biology and genetics, animal models for gene function analysis, PCR based technologies, cloning techniques, high-throughput genome and gene expression analysis methods, cell biology techniques.  
*Credit units: 2 ECTS Credit Units: None.*

**MBG 301  Molecular Biology of the Cell I**
Cell signaling, cell cycle regulation, cell functions, adhesion and extracellular matrix, techniques used in cell biology; transfections, immunoblots, immunoprecipitation, immunofluorescence.  
*Credit units: 3 ECTS Credit Units: 6. Aut (A. Güre)*

**MBG 302  Molecular Biology of the Cell II**
Germ cells and fertilization, early embryonic development, stem cells, generation and maintenance of differentiated cells, immune cells, cancer cells, specialized techniques in cell biology, light and fluorescent microscopy, flow cytometry, techniques used for cell proliferation and apoptosis studies. (Laboratory work is obligatory)  
*MBG 301, consent of the instructor.*  
*Credit units: 4 ECTS Credit Units: 6. Aut (I. Gürsel)*

**MBG 309  Principles of Biochemistry**
Introductory biochemistry, bioenergetics, protein structure, protein purification and characterization, enzymatic activity, kinetics, allosteric, vitamins and coenzymes.  
*Credit units: 3 ECTS Credit Units: 6. Aut (R. Çetin-Atalay)*

**MBG 311  Biochemistry I**
Introduction to intermediary metabolism, polysaccharides, energy storage, lipids and membrane structure, nucleic acid structure and nucleotide metabolism.  
*Credit units: 3 ECTS Credit Units: 6. Prerequisite: consent of the instructor. Spr (E. Erbay)*

**MBG 312  Biochemistry II**
Homeostatic and biological control mechanisms in major body systems, including skeletal system, muscle system, nervous system, circulatory system, respiratory system, digestive system, excretory system, reproductive system and immune system.  
*Credit units: 3 ECTS Credit Units: 6. Spr (K. C. Akçalı)*

**MBG 324  Molecular Biology of the Gene**
Molecular biology of eukaryotes including genome organization and chromosome structure, gene structure, protein structure and synthesis, regulation of gene expression, RNA splicing and processing, catalytic RNA. (Laboratory work is obligatory)  
*Credit units: 4 ECTS Credit Units: 6. Aut (I. Yülug)*

**MBG 326  Introduction to Bioinformatics**
Computer use in molecular biology networks, access to online databases, structure comparison, structure prediction. Homology based protein 3-D structure modeling.  
*Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Konu)*

**MBG 338  Microbiology**
Structure, growth and physiology of microorganisms, classification of bacteria, diverse activities of bacteria, viruses, microbial pathogenicity, exploitation of microorganisms by man.  
*Credit units: 4 ECTS Credit Units: 6. Spr (U. H. Tazebay)*
MBG 391  Summer Practice
A project on a special topic in an area of biology to be carried out by the student under the supervision of a
faculty member, at the department or another institution. Credit units: None ECTS Credit Units: None. Aut (I. Yuluğ) Spr (I. Yuluğ)

MBG 415  Genetic Engineering and Biotechnology
Use of higher eukaryotes (plants and animals) in biotechnology, transgenic animals as models of human disease,
production of bioactive macromolecules in transgenic animals, production, purification and industrial use of
recombinant proteins. Credit units: 3 ECTS Credit Units: 6.

MBG 416  Science and Ethics
Scientific concepts, history of science, the birth of modern science, science and society, ethics of science. Credit
units: 3 ECTS Credit Units: 6. Aut (U. H. Tazebay)

MBG 417  Genomics
Structural organisations of human, D. melanogaster, C. elegans, A. thaliana, and yeast genomes. Gene ortho-
thologs, repetitive sequences, evolutionary aspects, functional genomics approaches and methodologies. Credit
units: 4 ECTS Credit Units: 6. Aut (Staff) Spr (Ö. Konu)

MBG 451  Concepts in Biology I
This course is for students from Faculty of Education. Molecules of life, central dogma (DNA, RNA, protein)
organization of the cell, embryogenesis, genetic diseases, evolution. Credit units: 3 ECTS Credit Units: 6.

MBG 452  Practical Biology
This course is for students from faculty of Education. Practical techniques for the biology laboratory, biological
experiments, and problem solving in biology. The course involves one hour of discussion and four hours of
laboratory work per week. The students carry out practical projects. Credit units: 3 ECTS Credit Units: 6.

MBG 470  Immunology
Adaptive and innate immunity, humoral and cell mediated immunity, the lymphoid system, antibody structure and
function, antigen-antibody interactions, the antibody response, immunological tolerance, immunity to diseases,
complements and hypersensitivity, cytokines, major histocompatibility complex. Credit units: 3 ECTS Credit Units: 6.

MBG 471  Membrane Biology
Membrane composition and structure in living organisms, mechanisms of membrane transport, structure-function
relationships in transporter proteins, post-translational and transcriptional regulation of transporters in bacteria,
in lower eukaryotes, and in man. Credit units: 3 ECTS Credit Units: 6.

MBG 472  Introduction to Stem Cells
Basic biology of embryonic, adult and cancer stem cells. Molecular mechanisms of self renewal, differentiation
and plasticity. Reproductive and therapeutic cloning. Epigenetic changes associated with stem cells. Use of
stem cells in cell based therapies and its ethical considerations. Credit units: 3 ECTS Credit Units: 6. Aut (K. C. Akçalı)

MBG 473  Biomolecules, Biomaterials and Bioprocesses
Utilization of biological macromolecules as a biomaterial, principles applied to harness these biological complex
molecules in biology, medicine and pharmaceutical biotechnology discussion of the selected cutting edge re-
search papers. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Gürsel)

MBG 474  Introduction to Computational Biology
Introduction to computational Biology: Methods and exercises in phylogenetics, microarray data analysis, sys-
tems biology. Credit units: 3 ECTS Credit Units: 6.

MBG 475  Molecular Basis of Evolution
Darwin and the origin of species, the mechanisms of molecular evolution, genomic evolution, variation in species,
genesis in populations, molecular phylogenetics, transiions and evolution of modern humans. Credit units: 3 ECTS
Credit Units: 6. Spr (R. Çetin-Atalay)

MBG 480  Cell Cycle and Apoptosis
Mechanisms and molecules regulating cell cycle and apoptotic cell death, roles of cell proliferation and apoptosis
in the development of multicellular organisms, aberrations of cell cycle and apoptosis regulation in cancer
development and degenerative diseases. Credit units: 3 ECTS Credit Units: 6.

MBG 481  Protein Chemistry
Introduction to protein structure and the principles of protein structure with examples of key proteins. Specific
examples of proteins to show how they fulfill a wide range of biological functions. In silico approaches to
determining and predicting protein structure. Credit units: 3 ECTS Credit Units: 6. Prerequisite: MBG 311, consent of the instructor.
**MBG 482 Computational Approaches to Biology**
Introduction to computational biology, sequence alignments, Dynamic Programming, Distance matrices, protein domain families, phylogenetics, secondary structure predictions, protein folding and structure prediction. **Credit units: 3 ECTS**

**MBG 483 Developmental Biology**
Embryonic development of Drosophila, zebrafish, chick, Xenopus and mouse. Manipulating gene expression during development. Analyzing gene function during development. Analyzing cell fate and tissue interactions in embryos. **Credit units: 3 ECTS**

**MBG 485 DNA Damage and Repair Mechanisms**
Homologous recombination and role of double strand breaks, base excision repair pathway, mismatch repair, nucleotide excision repair and links with transcription, DNA double strand break repair and V(D)J recombination, cellular responses to DNA damage. **Credit units: 3 ECTS**

**MBG 487 Special Techniques in Molecular Genetics**
Principles of specific methods used in the molecular genetics site-directed mutagenesis, phage display technology, cDNA selection, exon trapping, library making and screening. Discussions of selected research papers. (No lab session.) **Credit units: 3 ECTS**

**MBG 488 Introduction to Human Genetics**
Principles of human genetics, patterns of single gene inheritance, human molecular genetics, the human gene map, cytogenetics, the molecular and biochemical basis of genetic disease, genetic counseling, prenatal diagnosis. **Credit units: 3 ECTS**

**MBG 489 Genetics and Biology of Cancer**
Genetic changes in cancer, phenotype of cancer cells, oncogenes, tumor suppressor genes, hereditary cancers, cell cycle, apoptosis, senescence, DNA repair and cancer, multicellular interactions in cancer. **Credit units: 3 ECTS**

**MBG 491 Senior Project I**
A project on a specific topic in an area of molecular biology or genetics to be carried out by the student under the supervision of a faculty member. **Credit units: 3 ECTS**

**MBG 492 Senior Project II**
A project on a specific topic in an area of molecular biology or genetics to be carried out by the student under the supervision of a faculty member. **Credit units: 3 ECTS**

**MBG 502 Advanced Cellular Biology**
Cell structure and function, the cytoskeleton, intracellular compartments, vesicular trafficking, the cell-division cycle, cell junctions, cell adhesion, extracellular matrix and development. **Credit units: 3 ECTS**

**MBG 503 Advanced Molecular Biology**
Chromosomal DNA and its packaging, higher-order organization of chromosomes, replication, recombination, control of gene expression, signaling pathways, cell cycle. Obligatory for master students. **Credit units: 3 ECTS**

**MBG 505 Advanced Molecular Genetics**
Organization of the genome, Mendelian and non-Mendelian inheritance, mitochondrial genome, mutigene families and repetitive DNA, polymorphism and polymorphic markers, genetic mapping, physical mapping, models of studying gene structure and function. (Obligatory for master students) **Credit units: 3 ECTS**

**MBG 509 Special Topics in Molecular Biology I**
Current topics in molecular biology, comprehensive reading, critical evaluations of scientific references, seminar presentations and class participation. **Credit units: 3 ECTS**

**MBG 510 Special Topics in Molecular Biology II**
Current topics in molecular biology, comprehensive reading, critical evaluations of scientific references, seminar presentations and class participation. **Credit units: 3 ECTS**

**MBG 511 Basic Protocols in Molecular Biology**
Basic techniques widely used in molecular biology and genetics will be discussed (Obligatory for master's degree students). **Credit units: 3 ECTS**
MBG 513  Bioinformatics
Commonly used databases in molecular biology, genetics and related fields, homology search for genes and proteins, primer design, molecular operations, restriction mapping, structure prediction. **Credit units: 3 ECTS**
**Credit Units: 6. Spr (Ö. Konu)**

MBG 514  Stem Cell Biology
The basic features of stem cell biology including concepts like self renewal, biological niches and differentiation. Derivation, manipulation, and differentiation of embryonic, adult, cancer stem cells in both mice and humans. Reproductive and therapeutic cloning. Existing as well as potential clinical applications and ethic considerations of stem cell therapy. **Credit units: 3 ECTS Credit Units: 3.**

MBG 515  Principles of Protein Structure
Principles of protein structure, with examples of key proteins in their biological context. Discussions of selected research papers. **Credit units: 3 ECTS**
**Credit Units: 3.**

MBG 516  Biomolecules, Biomaterials and Bioprocesses
Basic biomolecules (from simple molecules such as amino acids to macro molecules such as proteins and DNA) and principles of biology from material science perspective. This course must be a core course given very early in the curriculum. **Credit units: 3 ECTS Credit Units: None. Aut (I. Gürel)**

MBG 517  Computational Biology
Sequence analysis, comparative genomics and phylogenetics, expression analysis, and systems biology. **Credit units: 3 ECTS Credit Units: None.**

MBG 522  Recent Developments in Cellular Biology
Recent developments in cellular structure and function, intracellular trafficking, cytoskeleton, cell adhesion, extracellular matrix and development. Discussion on the related selected articles from leading journals. **Credit units: 3 ECTS Credit Units: 6.**

MBG 523  Recent Developments in Molecular Biology
Latest developments and emerging issues in molecular biology including nucleosome and chromatin structure, RNA polymerase II Holoenzyme and its roles, transcription and regulation, chromatin modifying and remodeling complexes, tissue specific gene expression, DNA replication, repair and recombination, cell cycle and regulation. Discussion on the selected articles. **Credit units: 3 ECTS Credit Units: 6. Spr (I. Yulug)**

MBG 524  Seminars in Molecular Biology
Recent advances in the field of Molecular Biology will be discussed. Newly emerging concepts in Molecular Biology will be introduced to and discussed with students. Class discussions on recent articles published in high impact journals in the field. **Credit units: None ECTS Credit Units: None. Spr (T. Özçelik)**

MBG 599  Master's Thesis
**Credit units: None ECTS Credit Units: 24. Aut (R. Çetin-Atalay) Spr (R. Çetin-Atalay)**

MBG 601  Human Genetics
This course is offered every two years alternating with MBG 603 and MBG 615. Molecular genetics of human diseases, genetic basis of cancer, DNA repair and deficiencies will be among the topics to be discussed. **Credit units: 3 ECTS Credit Units: 6. Spr (T. Özçelik)**

MBG 602  Molecular and Cellular Immunology
Basic elements of the immune system, molecular biology of antigen recognition, B and T lymphocytes, cellular and genetic basis of immunity, regulation and development of immune system, immune system deficiencies in humans, vaccination and adaptive immunotherapy. **Credit units: 3 ECTS Credit Units: 6. Aut (I. Gürel)**

MBG 603  Molecular Bases of Cancer
Cancer as a multi gene disease, oncogenes, tumor suppressor genes, mutator genes, gene therapy of cancer, germ-line and somatic mutations and cancer, genes involved in abnormal proliferation and metastatic behavior of cancer cells, immune response to cancer, familial cancers, virus-induced cancers. **Credit units: 3 ECTS Credit Units: 6. Aut (M. Öztürk)**

MBG 607  Gene Therapy
Current topics in human somatic cell gene therapy, viral and nonviral gene transfer techniques, gene therapy applications in hereditary and acquired diseases, ethical issues in genetic modification of humans. **Credit units: 3 ECTS Credit Units: 6.**

MBG 608  Principles of Gene Expression
Mechanisms of transcription, chromatin modifying and remodeling complexes, regulation of tissue specific gene expression, consequences of gene expression deregulation. **Credit units: 3 ECTS Credit Units: 6. Spr (A. Gürel)**
MBG 612  Special Topics in Genetics I  
Current topics in molecular genetics, comprehensive reading, critical evaluation of scientific literatures seminar presentations and class participation.  
Credit units: 3  ECTS Credit Units: 6.  Aut (U. H. Tazebay)

MBG 613  Special Topics in Genetics II  
Current topics in molecular genetics, comprehensive reading, critical evaluation of scientific literatures seminar presentations and class participation.  
Credit units: 3  ECTS Credit Units: 6.  Spr (U. H. Tazebay)

MBG 614  Advanced Protocols in Molecular Biology  
Techniques widely used in molecular biology and genetics. (Obligatory for master’s degree students who did not take MBG 511).  
Credit units: 3  ECTS Credit Units: 6.

MBG 615  Recent Advances in Molecular Biology  
Latest developments and emerging issues on molecular biology including cancer, cell-cell interactions, extracellular matrix, signal transduction, chromatin formation. Discussions on recent techniques with active student participation.  
Credit units: 3  ECTS Credit Units: 6.

MBG 616  Experimental Molecular Biology and Genetics I  
An introduction to basic molecular biology and genetics techniques. The student spends a half semester with one of the research groups and participates in some aspects of the research being pursued by the faculty member.  
Credit units: 3  ECTS Credit Units: 6.  Aut (T. Özçelik)

MBG 617  Experimental Molecular Biology and Genetics II  
An introduction to advanced molecular biology and genetics techniques. The student spends a half semester with one of the research groups and participates in some aspects of the research being pursued by the faculty member.  
Credit units: 3  ECTS Credit Units: 6.

MBG 618  Advanced Developmental Biology  
The concepts of development in a variety of organisms. Molecular mechanisms of embryonic development in model organisms. Early development, developmental abnormalities. The correlation between the expression and function of gene and cell fate and tissue interactions. Discussion of classic and current research articles.  
Credit units: 3  ECTS Credit Units: 6.

MBG 619  Advanced Membrane Biology  
Molecular structures of biological membranes, translocation and topogenesis of proteins in cell membrane with particular emphasis on translocation of solute transporters, structure-function relationships in membrane transporters, regulatory mechanisms controlling transporter expression and function in prokaryotes and in eukaryotes.  
Credit units: 3  ECTS Credit Units: 6.

MBG 620  Cell Proliferation and Death  
Molecular mechanisms that govern cell proliferation and programmed cell death, role of both processes in the development and homeostasis of multicellular organisms, aberrations of cell proliferation and apoptosis in diseases including cancer and degenerative diseases.  
Credit units: 3  ECTS Credit Units: 6.

MBG 622  Recent Developments in Immunology  
Signaling pathways involved in the ontogenesis of immune effector cells; Activation of T and B lymphocytes; Regulation of adaptive immunity by the innate immune system; Immune evasion of virally infected and tumoral cells; Immunity in diseases; Therapeutic approaches based on the manipulation of immune system. Discussions through the articles published in the leading journals of the field.  
Credit units: 3  ECTS Credit Units: None.

MBG 623  Seminars in Molecular Genetics I  
The course will be based on class presentations and discussions of novel concepts in Molecular Genetics. Articles selected by the staff will be introduced and discussed with the students in the form of paper presentations and seminars. Students will be encouraged to carry out a critical analysis of novel as well as milestone “classical” articles in the field of Molecular Genetics.  
Credit units: None  ECTS Credit Units: None.  Spr (T. Özçelik)

MBG 624  Seminars in Molecular Genetics II  
The course will be based on class presentations and discussions of novel concepts in Molecular Genetics. Articles selected by the staff will be introduced and discussed with the students in the form of paper presentations and seminars. Students will be encouraged to carry out a critical analysis of novel as well as milestone “classical” articles in the field of Molecular Genetics.  
Credit units: None  ECTS Credit Units: None.

MBG 699  Ph.D. Dissertation  
Credit units: None  ECTS Credit Units: 24.  Aut (R. Çetin-Atalay) Spr (R. Çetin-Atalay)
DEPARTMENT OF PHYSICS

A. Ercelen (Chair), A. Aydinli, M. Bayindir, C. Bulutay, S. Ciraci, H. V. Demir, O. Gulseren, T. Hakooglu, F. O. Ilday, C. Kocabas, M. O. Oktel, E. Ozbay, B. Tanatar, C. Yalabik.

The Department of Physics offers courses that lead to B.S., M.S., and Ph.D. degrees. The department facilities compound semiconductor research and technology laboratory consisting of Class 100 and Class 10 000 clean rooms housing a mask aligner, SEM, PECVD, RIE, UHV evaporator, magnetron sputterer, RTP, I-V, C-V and microwave measurement setups. Experimental research areas include STM, PL and Raman Spectroscopy and III-V micro and optoelectronic device technologies. Research areas include the study of condensed matter physics, optoelectronic devices, nanoscience, lasers and photonics, statistical physics, material science, semiconductor physics, computational physics, ultrafast optics, surface physics, mesoscopic physics.

UNDERGRADUATE PROGRAM

The undergraduate program is structured with the assumption that the student will continue his or her education towards an M.S. and a Ph.D. degree in Physics. The Department therefore admits a small number of highly qualified students every year. The program enables the student to attain a basic background in all areas of physics and at the same time provides a solid background in the area of condensed matter physics. A number of elective courses are offered for students whose interests may develop in other areas.

### TECHNICAL ELECTIVES

Any 300 or higher level CHEM, CS, EE, IE, MATH, or PHYS course or with the consent of the advisor.

### MINOR PROGRAM

The minor program is designed to attract bright students from other majors and provide them with a strong background in the main concepts that are usually found in a physics undergraduate curriculum. An advantage of establishing such a program is to have successful students from other departments be involved in our undergraduate classes and to raise the competition among the students. As a further benefit, physics minor graduates will help the department's interdisciplinary research by acting as a bridge to other departments in the university.
Prerequisite Courses:
PHYS 101 General Physics I
PHYS 102 General Physics II
MATH 101 Calculus I
MATH 102 Calculus II

Open to Students from All Departments

GRADUATE PROGRAM

The graduate program aims to develop students into scientists who can pursue original and creative research activities. This program is an important part of the research activity which aims to produce significant scientific output on an international level. The graduate program emphasizes research in various fields of condensed matter physics, in relation to the rapidly developing high technology fields. Presently, research is in progress in the theoretical and experimental study of tunneling, physics of electrons in lower dimensionalities, nanoscience, statistical mechanics, properties of new materials, fabrication and theoretical analysis of new devices, computational physics, ultrafast optics, optoelectronic devices.

Master of Science in Physics

Admission: Applicants are required to have a B.S. degree in Physics or in related fields of science and engineering. Evaluation of applicants is based on their ALES scores, past academic record, reference letters and the interview at Bilkent University. Applicants who cannot take the ALES examination will be evaluated based on GRE scores. Satisfactory knowledge of English is required. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)

Degree Requirements: In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The normal duration of M.S. study is 4 semesters. However, this duration may be extended for up to two more semesters subject to the approval of the Graduate Institute.

Doctor of Philosophy in Physics

Admission: Applicants must have an M.S. degree in Physics or a closely related field and must take the graduate program entrance examination at Bilkent, given at the end of Spring Semester each year. Applicants who cannot take the entrance examination at Bilkent, will be evaluated based on GRE scores. Satisfactory knowledge of English is required. (Also refer to the “Graduate Admissions” section in the introduction of this catalog for the general graduate admission requirements.)
Degree Requirements: Twenty-four credit units of course work beyond the M.S. level or forty-eight credits of course work beyond the B.S. level is required. The Ph.D. candidate is expected to pass an English examination, a qualifying examination and thesis proposal. Preparing and defending a dissertation based on original research is the essence of the program. The normal duration of Ph.D. study is 8 semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, subject to the approval of the Graduate Institute, these durations may be extended for up to two more semesters.

COURSE DESCRIPTIONS

UNDERGRADUATE COURSES

PHYS 101 General Physics I
Standards and units; vectors and coordinate systems; kinematics; dynamics; work, energy and power; conservation of energy; dynamics of system of particles; collisions; rotational kinematics and dynamics; equilibrium of rigid bodies; oscillations. Credit units: 4 ECTS Credit Units: 6. Aut (A. Aydını, M. Bayındır, A. Erçelegi, C. Kocabağ, E. Özbay) Spr (M. Bayındır, S. Çiraci)

PHYS 102 General Physics II
Charge and matter; electric field and Gauss' law; DC circuits; magnetic field; Ampere's law; Faraday's law; inductance; magnetic properties of matter; Maxwell's equations. Credit units: 4 ECTS Credit Units: 6, Prerequisite: MATH 101 or MATH 111 or MATH 113 or PHYS 101. Aut (S. Çiraci, A. Erçelegi) Spr (A. Aydını, H. V. Demir, F. Ö. İlday, B. Tanatar)

PHYS 105 Engineering Physics I
Vectors and coordinate systems; kinematics; dynamics; work, energy and power; conservation of energy; dynamics of system of particles; collisions; rotational kinematics and dynamics; equilibrium of rigid bodies; oscillations; wave phenomena; gravitation; fluid mechanics; fundamental concepts in thermodynamics. Credit units: 4 ECTS Credit Units: 8. Aut (S. Çiraci) Spr (Staff)

PHYS 106 Engineering Physics II
Charge and matter; electric field and Gauss' law; DC circuits; magnetic field; Ampere's law; Faraday's law; inductance; magnetic properties of matter; Maxwell's equations; electromagnetic waves; geometric optics; interference; diffraction; introductory topics in modern physics. Credit units: 4 ECTS Credit Units: 8. Spr (S. Çiraci)

PHYS 107 Basic Physics I
The course aims to present the basic concepts and laws of mechanics at the level where the relevant mathematics does not require a priori knowledge of calculus. The topics studied include: vectors; translational and rotational kinematics and dynamics of particles and systems; work and energy; collisions; harmonic oscillations. Credit units: 4 ECTS Credit Units: 6. Aut (B. Tanatar)

PHYS 108 Basic Physics II
The course aims to present the basic concepts and laws of electricity and magnetism at the level where the relevant mathematics does not require a priori knowledge of calculus. The topics studied include: charge and matter; Coulomb's law; electric field and potential; DC circuits; magnetic field; Ampere's and Faraday's laws. Credit units: 4 ECTS Credit Units: 6. Spr (Staff)

PHYS 111 Mechanics
Vectors and coordinate systems; kinematics, dynamics; work and energy; dynamics of system of particles; conservation of energy and momentum, collisions; rotational kinematics and dynamics; equilibrium of rigid bodies; oscillations; gravitation; waves; fluid mechanics; thermodynamics. Credit units: 5 ECTS Credit Units: 7. Aut (M. Ö. Öktel)

PHYS 112 Electricity and Magnetism
Charge and matter; electric field and Gauss' law; DC circuits; magnetic field; Ampere's law; Faraday's law; inductance; magnetic properties of matter; Maxwell's equations; electromagnetic waves; optics. Credit units: 5 ECTS Credit Units: 7, Prerequisite: MATH 113. Spr (M. Ö. Öktel)

PHYS 117 Basic Physics: Mechanics
The course aims to present the basic concepts and laws of mechanics at the level where the relevant mathematics does not require a priori knowledge of calculus. The topics studied include: vectors; translational and rotational kinematics and dynamics of particles and systems; work and energy; collisions; harmonic oscillations. Credit units: 3 ECTS Credit Units: 6. Aut (B. Tanatar)
PHYS 118  Basic Physics II
The course aims to present the basic concepts and laws of electricity and magnetism at the level where the relevant mathematics does not require a priori knowledge of calculus. The topics studied include: charge and matter; Coulomb's law; electric field and potential; DC circuits; magnetic field; Ampere's and Faraday's laws. Credit units: 3 ECTS Credit Units: 4. Spr (Staff)

PHYS 120  Orientation for Physics Majors
Introduction to the different aspects of the "physics department" for first year physics majors. Students will be introduced to the department and its members. Faculty members and students meet once a week for discussions and presentations to introduce a variety of subjects areas. Students are expected to become familiar with their prospective academic life as a physicist. Credit units: 1 ECTS Credit Units: 2. Aut (A. Erçelebi)

PHYS 122  Orientation for Physics Majors II
Introduction to various aspects of the "Physics Department" for first year physics majors. Faculty members and students meet once a week for discussion and presentations; students are expected to become familiar with their prospective academic life as a physicist. Credit units: 1 ECTS Credit Units: 3. Spr (A. Erçelebi)

PHYS 200  Physics for Poets
This course aims to present basic ideas of modern science to non-science majors with very little background in mathematics and physics. Scientific objectivity, science of mechanics, Newton's laws, electricity and magnetism, waves, special and general relativity, cosmology, atoms, particles and waves, uncertainty principle, quantum theory, fundamental constituents of matter, forces of nature. Credit units: 3 ECTS Credit Units: 5. Spr (M. Bayındır)

PHYS 205  Classical Mechanics I
Elements of Newtonian mechanics; motion of particle; motion of system of particles; motion of rigid body; gravitation; central force problems; special theory of relativity. Credit units: 3 ECTS Credit Units: 6. Aut (F. Ö. Ilday)

PHYS 206  Classical Mechanics II
Principles of least action; Lagrange's equations of motion; Hamilton's equations of motion; theory of small vibrations. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHYS 205. Spr (T. Hakioğlu)

PHYS 226  Quantum Physics
Old quantum theory; elementary introduction to quantum physics; Schrödinger equation, uncertainty principle, correspondence principle; one dimensional problems; angular momentum; hydrogen atom. Credit units: 3 ECTS Credit Units: 6. Aut (O. Gülseren) Spr (O. Gülseren)

PHYS 230  Quantum Mechanics Laboratory
Field emission microscope; emission and absorption spectra; Balmer series of hydrogen; Zeeman effect; optical pumping; Frank-Hertz experiment; determination of Planck's constant; measurement of e/m; radioactive decay; scanning-tunneling microscopy. Credit units: 3 ECTS Credit Units: 6.

PHYS 243  Methods of Mathematical Physics
Vector analysis, Fourier analysis; Sturm-Liouville theory; orthogonal polynomials, special functions, complex analysis. Credit units: 4 ECTS Credit Units: 6. Prerequisite: MATH 114.

PHYS 244  Mathematical Methods of Physics I

PHYS 245  Mathematical Methods of Physics II
Special functions of mathematical physics, Hypergeometric functions, Integral transforms, Integral equations, Variational theory. Credit units: 3 ECTS Credit Units: 6. Aut (T. Hakioğlu)

PHYS 315  Electromagnetic Theory I
Electrostatics; Coulomb's and Gauss' laws, the scalar potential. Solutions to the Laplace equation in rectangular, spherical and cylindrical coordinate systems with various boundary conditions. Poisson's equation; energy in the electric field; electrostatics in materials; capacitance. Magnetostatics: Biot-Savart and Ampere's laws, the field vector potential; energy in the magnetic field; magnetostatics of materials; Faraday's law; inductance. Credit units: 3 ECTS Credit Units: 6. Aut (A. Aydınlı)

PHYS 316  Electromagnetic Theory II
Maxwell's equations; electromagnetic waves; reflections from boundaries; propagation in waveguides; radiation from accelerating charges; Lorentz transformations of electric and magnetic fields. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHYS 315 or consent of the instructor. Spr (A. Aydınlı)
PHYS 325 Quantum Mechanics I
Wave packets and uncertainty; the postulates of quantum mechanics; eigenfunctions and eigenvalues; simple problems in one dimension; general structure of wave mechanics; operator methods in quantum mechanics; harmonic oscillator; path integral formulation of quantum mechanics; systems of many degrees of freedom; symmetry; rotational invariance and angular momentum; hydrogen atom. Credit units: 3 ECTS Credit Units: 7. Aut (M. Ö. Oktel)

PHYS 326 Quantum Mechanics II
Spin; addition of angular momenta; approximation methods in quantum mechanics; atoms and molecules; scattering theory; quantum theory of electromagnetic radiation. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHYS 325. Spr (M. Ö. Oktel)

PHYS 327 Quantum Mechanics
Wave function, time-independent Schrödinger equation, Formalism, Quantum Mechanics in three dimensions, identical particles, spin. Credit units: 3 ECTS Credit Units: None. Prerequisite: MATH 220.

PHYS 328 Statistical Physics
The laws of thermodynamics; applications of thermodynamics; basic probability concepts; elementary kinetic theory; classical microcanonical, canonical and grand canonical ensembles; classical ideal gas; equipartition of energy; quantum mechanical ensembles; ideal Fermi and Bose systems; black body radiation, phonons, the electron gas; magnetism; introductory nonequilibrium statistical physics. Credit units: 3 ECTS Credit Units: 6. Spr (B. Tanatar)

PHYS 371 Numerical Methods in Physics
Solutions to linear systems of equations; roots of polynomials and other nonlinear functions; statistical applications; determinants, eigenvalues, and eigenvectors, solutions to differential equations; applications of FFT; utilization of scientific software packages. (Emphasis will be placed on physical applications.) Credit units: 3 ECTS Credit Units: 6. Aut (M. Bayındır)

PHYS 372 Methods in Computational Physics
Advanced topics in numerical to scientific problems. This course will emphasize student project work. Credit units: 3 ECTS Credit Units: 6.

PHYS 415 Optics
Free and forced oscillations; traveling waves; principle of superposition; modulations; pulses and wave packets; electromagnetic waves; reflection, refraction, interference, diffraction and polarization; interferometry; holography. Credit units: 4 ECTS Credit Units: 6. Aut (F. Ö. İlday)

PHYS 420 Nanoscience and Nanotechnology I
General survey of nanoscience and nanotechnology, Atomic scale characterization and processes: Scanning probe microscopies: STM/AFM and atomic manipulation, Nanofabrication, Carbon Nanotubes, Nanowires, Transport in nanostructures, Nanoelectronics, Nanomagnetism, Spintronics. Credit units: 3 ECTS Credit Units: None.

PHYS 421 Nanoscience and Nanotechnology II
Electronic structure of nanostructures, carbon nanotubes, nanowires, Transport in nanostructures, landauer-Büttiker formalism, nanoelectronics molecular electronics, nanodevices, nanomagnetism, spintronics. Credit units: 3 ECTS Credit Units: None.

PHYS 438 Atomic and Molecular Physics
Transition properties and the selection rules for atoms; many electron atoms; Born-Oppenheimer approximation; molecular structure: electronic, vibrational, and rotational energies of molecules; general methods for calculations; spectroscopic methods. Credit units: 3 ECTS Credit Units: 6.

PHYS 440 Introduction to Quantum Transport Phenomena in Solids
Equilibrium and non-equilibrium states in ultrasmall systems; fluctuation dissipation theorem; Kubo formula for linear response; electron-phonon interaction; electron conduction in a magnetic field; quantum localization and metal-insulator transition; Aharonov-Bohm effect; mesoscopic space and charge quantization effects; macroscopic quantum phenomena; Coulomb blockade of tunneling. Credit units: 3 ECTS Credit Units: 6.

PHYS 442 Introduction to Nonlinear and Quantum Optics
Classical electromagnetic field; classical nonlinear optics; continuous waves approach in field interaction theory; elements of laser theory; optical bistability; saturation and modulation spectroscopy; time-dependent phenomena
in lasers; coherent transients; quantized electromagnetic field; essentially quantum effects; system-reservoir interactions; quantum theory of laser. Credit units: 3 ECTS Credit Units: 6.

**PHYS 445 Condensed Matter Physics I**
Crystal diffraction; crystal binding; phonons and lattice vibrations; thermal, acoustic and optical properties; free electron model; energy bands, electron-phonon interactions; semiconductors; transport properties. Credit units: 3 ECTS Credit Units: 6. Aut (O. Gülseren)

**PHYS 446 Condensed Matter Physics II**
Dielectric properties; diamagnetism and paramagnetism; ferromagnetism and anti-ferromagnetism; magnetic resonance; electron-phonon interactions; super-conductivity; optical properties. Credit units: 3 ECTS Credit Units: 6. Spr (O. Gülseren)

**PHYS 447 Optical Properties of Solids**
Macroscopic theory; fundamental theory with emphasis on the relationship between electronic structure and optical properties of solids. Representative semiconductors, insulators and metals; impurities and defects in solids; surface and interface states; optical properties of quantum well structures; photoluminescence. Credit units: 3 ECTS Credit Units: 6.

**PHYS 448 Magnetic Properties of Solids**
Theory of magnetism; diamagnetic and paramagnetic behavior of solids; ferromagnetic, antiferromagnetic, and ferromagnetic solids; magnetic properties under the alternating field. Credit units: 3 ECTS Credit Units: 6.

**PHYS 449 Group Theory**
Abstract group theory; theory of group representations; physical applications of group theory; full rotation groups and angular momentum; applications in molecular and solid state physics. Credit units: 3 ECTS Credit Units: 6.

**PHYS 451 Introduction to Many Body Theory**
Interacting systems; Green’s function of the single particle, Schrödinger equation; second quantization; quasiparticles; many-body Green’s functions; self-energy and perturbation series; diagrammatic methods; temperature-dependent Green’s function. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHYS 326 or consent of the instructor.

**PHYS 452 Elementary Excitations in Solids**
Interacting electron gas; Plasmons; electron-hole interaction and excitons; phonons; spin waves and magnons; interaction processes; transport phenomena; virtual phonons and superconductivity; interaction with photons; thermal properties. Credit units: 3 ECTS Credit Units: 6.

**PHYS 453 Nuclear and Particle Physics**
Introduction to subatomic particles; properties of nuclei and nucleons; spin and magnetic moments; nuclear reactions; radioactivity; alpha and beta decays; nucleon interactions and nucleon scattering at low energies; nuclear models; elementary particles. Credit units: 3 ECTS Credit Units: 6.

**PHYS 455 Special Topics in Theoretical Physics**

**PHYS 465 Semiconductor Device Physics**

**PHYS 466 Quantum Electronics**
Propagation of optical beams; optical resonators; interaction of radiation with matter; laser oscillations; specific laser systems; Q-switching and mode-locking; laser amplifiers; noise and modulation in lasers; nonlinear optics. Credit units: 3 ECTS Credit Units: 6.
PHYS 477 Ultrafast and Non Linear Optics
General introduction to the field of ultrafast optics and nonlinear optics. Nonlinear and dispersive pulse propagation, optical solutions, laser dynamics, mode-locking, ultrafast lasers, commonly used nonlinear optical processes. Credit units: 3 ECTS Credit Units: 6.

PHYS 480 Field Theory
Classical field theory; canonical quantization; quantization of scalar, spinor and vector fields; interacting fields and perturbation theory; symmetries; Feynman graphs. Credit units: 3 ECTS Credit Units: 6.

PHYS 481 Theory of Relativity
The concepts of space and time in classical mechanics; relativity principle of Galilee; special relativity; Lorentz transformations; introductory concepts in general relativity; experimental evidence for special and general relativity. Credit units: 3 ECTS Credit Units: 6.

PHYS 482 Elementary Particles
Properties of elementary particles: spin, parity, hypercharge, etc.; interactions of elementary particles; group theory of subnuclear world, quark theory; experimental status of elementary particles. Credit units: 3 ECTS Credit Units: 6. Prerequisite: PHYS 326 or consent of the instructor.

PHYS 491 Senior Project I
A project on a specific topic in an area of physics to be carried out by the student under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Aut (A. Aydönlü)

PHYS 492 Senior Project II
A project on a specific topic in an area of physics to be carried out by the student under the supervision of a faculty member. Credit units: 3 ECTS Credit Units: 6. Spr (A. Aydönlü)

GRADUATE COURSES

PHYS 515 Advanced Optics
Photon and wave pictures of electromagnetic radiation. Huygen's principle, interference and interferometry, far-field and near-field diffraction, coherence, polarization, ray optics and optical resonators with ABCD matrix formalism. Selected modern topics such as fiber optics, optical communications, lasers, electro-optic modulation and nonlinear optics are discussed. Credit units: 3 ECTS Credit Units: 6. Aut (F. Ö. Ilday)

PHYS 520 Nanoscience and Nanotechnology I

PHYS 521 Nanoscience and Nanotechnology II

PHYS 531 Quantum Communications and Information Processing I
Quantization of electromagnetic field. Quantum states of light; coherence; squeezing quantum noise. Quantum information and entropy. Classical and quantum measurement of photons; Mandel's formula; teleportation. Entanglement in atomic systems; Bell's inequalities; Zeilinger protocol. Entanglement and quantum cryptography. Credit units: 3 ECTS Credit Units: 6.

PHYS 532 Quantum Communications and Information Processing II

PHYS 538 Light-Matter Interactions
One- and multi-electron atoms; atoms in classical static and AC fields; diatomic molecules; molecules in external fields; quantization of electromagnetic field; mode expansion of quantized light; coupling of two-level systems with light; electromagnetically-induced transparency; coherent control of matter with light. Credit units: 3 ECTS Credit Units: 6.

PHYS 541 Electromagnetic Theory I
DEPARTMENT OF PHYSICS

PHYS 542 Electromagnetic Theory II

PHYS 543 Advanced Quantum Mechanics I

PHYS 544 Advanced Quantum Mechanics II
Approximation methods, many particle systems, scattering theory, second quantization. Credit units: 3 ECTS Credit Units: 6. Spr (C. Yalabik)

PHYS 545 Solid State Theory I

PHYS 546 Solid State Theory II

PHYS 547 Advances in Condensed Matter Physics I

PHYS 550 Physics of Semiconductor Devices

PHYS 551 Analytical Mechanics

PHYS 552 Statistical Mechanics
Distribution functions; the concept of entropy, the H-function; classical statistical mechanics; ensembles, partition functions. The equipartition theorem. Quantum statistical mechanics; partition function, Fermi-Dirac and Bose-Einstein distributions. Credit units: 3 ECTS Credit Units: 6. Aut (B. Tanatar)

PHYS 553 Methods of Mathematical Physics I
Sturm-Liouville theory. Special functions: Gamma functions; Bessel functions; Legendre polynomials; integral transforms; integral equations; calculus of variations. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

PHYS 557 Special Topics in Mathematical Physics I
Selected/advanced topics of current interest relevant to condensed matter physics will be discussed. Credit units: 3 ECTS Credit Units: 6.

PHYS 559 Group Theory
Abstract group theory; theory of group representations; physical applications of group theory, full rotation groups and angular momentum; applications in molecular and solid state physics; permutation symmetry applications to many particle systems. Credit units: 3 ECTS Credit Units: None.

PHYS 561 Special Topics in Condensed Matter Physics I
Credit units: 3 ECTS Credit Units: 6. Spr (T. Hakioglu)

PHYS 562 Special Topics in Condensed Matter Physics II
Credit units: 3 ECTS Credit Units: 6. Spr (A. Aydlnl)

PHYS 565 Special Topics in Condensed Matter Physics III
Credit units: 3 ECTS Credit Units: 6.

PHYS 567 Advanced Optoelectronic Innovative Designs
Credit units: 3 ECTS Credit Units: None.
PHYS 571  Special Topics in Applied Physics I  
Nonlinear Optics: Linear and nonlinear polarization, Maxwell's constitutive and wave equations, harmonic and anharmonic oscillator, second harmonic generation, optical parametric oscillation, spontaneous and stimulated raman scattering, two photon absorption, coherent anti stokes raman scattering, degenerate four wave mixing, brillouin scattering, absorption. Credit units: 3 ECTS Credit Units: 6.

PHYS 572  Special Topics in Applied Physics II  

PHYS 573  Special Topics in Applied Physics III  

PHYS 574  Special Topics in Applied Physics IV: Optoelectronics and Integrated Optics  
Optoelectronics and Integrated Optics wave equation, total internal reflection, phase shift upon reflection, planar slab waveguides, dispersion in waveguides, graded index waveguides and dispersion step index circular waveguides and optical fibers, nonlinear effects in waveguides, rectangular waveguides, numerical methods, coupled mode theory and applications gratings in waveguides, planar lightwave circuits; NxN star coupler, arrayed waveguide grating, A/D multiplexer. Credit units: 3 ECTS Credit Units: 6.

PHYS 577  Ultrafast and Non Linear Optics  
General introduction to the field of ultrafast optics and nonlinear optics. Nonlinear and dispersive pulse propagation, optical solutions, laser dynamics, mode-locking, ultrafast lasers, commonly used nonlinear optical processes. Credit units: 3 ECTS Credit Units: None.

PHYS 578  Nonlinear Dynamics and Chaos  
Introduction to nonlinear dynamics, with applications to physics, optics, engineering, biology, and chemistry. Emphasizes analytical methods, numerical techniques, and geometric thinking. Topics to be discussed include one-dimensional systems, bifurcations, synchronization, nonlinear oscillators, discrete maps, period doubling, fractals, strange attractors and chaos. Credit units: 3 ECTS Credit Units: None.

PHYS 580  Experimental Methods in Applied Physics  
Spr (C. Kocabas)  

PHYS 588  Theoretical and Experimental Foundations of Nanophotonics  
Nanoscale processes and devices and their applications for manipulating light on the nanoscale. Maxwell's equations, light-matter interaction, dispersion, EM properties of nanostructures, basic concepts of photonic crystals, integrated photonic circuits, Photonic crystal fibers, superprism effects, optical properties of metallic nanostructures, subwavelength phenomena, manipulating light with plasmonic nanostructures, plasmonic excitations, plasmonic nanosensors, materials, Negative refractive index and super-resolution. Credit units: 3 ECTS Credit Units: None.  

PHYS 591  Graduate Seminar I  
This is a graduate (MS and PhD) seminar course. The instructor and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the instructor and the students. Credit units: 1 ECTS Credit Units: None.  
Aut (C. Kocabas)  
Spr (C. Kocabas)  

PHYS 592  Graduate Seminar II  
This is a graduate (MS and PhD) seminar course. The instructor and students meet once a week for presentations and discussions. Topics of presentations are chosen by the mutual consent of the instructor and the students. Credit units: 1 ECTS Credit Units: None.  
Spr (C. Kocabas)  

PHYS 599  Master's Thesis  
Credit units: None ECTS Credit Units: 24.  
Aut (A. Ercelebi)  
Spr (A. Ercelebi)  

PHYS 612  Quantum and Nonlinear Optics  
Quantization of the electromagnetic field; coherent and squeezed states; atom-field interaction; coherent trapping; electromagnetically-induced transparency; quantum theory of laser; cavity quantum electrodynamics; review of nonlinear optical effects; quantum theory of nonlinear optical susceptibility; low-light-level nonlinear optics. Credit units: 3 ECTS Credit Units: 6.
PHYS 652  Advanced Statistical Mechanics
Random variables and their transformations, the langevin and fokker-planck equations, boltzmann transport equation, the h-function, and its solutions the wigner function the master equation, detailed balance. The ising model, solution to the 1-D model. The 2-D ising model-high and low temperature series, mean field theory. Introduction to phase transitions and critical phenomena-the critical exponents. The monte-carlo method, simulated annealing and molecular dynamics. The renormalization group theory and its application to the ising model. Other model systems with more complicated phase diagrams-multicriticality. Dynamic criticality-self ordered criticality. Credit units: 3 ECTS Credit Units: None.

PHYS 661  Special Topics in Solid State Physics
Current topics in Solid State Physics, comprehensive reading, critical evaluation of scientific literature by means of class participation, written reports and seminar presentations. Credit units: 3 ECTS Credit Units: 6.

PHYS 673  Nuclear and Particle Physics
Introduction to subatomic particles, nuclear models, elementary particles, symmetries, strong and weak interaction physics, and experimental techniques in nuclear and particle physics, accelerators. Credit units: 3 ECTS Credit Units: None.

PHYS 699  Ph.D. Dissertation
Credit units: None ECTS Credit Units: 24. Aut (A. Erçelebi) Spr (A. Erçelebi)
GRADUATE PROGRAM IN MATERIALS SCIENCE AND NANOTECHNOLOGY

S. Çiraci (Director).

Current research in nanoscience and nanotechnology requires an advanced knowledge in materials science and involves design and fabrication of novel and functional nanostructures. The graduate program in Materials Science and Nanotechnology is an interdisciplinary study and aims to develop researchers who can pursue outstanding and creative research in the diverse fields of nanoscience and nanotechnology, such as nanobiotechnology and nanomedicine; atomic scale imaging; nano-electronics; nanophotonics and spintronics; advanced materials design and manufacturing of nanofibers; nanotribology and hydrogen energy economy, etc. The graduate programs provides an in depth understanding of materials in nanometer scale and present an excellent training starting from the quantum theory of matter and quantum statistical thermodynamics. The graduate courses to be taken by the students have to focus on his/her thesis work. To this end the student together with his/her thesis advisor(s) and program supervisor determine the graduate courses which suit best to his/her thesis work.

Master of Science in Materials Science and Nanotechnology

Admission: Applicants are required to have a B.S. degree in various fields of science (physics, mathematics, chemistry, molecular biology and genetics, etc), engineering (electrical and electronics, mechanical, materials science and metallurgy, etc.) or medicine. Evaluation of applicants is based on their ALES scores, past academic record, reference letters and the interview at Bilkent University. Applicants who cannot take the ALES examination will be evaluated based on GRE scores. Satisfactory knowledge of English is required. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements)

Degree Requirements: In addition to at least 24 credit units of course work, the M.S. degree candidate must prepare and successfully defend a thesis. The normal duration of M.S. study is 4 semesters. However, this duration may be extended for up to two more semesters subject to the approval of the graduate Institute.

Doctor of Philosophy in Materials Science and Nanotechnology

Admission: Applicants must have a M.S. in various fields of science (physics, mathematics, chemistry, molecular biology and genetics, etc), engineering (electrical and electronics, mechanical, material science and metallurgy etc.) or medicine. Applicants who cannot take the ALES examination will be evaluated based on GRE scores. Satisfactory knowledge of English is required. (Also refer to the "Graduate Admissions" section in the introduction of this catalog for the general graduate admission requirements)

Degree Requirements: Twenty-four credit units of course work beyond the M.S. level or forty-eight credits of course work beyond the B.S. level is required. The Ph.D. candidate is expected to pass a qualifying examination and submit a thesis proposal. Preparing and defending a dissertation based on original research is the essence of the program. The normal duration of Ph.D. study is 8 semesters for students with M.S. degree and ten semesters for students with B.S. degree. However, subject to the approval of the Graduate Institute, these durations may be extended for up to two more semesters.

Ph.D. students are required to take at least 6 courses from our core curriculum. M.S. and Ph.D. students shall complete their course requirement from elective courses.

**COURSE DESCRIPTIONS**

**MSC 500 Concepts in Materials Science**

Fundamental concepts in materials science will be covered. Some of these topics are plastic deformation of crystalline solids and dislocations theory, defects in solids, diffusion phenomena, interfaces and kinetics of phase transformations. Also will be covered are nucleation and growth in solids. Case study examples will be undertaken using examples from various metallic, ceramic or polymeric systems. Credit units: 3 ECTS Credit Units: 6.

**MSC 501 Elements of Materials Science and Technology**

Selected topics of materials science and engineering; selected characteristics of materials; atomic structure and chemical bonding; crystals and elements of point group and space group symmetries; metals, insulators, semiconductors; atomic disorder and imperfections (vacancies, impurities, dislocations); noncrystalline: amorphous and glassy structures; single phase metals; molecular phases; ceramic materials; strength of materials and theory of elasticity; lattice vibrations and phonons; free electron theory. Credit units: 3 ECTS Credit Units: 6.

Aut (Ö. Gülseren)
MSN 502  **Nanoscale Materials and Nanotechnology**
General survey of nanoscience and nanotechnology, mechanical and electronic properties of nanostructures; atomic scale characterization and processes; scanning tunneling probe microscopic and atomic manipulation; selected nanostructures; usage and energy transfer through nanostructures, nanophotonics, nanoelectronics, nanomagnetism, and spintronics. **Credit units: 3 ECTS Credit Units: 6.**

MSN 503  **Applied Quantum Mechanics I**
Wave packets and uncertainty; the postulates of quantum mechanics; eigenfunctions and eigenvalues; simple problems in one dimensions; general structure of wave mechanics; operator methods in quantum mechanics; harmonic oscillator and phonons; systems of many degrees of freedom; symmetry; rotational invariance and angular momentum; hydrogen atom; single electron approximation; Hartree method; perturbation theory, variational method. **Credit units: 3 ECTS Credit Units: 6. Aut (M. Ö. Öktel)**

MSN 504  **Phase Transformations and Diffusion in Materials**
Surfaces and interfaces; thermodynamics of phase transformations; nucleation; growth of precipitates; coarsening, and spinodal decomposition; defects and diffusion in solids; interdiffusion; short circuit diffusion; defects and transport in ionic solids. **Credit units: 3 ECTS Credit Units: 6.**

MSN 505  **Fundamentals of Thin Film Materials**
Fundamental information on the deposition properties; reaction and evaluation of thin films; vapor-phase film deposition techniques; adsorption; nucleation mechanisms; selective deposition; surface energies; stress in thin films; structure-zone diagrams; epitaxy and composition; electrical, optical, mechanical, and magnetic properties of thin film devices. **Credit units: 3 ECTS Credit Units: 6.**

MSN 506  **Experimental Methods in Applied Physics**
Introduction to experimental methods; spectroscopy of semiconductors, photoluminescence, Raman scattering, Schottky diode fabrication, current and voltage measurements; computer-based instrument control and data acquisition; atomic physics, dye lasers, and optogalvanic spectroscopy. **Credit units: 3 ECTS Credit Units: 6.**

MSN 507  **Electrical, Optical and Magnetic Properties of Solids**
Band theory and total energy calculations; electronic structure of metals and semiconductors; dielectric and optical properties of solids; paramagnetism ferromagnetism; magnetic resonance; electron-phonon interactions; superconductivity; atomic and electronic structure of surfaces; heterostructures. **Credit units: 3 ECTS Credit Units: 6.**

MSN 508  **Applied Quantum Mechanics II**
Spin; Pauli exclusion principle, addition of angular momentum in quantum mechanics, Hartree-Fock-Slater method; local density approximation; many electron atoms and molecules; time-dependent perturbation theory; scattering theory, ballistic electron transport and quantum conductance, quantum theory of electromagnetic transitions. Selected problems in Material Science and Nanotechnology. **Credit units: 3 ECTS Credit Units: 6.**

MSN 509  **Statistical Thermodynamics**
Basic methods of statistical mechanics and their application to thermodynamic systems; ensembles; statistical formulation of thermodynamic functions; ideal monatomic gas; energy and chemical potential calculation in dense media. **Credit units: 3 ECTS Credit Units: 6.**

MSN 510  **Imaging Techniques in Materials Science and Nanotechnology**
Introduction to advanced imaging techniques including Atomic Force Microscopy (AFM), Scanning Tunneling Microscopy (STM), Transmission Electron Microscopy (TEM), Scanning Electron Microscopy (SEM). **Credit units: 3 ECTS Credit Units: 6. Aut (Staff)**

MSN 511  **Surface Science and Spectroscopy**
Spectroscopic methods of chemical analysis; optical, magnetic resonance, laser and electron spectroscopic methods; spectroscopic characterization of compounds and mixtures by combination techniques. **Credit units: 3 ECTS Credit Units: 6.**

MSN 512  **Biomedical Materials**
Types of biomedical materials and the material selection criteria. Chemical and physical properties of metals, and polymers for use in biomedical applications. Material - Biological entity interaction; biocompatibility, biodegradation. Special biomedical products, biomaterials, tissue engineering, applications and issues; heart valves, artificial bones, implants, blood vessel grafts. **Credit units: 3 ECTS Credit Units: 6. Aut (Staff)**

MSN 513  **Micro and Nanostructured Sensors**
Introduction and fundamental concepts in sensors and transducers. Optical sensors including plasmonic sensors, fiber and waveguide based sensing Coupling of physical and chemical effects to optical domain. Electronic sensors including thin films, semiconductor device based sensors and novel electronic sensors using nanostructures. Magnetic and Thermal sensors. Sensing based on mechanical effects, including acoustic sensors, microbalance. MEMS and NEMS structures and SAW resonators. Basic thermodynamics for biochemical sensors: Adsorption, absorption, diffusion and premeation. Chemical sensing, including gas and ionselective sensors. Biochemical sensing based on affinity and biocatalysis. Aspects of functionalization. Luminescence
based sensing using labels. Integration of multiple component systems microfluidics. Overview of fabrication technologies. Credit units: 3 ECTS Credit Units: None. Spr (Staff)

**MSN 515  Nanotechnology in Agriculture and Food**
Increase in world population and dwindling agricultural land compels us to search for methods to produce agricultural and food products efficiently. nanotechnology research in food and agricultural production is a rapidly growing field. It is anticipated that novel approaches through nanotechnology will result in crucial changes in the food industry, changing the way food is produced, processed, packaged, transported and consumed. This course will highlight current research in agriculture and food industries and anticipated applications of nanotechnology in these fields. Subjects will be precision farming, smart delivery systems, and other developments in the agricultural sector due to nanotechnology, packaging, food safety and food processing. Previous knowledge in food engineering and biology is required. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

**MSN 521  Biotechnology**

**MSN 532  Selected Topics in Materials Science and Nanotechnology**

**MSN 534  Characterization of Polymeric Materials**
Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

**MSN 535  Textile Materials**
Fibrous materials: natural and synthetic fibers; characteristics and properties of fibers. Structure-property relationships, chemical structural analysis, physical properties, thermal properties and mechanical properties of fibers. Fiber forming processes; fiber modifications by chemical and physical methods. High performance fibers and nanofibers and their applications in functional textiles and nanotextiles. Credit units: 3 ECTS Credit Units: None. Aut (Staff)

**MSN 541  Nanobiotechnology**
Nanotechnology is the study of materials at nanoscale - generally with a size of 100nm or less. Nanobiotechnology is the application of nanotechnology in solution of problems of life sciences, which includes biology and medicine. The aim of this course is to help equip graduate level students from various disciplines with basic knowledge on nanotechnology and its applications. The course will cover basic imaging techniques, biosensors, targeted drug delivery methods, biofilms, etc. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

**MSN 543  Protein and Gene Engineering**
Protein and gene engineering are commonly used techniques for studying biological processes. These techniques are based on manipulation of biological materials at nanoscale. This course aims to educate graduate level students in these techniques in an advanced level concentrating on genetic techniques used for modification of proteins, single aminoacid substitutions, site-directed mutagenesis, random mutagenesis, multiple deletions, protein structure, gene engineering using knock-out technology, using bacterial chromosomes for gene engineering, etc. Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

**MSN 551  Introduction to Micro and Nanofabrication**
This course intends to introduce conventional methods in macro and nanofabrication. The topics will include basics of film deposition techniques, optical and electron beam lithography, wet and dry etching methods, implantation and diffusion. Topics will be covered with detail when necessary and practical tips will be included for processes when available. There will be sections on applications of microfabrication to specialized topics such as CMOS fabrication and micro and nanoelectromechanical systems. Certain non-conventional methods of micro and nanostructure fabrication will be surveyed briefly. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

**MSN 555  Nanomaterials Processing by Intense Laser Beam**
Fundamentals of laser materials interactions, laser ablation and thin f.i.m deposition, processing with ultrashort laser pulses, creating nanostructures with lasers, laser micro and nano machining, laboratory training and hands-on experiments Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

**MSN 590  Seminars in Materials Science and Nanotechnology : Technology Development**
Credit units: None ECTS Credit Units: None.
MSN 598  Seminar I  
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

MSN 599  Master’s Thesis  
Credit units: None ECTS Credit Units: 24. Aut (S. Çiraci) Spr (Staff)

MSN 601  Advanced Computational Nanoscience  
Credit units: 3 ECTS Credit Units: 6.

MSN 698  Seminar II  
Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

MSN 699  Ph.D. Thesis  
Credit units: None ECTS Credit Units: 24. Aut (S. Çiraci) Spr (Staff)
SCHOOL OF APPLIED LANGUAGES

Tanju İnal, Ph.D., Director

The School of Applied Languages - the first of its kind in Turkey, offers four year degree programs in Banking and Finance, Accounting, and Translation and Interpretation. The Banking and Finance, and Accounting degree programs offer the opportunity to study a combination of two languages (English and French) and financial studies. The aim is to give a firm background in financial markets and organizations and to develop advanced communication skills in English and French, which are appropriate for business, banking and accounting.

ACADEMIC STAFF

Aylin Bayrakçeken-Akın, Assistant Professor
Ph.D., English Language and Literature, Hacettepe University, 1996.

Barbara Blackwell Gülen, Instructor
M.S., English Language Teaching, Middle East Technical University, 1987.

İsmail Boztas, Instructor

Cenk Cangör, Instructor
B.A., French Language and Literature, Hacettepe University, 1989.

Alican Demir, Instructor

Nazmi Demir, Assistant Professor

Akın Erköç, Instructor
B.A., French Language and Literature, Hacettepe University, 1981.

Ebru Güven Solakoğlu, Assistant Professor

Orhan Güvenen, Professor

Tanju İnal, Professor

Meral Karagülle, Instructor
M.A., American Literature, Hacettepe University, 1969.

Aysin Karanfilli, Instructor

Mümtaz Kaya, Assistant Professor
Ph.D., French Language and Literature, Hacettepe University, 1998.

Erin Maloney, Instructor

Şirin Okyayuz Yener, Assistant Professor
Ph.D., Department of Linguistics, Hacettepe University, 2001.

Christine Özcân, Instructor

Güçlü Özkök, Instructor
M.A., French Language and Literature, Hacettepe University, 1995.

Sabit Özönder, Instructor
Valery Paternotte, Instructor  
Ph.D., Environmental Management, Universite Libre de Bruxelles, 2002.

Elizabeth Saatçı, Instructor  

Mehmet Nihat Solakoğlu, Assistant Professor  

Hamit Sunel, Instructor  
Ph.D., Education, Hacettepe University, 1968.

Yasemin Tanbi, Instructor  
B.A., French-Turkish Translation and Interpretation, Hacettepe University, 2001.

PART-TIME ACADEMIC STAFF

Rana Atasoy, B.S., Business Administration, Bilkent University, 1996.  
Onur Aytar, M.S., Computer Science, Northeastern University, Boston, M.A. USA, 2003.  
Şenol Babuşçu, Ph.D., Management, Hacettepe University, 1997.  
Yiğit Bener, Faculty of Medicine (ULB-Belgique), 1982.  
Kutlay Bensan, Professional Interpreter Boğaziçi University, Bachelor of Arts Department of Translation and Interpretation 1992.  
Ender Dedeağac, B.A., Faculty of Law, Ankara University, 1969.  
Ragip Duran, Faculty of Law, University of Aix-Marseille, 1978.  
Adalet Hazar, Ph.D., Finance and Accounting, Gazi University, 2004.  
Dilek Öney, B.A., Public Administration, Middle East Technical University, 1961.  
Vedat Özer, B.A., Department of Banking and Insurance, Gazi University, 1983.  
Can Öztürk, M.A., Business Administration, University of Massachusetts, Dorimouth, USA, 2004.  
Ezgi Ulusdoyuran Sun, B.A., Department of Management, Kirikkale University, 2005.  
Sedat Yetim, Ph.D., Economics, Hacettepe University, 2000.
ACCOUNTING INFORMATION SYSTEMS

O. Güvenen (Chair), M. Karagülle, M. Kaya, C. Özcan.

UNDERGRADUATE PROGRAM

This program blends topics from accounting, international auditing and information systems to develop the knowledge, skills and abilities needed in the accounting profession. The program also seeks to develop advanced communication skills in English and French, which are appropriate for accounting and business. The first year is a foundation course in accounting, application of information technology and languages. Starting in the second year, courses begin to focus more explicitly on the application and integration of information technology into the accounting process while financial and managerial accounting principles are introduced and developed. Communication skills in English and French are further developed with a greater emphasis on business and finance related work in language study.

Accounting Information System Component

The Accounting Information System component of the program provides an understanding of computer and information technology concepts and places strong emphasis on acquiring subject-specific knowledge in international auditing, accounting, finance, and the business environment. Furthermore, the program incorporates a one-month training period in the third and fourth year of study during which students work for firms or within an accounting department of a business.

Language Component

The language courses develop general oral and written language skills as well as more specialized skills such as report writing, negotiating, interpersonal communication, analyzing and synthesizing within the wider context of business. In language work most of the practical sessions may be function-based and devoted to a given skill (oral work, writing proposals) whereas others are topic based and focus more on Business Communications involving case studies that culminate in oral presentations and business reports. Communication skills in both English and French are developed through the use of real-life cases and involve students in team-based projects.

One elective course should be taken from the elective courses list offered by the Faculty of Humanities and Letters departments.
ACCOUNTING INFORMATION SYSTEMS

COURSE DESCRIPTIONS

ACC 161 Economics I
Supply and demand analysis, the pricing system, theory of consumer behavior, theory of production, market structures; perfect competition, monopoly, other forms of imperfect competition, distribution of income; factor mobility, factor pricing. Credit units: 3 ECTS Credit Units: 6. Aut (E. Güven Solakoğlu)

ACC 162 Economics II

ACC 170 Computer Applications II
Students use and analyse complex formula and functions with spreadsheets, use of basic financial functions and tools and particularly use of data analysis of excel, use of solver and other optimizing functions, database operations, generation of graphs, basic operations for creating and editing documents. Credit units: 3 ECTS Credit Units: 6. Spr (A. Durukal)

ACC 173 Computer Applications I
Beginning usage of operating system software (Windows and Linux) and application of software (word processing, spreadsheet, presentation, the basics of internet and web page building. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

ACC 175 Mathematics I
Applications of calculus, equations, derivatives, integrals and logarithms to financial data, linear functions and applications of functions in business and economics. Introduction to matrix and vector operations. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

ACC 178 Mathematics II
Computerized empirical analysis of financial mathematics applied to real world financial, accounting and banking data. Interest rates, compounding, annuities, present and future values, amortization of mortgage loans and sinking funds for bonds. Maximizing profit and utility and minimizing cost. Use of matrices for index numbers and for solving multi-equation systems. Credit units: 3 ECTS Credit Units: 6. Spr (E. Güven Solakoğlu)

ACC 253 Accounting I
An introductory accounting course which covers the concepts and issues of financial accounting such as general accounting principles, the accounting cycle which starts with the analysis and recording of economic events and ends with the preparation of balance sheets and income statements for service and merchandize firms. Development of accounting principles and procedures related to assets, liabilities and owner’s equity. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)

ACC 258 Accounting II
Introduction to management accounting for internal reporting and decision making. Topics include cost behavior, cost determination, profit planning and control measures. Statement of Cash Flows and financial statement analysis are also covered. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ACC 253. Spr (S. Sevin)

ACC 271 Data Structures and Object Oriented Programming I
Fundamental programming in a high level language and introduction to programming principals. Topics include program structure and organization, object-oriented programming (classes, objects, types), data structures (lists, stacks, queues, hash tables), basic user interfaces. Java is the principal programming language. Credit units: 3 ECTS Credit Units: 6. Aut (N. Fenmen)

ACC 272 Data Structures and Object Oriented Programming II
Introduction to systems development providing a foundation for systems implementation cycle, systems analysis and object oriented program design techniques and project management. Credit units: 3 ECTS Credit Units: 6. Spr (N. Fenmen)

ACC 275 Applications in Probability and Statistics I
Introduction to probability, the central limit theorem, data collection, descriptive statistics of central tendency and dispersion, the normal distribution, summarizing and interpreting financial data, histograms, examining relationships between economic and financial variables using graphical techniques, simple correlation, sampling and point and interval estimates of parameters. Credit units: 3 ECTS Credit Units: 6. Aut (M. N. Solakoğlu)

ACC 276 Applications in Probability and Statistics II
Parametric and non-parametric tests of hypothesis, simple and multiple regressions based on excel and other statistical package programs, index numbers, time series and panel data all applied to financial and banking data. Credit units: 3 ECTS Credit Units: 6. Spr (M. N. Solakoğlu)
ACC 323  Business Law
Introductory course on the legal environment of business. The course covers such subjects as merchants' rights and obligations; agency relationships, legal forms of business organizations, negotiable instruments.
Credit units: 3 ECTS Credit Units: 6. Aut (A. E. Gürbüz Uslu)

ACC 326  Law of Contracts
Students will be acquainted with the role of contract law in business and economic activity. The course aims to teach students the principles that underlie the common law of contract and explain to students the effect of legislative intervention on the common law principles of contract law. Students will learn both the common law rules and legislation affecting contract law, as well as the ability to avoid contractual disputes and/or solve them.
Credit units: 3 ECTS Credit Units: 6. Spr (C. Ünal)

ACC 360  Cost Accounting and Computerized Accounting Applications
This course covers accounting for product costing and managerial planning and control. Topics include activity based costing, analysis of cost behavior, cost volume profit analysis, budgeting and budget variance analysis, process and job order costing and variable and absorption costing. Special emphasis will be given to adjusting and closing entries with popular accounting software packages (Likom, Logo, SAP).
Credit units: 3 ECTS Credit Units: 6. Spr (Staff)

ACC 374  Information Systems Security and Information Distortion (in French)
Information Systems privacy and security in the context of software, hardware, networks and databases. The very important impact of information systems security and information distortion to research, socio-economic systems with specific reference to accounting information systems, banking and finance and decision making systems.
Credit units: 3 ECTS Credit Units: 6. Spr (O. Güvenen)

ACC 383  Ethics, Responsibility and Citizenship
The aim of this course is to introduce ethical issues in relation to business and corporations. Emphasis will be given to the notion of corporate citizenship and its contribution to the framing of business ethics and to concepts of corporate social responsibility (CSR).
Credit units: 3 ECTS Credit Units: 6. Aut (R. Atasoy)

ACC 391  Summer Practice
One-month training period. (see www.bilkent.edu.tr/~sal) Credit units: None ECTS Credit Units: None. Aut (Staff)

ACC 425  Commercial Law
This course offers an introductory study of law of commercial enterprises, partnerships and corporations, negotiable instruments law and insurance law. Credit units: 3 ECTS Credit Units: 6. Aut (E. Dedeağac)

ACC 454  International Auditing
The primary objective of the course is to distinguish between accounting and auditing through familiarizing the students with the basic auditing concepts. Topics such as types of audits and auditors, audit reports for financial statements, professional ethics, evidence accumulation and verification procedures, internal control and auditing engagements are discussed. Credit units: 3 ECTS Credit Units: 6. Prerequisite: ACC 463. Spr (B. Fisher)

ACC 463  International Financial Reporting Standards (IFRS)
This course is an introductory course on international financial reporting. It focuses on the main aspects of international account and financial reporting standards by comparing with Turkish Accounting System. Topics covered include preparation of financial statements, inventory, cash flow statements, accounting policies plant, property and equipment, revenue, investment property, intangible assets, operating segments, impairment of assets, provisions, contingent liabilities and assets, foreign exchange rates, inflation and some financial instruments.
Credit units: 3 ECTS Credit Units: 6. Prerequisite: ACC 253 and ACC 258. Aut (C. Öztürk)

ACC 464  Taxation and Turkish Tax Law
This course comprises the principles of tax law, taxation process, income tax, corporation tax, value added tax, real estate tax, inheritance tax, tax penalties, conflicts of taxation and some other taxes in the Turkish system.
Credit units: 3 ECTS Credit Units: 6. Spr (A. Başparna)

ACC 473  Management Information Systems (in French)
Management and information technologies and communications (ITC), knowledge-based economy and knowledge society, business plan and business model, business models for electronic markets, electronic commerce, systems development and documentation techniques, data bases, impact of ITC on public and corporate governance, information and decision-making.
Credit units: 3 ECTS Credit Units: 6. Aut (O. Güvenen)

ACC 476  Control and Audit of Accounting Information Systems
This course provides knowledge of computer security and auditing. Basic cryptographical algorithms, protocols and applications will be studied. An overview of computer security and controls in information systems will be given.
Credit units: 3 ECTS Credit Units: 6. Spr (O. Aytar)
ACC 491  Summer Practice
One-month training period. (see www.bilkent.edu.tr/~sal) Credit units: None ECTS Credit Units: None. Aut (Staff)
BANKING AND FINANCE

N. Demir (Chair), A. Bayrakçeken-Akın, E. Güven Solakoğlu, E. Maloney, V. Paternotte, E. Saatçioğlu, M. N. Solakoğlu.

UNDERGRADUATE PROGRAM

This program is designed to provide a solid understanding of banking and financial studies and to develop advanced communication skills in English and French which are necessary for banking and finance. The first year is a foundation course in both banking/finance and languages. Starting in the second year, courses become more specialized, allowing in-depth study of specific finance topics with a greater focus on business and finance related work in language study.

Banking/Finance Component

The banking and finance component of the program is carried out in English and French as a second foreign language. It seeks to develop competence in financial markets and organizations. This is complemented by the use of computer assisted applications related to banking and finance. Additionally, a two-month training period is incorporated into the summer programs which aims to familiarize students with the working environment in financial institutions and other business organizations.

Language Component

The language courses develop general oral and written language skills as well as more specialized skills such as translating, report writing, negotiating, analyzing and synthesizing within the wider context of business. In the language work most of the practical sessions may be function-based and devoted to a given skill (oral work, translation into Turkish). Other language work is topic-based and focuses more on business communications involving case studies that culminate in oral presentations and business reports.

</table>
Begin usage of operating system software (Windows and Linux) and application of software (word processing, spreadsheet, presentation, the basics of internet and web page building).

Supply and demand analysis, the pricing system, theory of consumer behavior, theory of production, market structures; perfect competition, monopoly, other forms of imperfect competition, distribution of income; factor mobility, factor pricing. Credit units: 3 ECTS Credit Units: 6. Aut (N. Damir, M. N. Solakoğlu)

Economics II

Computer Applications I
Beginning usage of operating system software (Windows and Linux) and application of software (word processing, spreadsheet, presentation, the basics of internet and web page building. Credit units: 3 ECTS Credit Units: 6. Aut (E. Maloney)

Computer Applications II
Students use and analyse complex formula and functions with spread sheets, use of basic financial functions and tools and particularly use of data analysis of excel, use of solver and other optimizing functions, database operations, generation of graphs, basic operations for creating and editing documents. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BF 173. Spr (E. Maloney)

Mathematics I
Applications of calculus, equations, derivatives, integrals and logarithms to financial data, linear functions and applications of functions in business and economics. Introduction to matrix and vector operations. Credit units: 3 ECTS Credit Units: 6. Aut (E. Güven Solakoğlu)

Mathematics II
Computerized empirical analysis of financial mathematics applied to real world financial, accounting and banking data. Interest rates, compounding, annuities, present and future values, amortization of mortgage loans and sinking funds for bonds. Maximizing profit and utility and minimizing cost. Use of matrices for index numbers and for solving multi-equation systems. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BF 175. Spr (E. Güven Solakoğlu)

Interpersonal Communication in Business Setting
Theories and practice in verbal and nonverbal communication with a focus on interpersonal relationships. Emphasis on improving interpersonal skills and helping students increase their communication competence in business-related exchanges. Credit units: 3 ECTS Credit Units: 6.

Accounting I
An introdutory accounting course which covers the concepts and issues of financial accounting such as general accounting principles, the accounting cycle which starts with the analysis and recording of economic events and ends with the preparation of balance sheets and income statements for service and merchandize firms. Development of accounting principles and procedures related to assets, liabilities and owner's equity. Credit units: 3 ECTS Credit Units: 6. Aut (Staff)
BF 252  Accounting II
Introduction to management accounting for internal reporting and decision making. Topics include cost behavior, cost determination, profit planning and control measures. Statement of Cash Flows and financial statement analysis are also covered. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 251. Spr (C. Öztürk)

BF 264  Elements of Money and Banking I
Introduction to monetary and financial institutions, central banks and monetary policy, the transmission mechanism of money, money supply process, inflation and inflation targeting, money supply and demand as related to aggregate real supply and demand for goods and services, Keynesians versus Monetarists, Monetary policy versus government budget, PSBR, budget versus inflation, monetary and fiscal policy effects under fixed versus floating exchange rate policy, putting all together: the IS-LM-FE model. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 162. Spr (N. Demir)

BF 271  Applications in Probability and Statistics I
Introduction to probability, the central limit theorem, data collection, descriptive statistics of central tendency and dispersion, the normal distribution, summarizing and interpreting financial data, histograms, examining relationships between economic and financial variables using graphical techniques, simple correlation, sampling and point and interval estimates of parameters. Credit units: 3 ECTS Credit Units: 6. Aut (N. Demir, M. N. Solakoğlu)

BF 276  Applications in Probability and Statistics II
Parametric and non-parametric tests of hypothesis, simple and multiple regressions based on excel and other statistical package programs, index numbers, time series and panel data all applied to financial and banking data. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 271. Spr (M. N. Solakoğlu)

BF 362  Banking Operations
Canons of lending, personal borrowers, other borrowers, general principles of security, review and control of accounts. Interpretation of financial statements, Interbank Nostro and Vostro accounts, remittance and receipt of funds, rates of exchange, financing international trade for exporters and importers. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 252. (Prerequisite not required when offered as elective to other departments). Spr (Ş. Babuşcu)

BF 365  Elements of Money and Banking II
Overview financial markets and institutions, financial sector versus real economy, rates of returns: HPR, APR, EAR, risk and term structure of interest rate, bond market, pricing bonds, duration and bond price elasticity; stock market, stock market indices, pricing stocks, diversifying assets, the CAPM, the APT, the beta; portfolio with the CAL and the SML; performance analysis based on Sharp, Treynor and Jensen’s alpha. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 264. Aut (N. Demir)

BF 372  Computerized Financial Applications
This course aims to develop skills of empirical work by applying financial theories to real life problems with computers. It covers tools of financial statement analysis, forecasting, risk measurement in finance, technical analysis of stock markets, Markowitz portfolio design, the Capital Asset Pricing Model (CAPM) and performance assessment of portfolios. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 271 and BF 276 and BF 365. Spr (N. Demir)

BF 383  Ethics, Responsibility and Citizenship
The aim of this course is to introduce ethical issues in relation to business and corporations. Emphasis will be given to the notion of corporate citizenship and its contribution to the framing of business ethics and to concepts of corporate social responsibility (CSR). Credit units: 3 ECTS Credit Units: 6. Aut (R. Atasoy)

BF 384  Introduction to Financial Econometrics
Introductory level econometrics course designed to analyse financial time series and panel data with emphasis on model building and estimating parameters with the use of least squares techniques and maximum likelihood theories, testing stationarity, cointegration and volatility hypotheses for univariate and multivariate time series models. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 271 and BF 276 and BF 365. Spr (E. Güven Solakoğlu)

BF 385  Commercial Law
This course offers an introductory study of law of commercial enterprises, partnerships and corporations, negotiable instruments law and insurance law. Credit units: 3 ECTS Credit Units: 6. Aut (E. Dedeağaç)

BF 461  Corporate Finance
Overview of time value of money: present value, future value, annuities, perpetuities. Business finance with emphasis on investment and financing decisions of firms. Topics include ratio analysis, profit planning, capital
structure and working capital management. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 252 and BF 365. (Prerequisite not required when offered as elective to other departments).

BF 462 Investments
Investments setting, alternative investments, securities markets, efficient capital markets, valuation of bonds and stocks. Optimum portfolio design and portfolio performance measures. Credit units: 3 ECTS Credit Units: 6.

BF 464 International Finance
The international financial environment, the international monetary system, balance of payments and parity conditions, spot and forward markets, foreign exchange risk management, forecasting FX rates, economic exposure, transactions exposure, translation exposure, international financial markets, international portfolio diversification, trade financing, direct foreign investment decisions, strategy, political risk, capital budgeting. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 252 and BF 365. (Prerequisite not required when offered as elective to other departments).

BF 469 Banking Law
Sources of law: relevance to the business of banking, conflict resolving, judicial and quasi-judicial processes, court system, quasi-judicial bodies, bank ombudsman, contract law: role of contract law in banking, nature and elements of a contract, banker/customer contract. Property and its use as security; real and personal property, security functions and types. A bank’s rights and duties as a mortgagee. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BF 362. Aut (S. Babuşcu)

BF 473 Computerized Brokerage and Dealer Operations
Computerized Brokerage and Dealer Operations Applications with special emphasis on stocks, foreign exchange (FX) and commodity markets. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 365 and BF 384. Aut (E. Ulusoyuran Sun)

BF 479 Issues in Banking
The course introduces issues such as new trends, risk and risk sources, structural changes and expectations all related to banking in Turkey and abroad. Credit units: 3 ECTS Credit Units: 6.

BF 480 Applied Capital Markets
Structure of capital markets: stocks, bonds, mortgages etc. and capital market institutions such as capital markets board, stock exchange markets, legal and institutional requirements of the equity markets. Credit units: 3 ECTS Credit Units: 6. Aut (A. Hazar) Spr (A. Hazar)

BF 484 Law of Contracts
Students will be acquainted with the role of contract law in business and economic activity. The course aims to teach students the principles that underlie the common law of contract and explain to students the effect of legislative intervention on the common law principles of contract law. Students will learn both the common law rules and legislation affecting contract law, as well as the ability to avoid contractual disputes and/or solve them. Credit units: 3 ECTS Credit Units: 6. Spr (C. Ünal)

BF 485 Introduction to Bank Risk Analysis and Evaluation
This course covers the Basel 1-2 (The New Accord) topics with particular emphasis on the three pillars of Basel 2: Minimum capital requirements, supervisory review of capital adequacy and public disclosure for market discipline. Topics such as external rating, internal rating; different approaches to the measurement of credit risk and operational risk, steps for the adaptation of the new accord in Turkey are also covered. Credit units: 3 ECTS Credit Units: 6. Aut (S. Yetim)

BF 488 Computerized Insurance Services and Operations
The insurance sector and its public and private institutions; principles, basics and legal aspects of insurance services and operations in Turkey and abroad; Insurance operations in practice; Computerized insurance services, use of special software currently used for insurance services and operations. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BF 252 and BF 271. Spr (V. Özer)

BF 490 CRM and Data Mining for Financial Services
Customer relationship management (CRM) and data mining techniques customized to financial firms, designing acquisition strategies, evaluating “churn rates” and designing new strategies for higher profitability, data mining techniques include segmentation schemes, decision trees, binary response, cluster and principal components as data reduction techniques. Credit units: 3 ECTS Credit Units: 6.

BF 491 Summer Practice
One-month training period. (see www.bilkent.edu.tr/~sal) Credit units: None ECTS Credit Units: None. Aut (Staff)

SFL 101 French I
The aim of this course is to develop basic communication skills in French for social and professional use. Students will be exposed to basic communication situations related to everyday communication through which they will learn the basic structures of French grammar and acquire essential notions of French culture. Credit units: 3 ECTS Credit Units: 6. Aut (A. Erkoç, A. Karanfilli, Y. Tanbi)
SFL 102 French II
This course expands on the skills acquired in SFL 101 and emphasizes language skills needed to describe and carry out typical tasks in the workplace. Special attention will be given to terminology and pronunciation. Credit units: 3 ECTS Credit Units: 6. Prerequisite: SFL 101. Spr (A. Erkoç, A. Karanfil, Y. Tanbi)

SFL 103 French III
This course emphasizes language skills needed to interact socially in a professional environment and aims to further develop language awareness and accuracy in language use by engaging students with texts, both written and audio, from different contexts. Students will learn how to describe a company, follow instructions, write effectively and develop the ability to present information related to work settings cohesively and coherently both orally and in writing and to express ideas and opinions effectively. Credit units: 3 ECTS Credit Units: 6. Prerequisite: SFL 102.

SFL 104 English for Business II
This course builds upon the skills required in English for Business I. Competency is further developed in speaking, writing, reading and listening, covering a wider range of business situations. Credit units: 3 ECTS Credit Units: 6. Spr (A. Bayrakçeken-Akin, B. Blackwell Gülén)

SFL 105 English for Business I
This course aims to equip students with the ability to communicate effectively in English that is required in business life. Emphasis is placed on developing reading, writing, listening and speaking skills through realistic business cases, practice activities that cover a range of business situations (globalization trade etc.), role plays and the use of authentic material from the Economist and the Financial Times. Credit units: 3 ECTS Credit Units: 6. Aut (A. Bayrakçeken-Akin, B. Blackwell Gülén)

SFL 201 French IV
This course aims at developing the ability to listen and read complex texts for gist and detail and to apply this knowledge and understanding to speaking and writing. Emphasis will be given to texts related to banking, finance and accounting and case studies will focus on customer relationships and banking services. Credit units: 3 ECTS Credit Units: 6. Prerequisite: SFL 103. Aut (A. Demir, A. Erkoç)

SFL 202 French V
This course builds on the skills acquired in SFL 201. Besides professional skills and specific terminology concerning investment opportunities and types of credit, students will also deal with the intercultural aspect of business. Credit units: 3 ECTS Credit Units: 6. Prerequisite: SFL 201. Aut (Staff) Spr (A. Demir)

SFL 203 Introduction to French for Professional Use
(Offered to students following the Accelerated French track) This course aims at developing the ability to communicate effectively in French in a business context. Emphasis is placed on developing reading, writing, listening and speaking through realistic business cases and will include extended projects. Credit units: 6 ECTS Credit Units: 12. Prerequisite: SFL 103. Aut (A. Erkoç, M. Kaya)

SFL 207 Interpersonal Communication in Business Settings
Theories and practice in verbal and nonverbal communication with a focus on interpersonal relationships. Emphasis on improving interpersonal skills and helping students increase their communication competence in business-related exchanges Credit units: 3 ECTS Credit Units: 6. Aut (B. Blackwell Gülén)

SFL 208 Written Business Communication
Develops understanding of communication theories and builds skills in written communication emphasizing style and audience awareness. Practical applications center on external and internal business correspondence. Letters, memos that inform persuade, grant and refuse are stressed. Credit units: 3 ECTS Credit Units: 6. Spr (M. Karagülle, E. Saatçioğlu)

SFL 307 English in Business Communication
This course aims to develop communicative competency in writing short reports, conducting meeting and delivering presentations through assignments designed to meet real organizational needs. Credit units: 3 ECTS Credit Units: 6. Prerequisite: SFL 208. Aut (E. Saatçioğlu)

SFL 308 English in Organizational Communication
Covering a range of communication issues and practices within businesses and other organizations, emphasis is placed on effective communication through oral and written reporting, proposals, negotiations and team presentation. Credit units: 3 ECTS Credit Units: 6. Prerequisite: SFL 307. Spr (E. Saatçioğlu)

SFL 335 French in Financial Communication I
This course aims to improve students’ ability to communicate effectively in a wide-range of accounting and financial contexts. Realistic case studies related to finance, banking operations, investments and economics will be used to develop language skills. Emphasis will be given to a variety of topic areas such as financial reporting, corporate governance, mergers and acquisitions, insurance, investment banking. Credit units: 3 ECTS Credit Units: 6. Aut (C. Özcan)
SFL 336 French in Financial Communication II
This course aims to improve students’ ability to communicate effectively in a wide-range of accounting and financial contexts. Realistic case studies related to finance, banking operations, investments and economics will be used to develop language skills. Emphasis will be given to a variety of topic areas such as financial reporting, corporate governance, mergers and acquisitions, insurance, investment banking. Credit units: 3 ECTS Credit Units: 6, Prerequisite: SFL 335. Spr (C. Özcan)

SFL 338 French in Business Communication I
(Offered to students following the Accelerated French track) This course aims to develop students ability to communicate effectively in a range of business contexts. Through the use of realistic business cases emphasis will be given to writing short business reports, conducting business meetings and delivering presentations to specific audiences. Credit units: 6 ECTS Credit Units: 12, Prerequisite: SFL 203. Spr (A. Erkoç, S. Özcönder)

SFL 405 Intercultural Business Communication
This course focuses on business communication in intercultural environments. Cross-cultural communication theories and a cultural framework will be used to assist in the analysis, evaluation and creation of appropriate business messages addressed to specific audiences in both English and French. Practical applications center on designing a multilingual/multicultural website. Credit units: 3 ECTS Credit Units: 6. Aut (E. Saatçı)

SFL 406 Integrated Marketing Communications (IMC)
This course introduces students to the areas that comprise IMC: public relations, advertising, direct marketing, sales promotions, events promotions and online communication. Using these communication tools, students learn how to target an audience (in English + French), assess communication options and formulate IMC plans for organizations. Credit units: 3 ECTS Credit Units: 6. Spr (E. Saatçı)

SFL 431 French in Corporate Communication
This course aims to develop communications competency in writing short reports, conducting meetings and delivering presentations through assignments designed to meet real organizations. Credit units: 3 ECTS Credit Units: 6. Spr (C. Özcan)

SFL 432 Organizational Communication in French
Covering a range of communication issues and practices within business and other organizations, emphasis is placed on effective communication in French through oral and written reporting, proposals, negotiations and team presentations. Credit units: 3 ECTS Credit Units: 6, Prerequisite: SFL 431. Spr (C. Özcan)

SFL 434 French in Business Communication II
(Offered to students following the Accelerated French track) This course aims to improve the students ability to communicate effectively in a wide-range of financial contexts. Using real-life cases, emphasis will be given to writing long formal business reports and given team-presentations on complex subjects to specific audiences. Credit units: 6 ECTS Credit Units: 12, Spr (C. Özcan)

SFL 490 Common European Framework of Reference Level B1
French Language Proficiency test. All students entering the Banking and Finance (BF) and Accounting Information Systems (ACC) programs in September 2009 are required to pass this test in order to graduate. Credit units: None ECTS Credit Units: None.
MASTERS IN CONFERENCE INTERPRETING

T. İnal (Chair), O. Güvenen, Ş. Okyayuz Yener, C. Özelcan.

GRADUATE PROGRAM

The Masters in Conference Interpreting Program is composed of two academic semesters and a summer school program. The objective of the degree program in Conference Interpreting is to train conference interpreters in Turkish/English/French. The language combinations offered in the program are A-CC, A-BC, A-BB or A-A.

The curriculum aims to develop the special skills needed for interpreting and to achieve mastery of the contemporary interpreting techniques. In addition, professional interpreters require a wide range of applied courses and a broad background in contemporary practices and theories. Professional interpreting studies in Turkish, English and French include: mastery in sight translation, consecutive interpreting, simultaneous interpreting, media interpreting. Theoretical and lecture courses deal with fields such as European/international organizations, technologies for interpreters, computer literacy and contemporary interpreting theories. Students who are trained by professional conference interpreters have to complete a single final examination given at the end of the Interpreting Seminar course in the summer school period. Students are expected to display their interpreting skills to a jury composed of professional interpreters from Turkey and professional interpreters from abroad.

COURSE DESCRIPTIONS

CINT 501 Theory of Interpreting

Students will be acquainted with the theoretical aspects of interpretation and will be familiarizing themselves with the research findings that have a bearing on interpretation like cognitive, psycholinguistic, neurolinguistic, sociolinguistic paradigms and communication and discourse studies. *Credit units: 2 ECTS Credit Units: 4. Aut (Ş. Okyayuz Yener)*

CINT 503 Introduction to the Practice of Interpreting

This course aims to familiarize students with some basic communication skills, conference preparation techniques, professional ethics, conference procedures, working practices and conditions. They will learn about how they may attain the necessary skills to become effective communicators, how to keep up to date with world affairs in the various areas in which they work, how to improve their intuition and flexibility and develop their diplomatic skills. *Credit units: 4 ECTS Credit Units: 6. Aut (Y. Bener, R. Duran, D. Önal)*

CINT 506 EU and International Institutions

Students are familiarized with basic legal and economic notions and especially focus on understanding how EU institutions and international organizations operate to develop a know-how of institutional processes and proce-
dures. They become familiar with specific terminology, registers, styles and discourses used in communication in the relevant settings. Credit units: 4 ECTS Credit Units: 6. Spr (O. Güvenen)

CINT 509  Advanced Consecutive Interpretation I
In this first course on consecutive interpretation preliminary exercises in content analysis, memory exercises, summarization, sight translation and note-taking techniques will be studied. Students are prepared to be able to deliver fluent and effective consecutive interpretations of speeches into the mother tongue. Students are trained with authentic conference materials in which they will confront a diversity of subject areas, styles and registers. The length, information density and degree of technicality and specificity of the speeches will increase throughout the course. Credit units: 6 ECTS Credit Units: 8. Aut (Y. Bener, E. Kanık)

CINT 510  Advanced Consecutive Interpretation II
Through a variety of advanced level exercises and speeches in which the information density, degree of technicality and specificity increases as the course progresses, students are trained to deliver fluent and effective consecutive interpretations into the target language, accurately reproducing the content of the original, using appropriate terminology and register. Credit units: 6 ECTS Credit Units: 8. Spr (K. Bensan, R. Duran)

CINT 513  Advanced Simultaneous Interpreting I
Students will be building on skills such as effective communication, content analysis, fluency of speech, and memory exercises. Students will be acquainted with booth techniques and team interaction while acquiring the professional skill to interpret into the mother tongue from both active and passive foreign languages in actual conference settings and/or simulations in the booths. This is undertaken in order to enable them to reproduce the content of the original, using the appropriate terminology and register. The length, information density and degree of technicality and specificity of the speeches will increase throughout the course. Once they have mastered simultaneous interpreting skills, students will also be taught to interpret with the texts in front of them. Credit units: 6 ECTS Credit Units: 8. Aut (K. Bensan, R. Duran)

CINT 514  Advanced Simultaneous Interpreting II
Students will be trained to provide fluent and effective simultaneous interpretation of speeches into the target language undertaking advanced practice of simultaneous interpreting in the working languages in booths. Students will be attending conferences on diverse topics and they will analyze and criticize actual interpreting performance vis-a-vis actual conference situations. Through laboratory simulations and other opportunities they will be acquainted with the interpretation of diverse topics while undertaking research in relevant settings and terminology. Credit units: 6 ECTS Credit Units: 8. Spr (Y. Bener, R. Duran, D. Önyay)

CINT 516  Conference Interpreting
Students will be trained in the main types of work for conference interpreters. They will be acquainted with the types of interpreting necessary for committees and conferences, discussions between Heads of State, Prime Ministers, Ministers, business meetings, trade negotiations, court cases, working lunches, and field trips, working on the ability to rapidly shift between mother tongue and the active language, and from the passive language to the mother tongue. Credit units: 6 ECTS Credit Units: 8. Spr (Y. Bener, E. Kanık)

CINT 518  Cross Cultural Negotiations
Students will be exposed to cross-cultural negotiations in various domains/situations. They will be developing argumentation skills and the ability to deal with conflict issues through the use of different techniques. They will be asked to perform as speakers in mock debates, seminars, information sessions in their active languages; and they will have the opportunity to develop their attentive listening, comprehension and short-long term memory skills, especially through information dense speeches dealing with conflict issues in their passive languages. Students will work towards developing a sensitivity for such issues in performing as an intermediary/interpreter in differing cultures. Credit units: None ECTS Credit Units: None. Spr (S. Okyayuz Yener, C. Özcan)

CINT 520  Technology and Research for Interpreting
This course aims to allow the student to familiarize with the technologies used in the interpretation milieu. They will be asked to research new virtual meeting technologies, use of multilingual communication in the media, multilingual chats, on-line communication on the Internet and new practices that may have a relevance for their fields. Students will be acquainted with up-to date research techniques such as the use of terminology management systems in line with recent developments. They will also be made aware of interpreting practices for TV and radio interviews, and videoconferences. Credit units: 2 ECTS Credit Units: 4.

CINT 590  Interpreting Seminar
This course aims to allow students to practice the skills they attained throughout the two semesters in actual conferences and simulated conferences with the help of an advisor. The course has a single final examination that will reflect practical, real-life conference situations and will be graded as either satisfactory or unsatisfactory. A team of professional interpreters, native speakers of the students A, B, C languages and other professionals deemed necessary will be able to follow the final examination and consult with the advisor about the status (satisfactory/unsatisfactory) of the student. Credit units: None ECTS Credit Units: None.
FRENCH PREPARATORY PROGRAM

Basic French Section is part of the School of Applied Languages. It aims to provide preparatory programs in French (elementary and intermediate levels) to students who do not meet the French Language requirements necessary for studying in the department of Translation and Interpretation.

The overall objective of the program is to enable students to reach the level required by equipping them with the necessary language skills needed to study in their chosen disciplines.

To achieve this, two level courses are offered: Elementary French and Intermediate French.

**Elementary French**

This course is intended for students with no knowledge of the language. By providing a solid grounding in the basic skills students will be able to progress to higher levels. At this stage, students will start to familiarize themselves with spoken French, gradually moving on to developing speaking, reading, and writing skills. A successful completion of the course will enable students to follow the Intermediate French level course.

**Intermediate French**

This course is for students whose French knowledge is beyond the elementary stage. It will continue to reinforce the skills development of the elementary course. However, particular emphasis will be given to speaking and writing. To build on these two skills, language classes will be based on aspects of French contemporary life and society in addition to subjects such as economics and politics.
TRANSLATION AND INTERPRETATION
T. İnal (Chair), B. Blackwell Gülken, İ. Boztaş, Ş. Okyayuz Yener, S. Özönder, H. Sunel.
Part-time: A. Akıncı Candoğan, G. Bilgehan, M. Çelik.

UNDERGRADUATE PROGRAM
The degree program in Translation and Interpretation trains translators and interpreters in Turkish, English, and French. The curriculum aims to develop the special skills needed for translating and interpreting, and to achieve mastery of the contemporary spoken and written languages. In addition, a wide range of elective courses provide a broad cultural background required by professional translators.

Language studies in English and French include: oral and written comprehension, oral and written translation, oral proficiency, essays, precis writing, note-taking in addition to translation workshops. Elective courses deal with fields such as national government and administration, politics, economics, law, culture, current events, modern literature, European organizations, and computer literacy. The third year includes a summer program which forms an integral part of the curriculum. For this program, after a period of one month, spent in a firm/agency of the public or private sector, students submit a summer practice report which should also be presented orally either in English or French. In the fourth year students may follow a more specialized track of study by choosing one of the following: Written Translation or Conference Interpretation. However, access to Conference Interpretation requires the successful completion of a written and oral examination. This examination will be prepared by the school examination committee comprised of at least three members including the director and one instructor teaching the course. For both specializations a project will be undertaken which will require research to be carried out.

At least two elective courses should be taken from the elective courses list above.

COURSE DESCRIPTIONS

TRIN 101  Comparative Grammar (English-Turkish)
Comparative study of the principal grammatical structures of English and Turkish, including lexical items. Presentation of basic concepts necessary to the study of words: meaning, etymology, variants and formation. Credit units: 3 ECTS Credit Units: 6. Aut (A. Bayrakçeken-Akın)

TRIN 102  Applied Linguistics
Introduction to applied linguistics with special emphasis on the morphological, syntax and semantics of the French and Turkish languages. Role of linguistics in translation and in rhetoric analysis . Credit units: 3 ECTS Credit Units: 6. Spr (H. Sunel)

TRIN 103  Comparative Grammar (French-Turkish)
Comparative study of the principal grammatical structures of French and Turkish, together with a study of lexical items. Presentation of basic concepts necessary to the study of words: meaning, etymology, variants and formation. Credit units: 3 ECTS Credit Units: 6. Aut (H. Sunel)

TRIN 131  Texts and Composition in English I
This course uses texts of a general nature as a basis on which to develop the students' oral and written command of English. Emphasis is on style, language registers, vocabulary building and composition. Oral work includes small group discussions and debates on current topics in addition to public speaking. Credit units: 3 ECTS Credit Units: 6. Aut (M. Karagülle)

TRIN 132  Texts and Composition in English II
This course uses texts of a general nature as a basis on which to develop the students' oral and written command of English. Emphasis is on style, language registers, vocabulary building and composition. Oral work includes small group discussions and debates on current topics in addition to public speaking. Credit units: 3 ECTS Credit Units: 6. Spr (M. Karagülle)

TRIN 133  Texts and Composition in French I
This course uses texts of a general nature as a basis on which to develop the students' oral and written command of French. Emphasis is on style, language registers, vocabulary building and composition. Oral work includes small group discussions and debates on current topics in addition to public speaking. Credit units: 3 ECTS Credit Units: 5. Aut (A. Demir, V. Paternotte)

TRIN 134  Texts and Composition in French II
This course uses texts of a general nature as a basis on which to develop the students' oral and written command of French. Emphasis is on style, language registers, vocabulary building and composition. Oral work includes small group discussions and debates on current topics in addition to public speaking. Credit units: 3 ECTS Credit Units: 5. Spr (V. Paternotte)

TRIN 161  Introduction to Translation
This course consists of an introduction to the theory and methods of translation. It includes study of the nature, function and features of language, a survey of the development of the English, French and Turkish languages, and a description of translation as a profession. Credit units: 3 ECTS Credit Units: 6. Aut (İ. Boztas, H. Sunel)

TRIN 166  English-Turkish-French Translation
This course consists of oral and written translation from English into Turkish and from French into Turkish of topics drawn from a variety of sources. The course includes comparative stylistics of English / Turkish and French / Turkish, including a study of language registers. It also includes the use of recorded broadcasts and radio reports as a spoken source from which written translation is performed. Credit units: 4 ECTS Credit Units: 6. Spr (İ. Boztas, S. Özönder)

TRIN 172  Computer Literacy
Basic Computer Literacy. Students use both system and application software: word processing, Internet, basic communications and web page building, and spreadsheet. In addition, students learn how to build glossary tables and how to prepare web pages for translation. Credit units: 3 ECTS Credit Units: 6. Spr (E. Maloney)

</table>
The course also includes in-depth case studies and follow-up activities. Throughout the course, examples are provided from a rich range of media forms, including advertising, films, television, radio, newspapers, magazines and photography. **Credit units: 3 ECTS Credit Units: 6.**

**TRIN 335  Note-Taking and Consecutive Interpretation**
This course aims at combining oral comprehension with the ability to reproduce speeches and to note then down while a speaker delivers a speech. Note-taking procedures and bilateral interpretation techniques will also be stressed. **Credit units: 3 ECTS Credit Units: 6. Aut (M. Kaya, Ş. Okyayuz Yener)**

**TRIN 336  Introduction to Simultaneous Interpretation**
This course emphasizes the techniques and practice of simultaneous interpretation. It also includes the techniques of liaison interpretation. **Credit units: 3 ECTS Credit Units: 6. Spr (M. Kaya, Ş. Okyayuz Yener)**

**TRIN 337  Precis Writing in English-French**
This course consists of an introduction to the technique of precis-writing based on texts of a specialized nature and on recorded speeches. It also includes note-taking, editing and minute-writing. **Credit units: 3 ECTS Credit Units: 6. Aut (Ş. Okyayuz Yener, C. Özcan)**

**TRIN 339  Introduction to Interpersonal Communication (in French)**
This course offers basic knowledge of interpersonal communication principles and their practical application in everyday interpersonal settings. Emphasis is on improving interpersonal skills and helping students increase their communication competence through readings, lectures, in-class activities and out of class assignments. **Credit units: 3 ECTS Credit Units: 6. Aut (V. Paternotte)**

**TRIN 340  Audiovisual Media Translation I**
This course aims to introduce the students to the knowledge and skills required for producing translated version of an audiovisual product. Besides becoming familiar with the professional practice in this field, students will concentrate on techniques, resources and strategies for practical translation work in the media and enhance their awareness dubbing, subtitling, web translation and audio description, including linguistic and cultural problems specific to audiovisual translation. **Credit units: 3 ECTS Credit Units: 6. Spr (B. Blackwell Gülen, A. Erkoç)**

**TRIN 361  Technical Translation (English-Turkish)**
This course consists of written and oral translation from English into Turkish of scientific and technical material drawn from a variety of sources, including medical and pharmaceutical. The course includes documentary and terminological research and emphasizes style and language registers. **Credit units: 3 ECTS Credit Units: 6. Aut (A. Bayrakçakan-Akın)**

**TRIN 363  Technical Translation (French-Turkish)**
This course consists of written and oral translation from French into Turkish of scientific and technical material drawn from a variety of sources, including medical and pharmaceutical. The course includes documentary and terminological research and emphasizes style and language registers. **Credit units: 3 ECTS Credit Units: 6. Aut (S. Özönder)**

**TRIN 364  Literary Translation (English-Turkish)**
This course consists of written and oral translation from English into Turkish and includes documentary and terminological research with emphasis style and language registers. **Credit units: 3 ECTS Credit Units: 6. Spr (Ş. Okyayuz Yener)**

**TRIN 366  Literary Translation (French-Turkish)**
This course consists of written and oral translation from French into Turkish and includes documentary and terminological research with emphasis on style and language registers. **Credit units: 3 ECTS Credit Units: 6. Spr (H. Sunel)**

**TRIN 371  Computer Literacy II**
Web Page and Database Design. For the first half of the course students build a database. For the second half of the course students learn advanced HTML code, using both menu-driven and keyboard-driven software. **Credit units: 3 ECTS Credit Units: 6. Aut (E. Maloney)**

**TRIN 461  English-French Translation Workshop I**
This workshop progressively leads the student to develop French-English, French-English translation skills through intensive work on translation assignments and individual and group projects involving comparative analysis of a variety of texts. **Credit units: 3 ECTS Credit Units: 6. Aut (V. Paternotte)**

**TRIN 462  English-French Translation Workshop II**
This workshop further develops the students English-French, French-English translation skills through intensive work on translation assignments and individual and group projects involving the translation of a variety of texts. **Credit units: 3 ECTS Credit Units: 6. Spr (B. Blackwell Gülen)**
TRIN 463 Translation Criticism

TRIN 464 Professional Communication for Interpreters
The course aims to train students in the communication skills techniques required by interpreters in the professional world. Emphasis will be given to conducting meetings, negotiating contracts and presenting projects to English and French speaking audiences. Credit units: 3 ECTS Credit Units: 6. Spr (T. İnal, Ş. Okyayuz Yener)

TRIN 473 Turkish Diction
This course will particularly stress the need to speak Turkish efficiently and correctly with a special emphasis on the right pronunciation of words. Credit units: 1 ECTS Credit Units: 2. Aut (M. Çelik) Spr (M. Çelik)

TRIN 481 Consecutive and Simultaneous Interpretation Techniques
This course provides further practice in the techniques of consecutive interpretation. Emphasis on bilingual practical applications. Prerequisite: TRIN 335. Credit units: 6 ECTS Credit Units: 10. Aut (A. Akınç, M. Kaya)

TRIN 483 Simultaneous Interpretation I
This course emphasizes the techniques and practice of simultaneous interpretation in conference situations. Credit units: 6 ECTS Credit Units: 8.

TRIN 484 Simultaneous Interpretation II: Fieldwork+Projectwork
Implementing simultaneous interpretation. Under the supervision of a professional interpreter, the student will work in actual conference situations. Students are required to work on a project (under the supervision of an instructor) based on videotape recordings of conferences/seminars. Emphasis will be given to the preparation of dialogue lists/scripts in English/Turkish and French/Turkish and vice-versa. Credit units: 6 ECTS Credit Units: 12. Spr (A. Akınç, M. Kaya)

TRIN 485 Translation Workshop for EU Texts and Documents I (English-French-Turkish)
This course consists of translation from English into Turkish, French into Turkish on topics of current interest. Related with the European Union, its institutions and Turkish legal and official documents. Credit units: 6 ECTS Credit Units: 10. Aut (I. Boztaş, T. İnal, H. Sunel)

TRIN 486 Translation Workshop for EU Texts and Documents II (English French Turkish)
This course provides training in translation from English into Turkish and French into Turkish of legal and official documents as well as texts related with current European issues. Credit units: 6 ECTS Credit Units: 12. Spr (I. Boztaş, S. Özönder, H. Sunel)

TRIN 487 Interpreting for Public Services
This course provides an initial introduction to the context of public service interpreting and stresses interpreting for the courts, the police and the immigration services. Students will be introduced to the techniques of liaison and whisper interpretation and will reinforce the technique of consecutive interpretation. These techniques will be practiced through simulations of relevant interpreting situations. Credit units: 3 ECTS Credit Units: 6. Aut (T. İnal, Ş. Okyayuz Yener)
The School of Applied Technology and Management comprises three academic departments:

- Business Information Management
- Computer Technology and Information Systems
- Tourism and Hotel Management

The Department of Business Information Management (BIM) provides an “Applied Business” education with enriched “Information Management” and “Business Communications” components. BIM courses are designed to prepare innovative, adaptable graduates who have administrative and management skills and a solid grounding in the primary functions of business; who have the ability to use information effectively and to manage information resources and systems strategically; and who have sound teamwork and interpersonal communication abilities and can apply these skills equally to internal and external audiences. A very valuable part of the curriculum is the Industrial Training placement. This gives the student a “real life” business experience and adds a practical perspective to the theoretical studies. Students can specialize in the desired area of the study program through a wide variety of elective courses.

The Computer Technology and Information Systems Department (CTIS) aims to provide a first-rate education in the field of computers and information technologies for college and high school graduates who are willing to apply themselves diligently to a computer education and who wish to prepare themselves for the broad range of exciting career opportunities, in this dynamic and rapidly expanding field. The CTIS curriculum is designed to meet the popular and expanding IT industry requirements like rapid application development, networks and web technologies, data warehousing, where technical background is not sufficient and needs to be supported by social skills. To accomplish this, CTIS technical courses are complemented by a range of business studies. These include both management and social/communication courses. Main goal is to graduate students who are technically both competent and confident, who are innovative, adaptable, and who have sound teamwork and interpersonal communication skills.

The Tourism and Hotel Management Department (THM) aims to prepare students for managerial and supervisory positions in hotel, restaurant and travel establishments, encouraging them to establish their own firms in hospitality and travel industries. Hotel and restaurant business, culinary arts and travel industry studies emphasized with management courses are taught theoretically. On-premise training facilities including the Practice Restaurant; fully equipped demonstration kitchen, the small quantity food laboratory, practice kitchen and furnished hotel rooms are the practical side of the curriculum. The THM Department also conducts industrial training programs, so that students may complete internships and externships providing real life experience with well known leading international hotel and restaurant chains and multinational travel and tour operators offering a healthy blend of theoretical and applied learning of the 21st century. Bilkent Hotel and Conference Center - Ankara is a significant part of the Departments’ training programs.

ACADEMIC STAFF

Mustafa Akgül, Associate Professor
Ph.D., Combinatorics and Optimization, University of Waterloo, 1981. Combinatorial optimization, mathematical programming, linear programming, theoretical computer science, nonsmooth optimization.

Beyhan Akporay, Instructor
M.S., Technology Management, University of Maryland University Collage, 2007. Software engineering, distributed systems, project management.
Duygu Albayrak, Instructor
M.S., Physics, Middle East Technical University, 2000. Discrete mathematics, information technologies. E-learning, distance learning, effectiveness of educational strategies, learning management systems, software engineering education.

Özlem Albayrak, Instructor

Syed Amjad Ali, Assistant Professor

Aysegul Atilan, Instructor
M.S., Industrial Engineering, Middle East Technical Engineering, 1990. Elements of Business mathematics, calculus, PC business applications, industrial training project, business research skills.

Ozlem Benice, Instructor
Diplome, Etudes Superieures en Hotellerie et Restauration, Ecole Hotelliere de Lausanne, Switzerland, 1992. Food and beverage operations, food and beverage management, Food production techniques.

Ibrahim Boz, Instructor
Ph.D., Economics, Gazi University, 2009. Economics, accounting, tourism policies and sustainability, senior Project.

Jamel Ben Mohamed Chafra, Instructor
M.B.A., Bilkent University, 1996. Rooms division management, service operations management applications, industrial training project.

Ayse Bas Collins, Assistant Professor
Ph.D., Educational Sciences, Middle East Technical University, 1999. Human resources management, senior project, social psychology, organizational behavior.

Nazende Ozkaramete Coskun, Instructor

Hacer Cinar, Instructor
B.A., Business Administration, Hacettepe University, 1984. Accounting, tourism management applications, industrial training project.

Guilgun Demirel, Instructor

Ebru Eren, Instructor
M.B.A., Atılım University, 2007. Database management systems, information systems analysis, project management.

Cevat Ertuna, Instructor
Ph.D., Business and Economics, University of Memphis, 1999. Quantitative decision techniques, mathematics, finance, industrial training project, senior project.

Zeliha Ihan Ertuna, Instructor
Ph.D., Finance, Old Dominion University, 2001. Finance, accounting, economics, industrial training project.

Guliz Esen, Instructor
B.A., Foreign Language Education, Middle East Technical University, 1991. Database management, hospitality industry computerization, PC business applications I, and PC business applications II.
**Tony Evans**, Instructor  

**Serkan Genç**, Instructor  
Ph.D., Computer Engineering, Middle East Technical University, 2010. Computer graphics, operating systems, website design and implementation.

**Eda Gürer**, Assistant Professor  
Ph.D., Business Administration, Hacettepe University, 2006. Marketing, world travel destinations, world geography, industrial training project, selected topics in tourism II.

**Arzu Sibel ikinci**, Instructor  

**Ebru İnanç**, Instructor  

**Güneş Karamullağlu**, Instructor  
M.B.A., Social Sciences, Gazi University, 2000. Travel operations and management, tour development and implementation, event management, industrial training project.

**Hendrik C. Kuchlein**, Instructor  
Diploma, George Brown College, Canada, 1970. Food production techniques, international cuisines.

**Nuriye Örer**, Instructor  
Ph.D., Dietetics and Nutrition, Hacettepe University, 1995. Nutrition and sanitation, hygiene, health studies, nutritional anthropology, industrial training project.

**Elif Sibel Öz醍ek**, Instructor  

**Burcu Özdoğru**, Instructor  
M.S., Computer Engineering, Atılım University, 2006. JAVA programming, e-learning, learning management systems.

**Perin Öztin**, Instructor  
M.B.A., Alaska Pacific University, 1987. Tourist attractions of Turkey, senior project, selected topics in tourism I.

**Feray Özverim**, Instructor  

**Aykut Pekcan**, Assistant Professor  

**Vural Polat**, Instructor  

**Kamer Rodoplu**, Instructor  

**Nur Sağlam**, Instructor  
Cüneyt Sevgi, Instructor

Fatih Sezgin, Visiting Professor

Mustafa Siyahhan, Instructor
M.S.J., Ohio State University, 1974. Introduction to Business, Tourism Law, Principles of Marketing, senior project.

Ayşin Solak-Örkçüoğlu, Instructor
M.S., Computer Engineering and Information Science, Bilkent University, 1991. Problem solving and algorithms, programming languages, natural language processing.

Neşe Şahin Özçelik, Instructor

Esin Şenol, Instructor
M.B.A., Atılım University, 2008. Purchasing and cost analysis, Food and beverage cost control, health studies, industrial training project.

Serpil Tin, Instructor
M.S., Electrical and Electronics Engineering, Middle East Technical University, 1991. Computer networks, data communications, software engineering, algorithms and programming languages, management information systems.

Satılmış Topçu, Assistant Professor

Engin Türel, Instructor

Erkan Uçar, Instructor
M.S., Computer Engineering and Information Science, Bilkent University, 1993. Software engineering, programming languages, IT outsourcing, business process reengineering, data mining.

Ali Ünal, Instructor

Rabia Üşenmez, Instructor
B.S., Computer Technology in Tourism, Bilkent University, 1998. Business computer applications, website development 1, PC general applications 1, PC general applications.

Hamdi Murat Yıldırım, Instructor
Ph.D., Mathematics, Middle East Technical University, 2007. Algorithms, operating systems, cryptography, senior project.

VOCATIONAL SPECIALISTS

Nimet Ceren Alparslan
M.S., Computer Engineering, Atılım University, 2009.

Cem Aydın

Zeki Polatkesen

Leyla Sezer
M.S., Computer Engineering, Atılım University, 2009.
PART-TIME ACADEMIC STAFF

Hatice Zehra Yılmaz  

Serdar Bilecen, B.S., Electrical and Electronic Engineering, Middle East Technical University, 1987.
All major organizations place a high value on graduates who combine general business knowledge with solid computer and information management training, plus strong communication and interpersonal skills. The BIM study program is designed to prepare its students for this challenge. Specifically the curriculum has three main focuses:

**Business Administration:** Business Administration courses constitute about 40% of the curriculum. To provide a foundation in basic administrative and management skills, students are given a wide range of business studies. In addition to specialized courses like accounting, finance, statistics and law, students also gain a clear perspective of the human, organizational and social factors related to successful business operations, through a range of supporting business studies which provide a foundation in basic administrative and management skills.

**Information Management:** The courses on information management area address goals as active information finding, quantitative reasoning, analytical thinking and problem solving. Starting with extensive hands-on experience and business-oriented applications, students then learn to evaluate, select, implement and manage information systems. By the time they graduate, Business Information Management graduates will have experienced all phases of project development through a web based project, which introduces `creative elements’, graphics design, plus new challenges in Information Systems Analysis and Information Architecture.

**Business Communications:** Business Information Management aims to graduate students who have strong teamwork and interpersonal communication abilities, developed through courses that focus on writing, speaking, presenting, debating and negotiating in English. The students also strengthen their verbal and written communication skills through an experience in various communication techniques such as; drama, presentation techniques, team discussions and the use of audio visual aids.

**Internship:** The curriculum includes both a 50-day summer training program and a full-semester corporate internship. These training programs are a significant part of the BIM curriculum and an important component of the students' development. Students experience, in first hand, the challenges, opportunities and frustrations of business life. They learn how to interact with people from a variety of backgrounds and to serve as contributing team members. They also gain the perspective and self-confidence they will need when selecting a career upon graduation. In fact, our students frequently receive offers for later full-time employment during their internship periods.

COURSES DESCRIPTIONS

BIM 100  Applied General Mathematics
Applied General mathematics aims at helping the students to remind basic algebra and improve analytic thinking. The course starts with number systems, exponentials, radicals, ratio, proportion, percentages, solutions of equalities and inequalities, as an application solution of stated problems, analytic study of line, graphs, combination, permutation, binomial, set theory, Venn diagrams and by the word problems end. Credit units: None ECTS Credit Units: None. Aut (A. Altaban) Spr (A. Altaban)

BIM 103  Keyboarding
With the proliferation of personal computers and computer workstations, keyboarding proficiency has become an important skill for employees at all levels of an organization, and is of immediate value to undergraduate students. This course introduces the touch typewriting system to beginning students. The emphasis is upon developing the correct techniques to achieve speed and accuracy, using a personal computer. By the end of this course, the student will be able to touch type without visual assistance on a standard keyboard. Credit units: 3 ECTS Credit Units: 5. Aut (G. Demirel) Spr (G. Demirel)

BIM 107  Elements of Business Mathematics
This course provides the students who study business with three important needs: (a) strong mathematical background (b) effective methods of solving mathematical problems in business (c) advanced analytical approach to complex mathematical problems. The course focuses on dealing with business mathematics scenario problems in various contexts. The basic categories covered are: problems in economics, problems in financial calculations and problems in production settings. The students are familiarized with using linear and quadratic equations, their associated graphs and functions for solving various business and real life scenarios. The course lays the foundation for further mathematical departmental courses like Business Statistics and Decision Analysis. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BIM 100. Spr (A. Altaban)

BIM 108  Elementary Business Statistics
In this course, statistics and its role in managerial decision making; discrete and continuous numerical data; level of measurement for numerical data; graphical description of data, descriptive measures, basic counting rules, probability concepts, discrete probability distributions; continuous probability distributions; standard, normal, t, chi square and f distribution; sampling and statistical inference; hypothesis testing; bivariate data; regression, correlation will be covered. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BIM 105 or BIM 107. Aut (F. Sezgin)

BIM 109  Keyboarding
With the proliferation of personal computers and computer workstations, keyboarding proficiency has become an important skill for employees all levels of an organization, and is of immediate value to undergraduate students. This course introduces the touch typewriting system to a beginning students. Credit units: 2 ECTS Credit Units: None. Spr (G. Demirel)

BIM 121  PC Business Applications I
Department of Business Information Management aims helping students to get European Computer Driving License (ECDL). (ECDL) is the internationally recognized qualification which enables people to demonstrate their competence in computer skills and consists a series of centrally controlled and standardized computer literacy exams. In this context, the course starts with a basic overview of Concepts of Information Technology,

BIM 122  PC Business Applications II
This course covers three widely used PC business applications. The major focus is on spreadsheets, using MS-Excel. Starting from the very basics of data types, data entry, editing and formatting, the student progresses to advanced use of MS-Excel, through case studies that employ a range of mathematical, statistical, financial, logical and lookup functions. Use of macros plus graphical data representation are included as part of the required term project. The term project combines MS-Excel with effective Internet research techniques and the advanced use of MS-Power Point, both of which are also taught in this course. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BIM 121. Spr (G. Esen, A. S. İkinci, R. Üşenmez)

BIM 181  PC General Applications
This course provides the fundamentals and basic concepts of personal computers and an introduction to general applications such as word processing, spreadsheets and the usage of Internet research. The course objective is to provide students with sufficient knowledge to effectively complete written and research assignments and to be component users during their summer training. Credit units: 3 ECTS Credit Units: 6. Aut (A. Altaban)

BIM 191  PC General Applications I
The objective of this PC pandemic course is to ensure that students are competent as introductory users of the most frequently encountered General Application Software Packages. Emphasis is placed on managing the computer resources, effective Internet search techniques, creating publishing and presenting information using Word processors. Credit units: 3 ECTS Credit Units: 5. Aut (A. S. İkinci, R. Üşenmez) Spr (R. Üşenmez)

BIM 201  Problem Solving and Algorithms
The aim of the course is to improve the students’ analytical thinking and problem solving skills using a programming approach. The course will cover the basic problem solving concepts that the students need to know and understand when working with any programming language or application. The fundamental steps of structured programming, building conditions, repetition, functions and array manipulation are the main topics covered in the course. Credit units: 3 ECTS Credit Units: 6. Aut (N. Fenmen) Spr (N. Fenmen)

BIM 205  Principles of Accounting
The course introduces the accounting cycle and studies the concepts and principles of accounting that are utilized for business purposes. Accounting procedures that are used in the preparation of financial statements for sole proprietorships, partnerships and corporations, and financial statement analysis are covered. The course also aims to familiarize students with various tools and techniques that are currently used in accounting. A widely used accounting software and Microsoft Excel are used for recording transactions and preparation of financial statements using computers. Credit units: 3 ECTS Credit Units: 5.

BIM 206  Managerial Accounting
The objective of the course is to introduce the students the main issues in Management Accounting. The principal topics encompass; cost volume profit analysis, cost behaviour, costing systems, budgeting, unit cost calculations, pricing, variance analysis accounting and performance evaluation. At the end of this course, the students will be able to make decisions different levels of management, and on data and reports to facilitate the decision making process. Credit units: 3 ECTS Credit Units: 6. Aut (A. Pekcan)

BIM 210  Legal Aspects of Business
The basics of Turkish law and the Turkish Commercial Code are the focus of this course. Contract preparation and partnership operations are two major topics covered in the Course. During group studies students create samples of the legal documents typically encountered in business life. Credit units: 3 ECTS Credit Units: 5. Aut (C. Ünal)

BIM 215  Database Management Systems
The course starts with an explanation of the techniques and methodologies of Database Management Systems in particular with the Entity Relationship approach to data modeling, and the relational model of DBMS. File systems and databases, the relational database model are introduced in database the concepts part. Entity relationship (E-R) modeling, normalization of database tables and Structured Query Language (SQL) are covered in the design concepts part. These theoretical concepts are applied and enhanced through labwork sessions, during which students will analyze, design, create and manipulate databases. The students gain the effective use of database application by using Microsoft Access. The labwork sessions prepare the students earn the certificate for European Computer Driving Licence (ECDL), Module AM5, Database, and Advanced Level. Finally, the contributions of DBMS to an organization’s operations, control and planning activities will be studied. Students carry out a term project to implement the subjects introduced in both class and labwork sessions. Credit units: 4 ECTS Credit Units: 6. Prerequisite: BIM 201. Aut (E. Eren, G. Esen) Spr (E. Eren)
BIM 223  Business Communications I
This course is aimed at students in all fields, but especially for future managers who should be aware of the vital role of communications in effective organizational management. The course will help students evaluate their own behaviour to better understand themselves and to understand how to effectively interact with others. The course covers aspects of both interpersonal and intrapersonal communication and uses a performance-based approach that helps the students to position themselves for success in tomorrow's job market. Credit units: 3 ECTS Credit Units: 5. Aut (E. İnanç)

BIM 224  Business Communications II
Verbal and nonverbal communication, importance of body language, conflict management skills, managing change and innovation, negotiation skills, inputs and outputs of communication, leader vs. manager, foundations of individual and group behavior, motivation and its significance in organizational effectiveness and efficiency. Credit units: 3 ECTS Credit Units: 6. Prerequisite: BIM 223. Aut (E. S. Özdelek) Spr (E. S. Özdelek)

BIM 231  Business Research Skills
Business Research Skills course introduces students to critical thinking and other skills needed to become a contributing team member in a dynamic, technology enhanced organization. Course materials and instruction focus on research process, research design, sources, collection, and analysis of data, and presentation of results and recommendations. Through participation in various assignments, projects, and activities, students successfully completing BIM 231 should be well prepared to: Effectively use library, electronic and community resources for secondary research, Exercise skills using primary research methods for business research, Apply basic quantitative and qualitative and qualitative skills for problem solving and decision making. Provide meaningful business communications both internal and external to the organization. Effectively communicate research results in an oral presentation as well as written report. Successfully prepare and deliver business related oral presentations using appropriate technology. Credit units: 3 ECTS Credit Units: 5. Aut (E. İnanç) Spr (N. Sağlam)

BIM 242  Web Site Development I
This course covers the basics that Web Developers need to develop their skills: Internet Concepts, Creating Web pages with XHTML, configuring text, color, and page layout with CSS, Web Development process using markup languages and programming languages, Working individually and in team, using popular technical tools including DreamWeaver MX 2004, Adobe Photoshop 7.0 Students will gain an understanding of Web Design, its uses and value to any organization. Working in teams, students will prepare a Web site as a project will be demonstrated to other project groups and a jury w at the end of the semester. Credit units: 3 ECTS Credit Units: 5. Aut (R. Üşenmez) Spr (R. Üşenmez)

BIM 260  Financial Statement Analysis
The first half of this course is devoted to an in-depth study of the content of Financial Statements, commencing with a review of IFRS and accrual accounting. Students then learn to analyze, interpret and draw conclusions about a company’s “health” based on its financial statements. Topics include earnings quality, cash flow analysis, ratio analysis and capital structure. Trend analyses and common size statements are created using Excel. Upon completion students will understand both the importance and limitations of using financial statements to evaluate how well a company is managing its operating, investing and financing activities. Credit units: 3 ECTS Credit Units: 5. Prerequisite: BIM 205 or THM 106. Aut (T. Evans) Spr (T. Evans)

BIM 261  Corporate Finance
Building on the knowledge gained in BIM 260 (Financial Statement Analysis) this course focuses on how corporations plan and attain financial objectives. The challenge is to efficiently and profitably raise, allocate and manage the firm’s capital resources; the goal is to maximize company cash flows, stock value and thus shareholder wealth. Topics in this exploratory course include TVM, capital markets, capital budgeting, working capital management, short and long term funding, dividend policy, financial forecasting and planning, plus selected topics in risk management. Credit units: 3 ECTS Credit Units: 5. Prerequisite: BIM 260 or BIM 360. Spr (T. Evans)

BIM 282  Hospitality Industry Computerization
The aim of the course is to introduce the students to the principles of EDP (Electronic Data Processing) and hotel MIS (Management Information Systems), and to explore the role of information in operational and management decision making. It is both a theoretical and a practical course. A case study using hotel management software, students will learn how management reports are derived from the operational level transactions that flow through the hotel system every day. The course will enhance the student's understanding of hotel operations and management and integrate their understanding of other theoretical courses such as Rooms Operations Management and Hospitality Industry Accounting. Credit units: 3 ECTS Credit Units: 5. Aut (G. Esen) Spr (G. Esen)

BIM 306  Decision Analysis
The objective of this course is to explore basic tools of decision making. A familiarity with elementary mathematical subjects such as functions, linear equations, matrices, probability theory and basic statistical concepts is required. These fundamental subjects are reviewed briefly in the beginning of the course. In studying these
subjects, emphasis is given on the description and logic of different techniques instead of a rigorous mathematical treatment. Therefore the student will be able to choose the suitable tools and go through more detailed information sources if necessary in the future. Keeping this approach in mind, Multiple Regression and Modelling, Analysis of Time Series, Analysis of Variance, Index Numbers, Quality Control are explored. In the studying problems involving Decision-Making Under Uncertainty, the concepts of relative cost and profit tables, decision trees, Bayes’ Theorem, marginal analysis and utility are introduced. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BIM 106 or BIM 108. Aut (F. Sezgin) Spr (F. Sezgin)

**BIM 310 Industrial Training Project**

The student will spend one semester working in industry. This provides the student with an opportunity to apply his present knowledge in a real-life environment, and to observe, document and evaluate the operations of a department. The student will be required to present an analysis of his experience, identifying the factors contributing to the success and/or problems of the department. The student’s contributions to the department during his internship will be evaluated by his manager. Credit units: 4 ECTS Credit Units: 30, Prerequisite: BIM 390. Aut (G. Demirel, E. Eren, G. Eseken, A. I. Ikinic, E. Inan, R. Ugurmez) Spr (A. Altaban, G. Demirel, E. Eren, G. Eseken, A. I. Ikinic, E. Inan, F. Sezgin, R. Ugurmez)

**BIM 316 Information Systems Analysis**

The course offers a layout that reflects real-world systems analysis skills and techniques within the framework of the systems development life cycle (SDLC). Strategic planning, review of systems requests, and the steps in a preliminary investigation are included in analyzing the business case. Creation of a logical model for the new system by using entity-relationship diagrams, data flow diagrams and process description tools are the basic topics discussed in the enterprise modeling. Microsoft Project, a project management tool, is used to plan, schedule, monitor and manage IT projects. Upon successful completion of this course, students will know how to translate business requirements into information systems that support a company’s short- and long-term objectives. Credit units: 3 ECTS Credit Units: 5, Prerequisite: BIM 215. Aut (E. Eren) Spr (E. Eren)

**BIM 341 Web Site Development II**

This course reinforces and builds on the basics taught in BIM 242. Students will learn how to convert static web sites into response empowered sources of dynamic information. Using a programming language (ASP) students will develop interactive feedback web pages and a database support system. Working in teams, students will prepare a website at which visitors can review products or services and can place on-line orders or requests for further information. Credit units: 4 ECTS Credit Units: 5, Prerequisite: BIM 201 and BIM 215 and BIM 242. Aut (A. I. Ikinic) Spr (A. I. Ikinic)

**BIM 375 Public Relations**

This course offers an understanding of public relations concepts and practices. The major objectives are to teach students how to effectively communicate in attaining marketing/public relations goals, to help students understand the impact of public relations writing on a variety of audiences, to provide basic information about social identification and behavior, and to help students become familiar with the various media employed by public relations practitioners. Credit units: 3 ECTS Credit Units: 6, Prerequisite: BIM 224. Aut (E. S. Ozdilek) Spr (E. S. Ozdilek)

**BIM 390 Summer Training**

This program provides the students with exposure to the workplace, in a supervised setting. Summer Training assignments are scheduled and monitored through the school’s Industrial Training Office. The main objective is for the student to obtain practical real-life experience of the working environment. This training, which comprises a minimum of fifty (50) working days, is undertaken during the summer break following completion of the student’s second academic year. Credit units: None ECTS Credit Units: None. Aut (N. S. Saglam)

**BIM 402 Advanced Selling Skills**

The task of “selling” is becoming more and more challenging each year. This course is designed to develop sales professionals who possess the required knowledge and skills to succeed in this profession. The course defines and uses the selling process as a platform to address the needs of complex sales situations. When there is a requirement to go beyond the basic selling models, particularly in large volume sales situations, this course can enhance the sales performance of even the best Sales Representatives. Credit units: 3 ECTS Credit Units: 6.

**BIM 403 Communications Skills**

This course is designed to enhance the students’ ability to analyze, summarize and effectively present their opinions, observations and recommendations on a variety of business issues. The emphasis is on oral presentation techniques and skills. Students will be given the basic concepts of determining the purposes of a speech and the necessity of using visual aids in presentation. Upon successful completion of the course, students will be able to deliver a presentation professionally. Credit units: 3 ECTS Credit Units: 6.

**BIM 404 Interactive Communications**

The aim of the course is to enhance the students’ understanding of the concepts of interpersonal communication and to develop their interpersonal communication skills in English focusing in particular on more formal discourse.
Focus is on listening skills, verbal communication, communication in group, leadership in group communication and customer relations. Particular emphasis will be placed on the ability to communicate in writing in order to achieve work-related goals. Credit units: 3 ECTS Credit Units: 6.

**BIM 405 Organizational Behaviour**
As an eclectic field of study, integrating the behavioral sciences; psychology, sociology, anthropology etc., into the study of human behavior within organizations, the course focuses on the analytical approach to studying organizational behavior and on increasing student’s ability to think in analytical terms. The dilemma of organizational behavior is to attempt to increase the predictability of human behavior. Credit units: 3 ECTS Credit Units: 6. Spr (M. Ferendeci-Özgödek)

**BIM 406 International Business**
The main aim of this course is to define the field of international business and emphasize the differences between business within the domestic context and business in the international context. It provides a basis for understanding the global business environment and a person's place in it as the global business environment has increasingly influenced our professional, business and personal lives. Credit units: 3 ECTS Credit Units: 6. Spr (D. Van Loo)

**BIM 411 Senior Project I**
Students are given a research project on a subject that will enrich their theoretical and practical knowledge in an area related to their future careers, preferably in the hospitality and travel industry. Students learn how to conduct research in an introductory level. They will take a project from the stage of selecting a topic through to the production of a well-planned, well-written project final document. The course also aims to improve the students communication skills by concentrating on effective presentations at various stages of the study. Each student will understand the importance of responsibility delegation in a team. Credit units: 3 ECTS Credit Units: 6.

**BIM 412 Senior Project II**
Continuation of BIM 411. Credit units: 3 ECTS Credit Units: 6.

**BIM 413 Marketing Management**

**BIM 414 Research Methodology**
The aim of this course is to give students an understanding of scientific research and teach how to conduct research in an introductory level. The course covers topics such as the scientific method, problem definition, hypothesis formulation, research design, data collection and measurement methods, analyzing data and reporting. They will take a project from the stage of selecting a topic through to the production of a well-planned, well-written project final document. The course also aims to improve communication skills of students by concentrating on effective presentations at various stages of the study. Credit units: 3 ECTS Credit Units: 6.

**BIM 416 Negotiation Skills**
Negotiation is a life skill. Every day we negotiate with colleagues, suppliers or customers. Negotiation skills can have a serious impact on profits, project deadlines, your reputation with your colleagues and your ability to implement change successfully. This course will help students to: Recognise the strengths and weaknesses of their negotiation style; Plan and prepare effectively for a negotiation; Cope with difficult negotiations; Know how to trade concessions conditionally, and; Adapt their style in differing situations. Credit units: 3 ECTS Credit Units: 6. Aut (S. Bilecen) Spr (S. Bilecen)

**BIM 417 Senior Seminars in Business Information Management**
Exposes students to selected topics of current issues in business, information management and organizational communication, mostly with the support of guest speakers. The students will also participate in the planning and organization of the seminars. Credit units: 3 ECTS Credit Units: 6.

**BIM 418 Management Information Systems**
The goal of this course is to help students learn how to use and manage information technologies to revitalize business processes, improve business decision making, and gain competitive advantage. Particular emphasis is placed on Internet technologies that provide a platform for business collaboration processes among all stakeholders in today’s networked enterprises and global markets. The course is built on five major areas of information systems knowledge needed by business professionals: Foundation Concepts, Information Technologies, Business Applications, Development Processes, and Management Challenges. Credit units: 3 ECTS Credit Units: 6. Aut (A. Altaban)

**BIM 419 Strategic Brand Management**
The aim of the course is to equip students who are the potential managers, senior executives and marketers with necessary information about the understanding of basic branding principles, classic and contemporary
branding applications and case studies, the effects of day to day marketing decisions on brand performance and the long-term prosperity of the brand franchises and product or service portfolios also new ideas with implications for marketing strategies and tactics. The course aims to make (students acquire necessary skills to better understand and interpret the current branding developments in industry which is planned to do by applying the concepts and ideas to current events or any of the more detailed branding issues or case studies given in the lectures. Credit units: 3 ECTS Credit Units: None. Aut (E. S. Özdière) Spr (E. S. Özdière)

**BIM 420 Team Effectiveness**
The aim of the course is to provide students with theoretical and practical insights into the nature of team dynamics, the stages of team development, the factors that affect team effectiveness and the methods for building team cohesiveness. Credit units: 3 ECTS Credit Units: 6.

**BIM 421 Total Quality Management**
This course provides an introduction to the application of Total Quality Management tools and techniques in both product and service industries. The theory and history of Quality Management in the world, important milestones and trends are discussed. The main principles of Total Quality management (customer focus, leadership, social impact, employee management, etc.) are introduced and some group work is done on those topics. Finally, the widely accepted Business Excellence Model of European Foundation for Quality Management (EFQM) is given with some real life business examples of successful companies. Credit units: 3 ECTS Credit Units: 6.

**BIM 422 Technology Entrepreneurship and Innovation**
Learning intensive that flexibly covers many topics important to creating and maintaining a positive environment in which entrepreneurship can flourish. The course provides participants with an intense immersion in entrepreneurship, the creation and care of an entrepreneurial ecosystem. The course content has been developed by an initiative of Intel Corporation and its Higher Education group, and the Lester Center for Entrepreneurship and Innovation at the University of California, Berkeley. the course focuses on effective teaching of entrepreneur- ship and creation of programs and organizations to support entrepreneurship. It brings wide variety of techniques and theoretical frameworks in teaching and content. Credit units: 3 ECTS Credit Units: None.

**BIM 423 Advertising Management**
This course is an introduction to both the theory and practice of advertising and provides important insights into how advertising is done. The main purpose is to develop the ability to manage basic advertising campaigns on the client side. The course is designed to introduce the student to advertising foundations and environment. How advertising began, and where it fits in today's market will be discussed. Social issues, ethics, regulation, and responsibility will be covered. The students as future clients to the advertising agencies will be able to practice the progress of an agency while campaigning with the research methods and strategic planning for advertising, Print, broadcast, and interactive online media will be analyzed. The creative process will be discussed and practised. Credit units: 3 ECTS Credit Units: 6.

**BIM 424 Integrated Business Management**
In this course students apply the concepts and techniques of Strategic Management to run a $100 million company, using a dynamic business simulator. Teams comprising three or four students complete in an evolving, competitive environment that requires integration of many common management functions, including product development, production, pricing and marketing, plus financial planning and forecasting and strategic positioning of the firm within selected market segments. This course is offered only to senior year students who have a superior academic standing. Credit units: 3 ECTS Credit Units: 6.

**BIM 425 Contemporary Practices in Human Resources Management**
This course focuses on strategic implications of "people" issues within organizations. It covers contemporary Human Resources Management practices to assist the organization in meeting its business objectives through the effective performance and job satisfaction of its employees. This course builds on steps for developing and delivering HR programs to ensure that HRM adds value to the organization and gaining basic knowledge and practicing in job analysis, personnel planning, recruitment, selection, hiring, orientation, performance management, motivation, compensation, training, leadership, change management and business ethics. Students will analyze case studies, identify problems and their causes, and propose solutions. Credit units: 3 ECTS Credit Units: None.

**BIM 426 Small Group and Team Communication**
This course examines how group behavior affects organizational effectiveness, decision making, conflict resolution, and strategies for efficient group and task management. Through active participation and observation of team dynamics, students will examine the principles of building and sustaining highly effective teams. Credit units: 3 ECTS Credit Units: 6. Spr (E. İnanç)

**BIM 430 Consumer Behavior**
Consumer Behavior is the study of social sciences that examine core influencing factors of consumer needs before, during and after the consumer purchasing process. Psychological, social, cultural influences in the com-
petitive markets and consumers? decision making strategies are discussed under the framework of consumer buyer behavior. Target market, market segmentation and consumer motivation are also discussed. **Credit units: 3 ECTS Credit Units: 6.**

**BIM 432 Customer Satisfaction**
Customer satisfaction is still one of the hardest challenges for today's businesses and becoming a hot issue in emerging markets. Concentrating on customer satisfaction is believed to drive businesses off the traditional marketing strategies while making them look and see through customers' eyes. In this course, concepts regarding the customer satisfaction as well as factors shaping customer satisfaction will be reviewed. Then the course will go into customer satisfaction programs aiming at reaching customer loyalty as an ultimate goal. In the second part of the course, the ways and means of assessing customer satisfaction will be reviewed. The results of assessment and reflecting results on customer relations performance will be the last issue to be covered in this course. Students will also participate in group studies to form customer satisfaction surveys as well as to conduct surveys on various subjects. **Credit units: 3 ECTS Credit Units: 6.**

**BIM 440 European Union**
The objective of this course is to become aware of the developments around us, what our personal responsibilities are and to investigate the importance of the issue of Turkey's Western integration and Turkey's importance to the West in this new post cold war era. To understand EU as a regional organization, students will first learn about its peculiar law, which is entirely different from International Law. Also it is mandatory to understand the institutions of EU and their functions. Topics to be covered in this course are: European Union Law and its tools, national characteristics of European institutions, supranationality of European Union, Turkey and European Union relations, approximation of Turkish Law to European Law, challenges and prosperity in Turco-European relations. **Credit units: 3 ECTS Credit Units: 6.**

**BIM 445 Implementing Web Based Intra Portals**
How to achieve the performance in an organisation by using the information systems goes through the combination of "common usages" and "common goals" in one screen from various locations at various periods where it is called as "portal". This lecture aims to give basic and important principles to settle, develop a portal and also how to make this technology usable, and always live in real working life. **Credit units: 3 ECTS Credit Units: 6.**

**BIM 450 Multimedia Techniques**
Introduction to multimedia presentation techniques combined with selective types of digital media such as graphics, video, animation, sound, etc. Course is based on practical exercises and weekly assignments. Students are expected to be working as groups and perform a major multimedia project fulfilling the given criteria by the end of the semester. The course will focus on special multimedia editing software such as Adobe Premiere, Adobe Photoshop and Macromedia Flash technology will be examined for authoring and development of interactive online or offline media. **Credit units: 3 ECTS Credit Units: 6.** 

**BIM 452 Knowledge Management in Business**
**Credit units: 3 ECTS Credit Units: 6.**

**BIM 455 Judgement and Decision Making**
This course focuses on understanding judgement and decision making processes, and is based on social psychology which includes cognitive, personality, development and psychology. We shall try to analyze why these decisions produce strong feelings and emotions, what braces our decisions, what are beyond our control and how we can make better decisions. **Credit units: 3 ECTS Credit Units: 6.**

**BIM 469 International Communications**
The aim of the course is to introduce students to the main concepts, dilemmas, controversies and conflicts, as experienced in both historical and modern society, in light of the international communication system. International communications will be studied in terms of the political, economic and cultural relations between nation states. It is also an aim to provide a broad understanding of the role of the media in international communication and international relations. Students will be required to discuss current political events and news during each lecture. Students' participation in class and seminar discussions is expected and will be considered in the final course grades. **Credit units: 3 ECTS Credit Units: 6.**

**BIM 471 Information Architecture**
This is a 'finishing course' for BIM students who have successfully completed the System Development course (63-316) plus both Website Development courses, (63-242, 63-341). The focus is on effective presentation of information produced by computer applications, with particular emphasis on Website design and e-commerce. The first aim is to sensitize students to Human Computer Interactions related to information input, retrieval and display. Through critical analysis of existing systems, students will gain a sound understanding of Website Organizational Schemes, Organizational Structures, Labeling and Navigation systems, plus Information Retrieval tools. The creative aspects of Page design - graphics and content editing - will be evaluated in terms of Website usability. Finally, the organizational challenges of dealing with conflicting requirements when developing Web-based information systems, plus techniques for reconciling these differences, are explored. **Credit units: 3 ECTS Credit Units: 6.**
BIM 482  Electronic Business
Information systems, particularly those dealing with Electronic Business, have become a critical part of the products, services, and management of organizations. The effective and efficient use of information technology is an important element in achieving competitive advantage for business organizations and excellence in service for government and non-profit organizations. This course will not only help the student to gain the ability to develop, implement and manage an infrastructure of information technology, data, and organization-wide systems, but it will also help develop the skills to manage, analyze and develop applications dealing with electronic business. They will also be able to assist in incorporating information technology into the organization’s strategy, planning, and practices.  
Credit units: 3 ECTS  Credit Units: 6. Aut (T. Evans) Spr (Staff)

BIM 490  Project Management
Project management is the application of knowledge, skills, tools, and techniques to project activities to meet project requirements. The course introduces the project management discipline and the project management life cycle. It covers a comprehensive view of the project management processes (initiating, planning, executing, monitoring and controlling, and closing) and PMI’s (Project Management Institute) project management methodology including nine knowledge areas (Scope Management, Integration Management, Time Management, Cost Management, Quality Management, Risk Management, Procurement Management, Human Resource Management and Communication Management). The students will also learn the advanced features of MS-Project and will be able to use it in their project implementation.  
Credit units: 3 ECTS  Credit Units: 6. Aut (E. Eren) Spr (E. Eren)

BIM 492  Strategic Management
In this course students apply the techniques of Strategic Management to run a $100 million company, using a dynamic business simulator. Teams comprising four or five students manage companies in a constantly evolving market. This enables the students to apply the skills and knowledge they have obtained in the previous three years. Effective interpersonal, team building and communications skills are required to formulate decisions that integrate accounting, finance, marketing, R&D and production planning activities, plus Human Resource Management, in a highly competitive environment.  
Credit units: 3 ECTS  Credit Units: 6. Aut (T. Evans) Spr (G. Esen, T. Evans)

BIM 494  Selected Topics in Business
This course, together with BIM 498, will provide graduating students with leading edge information in each of the three areas of BIM department specialization. Guest instructors drawn from industry will offer real world perspective on the current trends and debates in their professions. Topics covered can range from ethical legal and social issues to an advanced treatment of material studied in earlier semesters.  
Credit units: 3 ECTS  Credit Units: 6.

BIM 496  Selected Topics in Business Communications
The subject matter of this advanced Business Communication course will vary from year to year based upon the recommendations of the guest instructors who are drawn from industry. The aim of the course is to ensure that BIM graduates enter the marketplace sensitized to the most recent trends and techniques in the constantly evolving field of Business Communications. Class projects may be assigned to supplement readings, lectures and class discussion.  
Credit units: 3 ECTS  Credit Units: 6. Aut (E. S. Özdilek)

BIM 498  Selected Topics in Information Management
The objective of this Senior Year course is to provide graduating students with current trends in the rapidly changing area of Information Management. To ensure that course material is at the leading edge of IM developments, instruction is provided by IM professionals drawn from business and industry. Although the course content is dynamic, the focus is on integrating state-of-the-art information technologies into the daily operations of an organization.  
Credit units: 3 ECTS  Credit Units: 6.
COMPUTER TECHNOLOGY AND INFORMATION SYSTEMS

Department of Computer Technology and Information Systems offers a four-year BSc. degree in information technology (IT) and information systems (IS) with a curriculum concentrated in software development and designed to meet the popular and expanding IT industry requirements. A semester-long industrial training opportunity - in their 3rd year - enables our students to practically apply their background on topics like database, data communications and networking, Internet and e-commerce applications, software engineering, programming and even get solid job offers from contemporary software companies.

Technical courses are complemented by a range of business studies. These include both management and social/communication courses. Our aim is to graduate students who are technically both competent and confident, who are innovative, adaptable, and who have sound teamwork and interpersonal communication skills.

COURSE DESCRIPTIONS

CTIS 151 Introduction to Programming
An introduction to programming from both design and programming standpoints. Syntax and semantics of programming languages. Programming style. Program debugging and testing. Data representation, simple arithmetic expressions, decision and control statements. Arrays. Introduction to standard libraries, structured and modular programming technique will be introduced along with the usage of C language (Four hours lecture, four hours lab, one hour recitation.) Credit units: 5 ECTS Credit Units: 8. Aut (B. Özdöğru, S. Tun) Spr (D. Albayrak, A. Solak-Örkcüoğlu)

CTIS 152 Algorithms and Data Structures
Implementation of abstract data types and structures. Dynamic data structures. Strings, stacks, queues, linked lists, doubly linked lists. Multidimensional structures. Recursion. Implementation of basic searching and sorting methods. File I/O (Four hours lecture, four hours lab, one hour recitation.) Credit units: 5 ECTS Credit Units: 8. Prerequisite: CTIS 151. Aut (A. Solak-Örkcüoğlu) Spr (A. Solak-Örkcüoğlu, S. Tun)

CTIS 163 Discrete Mathematics
This course focuses students on the construction and computation of objects. Designed as an introductory course in discrete mathematics, it serves a variety of majors, including mathematics, and computer science. Logic and
proof. Elements of logic, mathematical induction and operations relations and functions and counting methods. The course introduces algebra that directly applies to computer science. In addition to Boolean algebra, abstract data types are introduced as algebras and computational algebras. Topics include graph theory, Boolean algebra, theory of trees, combinational circuits, automata theory, grammars and languages. (Four hours lecture.) Credit units: 4 ECTS Credit Units: 6. Aut (D. Albayrak, A. Solak-Özkoçğlu) Spr (D. Albayrak)

CTIS 164 Technical Mathematics with Programming
The objective of this course is to familiarize students with fundamental concepts in technical mathematics and calculus, using programming. The course will cover topics from functions and graphs, linear equations, quadratic equations, trigonometry, inequalities, exponential and logarithms, matrices and determinants, plane analytic geometry, differentiation and integration. On successful completion of this course a student is expected to have enough mathematical and programming experience to deal easily with computer graphics and other mathematical based programming areas in information technology. (Four hours lecture.) Credit units: 4 ECTS Credit Units: 5. Prerequisite: CTIS 151. Spr (S. Genç)

CTIS 165 Fundamentals of Information Systems
The course introduces the fundamental concepts of information systems with historical and evolutionary perspectives. Some of these topics are systems, organizational and strategic role and added value of information systems, decision support systems, data mining, MIS, information systems planning, data management, computer networking, internet, analysis, design, development, and maintenance of information systems, competitive edge of information systems. This course reflects an extensive summary of the curriculum as well. (Three hours lecture, One hour lab.) Credit units: 3 ECTS Credit Units: 6. Aut (Ö. Albayrak, E. Uçar) Spr (Ö. Albayrak, E. Uçar)

CTIS 166 Information Technologies
The course introduces basic operating system concepts by using Linux operating system. Covered Linux topics include: Linux GUI, kernel, CUI, shells, basic shell programming, Linux file system architecture, file security, linux tools for software developments, etc. The course also introduces networking and internetworking concepts. (Three hours lecture, One hour lab.) Credit units: 3 ECTS Credit Units: 5. Aut (M. Akgöl, H. M. Yıldırım) Spr (M. Akgöl)

CTIS 251 Object Oriented Programming
The objective of the course is to make the students familiar with the object oriented programming paradigm by focusing on the principal concepts such as objects, classes, encapsulation, modular design, hierarchy between classes, inheritance, polymorphism and abstract classes. Java language will be used as the programming language and all the applications and examples both in the lecture and in the lab will be implemented using Java. (Four hours lecture, three hours lab.) Credit units: 5 ECTS Credit Units: 7. Prerequisite: CTIS 152. Aut (S. A. Ali, N. Şahin Özel) Spr (B. Özdoğan)

CTIS 252 Programming in Java
The main goal of this course is to teach advanced subjects of programming in java. The course content will be taught together with example programs and lab practice. The students are expected to have a background on object oriented programming concepts with Java. The course topics are: JApplet, Multi Frame, JDialog, Java I/O, File Operators, Serialize objects, Generics, Collections, Multi-Threaded Programming, Using Threads, Creating a Multi-Threaded Program, Thread Synchronization, JDBC, Overview of SQL Language, Overview of JDBC and its drivers, JDBC API: connections, statements, result sets, Using JDBC: updates, queries, Basic Networking, Overview of Networking, Networking Concepts, Identifying Your Computer’s IP Address, Using the InetAddress Class, Sockets, Implementing the Client Side of a Socket, Implementing the Server Side of a Socket, Developing a multi-threaded Server, Datagram Socket, Servlet, Java Server Pages, Personalizing the Site, Displaying Dynamic Content, Remote Method Invocation (RMI), Java Beans, J2EE, Model View Controller (MVC). (Four hours lecture, four hours lab.) Credit units: 5 ECTS Credit Units: 8. Prerequisite: CTIS 251. Aut (B. Özdoğan) Spr (B. Özdoğan, N. Şahin Özel)

CTIS 255 Web Technologies I
The objective of the course is to give the necessary background information and the technologies to develop a professional web site. It focuses mainly on design and implementation of interactive web pages using different web technologies like html, dhtml, css, javascript, flash. Through both lectures and laboratory work, students will gain a comprehensive understanding of the Internet and the purpose and value to an organization of owning a website. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 5. Prerequisite: CTIS 151. Aut (S. Genç, C. Sevgi) Spr (N. Şahin Özel)

CTIS 256 Web Technologies II
The aim of this course is to enable students to develop information systems using web as the main interface between users and the system. To do this; all necessary information, design techniques and the concepts will be taught such as PHP, my SQL, ASP, JSP e-commerce concepts, XML. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 5. Prerequisite: CTIS 255. Spr (S. Genç)
CTIS 259  Database Management Systems and Applications  
Credit units: 5  ECTS Credit Units: 7, Prerequisite: CTIS 152.  
Aut (F. Yüreğen) Spr (F. Yüreğen)

CTIS 261  Computer Networks I  
Credit units: 4  ECTS Credit Units: 5, Prerequisite: CTIS 163 and CTIS 165. Aut (V. Polat, C. Sevgi) Spr (H. M. Yıldırım)

CTIS 262  Computer Networks II  
Credit units: 4  ECTS Credit Units: 5, Prerequisite: CTIS 261. Spr (S. A. Ali, V. Polat)

CTIS 264  Computer Algorithms  
The course focuses on algorithms and problem solving techniques. Major concepts include; sorting, searching, divide and conquer algorithms, dynamic programming, greedy algorithms, graph algorithms, cryptographic algorithms, string matching algorithms. Basics of analysis of algorithms. Main aim is to improve students’ analytical thinking skills. (Three hours lecture.)  
Credit units: 3  ECTS Credit Units: 6, Prerequisite: CTIS 152 and CTIS 163. Spr (M. Akgüll)

CTIS 290  Summer Training  
This program provides the students with their first exposure to the workplace, in a supervised setting. Summer Training assignments are scheduled and monitored through the school’s Industrial Training Office. The main objective is for the student to observe an information systems institution first-hand, and obtain practical real-life experience. This training, which comprises a minimum of forty (40) working days, is undertaken during the summer break following completion of the second academic year. A training report has to be submitted.  
Credit units: None  ECTS Credit Units: None.  
Aut (Ö. Albayrak, S. Tin, E. Uçar)

CTIS 310  Industrial Training Project  
The student will spend one semester working in industry. This provides the student with an opportunity to apply his present knowledge in a real-life environment and to observe, document and evaluate the operations of a computing department. The student will be required to present an analysis of his experience, identifying the factors contributing to the success and/or problems of the department. The student’s contributions to the department during his internship will be evaluated by his manager.  
Credit units: 4  ECTS Credit Units: 30, Prerequisite: CTIS 290.  
Aut (E. Uçar) Spr (E. Uçar)

CTIS 313  Money Management  
The course covers the usage and storage of money and the management of it; in order to avoid unnecessary losses. In the first part of the course the price and different forms of money will be analyzed, where as in the second part foreign currency markets and management will be included in the discussions to be able to complete the money management process. (Three hours lecture.)  
Credit units: 3  ECTS Credit Units: 5.  
Spr (F. Özerverim)

CTIS 315  Introduction to Matrix Games  
The aim of the course is to show the students how to develop a strategy that minimizes the loss under strong competition. Five or six relatively simple games will be defined and played. The possible and rational moves in each one of the games will be determined and gathered in form of a matrix. Based on the matrix and the statistical frequency of the appearance the strategy that minimizes the loss will be chosen. This choice will be discussed and compared, and lastly theoretically proven in case it is possible. The findings of the game will be applied to similar economic cases in real life. (Three hours lecture.)  
Credit units: 3  ECTS Credit Units: 5.

CTIS 359  Principles of Software Engineering  
Software processes; requirements analysis and specification, design, development and testing methodologies, and software lifecycle. Importance of planning and managing the software processes. Software modeling,
review of Unified Modeling Language and CASE technology. Software development, planning, management and engineering standards such as ISO/IEC 12207 and EIA/IEEE J-STD-016-1995. An in-depth introduction to the concepts and techniques for software development. Experience team-oriented software engineering through conventional software life cycle models via small-scale software project. (Three hours lecture, one hour lab.) Credit units: 3 ECTS Credit Units: 7, Prerequisite: CTIS 251 and CTIS 259. Aut (B. Akporay)

**CTIS 361** Contemporary Application Development

The course teaches the process of developing an information system application using an object-oriented programming language and environment (currently: C#.Net). Introduction to the concepts and tools of the rapid development process through reusable code segments will be emphasized. Basic programming applications and visual interface design using contemporary environment and toolset will enable students to be more productive, more quickly. Also, the reuse and threading of operating system- and web-applications will be demonstrated with hands-on practice. (Three hours lecture, Two hours lab.) Credit units: 3 ECTS Credit Units: 7, Prerequisite: CTIS 251.

**CTIS 363** Ethical and Social Issues in Information Systems

Main objectives of the course are basic understanding of IT history, awareness of current issues, and familiarity with ethics. The course provides an overview of ethical theories and related problems with privacy, networking, security and society. The course presents issues such as social networking, government surveillance, privacy, security, and intellectual property from all points of view. The content challenges students to think critically and enables them to draw their own conclusion, and balance conflicting objections which ultimately prepares them to become responsible and ethical professional as well as individual users of future technologies. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 7, Prerequisite: CTIS 165.

**CTIS 453** Selected Topics in Information Systems I

The course introduces the students to the fundamental concepts of information systems. These include, systems theory; management information in organizations, MIS; decision support systems; enterprise resource planning systems; information systems planning; organizing for information system projects; IS project lifecycle models; IS development and maintenance principles; organization, management and control IS, IS outsourcing. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310.

**CTIS 454** Selected Topics in Information Systems II

The objective of this course is to provide the required information and technology to 2D and 3D graphics software systems. In addition to teaching the basic concepts behind the graphics systems, it enables students to learn a widely used graphics library. Open GL, for the implementation. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310.

**CTIS 455** Senior Project

Students are assigned a project that will allow them to use their skills and knowledge under close supervision of a faculty advisor. This course is the 2nd half of a yearly software project where the 1st half starts with the course CTIS 459. In CTIS 459, student teams complete the planning, requirements specification and design and in CTIS 456 they continue with the implementation and testing. During an oral presentation to a faculty board, the students provide a full demonstration of their work. Some of the projects are sponsored by contemporary Software Companies. Credit units: 4 ECTS Credit Units: 9, Prerequisite: CTIS 459. Aut (H. M. Yıldırım) Spr (M. Akgül, B. Akporay, D. Albayrak, O. Albayrak, S. A. Ali, S. Genç, B. Özdoğru, V. Polat, A. Solak-Orkçuoğlu, N. Sahin Özcelik, E. Uçar, H. M. Yıldırım)

**CTIS 457** Survey in Information Technologies

During this first semester course student teams will perform advanced research on related IT and/or IS topics mainly focusing on new trends and technologies. They need to consult with at least 5 related contemporary establishments on their specific research area. At the end of the semester, they need to prepare a research thesis and make a presentation. Some of the topics are Mobile Communication, IS security, E-learning, Distance Education and Outsourcing. (Two hours lecture.) Credit units: 2 ECTS Credit Units: 4, Prerequisite: CTIS 310. Aut (D. Albayrak, S. A. Ali, C. Sevgi, S. Tin) Spr (S. Tin)

**CTIS 458** Seminars in Information Systems

During this final semester course, managerial level guest speakers from the IT industry, provide weekly seminars. Each team of 3-4 students, get prepared for the topics for two weeks before the seminar date. At the end of each seminar, Q-A sessions and panel discussions are hold. Main aim of the course is to enable senior level students get familiar with latest technologies and hot topics as well as to get acquainted with the corporates and organizations in the IT and Software Industry. (Two hours lecture) Credit units: 2 ECTS Credit Units: 4, Spr (B. Akporay, S. Tin)

**CTIS 459** Applied Software Engineering

Selecting an appropriate software development life cycle model for the senior project, and applying appropriate requirements, analysis, design and testing methodologies. Employing techniques that help achieve SEI CMMI and IEEE goals while enhancing the impact of CASE tools and formal methods. Students are guided in technical analysis, design, development, testing and documentation phases in the context of their senior project topics and
required to prepare a complete set of documents and plans ranging from software requirements specification (SRS) and software design description (SDD) to software development plan (SDP) and software installation plan (SIP). Supplementary, but selected software engineering issues in areas such as software estimation techniques, project management concepts, software validation and verification, real-time operating systems and design, user interface design, rapid software development and prototyping, software quality and configuration management, distributed system architectures are covered. (Three hours lecture, two hours lab.) Credit units: 4 ECTS Credit Units: 9, Prerequisite: CTIS 359. Aut (Ö. Albayrak) Spr (Ö. Albayrak)

CTIS 485 Information Storage and Management
The objective of this course is to introduce students with essential concepts in information storage and management technologies. The course will cover topics in storage systems, storage networking and virtualization technologies, business continuity and storage security. A successful student is expected to understand and visualize the working mechanism behind commonly used storage systems and the underlying protocols, different storage networking technologies and their pros and cons, the importance of information availability and the need for security to protect data. (Three hours lecture) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310. Spr (S. A. Ali)

CTIS 486 Linux System Administration
The course covers practical issues in Linux system administration. Main modules are installation, software management, and user management issues. Linux shell utilities, file system management, core system daemon, kernel and compilation concepts are studied in detail. Lectures are held in laboratory environment where each student has a chance to apply the modules simultaneously through online systems. One of the main concentrations of the course is on networking. Thus, TCP/IP & network configuration, local & network security will be studied with applications of Internet protocols like HTTP, SMTP, and DNS. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 158 and CTIS 310.

CTIS 487 Mobile Application Development
The aim of this course to introduce students with both the technical and business related challenges posed by current mobile devices and wireless communications. On successful completion of this course a student will be able to compare and select software tools and APIs to develop mobile applications while considering their popularity, scope and limitations. A successful student will be able to develop and test realistic applications for mobile devices. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 251 and CTIS 310. Aut (S. A. Ali)

CTIS 488 Data Analysis
This course will provide an introduction to the important concepts in statistics. The focus throughout the course will be on developing an understanding of the rationale, the correct interpretation, and the appropriate applications of some of the most commonly used statistical techniques. No previous research or statistical knowledge is assumed from the students. The emphasis will be on concepts and applications rather than on computations. Topics include frequency distribution, central tendency, probability of samples, variability, hypothesis testing, ANOVA, correlation and regression analysis can be list as main subject. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310. Aut (D. Albayrak)

CTIS 489 Interactive Computer Graphics Programming
The aim of the course is to provide necessary 2d and 3d programming concepts to create interactive graphics applications such as simulators, computer games, real-time visualization applications using OpenGL API. The topics in the course are video hardware architecture, 2d/3d mathematics, GLUT library, 2d primitive drawing, 2d transformations, 2d animation, 3d object modeling and drawing, 3d transformations, perspective projection, orthogonal projection, hidden surface removal, i/o handling, texture mapping, lighting, alpha blending, special effects such as fogging and particles. All topics are experimented in lab sessions. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310. Aut (S. Genc)

CTIS 490 Distributed Systems
This course covers the fundamentals of distributed systems. The underlying principles, technologies, and real-world applications are discussed. The concepts studied are system models, networking, internetworking, inter-process communications, synchronization, consistency, replication, fault tolerance, and security. The case-studies of object-based (CORBA & DCOM), file-based (NFS), document-based (Web-services), and coordination-based (Jini) distributed systems are examined. The coursework will include a research paper and an application project. (Three hours lecture) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310.

CTIS 491 Software Validation Verification and Testing
Critical role of testing in successful completion of quality software projects inevitably makes it an integral part of software development process. The objective of this course is to provide a framework for understanding Software Validation and Verification concepts, processes and techniques in order for the students to effectively contribute to the testing effort in software development organizations. The course concentrates on software inspections and reviews, requirements tracing, and system and component testing. Test planning, test case design, defect
reporting and tracking, and control of testing process are practiced on sample software projects. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310.

CTIS 492 Information Systems Outsourcing
The course introduces the students to the fundamental concepts of information systems. These include, management information in organizations, decision support systems, enterprise resource planning, information systems planning, organizing for information system projects, IS project lifecycle models, IS development and maintenance principles, organization, management and control IS. This course will outline the major aspects of outsourcing with a focus on IT and IT-enabled services outsourcing. The course will - in detail - explain the conditions in which outsourcing makes sense and conditions where short term cost gains are offset by long term systemic issues. The course explores both voluntary and involuntary outsourcing for both consumers and producers of IT and IT-enabled services. Variables that impact outsourcing are discussed and the impacts of outsourcing are explored from business as well as social perspectives. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310.

CTIS 493 Information Systems Project Management
Project management is the application of knowledge, skills, tools, and techniques to project activities to meet project requirements. IT projects are unique because of rapid changes in technology, required user involvement, various systems development life cycle methodologies, product scope changes, team dynamics, and global teams. This course covers a comprehensive view of the IT project management processes. It introduces the project management discipline and the project management life cycle. It covers the management of project teams and project communications. Project selection, scheduling, and control tools and techniques such as Net Present Value (NPV), Return on Investment (ROI), Work Breakdown Structures (WBS), Critical Path Method (CPM), and Earned Value (EV) management are examined. Project risk, quality, and procurement management are also included. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310. Spr (E. Uçar)

CTIS 494 Software Quality Assurance
The purpose of this course is to provide students a common understanding of software quality assurance. The course aims to arm students with tools, techniques and methodologies of developing robust software. It provides both the theoretical and the practical concepts. The course requires several group project/ case study assignments. Topics include: Software Inspections and Testing, Capability Maturity Model, ISO9000 and SPICE, Software Quality Metrics, The Seven MP Tools, Software QFD and Voice of the Customer, Risk Assessment and Failure Modes and Effects Analysis, Quality Measures and Statistical Methods, Verification and Validation, Testing and Evaluation, Integration, Extension and Maintenance for Trustworthiness. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310. Aut (B. Akporay)

CTIS 495 Robotics and Embedded Computing
Introduction to the concepts and tools of the embedded development process. Microsoft Robotics Developer Studio 2008 as a Robotics application development and simulation environment. Lego NXT, Corobot robots and various sensors enabling students to be more productive and ready for international robotics competitions. Important concepts to be included are: Embedded Systems Hardware and Software, Overview of Robotics Hardware, Working with Decentralized Services, Advanced Topics in robotics development. (Three hours lecture in lab.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310 and CTIS 351.

CTIS 496 Data Security in Computing
The course covers theory and practice of computer security, focusing in particular on the security aspects of the computing systems. Access control mechanisms are analyzed together with distributed security model architectures. It surveys cryptographic tools used to provide security, such as shared key encryption (DES, 3DES, AES, etc.); public key encryption, key exchange, and digital signature (Diffie-Hellmann, RSA, DSS, etc.). Besides, it then reviews how these tools are utilized in the internet protocols and applications such as Kerberos, SSL, IPSEC, TLS, and others. Network security issues, such as viruses, intrusion, firewalls, and others will also be covered. (Three hours lecture.) Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTIS 310. Spr (H. M. Yıldırım)

CTIS 497 LAN Switching and Wireless Networks

CTIS 498 Wide Area Networks
TOURISM AND HOTEL MANAGEMENT

Vocational Specialists: Z. Polatkesen.

TOURISM AND HOTEL MANAGEMENT PROGRAM

Tourism is the fastest growing sector not only in our country, but also in the world. Since the world became a global market, the multi-national corporations are entering into this leading sector to a large extent. Thus students who select Tourism and Hotel Management as their area of specialization will have a chance to follow a curriculum that prepares them for a career both domestically and world-wide.

The practical and theoretical courses have a wide spectrum extending from department specific travel, hotel and food and beverage operations courses to managerial skill development, accounting, finance courses supported with English as teaching medium, second foreign languages, internships and project courses.

Credits / ECTS Credits
* SECOND FOREIGN LANGUAGE COURSES

One of the following four-semester sequences of courses in Japanese, Chinese, Russian, German, Italian, French or Spanish, offered by the Faculty of Humanities and Letters, can be taken to fulfill the second foreign language requirements:

Japanese : JAP 161/162/163/164/261
Chinese : FRL 165/166/167/168
French : FRE 161/162/163/164/261/262/263
German : GER 161/162/163/164/261/262/263
Italian : ITA 161/162/163/164/261/262/263
Spanish : SPA 161/162/163/164/261/262/263
Russian : RUS 161/162/163/164/261

MINOR PROGRAM

Food and Beverage Management Minor is intended to invite the ones who are interested in the Food and Beverage field. It will cover almost all the related information in the field starting with the fundamentals of nutrition and sanitation. The Minor will give the students both the theoretical and mostly practical knowledge in the Food and Beverage operations so that the students will accumulate food preparation and service knowledge that will be enlarged and enhanced by the cost analysis and management courses.

Health Tests: For THM 244, THM 246 and THM 323 courses each student has to have certain health tests, at the start of the semester, and the results must be appropriate for food and beverage operations. Those with health discrepancies cannot continue. Students attending the minor program need to pay for health test expenses.

Duration, Attendance and Timing: THM 246 and THM 323 Courses start at 08:30 in the morning and last 6 hours. THM 244 course is organized either in the morning time or afternoon and lasts 4 hours. For operational courses THM 244, THM 246 and THM 323 attendance and timely arrival of students are extremely important. Students need to follow the special rules related instructors set. Those rules are given to students at the first lecture of the semester. First week of these courses are for orientation, operation starts with the second week. Absenteeism allowances of these courses are also very low and followed strictly, to be announced by instructors. This is due to the fact that "Le Piment Rouge" is accepting guests, like a commercial restaurant.

Uniforms: For THM 244, THM 246 and THM 323 courses: each student has to purchase special uniforms, on their own expenses. Those uniforms are ordered at the start of each semester, and with second week onwards students are required to attend with these uniforms on. This is due to hygiene requirements. Uniforms purchased for THM 244 course are used also for THM 323 course. THM 246 course requires another set of uniforms. Students are provided a changing room and lockers.

Kitchen Facilities: THM 244 and THM 323 courses are practiced in kitchens. Due to operational limitations, each section can accommodate maximum 26 students for THM 244 course and 12 students for THM 323 course. For THM 246 course the enrollment limit is 12 students.

Prerequisite Courses: None

Open to Students from All Departments

THM 105 Introduction to Business
Designed to give an overall view to all the relevant functions of a business. Emphasizes the integrational aspects of the entire business organization and paves the way for functional area knowledge to be developed. Helps to understand and to conceptualize the nature of business, and gives the necessary orientation to the areas that will require functional specialization later on. Credit units: 3 ECTS Credit Units: 5. Aut (C. Ertuna, M. Siyahhan) Spr (P. Öztin, M. Siyahhan)

THM 106 Principles of Accounting
Introduces and studies the concepts and principles of accounting that are utilized for managerial purposes. This course aims to familiarize students with various tools and techniques that are currently used in accounting. Credit units: 3 ECTS Credit Units: 5. Aut (Z. ÇI. Ertuna) Spr (S. Sevin)

THM 107 Microeconomics
Familiarizes students with the basic principles and concepts of microeconomics. The course will mainly concentrate on the general knowledge, terminology, concepts and procedures utilized in the analysis of microeconomic units and provide an overview of microeconomic problems and their possible solutions. Credit units: 3 ECTS Credit Units: 5. Aut (N. Ö. Coşkun) Spr (N. Ö. Coşkun)

THM 158 Principles of Economics
Basic principles of micro and macroeconomics. Important highlights are, background, terminology, concepts, procedures in microeconomic analysis. Problem solving with microeconomic units. National output, national income, money, monetary institutions, unemployment, growth and international monetary systems. Credit units: 3 ECTS Credit Units: 6.

THM 163 Dynamics of Tourism
Focuses on the position of tourism as the world's largest industry which has led to the widespread acknowledgment of the decisive role it plays in shaping the world. Thus, a global overview of the industry; trends, its socio-cultural and economic impact, motivators, hospitality related services, transportation, intermediaries and attractions are discussed. Credit units: 3 ECTS Credit Units: 5. Aut (G. Karamullaoğlu) Spr (G. Karamullaoğlu)

THM 164 Calculus
Provides background knowledge of mathematical procedures that are designed to analyze numerical information essential in decision making, for those who intend to pursue a career in hospitality management. Topics include: linear and quadratic equations; rate of change of functions; derivatives and integration. Credit units: 3 ECTS Credit Units: 5. Aut (K. Rodoplu) Spr (K. Rodoplu)

THM 166 Health Studies
The course provides students with the knowledge and skills necessary to help domestic and international tourists whose first-aid problems have to be addressed promptly and properly. It enhances students’ comprehension of theoretical and practical concepts and aspects of health issues routinely encountered in the tourism industry worldwide. Credit units: 1 ECTS Credit Units: 1. Aut (E. Şenol) Spr (E. Şenol)

THM 167 Behavior and Etiquette
The purpose of this course is to provide basic knowledge and practical guidelines on everyday manners and common courtesies. It also aims at giving a perspective for proper behavior and etiquette acceptable in social and business situations. To sensitize students to the rules of protocol and dynamics of contrasting cultures is also another aim of this course. Credit units: 1 ECTS Credit Units: 1. Aut (E. Türel) Spr (E. Türel)

THM 168 Nutrition and Sanitation
This course consists of two parts, Nutrition and Sanitation. The course provides information in response to today's concern over adequate sanitation and health. It also provides information about food, nutrients and health interrelations, common nutritional problems and their prevention by means of proper nutritional interventions. Credit units: 3 ECTS Credit Units: 5. Aut (N. Örer) Spr (N. Örer)

THM 172 World Travel Destinations
Provides geographic knowledge for effective and efficient service in the travel industry. Terms and concepts that are important to a travel counselor are studied. Also, the geographic resources and man-made attractions that function as a tourist destination, and the developments taking place on a world-wide basis are examined. Credit units: 3 ECTS Credit Units: 5. Aut (E. Türel) Spr (E. Türel)

THM 202 Principles of Management
Provides insights into the basic managerial functions, primarily planning and decision making, organizing, leading and controlling. The objective of the course is to encourage students to investigate and learn unified, universal, valid principles and theories applicable. Credit units: 3 ECTS Credit Units: 5. Aut (A. Pekcan) Spr (A. Pekcan)
THM 205  Macroeconomics  
Focuses on topics in macroeconomics; national output and national income; nature of money and monetary institutions; unemployment and growth; international monetary systems. Credit units: 3 ECTS Credit Units: 5.  
Aut (N. Ö. Coğuşkun) Spr (N. Ö. Coğuşkun)

THM 242  Social Psychology  
Includes some of the fundamental components of the study of tourism from a social-psychological standpoint. The course will study tourism along two dimensions: by an understanding of the social, organizational and the community contexts of tourism. Credit units: 3 ECTS Credit Units: 5. Aut (A. B. Collins, A. Pekcan) Spr (A. B. Collins)

THM 243  Rooms Division Management  
The course is intended to examine the two basic functions of rooms division management: housekeeping and front office operations. The course is also aimed at helping students acquire the basic skills necessary for the operations and other management analyses. Students will be introduced to the concepts and techniques of rooms sales forecasting, revenue budgeting, analyses of rooms sales and profit, break-even analysis, rooms pricing and yield management. Credit units: 3 ECTS Credit Units: 5. Aut (J. B. M. Chafra) Spr (J. B. M. Chafra)

THM 244  Food Production Techniques  
The course introduces students to the most common tools and equipment and basic methods used in the preparation of foods. These are the standards used in international kitchens of the hotel industry. Students will be introduced to the various products used with common basic preparation methods; use and interpretation of recipes, as well as planning menus considering the traditional organization of medium to large kitchen operations. Credit units: 2 ECTS Credit Units: 4. Aut (O. Benice) Spr (Staff)

THM 245  Purchasing and Cost Analysis  
Provides students with skills and knowledge for effective management of purchasing and cost analysis in a hotel and presents the responsibilities of a purchaser and a food and beverage controller. The course also covers determination of standards, development of operating budget and cost-volume-profit analysis, as well as basic operating activities, menu planning, purchasing, receiving, storing, issuing, production and serving. In addition, the course provides the knowledge required to prepare food and beverage reconciliation reports. Credit units: 3 ECTS Credit Units: 5. Aut (E. Şenol) Spr (E. Şenol)

THM 246  Restaurant Service  
Provides students with practical knowledge for effective management of food and beverage service. Students will have experience work in a fine dining room and will have theoretical knowledge before the service starts. Credit units: 3 ECTS Credit Units: 5. Aut (A. Unal) Spr (A. Unal)

THM 247  Food and Beverage Management  
Provides students with practical training in all aspects of restaurant operations and an in-depth approach to managerial skills for efficient food and beverage operations. Major topics include marketing strategies, menu planning and analysis, as well as labor organization and control. Credit units: 3 ECTS Credit Units: 5. Aut (O. Benice) Spr (O. Benice)

THM 252  Tourist Attractions of Turkey  
Discusses regional distribution of touristic activities with an emphasis on the natural, historical and archaeological attractions along with their characteristics as tourism products in Turkey. Credit units: 3 ECTS Credit Units: 5. Aut (P. Öztim) Spr (P. Öztim)

THM 258  Principles of Economics  
Basic principles of micro and macroeconomics. Important highlights are, background, terminology, concepts, procedures in microeconomic analysis. Problem solving with microeconomic units. National output, national income, money, monetary institutions, unemployment, growth and international monetary systems. Credit units: 3 ECTS Credit Units: 5. Aut (F. Özerim) Spr (F. Özerim)

THM 269  Co-Op Management Application  
An integration of hospitality work experience and class room instruction along with the practical management application opportunities in the hospitality industry. Completion of 40 work hours in a semester and attainment of on-the-job training goals are required. Hospitality position to be secured prior to the start of the semester. Credit units: None ECTS Credit Units: None. Aut (E. Türel) Spr (E. Türel)

THM 300  Summer Training  
This program provides students with an intensive exposure to the tourism workplace. Assignments are scheduled and monitored through the school's Industrial Training Office. The main objective is to obtain practical, real-life experience. The training program, comprised of a minimum of sixty (60) work days, takes place during the summer period. Credit units: None ECTS Credit Units: None. Aut (E. Türel) Spr (J. B. M. Chafra)
THM 301 Human Resources Management
Designed to help students understand and work with human resources managers and also deal directly and successfully with human resources issues themselves. The course focuses on hiring, training and supervision of employees. Credit units: 3 ECTS Credit Units: 5. Aut (A. B. Collins) Spr (A. B. Collins)

THM 309 Principles of Marketing
Provides an overview of the evolution of marketing, identifies the basic characteristics of consumer and individual market, explains target marketing providing insight into the four elements of the marketing mix; product concepts, marketing channel, promotion planning and international marketing. Credit units: 3 ECTS Credit Units: 5. Aut (E. Gürel) Spr (E. Gürel)

THM 310 Industrial Training Project
Students spend one full semester working in the industry. This provides the students with an opportunity to apply their present knowledge in a real-life environment, and to observe, document and evaluate the operations of a department. During their internship the student will be required to prepare a report of their experience, identifying the factors contributing to the success and/or problems of the department. Credit units: 4 ECTS Credit Units: 21, Prerequisite: THM 300. Aut (J. B. M. Chafrá, H. Çinar, C. Ertna, Z. İ. Ertna, E. Gürel, G. Karamullaoglu, N. Örer, E. Şenol) Spr (J. B. M. Chafrá, H. Çinar, E. Gürel, G. Karamullaoglu, N. Örer, E. Şenol)

THM 313 Hospitality Management Accounting
The course, with the help of accounting and internal control techniques, provides students an analytical perspective to evaluate the hospitality industry. Credit units: 3 ECTS Credit Units: 5, Prerequisite: THM 106. Aut (H. Çinar) Spr (H. Çinar)

THM 323 International Cuisines
This practical, hands-on course will enable the students in small groups to work in the a la carte kitchen of the practice restaurant. They will have the opportunity to, using the knowledge gained in food preparation techniques, apply standard recipes, prepare a selection of international dishes for service in the restaurant. Credit units: 4 ECTS Credit Units: 5, Prerequisite: THM 244 or THS 221. Aut (Staff) Spr (Staff)

THM 326 Tourism Policies and Sustainability
The central role that governments play in development and sustainability of the tourism industry. Government attitudes and involvement on the tourism development and protection of natural resources are analyzed. Credit units: 3 ECTS Credit Units: 5. Aut (İ. Boz) Spr (İ. Boz)

THM 327 Event Management
Events, meetings and conventions have become major activities in world tourism industry. The course first focuses on historic development and importance of meetings and conventions, together with the terminology and classification. Prominent event destinations in the world and their attributes are also discussed. Costing details and operation process of small to medium size events are the final major topic. Credit units: 3 ECTS Credit Units: 5. Aut (Staff) Spr (G. Karamullaoglu)

THM 348 Service Operations Management
Focuses on the management of hotel and tourism service operations. Conceptual and quantitative skills for dealing with key operational issues are taught. Credit units: 3 ECTS Credit Units: 5. Aut (J. B. M. Chafrá) Spr (J. B. M. Chafrá)

THM 391 Business Forecasting
The course aims at presenting the basic statistical techniques used for business forecasts and long-term loans. The focus is on deriving meaning from a particular data set and the use of statistical estimation methods. Moving averages, simple and multiple regression, time series analysis and box-jenkins methodology are the topics of the course. Credit units: 3 ECTS Credit Units: 5.

THM 392 Nutrition and General Health
The goal of the course is to reveal the fascination of the science of nutrition and share the fun and excitement of nutrition with students and also aims students to understand how the scientific facts apply to people’s health in daily life. Credit units: 3 ECTS Credit Units: 5. Aut (N. Örer)

THM 396 Case Studies for Tourism
The purpose of the course is to cover the innovative techniques of defining different aspects of tourism and hospitality world’s problem areas and exploring through the use of selected domestic and international case studies the solution of those. Credit units: 3 ECTS Credit Units: 5.

THM 397 Ethics in Hospitality Industry
The objective of this course is to improve the understanding of ethical aspects of traditional operational problems in tourism industry, stressing the roles of national and international companies and how individuals should socially respond to in practice; considering the rules and regulations, staff and executive relationships. Credit units: 3 ECTS Credit Units: 5.

ENGLISH LANGUAGE PREPARATORY PROGRAM

Hande İsil Işık-Mengü (Acting Director)

The medium of instruction at Bilkent University is English. The BUSEL English Language Preparatory Program aims to equip students with the necessary language and study skills for successful entry to and study in their chosen faculties and schools. There is an emphasis on English for Academic Purposes (EAP) in the program as a whole, which recognizes that students need more than linguistic input in order to be successful in their studies. During their stay in the program, students are required to develop the ability to analyze texts and information sources, as well as critical thinking skills and awareness of their own learning styles and preferences. The program is demanding and requires a full-time commitment on the part of the students.

Newly arriving students are required to take the Certificate of Proficiency in English Examination (COPE)* in September. Students who meet the required standards will pass directly into their freshman year. Students whose English does not meet the required standards will be placed in the Preparatory Program courses at different levels based on their results in the COPE exam.

The Preparatory Program consists of five levels (Elementary, Pre-Intermediate, Intermediate, Upper Intermediate, Pre-Faculty) which build on one another. Each level includes the production of a complete learning portfolio (vocabulary journal, written and spoken outcomes, and homework assignments). The courses are explained below but it is important to realize that, in addition to class work, students are expected to attend tutorials, make use of computerized learning facilities, do regular independent study, and produce assignments. Students will be evaluated continuously through achievement tests, learning portfolio assessment and assignments. Those students who have successfully completed the exit levels may sit the proficiency test and, if successful, be eligible to enter their freshman year.

Elementary Course

This course provides grounding in the English language and equips students with the necessary basic skills essential for work at higher levels. Students start to develop speaking, listening, reading, and writing skills and are required to produce assignments in these areas. Students also begin to develop some of the basic study skills needed for successful study in an English medium university.

Pre-Intermediate Course

This course offers a comprehensive introduction to a number of language items and follows on from the initial introduction at the Elementary level. Students are expected to both develop their awareness of language points and produce accurately through the skills. In order to prepare students for higher levels, skills development is graded according to a strict language framework. In addition, students are required to use both current and previous level lexis.

Intermediate Course

- **4-year Department Students**: A pass at (i) FCE/CAE/CPE or (ii) a score of at least 6.5 in IELTS (academic exam), with a minimum of 5.5 scored in every section, or (iii) a score of 550 on TOEFL PBT, with a minimum of 4 on the Test of Written English (TWE) or a score of 80 on TOEFL iBT, with a minimum of 20 scored in every section (Listening, Reading, Speaking, Writing), or (iv) a score of 87 on KPDS/UDS allows students the right to enter directly into the departments (ETS students inclusive).

- **2-year Vocational School Students**: A pass at (i) FCE/CAE/CPE or (ii) a score of at least 6 in IELTS (academic exam), with a minimum of 5 scored in every section, or (iii) a score of 490 on TOEFL PBT, with a minimum of 4 on the Test of Written English (TWE) or a score of 75 on TOEFL iBT, with a minimum of 19 scored in Listening, Reading, Writing sections and 18 scored in Speaking section, or (iv) a score of 80 on KPDS/UDS allows students the right to enter directly into the vocational schools.
At Intermediate level students are primarily expected to develop fluency and accuracy in the language they were presented with at previous levels. Students focus in more depth on the academic skills they are required to have at entry into their freshman year. All the skills, speaking, listening, reading and writing are extended with particular emphasis on production and listening and note-taking skills. At the same time, students are required to further develop their lexical knowledge to extend their means of expression through oral and written production.

**Upper Intermediate Course**

This course offers a new set of advanced language items and further consolidates the ones introduced from the previous levels. Students are expected to produce coherent and accurate language appropriate to a university setting, and be fluent in skills with specific reference to those required for academic success. They are required to demonstrate a good command of the productive skills with an ability to express themselves clearly and concisely together with an ability to read effectively a broad range of material, and to follow lectures and talks in English.

**Pre-Faculty Course**

This course aims to bring students' language, skills and lexis up to the level required for entry into faculties and schools and to equip them with the ability to follow lectures successfully, to write to an acceptable academic standard, to read a wide range of academic literature of relevance to their chosen discipline, and to participate in seminars and discussions related to their field of study.

**Tutorials**

In addition to normal teaching hours, students are also given instruction individually or in small groups of 3-5 to further meet their needs.
COURSE DESCRIPTIONS

ENG 100  English
Credit units: None  ECTS Credit Units: None. Aut (N. Ceyhan Yurduseven, N. S. Ergül, H. Mullaçoğlu) Spr (N. Ceyhan Yurduseven, N. S. Ergül, H. Mullaçoğlu)

ENG 101  English and Composition I
The central basis of ENG 101 is to introduce students to an academic approach to thinking, reading, speaking and writing in an integrated, meaningful manner such that they are able to apply the skills learnt to their departmental studies. In addition, the ENG 101 course aims to further develop the students' linguistic accuracy and range in English. Credit units: 3  ECTS Credit Units: 6, Prerequisite: ENG 100. Aut (A. Akçam, A. L. Akkaç, A. Akşınar, Ö. Albaş Vural, F. T. Ankan, J. Asquith, N. Avcıbaşoğlu, H. Başol-Çetin, E. Bekişoğlu, D. C. Bennett, Ş. Bezci, S. Birlik Karaca, Y. Bistren, I. Board, L. M. S. Bruce- Özdemir, T. Cankatan, N. Ceyhan Yurduseven, D. Çiçekoğlu, H. Dabir, M. Demirkaya, M. D. Elwell, T. Esmer, S. Evliyagil, R. Fisher, M. Krugman, Ş. Küçük-Dalbudak, T. Berk, M. Langbroek, B. Menkür Çeçen, G. Öğüz, G. Öncü, P. E. Önkol, Z. Özek Vural, P. Poole, E. R. Sandberg, S. J. Sandberg, J. L. Schroeder, Ç. Selim-Dabir, M. Sherwood, E. Soylu, P. Stephan, R. Şabi Koç, B. Tannverdi-Akalin, T. Thurston, R. D. Tickler, M. Tunca, R. Turner, S. Warchol, R. Wiggin, D. J. Willmann, A. M. Wuthrich)

ENG 102  English and Composition II

ENG 117  Advanced English Grammar I
This course is designed specifically to help students to further develop competency in grammar, vocabulary and modes of written expression under timed conditions. In order to improve their self-editing skills, students will keep a portfolio of their written work. Credit units: 3  ECTS Credit Units: 4. Aut (S. İrfaan, B. Tannverdi-Akalin, R. Wiggin)

ENG 118  Advanced English Grammar II
This course is designed to build on the skills developed in ENG 117, specifically by helping literature students to improve their competency in grammar, vocabulary and modes of written expression under timed conditions. In order to improve their self-editing skills, students will keep a portfolio of their written work. Credit units: 3  ECTS Credit Units: 4, Prerequisite: ENG 117. Spr (B. Tannverdi-Akalin, R. Wiggin)

ENG 201  Essay Writing
This course aims to improve the essay composition skills that students develop in ENG 101 and ENG 102. The course will help students refine their theoretical and practical knowledge concerning effective academic essays and critical essays on literary texts. Credit units: 3  ECTS Credit Units: 5. Aut (V. Kennedy)

ENG 206  Business Communications
The objective of this course is to develop professional communication skills necessary for Business Administration majors as they enter the business world. Coursework includes writing proposals, memos, persuasive letters,
and business reports as well as conducting business meetings and presentations through adopting documents to particular needs and audiences via authentic business communication cases. Credit units: 2 ECTS Credit Units: 5, Prerequisite: ENG 102. Spr (F. T. Akşit, H. Başoç-Çetin, T. Cankatan, M. Langbroek, Z. Özek Vural)

ENG 241 Sophomore Academic English I
This course aims to reinforce and develop students' academic English skills beyond the level reached in the Freshman year. This is done in conjunction with Phil 241, with a particular focus on reading, thinking, writing and speaking about influential social and political philosophy texts. Credit units: 3 ECTS Credit Units: 5. Aut (D. Butcher, G. J. Cotten, A. Kadioğlu, İ. Kaya-Yıldırım, M. Krugman, A. Kuglin Altıntaş, T. Berk)

ENG 242 Sophomore Academic English II
This course aims to reinforce and develop students' academic English skills beyond the level reached in the Freshman year. This is done in conjunction with Phil 242, with a particular focus on reading, thinking, writing and speaking about influential social and political philosophy texts. Credit units: 3 ECTS Credit Units: 5, Prerequisite: ENG 241. Spr (D. Butcher, G. J. Cotten, A. Kadioğlu, İ. Kaya-Yıldırım, M. Krugman, T. Berk, M. Tunca)

ENG 400 Technical and Professional Composition
This course for industrial and electrical engineers will develop technical and professional communication skills. Students will be expected to become competent in writing proposals, technical reports and business letters and in presenting academic and technical papers. The tasks performed as part of the course will mirror the tasks students will be expected to do in their prospective professional lives and in their faculty classes. Credit units: 3 ECTS Credit Units: 6, Prerequisite: ENG 102. Spr (A. L. Akkaş, I. Board, L. M. S. Bruce-Ozdemir, S. Irfaner, P. E. Önkol, Ç. Selim-Dabir, E. Soylu)

ENG 401 Technical Report Writing and Presentation
The objective of this course is to assist computer engineering students in effectively presenting various types of information in both the written and oral modes. Students will be expected to become competent in writing and organizing technical reports and in effectively presenting academic and technical papers. The tasks performed as part of the course will mirror the tasks students will be expected to do in their prospective professional lives and in their faculty classes. Credit units: 2 ECTS Credit Units: 2, Prerequisite: ENG 102 or ENG 104. Aut (A. L. Akkaş, I. Board, M. D. Elwell, E. Soylu)

ENG 404 English for Philosophy of Education
This course aims to provide students with the necessary academic skills to read, analyse, discuss and write about primary political theory texts. An emphasis is placed on close reading and evaluation of key passages and on the logical and coherent structuring of short written arguments. Credit units: 3 ECTS Credit Units: None. Aut (A. Kuglin Altıntaş) Spr (A. Kadioğlu)

ENG 406 Graduate Writing and Presentation Seminar
ENG 406 is primarily a writing seminar for graduate students. The course will focus on issues of style, voice, logic, grammars, and audience awareness in students' written work. In addition, students will learn and discuss how to present their papers effectively to an audience of peers. The objective of the course is to develop in students a scholarly identity within the conventions of their discipline. Students' own writing will serve as the basis for class discussions. Credit units: 3 ECTS Credit Units: None. Aut (A. Kuglin Altıntaş)

ELS 103 Advanced English I
This course aims at improving language accuracy and fluency through critical analysis of content and regular oral and written tasks which require students to present, express, and support their opinions. Credit units: 3 ECTS Credit Units: 5. Aut (B. Menküer Çeçen, P. Poole) Spr (B. Menküer Çeçen)

ELS 104 Advanced English II
This course builds on ELS 103 and aims to develop the ability to argue, formulate and organise various viewpoints and present them in written and spoken English. Credit units: 3 ECTS Credit Units: 5, Prerequisite: ELS 103. Aut (J. Asquith, R. D. Tickler) Spr (J. Asquith, H. Dabir)

ELS 203 Advanced English III
The objective of this course is to develop professional communication skills necessary for Vocational School students and to bring the real world of international business into the language-teaching classroom. Course work includes writing e-mails, business letters, discussing case studies, and giving oral presentations, learning problem-solving techniques and analytical skills. Credit units: 2 ECTS Credit Units: None, Prerequisite: ELS 103 and ELS 104. Aut (A. Çetindag Güven, J. L. Schroeder) Spr (A. Çetindag Güven, Ş. Küçükal-Dalbudak)

ELS 204 Advanced English IV
The general basis of ELS 204 is to consolidate the business communication skills necessary for students in their professional life, as initiated in ELS 203. Throughout the course students are encouraged to use their own experience and opinions in order to maximise their analytical and persuasive skills. Credit units: 2 ECTS Credit
Units: None, Prerequisite: ELS 103 and ELS 104 and ELS 203. Aut (J. Goggin, G. Oğuz) Spr (J. Goggin, G. Oğuz, P. Poole)

**ELS 301 Advanced Communication Skills**

This course for CTIS students aims to develop advanced level oral, written, and thinking skills through presentations, debates, secondary research and technical report writing in an extended problem and solution analysis scenario. **Credit units: 3 ECTS**

Credit units: 4, Prerequisite: ELS 102 or ENG 102. Aut (M. Sherwood, R. Şabi Koç, T. Thurston)
VOCATIONAL PROGRAM IN TRANSLATION

N. Yeşil (Chair), T. Esmer, E. Geçgil, S. Katlan, S. Kunt-Akıbas.

English and Translation Studies is a two-year program for students seeking employment in business and professional organizations where proficiency in English and Turkish is essential to translate into either language. Upon successful completion of the program students are awarded the degree of Associate of Arts in Translation.

The program provides sound vocational training in translation and interpreting from English into Turkish and Turkish into English. Courses specifically designed to lay a foundation for linguistic ability and to heighten awareness in the target and source cultures are offered to students as support to a wide range of courses in written translation, audiovisual translation and interpreting.

A high standard of English and Turkish is required for successful translators. Those students who are admitted into the program but whose level of English does not permit them to join the freshman year of the program are required to enter the Preparatory Program in order to meet the minimum requirement for entry into the freshman year.

ET 282  Translation for Science and Technology II  ...........................................  2 / 4
HIST 202  History of Turkish Republic II  ......................................................  2 / 1

COURSE DESCRIPTIONS

ET 27  Translation for Specific Purposes I
Open to several departments, this elective course is designed to improve the translation skills that may be required from students after their graduation. Based on area translation into Turkish and/or preparation for English proficiency exams, students are familiarized with the norms of various text types, along with the constraints that surface in their translations. The selection of topics is made in accordance with the departments of those students that register for the course. Credit units: 3 ECTS Credit Units: 5. Aut (N. Yesil)

ET 28  Translation for Specific Purposes II
As a sequel to “Translation for Specific Purposes I,” this elective course aims at further improving the translation skills of prospective graduates. A wide variety of topics or sub-topics are selected for course material in accordance with the students’ needs for area translation into English and/or preparation for English proficiency exams. Focusing on how various translational constraints can be approached, students attain a higher awareness of their decision-making processes in translation, which is essential to their success in exams based on translation. Credit units: 3 ECTS Credit Units: 5.

ET 29  Translation for Specific Purposes III
Based on the framework for the structural analysis of English provided in the courses Translation For Specific Purposes I and II, this course aims to prepare graduate students for English proficiency exams. Students learn to use their translation skills as they work on mock proficiency exam questions. By guiding students on how to answer questions testing reading comprehension or skills in vocabulary, grammar and translation, students will be able to attain higher scores in English proficiency exams. Credit units: 3 ECTS Credit Units: 5.

ET 105  Discourse Analysis I
This course aims to analyze texts in English with discourse tools such as cohesion, coherence, etc. In this way, students improve the analytical skills necessary for comprehension and develop an understanding of how linguistic devices may be used in translation. Throughout the course, students apply the above-mentioned skills in textual analyses for translation purposes. Credit units: 2 ECTS Credit Units: 3. Aut (S. Katlan)

ET 107  Comparative Grammar I
The aim of the course is to raise awareness about the usage of different structures in both English and Turkish by comparing and contrasting them, and thus to help students use both languages accurately and consciously. The structural analysis and translation is done at sentence level with emphasis given to the context, as well. Students receive a great amount of input on grammar and they are expected to practise the translation of grammatical structures. Credit units: 3 ECTS Credit Units: 4. Aut (E. Gecigil)

ET 108  Comparative Grammar II
As a sequel to ETS 107 Comparative Grammar I, the course aims to help students further refine their understanding of both English and Turkish usage through text analysis and translation. The course offers the students a chance to practise how to take context into account when rendering grammatical structures in their translations. Students are expected to acknowledge that the context has an influence on the choice of grammatical structures in the translation process. Credit units: 3 ECTS Credit Units: 4. Spr (E. Gecigil)

ET 115  Reading for Translation Purposes
The objective of this course is to assist students in reading texts in English so that they can inquire into the variety of resources and strategies the translator uses in comprehending the text. In either written or verbal form, the students transfer into Turkish their understanding of English texts. To this end, students summarize the texts for different recipients or give short presentations. Credit units: 3 ECTS Credit Units: 4. Aut (S. Katlan)

ET 121  Written Translation I
This is an introductory translation course aimed to familiarize students with the basic terms and concepts of translation studies. Students will analyze, discuss and translate informative, expressive and vocative texts from English into Turkish. At the end of this course, they are expected to have learnt norms and constraints pertinent to the translation of various types of texts from English into Turkish, be able to produce target texts that fulfill the criteria set out in the translation brief of each translation task, and be able to explain their and others’ translation processes and products using translation studies terminology. Credit units: 3 ECTS Credit Units: 4. Aut (N. Yesil)

ET 122  Written Translation II
As a follow-up to ETS 121 Written Translation I, this course aims to focus on the translation of informative, expressive and vocative texts from Turkish into English. Students will analyze, discuss and translate informative, expressive and vocative texts from Turkish into English. At the end of this course, they are expected to have learnt norms and constraints pertinent to the translation of various types of texts from Turkish into English, be
able to produce target texts that fulfill the criteria set out in the translation brief of each translation task, and be able to explain their and others’ translation processes and products using translation studies terminology. Credit units: 3 ECTS Credit Units: 4. Spr (S. Kunt-Akbåş)

ETS 124  Written Media Translation
This course helps students compare/contrast and learn the use of the norms which operate in the Turkish media and those of English-speaking countries. The students’ vocabulary is expanded in the areas likely to be the subject of news. Students keep abreast of current affairs and get plenty of practice in written media translation from and into Turkish and English. Credit units: 3 ECTS Credit Units: 5. Spr (S. Kunt-Akbåş)

ETS 136  Translation for Business I
This course is designed to help students to acquire the skills required for translating English business texts and documents into Turkish. Students analyze and compare the norms which operate in English and Turkish in the context of business. For this purpose, students work on the translation of texts like contracts, business letters and tender invitations. Credit units: 3 ECTS Credit Units: 5. Spr (T. Esmer)

ETS 145  Communication Skills
The objective of this course is to introduce the aspects of active listening and different kinds of speeches that interpreters have to deal with and to raise an awareness of the properties of such speeches. Identifying the type of speech, students learn how to analyze its structure, discerning the main ideas and the links between them. Students are also familiarized with the barriers to communication such as implied meaning, metaphor, understatement, hyperbole, irony, etc. Through the preparation and presentation of speeches, students consolidate what they have learnt and overcome their anxiety when speaking before a group. Students will be able to benefit from these skills in their interpreting courses. Credit units: 3 ECTS Credit Units: 4. Aut (E. Gecgil)

ETS 153  English Lexis
The objective of this course is to enhance the students’ knowledge of English vocabulary. To this end, students shall be informed of Greek and Latin roots, prefixes and suffixes in English. The course shall heighten the students’ awareness of the norms and constraints in translating such lexical items. Credit units: 3 ECTS Credit Units: 5.

ETS 184  Societies and Cultures
The primary intent of this course is to closely study the concepts of society and culture with a view to analyzing the relationship between the individual and society. Students are expected to read texts critically and discuss topics related to social institutions such as politics, religion, education, economy, and family. Through questioning and critical thinking, students shall have the opportunity to gain insight into themselves, their close environment as well as the society and culture they belong to. Credit units: 3 ECTS Credit Units: 4. Spr (E. Gecgil)

ETS 205  Discourse Analysis II
In this course, students further develop the discourse analytical skills attained in "Discourse Analysis I". Students analyze the discourse properties in encyclopedic entries, articles, black humor texts as well as excerpts from short stories and novels in English and translate these texts into Turkish under the light of their analyses. Credit units: 3 ECTS Credit Units: 4. Aut (S. Kunt-Akbåş)

ETS 208  Translation for Business II
The course aims at improving students’ competence in the translation of a variety of business documents and texts in Turkish and English and helping them analyze and compare the norms which operate in the business world of the source and target systems. Together with these analyses, students produce translations in contexts such as law (court verdicts, judicial records, etc.) or international organizations like the European Union and the World Bank (presidency conclusions, educational sector study reports, etc.). Credit units: 3 ECTS Credit Units: 5. Spr (S. Katlan)

ETS 213  Translation for Dubbing and Subtitling I
This course is designed to be practical and to mimic the professional working environment. The norms and technical aspects of subtitle translation are taught through readings, lectures and demonstrations. Students who gain practice in adjusting film dialogues into subtitle units and translating them into Turkish, also read about and discuss issues such as the role of audiovisual (AV) translation in the transmission of cultural values and the concepts of adequacy and acceptability in AV translation. Credit units: 3 ECTS Credit Units: 5. Aut (S. Katlan)

ETS 214  Translation for Dubbing and Subtitling II
The main objective of this course is to familiarize the students with the mechanics of revoicing, with a particular emphasis on lip-sync dubbing of feature films. Students are exposed to sample dubbing texts in Turkish, which are compared to and contrasted with original dialogue scripts in English. They also gain practice in translating film dialogues into Turkish and synchronising the translated dialogues with the lip movements of the actors. Credit units: 3 ECTS Credit Units: 5. Spr (S. Katlan)

ETS 215  Interpreting I
This course is intended to introduce the types of interpreting and raise an awareness of the skills and strategies used in consecutive interpreting and sight translation. Students improve consecutive interpreting and sight translation skills in the interpreting laboratory of the department. Throughout the semester, students interpret
and translate authentic conference texts on a variety of topics from English into Turkish. Credit units: 3 ECTS Credit Units: 5. Aut (S. Kunt-Akbaba)

ETS 216 Interpreting II
This course aims to help students learn and practice the basics of simultaneous interpreting. After some simultaneous-specific preparation exercises, students simultaneously interpret authentic conference texts from English into Turkish in the department’s interpreting laboratory and get acquainted with the tools and strategies of the simultaneous interpreter. Credit units: 3 ECTS Credit Units: 5. Spr (S. Kunt-Akbaba)

ETS 221 Theories of Translation
The main objective of this course is to assist students in discovering how theory relates to practice in the field of translation. Given an introduction to the history of translation theory, students develop a critical outlook on theories of translation and translation criticism. By means of this method, the student is expected to acquire a deeper insight into the process and product of translation. Credit units: 3 ECTS Credit Units: 5. Aut (T. Esmer)

ETS 222 Translation Project
This course aims to ensure that students make use of their knowledge of translation theory in the areas of translation practice and criticism. Students are expected to prepare and present three projects. The first project involves a description of the student’s practical training. For the second project, students write a critical comparison of at least two translations of one source text. The third project comprises a translation of a short story (or an informative text) along with a description of the decision-making process of the translation. Credit units: 3 ECTS Credit Units: 5. Spr (S. Kattan)

ETS 224 Literary Translation
This course aims to familiarize students with the norms in literary translation with reference to textual traditions in Turkish and English literatures. To this end, students translate excerpts from plays and short stories as well as samples of poetry. Based on their decision-making processes in translation assignments, students acknowledge the polysemous nature of literary texts that may be conveyed by means of various translation solutions. Credit units: 3 ECTS Credit Units: 5. Spr (N. Yeşil)

ETS 237 Translation for Social Sciences
This course is designed to familiarize students with the translation of medical texts. To this end, students read a variety of Turkish texts in different fields of medicine and discover the terminology used. Students explore the norms that operate in Turkish medical texts and make use of this knowledge in the decision-making processes of their translations. Credit units: 2 ECTS Credit Units: 4. Spr (T. Esmer)
The Vocational School of Computer Technology and Office Management offers two-year programs in the following areas:

- Accounting
- Bureau Management and Executive Assistantship
- Commerce and Administration
- Computer Technology and Programming

The school places an emphasis on maintaining a continuous dialogue with business and industry. This cooperation allows for a dynamic curriculum to reflect the changing needs of these environments. A training period under the supervision of the School is incorporated into the summer programs to familiarize the students with their respective industrial areas of study.

ACADEMIC STAFF

**Ceren Aydoğmuş**, Instructor
M.B.A., Management, Bilkent University, 1995. Computer applications, audit, financial regulations, finance, macroeconomics, international marketing, organizational behavior, communication skills, transferable skills, community service.

**Can Uğur Ayfer**, Instructor
M.S., Computer Engineering, Middle East Technical University, 1980. Internet programming, operating systems, network applications.

**Reyyan Ayfer**, Instructor
M.S., Computer Engineering, Middle East Technical University, 1981. Database management, programming languages, data structures, information ethics and security.

**Mehmet Serhat Azgur**, Instructor
M.S., Computer Engineering, Middle East Technical University, 2010. Systems development, project management, computer networks, operating systems, instructional model design.

**Tolga Baycan**, Instructor

**İnci Niment Durubal**, Instructor
M.S., Management, Atılım University, 2010. Economics, management, banking and insurance, finance, international finance.

**Ahmet Durukal**, Instructor

**Hayrûnnisa Erdem**, Instructor
Diploma, Kings College, General Secretarial School, USA, 1980. Advanced word processing, Applied word processing, reports and audio transcription, keyboarding.

**Nermin Fenmen**, Instructor
M.S., Chemical Engineering, Middle East Technical University, 1982. Mathematical modeling of engineering applications, computer simulation, algorithms, management information systems.

**Esra Findik**, Assistant Professor
Ph.D., Library Information Sciences, Hacettepe University, 1985. Etiquette and modern business manners, business writing techniques in Turkish.
Burcu Fisher, Instructor  

Sezer Kadayıflar, Instructor  

İlker Kalender, Instructor  
M.S., Secondary Science and Mathematics Education, Middle East Technical University, 2002. Computerized adaptive testing procedures, detection of creating/aberrant response patterns, through software, educational technology.

Ceylan Kızılduman Yazıcı, Instructor  
Ph.D., Computer Education and Instructional Technology, Middle East Technical University, 2009. Instructional technology and design, development and evaluation, print and web-based learning material production, instructor training, project management and English language teaching.

Can Kültür, Instructor  
Ph.D., Computer Education and Instructional Technologies, Middle East Technical University, 2009. Software engineering, human computer interaction, instructional technology, distance education, instructional systems design, introduction to programming, multimedia.

Murat Özsoy, Instructor  

Lori Russell-Dağ, Instructor (on leave)  
M.S., Computer Engineering, Atılım University, 2006. Object oriented programming, database management systems, computer applications.

Okyay Say, Instructor  

Selda Sevin, Instructor  

Sibel Uğurlubilek, Instructor  
M.S., Computer Engineering, Atılım University, 2005. Introduction to computers, computer applications, web technologies.

Hülya Yavuz, Assistant Professor  
Ph.D., Educational Sciences, Middle East Technical University, 1991. Computer aided education, curriculum development, mathematics education.

Füsun Yürüten, Instructor  
M.S., Computer Engineering, Middle East Technical University, 1993. Database management systems, object oriented system analysis and design, systems development, programming languages.

VOCATIONAL SPECIALISTS

Selen Aktaş  

Seren Cevheri  

Aslı Ömerbeyoglu  
M.S., Business Administration, Atılım University, 2006. Accounting standards, computer aided accounting applications.
Engin Zafer Kıraçbedel
B.S., Computer Technology and Information Bilkent University, 2006. Programming languages, operating systems, computer applications, data structures.

Ceylan Okuyucu
M.S., Software Management, Middle East Technical University, 2010. Programming languages, database applications.

Ergem Utkulu Özdemir
A.S., Computer Technology and Programming, Bilkent University, 1997. Introduction to programming, object oriented programming, operating systems, computer applications.

PART-TIME ACADEMIC STAFF

Rana Atasoy, B.S., Business Administration, Bilkent University, 1996.
Meltem Ferendeci-Özgödek, M.A., Management, Hacettepe University, 1993. Management, marketing, consumer behavior, human resources management, organizational behavior.
Derek Van Loo, M.S., Economics, University of Rotterdam, 1994.
ACCOUNTING AND TAXATION

N. Fenmen (Chair), A. Durukal, S. Kadıyıçılár.

Vocational Specialists: S. Aktaş, S. Cevheri, A. Ömerbeyoğlu.

This two year program leading to an Associate of Science degree in accounting aims at training qualified personnel to meet the requirements of the accounting world. Students are given a strong background in business and financial applications, and are trained so that they are familiar with the software packages used in real life. The curriculum of the department covers applied computer techniques, financial, managerial and advanced level accounting applications, auditing and taxation together with relevant topics in mathematics, statistics and business finance. All accounting courses involve hands-on experience in the most widely used spreadsheet and accounting software packages in the laboratory. At the end of their first year, students are required to successfully complete a 30 day industrial training program where they are expected to develop their practical skills in accounting applications.

COURSE DESCRIPTIONS

CAA 111  Financial Accounting
Generally accepted accounting principles, the accounting cycle, double-entry system with emphasis on the adjusting and closing processes, preparation of financial statements (balance sheet, income statement, cash flow statement), bank reconciliation, merchandising operations, plant assets and tangibles. Hands-on experience with popular accounting package software in the laboratory. Credit units: 4 ECTS Credit Units: 6. Aut (S. Sevin)

CAA 112  Cost Accounting
Comprehensive study on the accountant’s role in providing management with information to assist in the decision making process. Examination of concepts such as process and job-order costing, activity based costing, analysis of cost behavior (variable and fixed cost), cost-volume profit analysis, budgeting for profit planning, flexible budgets, standard cost and variance analysis, inventory planning and control (LIFO, FIFO weighted average). Hands-on experience with popular accounting package software in the laboratory. Credit units: 4 ECTS Credit Units: 6. Prerequisite: CAA 111 or CAD 128. Spr (S. Sevin)

CAA 123  PC Business Applications
This course provides the fundamentals and basic concepts of personal computers and an introduction to general applications such as word processing, spreadsheets, PowerPoint and the usage of Internet research. The course objective is to provide students with sufficient knowledge to effectively complete written assignments and presentations in the field of business and prepare them for the course CAA 223 which involves the fundamental concepts of spreadsheets as required by the ECDL Advanced Spreadsheet certification. Credit units: 3 ECTS Credit Units: None. Aut (Staff)

CAA 200  Industrial Training
This non-credit course provides for the evaluation of the student’s 30-day industrial training period which each student is required to complete during the summer break following his/her first year. During their industrial training period, students are expected not only to apply their knowledge and experience gained during their first year, but also to familiarize themselves with the actual business world, and concepts which may be new to them. Credit units: 2 ECTS Credit Units: None. Prerequisite: CAA 111. Aut (N. Fenmen)

CAA 211  Managerial Accounting
Advanced topics in financial and managerial accounting, with special emphasis on accounting practices applicable in Turkey. The uniform accounting plan, corporate accounting, and in-depth study on cost accounting, job order cost systems, process cost accounting. Hands-on experience with popular accounting package software in the laboratory. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CAA 112. Aut (Staff) Spr (Staff)

CAA 212  Advanced Accounting Applications
Advanced financial, cost, and managerial accounting applications with spreadsheet and accounting software packages. Credit units: 3 ECTS Credit Units: 4. Prerequisite: CAA 112 and CAA 223. Aut (Staff) Spr (Staff)

CAA 223  Advanced Spreadsheet Applications
The aim of the course is to provide advanced computerized applications of analysis covered in other courses such as statistics, finance, economics, management science, and accounting. Major topics include creating, enhancing and linking worksheets, charts, statistical, decisional and financial functions, sorting and filtering lists, creating summary reports and pivot tables, modeling. All lectures take place in the computer laboratory. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CAA 123 or CTP 192 or CTP 193. Aut (S. Kadıyıftchmodlar) Spr (S. Kadıyıftchmodlar)

CAA 226  Elements of Finance Analysis

CAA 236  International Finance
The international environment offers many opportunities and challenges to businesses. In this course, topics are treated in a realistic international context. The impact of fluctuating exchange rates, changes in international markets, news of political and economic changes, managing international account receivables etc. are discussed in this course to help the student understand the management of assets and financing in an open environment. Credit units: 3 ECTS Credit Units: 4.

CAA 243  Auditing
CAA 245  **Financial Regulations**
The aim of the course is to prepare accounting students regarding financial regulations concerning taxation, social security, incentives, foreign investments, exchange controls, customs union and free trade zones. *Credit units: 3 ECTS Credit Units: 4, Prerequisite: CAA 111 or CAD 128. Aut (R. Atasoy)*

CAA 246  **Principles of Banking and Insurance**
Principles of banking. Money and loans. World trends in banking. Central Banking. Sources and utilization of funds. International banking services, other basic banking services. Principles of insurance. *Credit units: 3 ECTS Credit Units: 4, Spr (R. Atasoy)*

CAA 248  **Legal Aspects of Business**

CAA 251  **Computerized Accounting Applications**
Topics in financial and managerial accounting with emphasis on applications in Turkey including Financial Statements, Uniform Accounting Plan, Job - Costing and Process - Costing Systems and their applications. Hands-on experience adjusting and closing entries with popular accounting software packages. *Credit units: 3 ECTS Credit Units: None. Aut (Staff)*

CAA 292  **Database Applications for Business**
The course introduces database management concepts with hands-on experience in database design and database applications using popular software packages. The course covers the analysis of the situation, identifying the requirements, creating the tables, queries and reports to meet these requirements. Lectures take place in the computer laboratory. *Credit units: 3 ECTS Credit Units: 4, Prerequisite: CAA 223.*
BUREAU MANAGEMENT AND EXECUTIVE ASSISTANTSHIP

E. Findik (Chair), H. Erdem.

The curriculum of the vocational program in Bureau Management and Executive Assistantship is designed to prepare the student to serve as a link between the decision maker/executive and the persons implementing those decisions.

The world of business has characterized by flexibility and change. Nonetheless, fundamental skill requirements endure. Among these is the need for a high level of competence on the part of the office manager. She/he has been referred to as an "executive extender," one who must be efficient and up-to-date in office skills, a highly trained member of the office team.

The program in Bureau Management and Executive Assistantship allows the student to develop skills in computer and information systems, computer applications, advanced word processing, office machine operation, accounting, business behavior, economics, management, and other related subjects. A six-week on-the-job training period, under the supervision of the department, is incorporated in the program during the summer months of the first year to familiarize the student with the business world. Graduates of the department will be qualified bilingual office managers in English and Turkish with experience in business correspondence in both languages and will thus be in a position to undertake duties as responsible, respected, high-placed office managers.

COURSE DESCRIPTIONS

BM 100  Keyboarding
At the end of this course, the student will be able to type by touch (without visual assistance) on a computer keyboard, using techniques that are acceptable. This course makes the students able to type letters, figures and most commonly used symbol keys and to use the basic rules of arrangement of copy on paper; to apply ten finger typing skills to production of documents both in Turkish and English. Students, who can touch type, do computer-based tasks, assignments, reports and thesis more quickly at school or home. They also can enter their thoughts and ideas straight into the computer and edit it properly. Credit units: 2 ECTS Credit Units: 2. Aut (H. Erdem) Spr (H. Erdem)

BM 101  Keyboarding
At the end of this course, the student will be able to touch-typing (without visual assistance) on a computer keyboard, using techniques that are acceptable; to format copy by setting margins and tabs; to proofread and edit a selected paragraph, at speed and accuracy rates appropriate to the kind of copy. Credit units: 3 ECTS Credit Units: 6. Aut (H. Erdem)

BM 102  Applied Word Processing
A systematic and comprehensive program for perfecting and applying formatting skills up-to-date standards of formal correspondence. The purpose of this course is to improve basic keyboarding abilities that are essential to accurate speed production work (in order to be able to carry out various kinds of formatting techniques required in a modern office.) It involves applying keyboarding and communication skills to practical work and formatting primary personal and business documents. Credit units: 3 ECTS Credit Units: 5. Spr (H. Erdem)

BM 161  Office Administration and Management
This course is an information source emphasizing the administrative skills necessary for success in today's highly technological offices. It includes the major skills, attitudes, concepts and knowledge needed by administrative assistants. With the help of this course the students are preparing for a profession in which there are many opportunities to develop initiative, judgment and knowledge that will lead to opportunities for responsible positions in the business world. Credit units: 3 ECTS Credit Units: 5.

BM 164  Office Automation
Office Automation is interaction of people in offices using systems and technologies such as; printers, scanners, copiers and telecommunication systems (fax, teleconferencing, video-conferencing, voice mail systems) to meet their goals and examines how these technologies may be used to improve organizational communication. Credit units: 3 ECTS Credit Units: 3.

BM 171  Business Mathematics
Students gain familiarity with the basic concepts of Business Mathematics Topics such as, computation of averages, interpretation of ratio and percent, depreciation methods, simple and compound interest, annuities and applications, buying, selling. Credit units: 3 ECTS Credit Units: 5.

BM 172  Filing and Record Management
This course provides the students with the knowledge of how to set up and maintain files and records. They will learn the basic filing methods and indexing rules. They distinguish between basic filing equipment and supplies. The students identify the importance of efficient records management programs in today's business offices and also identify the "life cycle" of records; including the basic components of records management programs such as records retention, transfer and disposition. In addition, they will learn the importance of vital records and they will study the centralized and decentralized files management. Credit units: 3 ECTS Credit Units: 4. Spr (E. Findik)
BM 182 Principles of Accounting
The aim of this course is to introduce students to the basic concepts of accounting. Topics such as transaction analysis, general journal and ledger, trial balance, income statement, principles of managerial accounting and break-even analysis. Credit units: 3 ECTS Credit Units: 4.

BM 183 Introduction to E-Business
Credit units: 3 ECTS Credit Units: None.

BM 184 Standard Turkish Accounting System
Credit units: 3 ECTS Credit Units: None.

BM 185 Management Information Systems
The objective of the course is to introduce students the basic concepts of Management Information Systems, structure of Management Information Systems and computer system resources; such as hardware, software and databases. Credit units: 3 ECTS Credit Units: 6.

BM 186 Business Statistics
The objective of the course is to introduce students to the basic concepts of statistics with some application to business. More specifically, the course first explains the methods for describing data and assessing the variability of data. The second stage covers the issues of sampling distributions, hypothesis testing, multiple regression analysis and analysis of variance. Credit units: 3 ECTS Credit Units: 6.

BM 187 Macroeconomics
The course of Macroeconomics introduce the students to the basic theory of gross domestic product. The students gain familiarity with the accounts included in the GDP computation, the disadvantages of GDP and the difference between real and nominal GDPs. Furthermore, the students also learn about the concept of business cycle, types of unemployment, the concept and type of inflation. The national economic is also explained through aggregated demand and supply, the potential fiscal policies used to regulate the national market, the type of national dept effecting the national economy. Finally, the concept of money, money creation and monetary policies are introduced. Credit units: 3 ECTS Credit Units: 6.

BM 188 Presentation Techniques
The main purpose of this lecture is to teach the effective ways of presentation. Planning the presentation, analyzing the audience, setting goals, organizing, preparing and using visual aids, delivering the presentation, answering questions, following up will cover the main frame of the lecture. Credit units: 3 ECTS Credit Units: 6.

BM 189 Principles of Marketing
Provides an overview of the evolution of marketing, identifies the basic characteristics of consumer and individual market, explains target marketing providing insight into the four elements of the marketing mix; product concepts, marketing channel, promotion planning and international marketing. Credit units: 3 ECTS Credit Units: 6.

BM 190 Introduction to Business
Designed to give an overall view to all the relevant functions of a business. Emphasizes the integrational aspects of the entire business organization and paves the way for functional area knowledge to be developed. Helps to understand and to conceptualize the nature of business, and gives the necessary orientation to the areas that will require functional specialization later on. Credit units: 3 ECTS Credit Units: 6.

BM 192 Commercial Correspondence
Credit units: 3 ECTS Credit Units: None.

BM 193 Introduction to Finance
The course objective is to introduce students to the basic concepts of finance. The introductory topics covered in the course are the concept of valuation and valuation of a firm's stock. In the second phase, the principles of capital investment, capital budgeting and evaluation of risky investments, required returns for projects are discussed. Finally, the requirements returns for companies, divisions, acquisitions and some concepts of capital structure are presented. Credit units: 3 ECTS Credit Units: 6.

BM 200 On the Job Training
The main objective of this training is for students to observe the real aspects of business life and have an opportunity to improve their skills and knowledge and to familiarize the student with the business world. During the 30 working days that constitute the on the job training period, students will be supervised by the department. The program will be conducted during the summer months of the first year. Credit units: None ECTS Credit Units: None. Aut (E. Fundik)

BM 201 Advanced Word Processing
This course aims to improve the basic keyboarding skills by having the students use effective skill development materials. In order to give the students a professional approach on-the-job activities, they will be exposed to keyboarding problems related to executive offices. High quality typing and independent work without direct supervision are the other features of this course. Credit units: 3 ECTS Credit Units: 4. Aut (H. Erdem)
BM 202  Reports and Audio Transcription  
This course is designed to teach report writing techniques in computer aided environment. The other important feature of this course is to teach how to use a special program, like "coolpro.exe"; in transcribing audio-recorded materials.  
Credit units: 3 ECTS Credit Units: 5.  Spr (H. Erdem)  

BM 261  Microeconomics  
The course is designed to provide a solid foundation of economic understanding in managerial decision making. The principal topics covered in this class are: economic optimization, demand analysis and demand estimation, forecasting, production, cost analysis and cost estimation, market structure, decision making under uncertainty, and capital budgeting.  
Credit units: 3 ECTS Credit Units: 5.  

BM 262  Principles of Management  
This is the introductory course in management. The course is designed to provide students an overview of the management function and its role in organizations and also organizational theories. By the end of the course, you will be able to better understand management styles. You will gain an in-depth understanding of co-workers and a general understanding of the business environment in which you will operate.  
Credit units: 3 ECTS Credit Units: 5.  

BM 271  Etiquette and Modern Business Manners  
This course is designed to acquaint the student with the good manners and etiquette rules of public places and the business world. The topics to be covered are: business and social manners of public occasions and events, everyday courtesies, male and female work relationships, executive communication, executive entertaining, seated dinners, gift giving and receiving. The course will be conducted partly in Turkish.  
Credit units: 3 ECTS Credit Units: 4.  Spr (E. Findik)  

BM 272  Business Writing Techniques in Turkish  
This course will integrate the principles and practices of Business Writing in Turkish. Topics will include: general writing techniques, letter writing, principles of writing memorandums and reports, press releases, finding business information, writing resumes, applications and employment letters, and speech writing.  
Credit units: 3 ECTS Credit Units: 4.  Aut (E. Findik)  

BM 281  Organizational Behavior  
This course firstly aims to develop some specific analytical ability to think and to solve organizational behavior problems. Secondly, it provides insights into personal and interpersonal relationships: it aims to change the student from an individual into an efficient group member in an organization. Therefore, it includes such topics as: Organization system and environment, understanding individual behavior, communication, stress management, decision making, problem solving and group dynamics.  
Credit units: 3 ECTS Credit Units: 5.
COMMERCE AND ADMINISTRATION

N. Fenmen (Acting Chair), İ. N. Durubal, B. Fisher, S. Sevin.

Commerce and Administration is a two-year program leading to an Associate of Science degree in business administration. Students are given a strong background in business, marketing, human resource management and financial applications, and trained so that they are familiar with the software packages widely used in business.

The curriculum of the department covers business administration, production management, marketing, human resources management, economics, statistics, accounting and finance courses. Apart from the “must” courses in the curriculum, students select two elective courses in their second year. The elective courses offered by the Department aim not only at broadening the student’s knowledge on certain topics, but also serve to guide the student into a deeper understanding of various options in the field of business administration.

At the end of their first year students are required to successfully complete a 30-day industrial training program. Industrial training is aimed to develop the students practical skills in business applications. During their industrial training period, students are expected not only to apply their knowledge and experience gained during the first year, but also to familiarize themselves with the actual business world, and concepts which may be new to them.

COURSE DESCRIPTIONS

CAD 111 Principles of Management
Introduction to management: concepts, principles, techniques and practices. Understanding the manager’s role.
The management process: planning, organizing, leading and controlling. The environment of management, social responsibility and ethics. Understanding an organization. Credit units: 3 ECTS Credit Units: 4. Aut (İ. N. Durubal)

CAD 113 Microeconomics
An analytical look at the basis of production and consumption behavior, market structures, pricing system, resource allocations, market failures. Credit units: 3 ECTS Credit Units: 4. Aut (İ. N. Durubal)

CAD 114 Principles of Marketing
Fundamental concepts in marketing. Strategic planning, marketing environment, consumer buyer behavior, marketing segmentation, targeting, positioning, marketing mix (4P) and global marketing. Credit units: 3 ECTS Credit Units: 4. Prerequisite: CAD 111. Aut (A. Durukal) Spr (İ. N. Durubal)

CAD 125 Business Mathematics

CAD 126 Statistics
Summarizing data with tabular and graphical approaches. Measures of central tendency and dispersion. Basic principles of probability. Test of hypotheses. Computer applications with statistical software packages. Credit units: 3 ECTS Credit Units: 5, Prerequisite: CAD 125. Aut (S. Kadayıfçilar)

CAD 128 Principles of Financial Accounting

CAD 200 Industrial Training
This course provides for the evaluation of the 30-day industrial training period students are required to complete during the summer break following their first year. During their industrial training period, students are expected not only to apply their knowledge and experience gained during their first year, but also to familiarize themselves with the actual business world, and concepts which may be new to them. Credit units: 2 ECTS Credit Units: None, Prerequisite: CAD 111. Aut (N. Fennmen) Spr (Staff)

CAD 211 Organizational Behavior
Understanding levels in OB: Individual level, group level and organization system level. Foundations of individual behavior, role of personality and emotions. The behavior of people in groups. The formal organization system. (Organization’s structure, culture, work design, communication, change and development) Credit units: 3 ECTS Credit Units: 5, Prerequisite: CAD 211. Aut (S. Sevin)

CAD 212 Production Management
Quality management, TQM, SPC, ISO9000, capacity planning and facility location, inventory systems for independent demand, inventory systems for dependent demand (MRPII), materials and purchasing management, supply chain management. Credit units: 3 ECTS Credit Units: 5, Prerequisite: CAD 212. Spr (S. Kadayıfçilar)

CAD 216 Human Resources Management

CAD 218 Marketing Management
The role of marketing in organizations and society. Marketing strategy, strategic marketing planning, implementation and decision making processes. Measuring and forecasting market opportunities. Marketing mix strategies and applications. Credit units: 3 ECTS Credit Units: 4, Prerequisite: CAD 114 or CAD 213. Aut (M. Ferendeci-Özgödek)
CAD 225  Management Science  
General overview of quantitative techniques and mathematical models within the context of decision making, planning and controlling. Linear programming decision analysis. Forecasting project management, waiting line analysis network models. **Credit units: 3 ECTS Credit Units: 6. Prerequisite: CAD 111 and CAD 125. Aut (S. Kadayifci)***

CAD 229  Principles of Managerial Accounting  

CAD 231  Macroeconomics  
Analysis of concepts such as gross national product, inflation, employment, national debt, fiscal and monetary policies. Economic fluctuations. Introduction to international economics. Investment and financial intermediation, Banking System. Application of tools of macroeconomic analysis in understanding the economy of a country. **Credit units: 3 ECTS Credit Units: 4. Prerequisite: CAD 113. Aut (B. Fisher) Spr (B. Fisher)***

CAD 233  International Marketing  
Key factors that lead to globalization, world trade and regional trade agreements. Structure of multinational company. Planning for international markets via alternative entry modes; exports, licensing, joint ventures, contractual agreements, manufacturing, franchising, investment and developing international product, pricing, promotion strategies. Economic, political and cultural factors affecting international marketing. International marketing research. Organization and control in International marketing. Marketing planning for International Business. **Credit units: 3 ECTS Credit Units: 5. Aut (D. Van Loo)***

CAD 234  Consumer Behavior  
Introduction to consumer behavior. Marketers’ and consumers’ views, the consumer marketplace. Market segmentation. The consumer as an individual: Consumer motivation, consumer perception, consumer learning and consumer attitudes. External influences on consumer behavior: Cultural influences, social and situational influences. Consumer decision making process. **Credit units: 3 ECTS Credit Units: 5. Prerequisite: CAD 114.***

CAD 242  Business Communications  
This course encourages practicing language to boosts business skills and enhance interpersonal skills through role plays of business meetings, telephone conversations, job interviews and written applications. A key aim of this course is to focus on vocabulary comprised in key course offerings and to offer a medium of discussion where the student not only practices the language, but uses his background acquired throughout key courses in the department to participate effectively in debates and discussions. **Credit units: 3 ECTS Credit Units: 5.***
COMPUTER TECHNOLOGY AND PROGRAMMING

Computer Technology and Programming offers a two-year program which provides foundations of a concise computer science education through its carefully designed curriculum. The curriculum includes contemporary computing topics and ultimately earns the students an Associate of Science degree.

The curriculum emphasizes basic theory as well as practical experience in a variety of operating environments, tools and programming languages. It is designed to equip students with strong problem solving abilities, critical thinking abilities and skills for life long learning. Students who complete the program will have a thorough knowledge and experience in structured and object oriented programming in Windows and UNIX environments. Programming languages such as C, C++, Java, visual programming tools, relational database management systems, and data communications are the major topics covered during the program. Students are required to design and implement various programming projects in partial fulfillment of the curriculum.

The courses are combination of theory and laboratory practice in up to date lab facilities. Facilities including a network of personal computers in laboratories and multiple UNIX servers, all connected to the campus backbone. Instruction is supported by the department computational facilities including a network of personal computers in laboratories and multiple UNIX servers, all connected to the campus backbone.

The program specifics are designed and frequently updated to reflect changes in the IT industry. This dynamism in the curriculum adapts the students to the needs and expectations of the industry as well as prepares them to continue their academic studies leading to a BS degree in Computer Science.

The compulsory 30 days industrial training has proven to be a valuable interaction between the industry and the department, and it provides strong recruitment opportunities for the students.

### Course Descriptions

**CTP 100 Transferable Skills**
This course aims to provide the input and practice in transferrable skills such as learning skills, self-management, working collaboratively, problem solving, communication skills and information technology. The course aims to help students discover their personal strengths and weaknesses as well as guiding them to develop their life-long competencies. The course work consists of self-awareness activities and authentic tasks such as role-plays and case studies. **Credit units: 2 ECTS Credit Units: 2. Spr (C. Aydoğmuş)**

**CTP 101 Introduction to Programming**
An introduction to programming using problem solving strategies. Theoretical principles and phases of problem solving. Basic properties of algorithms. Top down design. Structured programming techniques will be introduced using the C language. Topics include data representation, simple arithmetic expressions, basic problem solving concepts: selection and repetition, arrays, functions and modular programming, program testing and debugging. (Six hours lecture, four hours lab). **Credit units: 5 ECTS Credit Units: 10. Aut (İ. Kalender, Ç. Külüür) Spr (O. Say)**

**CTP 102 Elementary Data Structures**

**CTP 105 Programming Environment**
An introduction to computers and computer applications. The course aims to familiarize students with the basic skills and terminology needed to use a computer efficiently using a lecture in lab format. Course topics include computer structure and terminology, the Internet, operating systems (Linux/Unix, Windows). Applications include word processing, presentation, spreadsheet and database applications. **Credit units: 3 ECTS Credit Units: 5. Aut (C. Aydoğmuş) Spr (M. Özsoy)**

**CTP 106 Business Applications**
The aim of this course is to provide the students with skills necessary to construct well-designed web sites. The web page design for business. This course provides an introduction to basic web design and implementation topics to create professional looking web pages. Topics include an introduction to HTTP and CGI web protocols, principles of web design, HTML/XHTML, cascading style sheets, JavaScript basics, and the implementation of web pages using web authoring tools. **Credit units: 3 ECTS Credit Units: 4. Aut (M. Özsoy) Spr (S. Uğurlubilek)**

**CTP 107 Discrete Mathematics**
The aim of this course is to develop logical reasoning ability of students. Topics include elements of logic, set theory and operations on sets; DeMorgan's rules, finite and infinite. Relations and functions. Logic circuits. Induction and recursion, pigeonhole principle. Permutations, combinations and probability of discrete events. Graphs and their representation in computing. **Credit units: 3 ECTS Credit Units: 6. Aut (H. Yaşar) Spr (H. Yaşar)**

**CTP 108 Computer Programming for Business**
This course examines programming fundamentals of Windows desktop using up-to-date software development tools, while introducing students the important event driven features of that platform. The course utilizes inte-
grated cases that are improved from week to week, and are based upon common business problems and processes integral to solving them. A consistent four-step design methodology (Plan/Design/Code/Run) encourages problem-solving as students learn how to create applications. Includes data storage, form and database design basics and in-class debates related to computing business topics. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CTP 101. Aut (T. Baycan) Spr (T. Baycan)

CTP 118 Computer Organization
The aim of this course is to prepare students for computing and technical programming. Course topics include number theory. Definitions, operations and properties to Boolean algebra. Digital logic gates. Combinational Systems. Flip, flops. Sequential Logic. Registers, shift registers. Counters. ALU, CPU, Control Unit. Credit units: 3 ECTS Credit Units: 4. Aut (H. Yavuz) Spr (H. Yavuz)

CTP 191 Introduction to Computers
This course aims to provide students with the ICT skills required for success in their academic and professional lives. The course covers basic concepts of information technology, Internet and web concepts, the use of word processing software, and the creation of web pages using a basic web authoring tool. At the end of the course, students should be able to effectively search for information using Internet, library and online database search tools, prepare professional and well formatted documents, and web pages. Credit units: 3 ECTS Credit Units: 5. Aut (Staff)

CTP 192 Introduction to Computer Applications
An introduction to computers and computer applications. The course aims to familiarize students with the basic skills and terminology needed to use common office applications. Upon successful completion of the course students will be able to use a word processing application to produce well formatted, professional documents, use presentation software to create professional, well-organized presentations, and to understand the basic concepts needed to create and modify simple databases. Credit units: 3 ECTS Credit Units: 5, Prerequisite: CTP 191.

CTP 200 Industrial Training
The aim is to provide students an opportunity to take part in the real business environment and understand the requirements of the industry. Students are expected not only to apply their knowledge and experience gained during their first year but also to familiarize themselves with technologies and concepts new to them. This thirty day training period is undertaken during the summer break following a successful completion of the first year. Credit units: None ECTS Credit Units: None, Prerequisite: CTP 102 and CTP 108. Aut (Ç. I. Kalender) Spr (Ç. I. Kalender)

CTP 201 Object Oriented Programming I
Description of object-oriented program development. Introduction of object oriented programming concepts using C++ programming language. Objects, classes, encapsulation. Hierarchy between classes, inheritance and abstract classes. Function and operator overloading. Virtual functions, virtual baseclasses and polymorphism. Credit units: 5 ECTS Credit Units: 10, Prerequisite: CTP 102. Aut (O. Say) Spr (O. Say)

CTP 202 Object Oriented Programming II
This course is designed a second course in object-oriented programming. Object-oriented concepts are further developed using the Java programming language. The course covers OOP concepts, including classes and objects, encapsulation, inheritance, polymorphism, interfaces and abstract classes. Important Java packages, classes and GUI design are also included. Credit units: 5 ECTS Credit Units: 8, Prerequisite: CTP 201. Aut (O. Say) Spr (O. Say)

CTP 203 Operating Systems
The course is designed to provide the fundamentals of operating systems and an introduction to the internal operations of modern operating systems (OS). Topics include: history and basic OS concepts, process management, memory management, file systems, input/output management, operating system security and protection and support for distributed systems. Also covered is the UNIX environment and shell scripts. Lab sessions: Unix/Linux Administration. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CTP 202 and CTP 118. Aut (M. S. Azgur) Spr (M. S. Azgur)

CTP 204 Networking Principles and Applications
The course aims to provide information about the fundamentals of data communications and contemporary computer network principles and applications. Topics include: electronic communications, analog and digital signals, data communications, local and wide area networks, OSI layers, internetworking (TCP/IP, Ethernet). Designed to prepare students for more advanced topics in networking. Lab sessions: Unix/Linux networking. Credit units: 3 ECTS Credit Units: 5, Prerequisite: CTP 203. Aut (M. S. Azgur) Spr (M. S. Azgur)

CTP 206 Database Management Systems
The course includes DBMS concepts, definitions, specifications and objectives. Includes the relational data model. SQL will be introduced as a data manipulation language. Topics also include database design considerations (ER Diagrams and normalization), concurrency control mechanisms, crash recovery concepts and an
overview of current trends. During lab sessions students have hands on experience using SQL as a database tool, and experience applications created with a widely-used database package. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CTP 203. Aut (F. Yüreğen) Spr (F. Yüreğen)

CTP 208  Programming for the Internet
This course is designed to introduce to the student the fundamentals of developing web-based applications. Upon completion of the course students will be able to understand HTTP and CGI protocols, to write basic PHP scripts, to write PHP scripts that use a RDBMS and develop a full featured web based database application. Credit units: 3 ECTS Credit Units: 5. Prerequisite: CTP 227. Aut (L. Kalender) Spr (L. Kalender)

CTP 209  Systems Development
The course presents a comprehensive introduction to the systems design skills in information engineering that students, as future users or systems analysts, will need to work in a highly competitive computer-integrated business environment. It provides the students with the skills to identify business problems which may be solved by technology-based solutions, and determine requirements for information systems solutions. The course includes Systems Development Life Cycle (SDLC), Systems Analysis and Design Techniques (DFDs, Logical Modeling, E-R Diagrams, Object Oriented Modeling), review of Unified Modeling Language (UML), Project Management tools verification, validation, configuration management and evaluation of engineering standards such as MIL-STD-498, IEEE/EIA 12207 and ISO 9000-2000. Credit units: 3 ECTS Credit Units: 6, Prerequisite: CTP 198. Aut (M. S. Azgur) Spr (M. S. Azgur)

CTP 210  Term Project
Specification, analysis, design, implementation, documentation and presentation of a medium-sized software system by small teams under close supervision of an advisor for each team. Teams will develop a software system, utilizing tools and techniques taught in previous courses and new ones that they will independently choose and learn during project development. Credit units: 4 ECTS Credit Units: 6, Prerequisite: CTP 201 and CTP 299. Aut (T. Baycan) Spr (T. Baycan)

CTP 227  User Interface Design and Development
The course will begin with introducing the basic principles of user interface design, its significance in human-computer interaction, interface quality, evaluation strategies, understanding the user behavior and interaction schemes. Students will be developing projects throughout the semester to apply their theoretical buildup. Web based user interface technologies will be specially emphasized. The course will be completed with the introduction of web programming, server and client side scripting and their impacts on user interface design. Credit units: 3 ECTS Credit Units: 6. Prerequisite: CTP 106. Aut (L. Kalender) Spr (M. Özsöy)

CTP 291  Computer Applications for Business I
Advanced features of word processing. Desktop publishing concepts. Mail merging. Inserting files, pictures, graphs in documents. Preparing index and table of contents. Switching between applications, generating new applications. Details of the print manager and control panel. Database concepts in spreadsheets. Credit units: 3 ECTS Credit Units: 5. Prerequisite: CTP 191. Aut (Staff)

CTP 292  Computer Applications for Business II
Fundamental concepts of a database. Data types. Creating and updating a database file. Building conditions, indexing and sorting. Advanced desktop publishing. Credit units: 3 ECTS Credit Units: 5. Prerequisite: CTP 192. Spr (Staff)
The objective of the two-year program in the Vocational School of Tourism and Hotel Services is to prepare students for various positions in hotels, restaurants and travel agencies. With the rapidly growing potential of tourism, as a leading industry in the economy, the need for well-trained staff is obvious. Success in the hotel and restaurant industry requires substantial professional knowledge, business sense and human relations skills. For this reason, the curriculum of the Vocational School of Tourism and Hotel Services aims at achieving “hands-on” experience. The wide use of laboratories (e.g. training kitchen, restaurant etc.) and the existence of a practice hotel (Bilkent Hotel and Conference Center - Ankara, rated a five-star hotel by the Ministry of Culture and Tourism) provide the students with a firm background in professional skills. Attention is also given to communication skills, foreign languages and computer applications. A 60-day industrial training program at an establishment in the hotel or travel industry is compulsory. This takes place during the summer months after the successful completion of the first year.

ACADEMIC STAFF

Oğuz Benice, Instructor
Diplôme, Études Supérieures en Hôtellerie et Restauration, Ecole Hôtelière de Lausanne, Switzerland, 1992. Food and beverage operations, food and beverage management, Food production techniques.

İbrahim Boz, Instructor
Ph.D., Economics, Gaziantep University, 2009. Economics, accounting, tourism policies and sustainability, senior Project.

Jamel Ben Mohamed Chafra, Instructor
M.B.A., Bilkent University, 1996. Rooms division management, service operations management applications, industrial training project.

Ayşe Baş Collins, Assistant Professor
Ph.D., Educational Sciences, Middle East Technical University, 1999. Human resources management, senior project, social psychology, organizational behavior.

Nazende Özkarname Coşkun, Instructor

Hacer Çınar, Instructor
B.A., Business Administration, Hacettepe University, 1984. Accounting, tourism management applications, industrial training project.

Cevat Ertuna, Instructor
Ph.D., Business and Economics, University of Memphis, 1999. Quantitative decision techniques, mathematics, finance, industrial training project, senior project.

Zeliha İlhan Ertuna, Instructor
Ph.D., Finance, Old Dominion University, 2001. Finance, accounting, economics, industrial training project.

Eda Gürel, Assistant Professor
Ph.D., Business Administration, Hacettepe University, 2006. Marketing, world travel destinations, world geography, industrial training project, selected topics in tourism II.

Günes Karamullaoglu, Instructor
M.B.A., Social Sciences, Gaziantep University, 2000. Travel operations and management, tour development and implementation, event management, industrial training project.

Hendrik C. Kuchlein, Instructor
Diploma, George Brown College, Canada, 1970. Food production techniques, international cuisines.
Nuriye Örer, Instructor
Ph.D., Dietetics and Nutrition, Hacettepe University, 1995. Nutrition and sanitation, hygiene, health studies, nutritional anthropology, industrial training project.

Perin Öztin, Instructor
M.B.A., Alaska Pacific University, 1987. Tourist attractions of Turkey, senior project, selected topics in tourism I.

Aykut Pekcan, Assistant Professor

Kamer Rodoplu, Instructor

Mustafa Siyahhan, Instructor
M.S.J., Ohio State University, 1974. Introduction to Business, Tourism Law, Principles of Marketing, senior project.

Esin Şenol, Instructor
M.B.A., Atılım University, 2008. Purchasing and cost analysis, Food and beverage cost control, health studies, industrial training project.

Engin Türel, Instructor

Ali Ünal, Instructor

VOCATIONAL SPECIALISTS

Zeki Polatkesen
HOSPITALITY SERVICES

Vocational Specialists: Z. Polatkesen.

Hospitality Services Program

The Hospitality Services (HS) program is designed to provide students with relevant education in hotel, restaurant and travel industry, furnishing them with theoretical as well as practical knowledge applicable for the real life circumstances. Emphasis is given on hands-on experience, speaking ability of an additional foreign language and use of computer systems.

** SECOND FOREIGN LANGUAGE COURSES

One of the following four-semester sequences of courses in Japanese, Chinese, Russian, German, Italian, French or Spanish can be taken to fulfill the second foreign language requirements:

Japanese : JAP 161/162/163/164
Chinese : FRL 165/166/167/168
French : FRE 161/162/163/164
German : GER 161/162/163/164
Italian : ITA 161/162/163/164
Spanish : SPA 161/162/163/164
Russian : RUS 161/162/163/164

* ENG-ELS COURSES

The students can take either ELS 103 and ELS 104 in the first year, ELS 203 and ELS 204 in the second year or ENG 101 and 102 based on their success in the COPE or equivalent exams.

COURSE DESCRIPTIONS

THS 105 Introduction to Business
Designed to give an overall view to all the relevant functions of a business. Emphasizes the integral aspects of the entire business organization and paves the way for functional area knowledge to be developed. Helps to understand and to conceptualize the nature of business, and gives the necessary orientation to the areas that will require functional specialization. Credit units: 3 ECTS Credit Units: 5. Aut (C. Ertuna)

THS 110 Nutrition, Hygiene and Safety
Provides guidelines in response to today's increasing concern for adequate sanitation and health. Topics include food, nutrients, food and health interrelations, common nutritional problems and their prevention by means of proper nutritional interventions. Food safety, food service accidents and ways to protect employees are also discussed. Credit units: 3 ECTS Credit Units: 5. Aut (N. Örer) Spr (N. Örer)

THS 121 Business Mathematics
Provides mainly background knowledge of simple mathematical computation geared towards increasing student's competency in solving practical business problems. Credit units: 2 ECTS Credit Units: 2. Aut (C. Ertuna) Spr (E. Şenol)

THS 126 Food and Beverage Operations
An introduction into the terminology, concepts and procedures in food and beverage operations, including operational functions and importance within a hotel organization. Credit units: 3 ECTS Credit Units: 5. Aut (O. Benice) Spr (O. Benice)
THS 131 Introduction to Tourism Industry
Introduces students to the different components of tourism, emphasizing terminology, concepts and procedures used throughout the travel and hospitality industry, with an overview of the organizations and major operations. Credit units: 3 ECTS Credit Units: 5. Aut (O. Benice)

THS 138 World Geography
Examines the development of the touristic areas of major travel destinations and attractions travelers are journeying to, and developments taking place on a world-wide basis. Credit units: 3 ECTS Credit Units: 5. Aut (E. Türel) Spr (E. Türel)

THS 148 Front Office Operations
Analyzes and discusses the various areas of the front office stressing security, communication, statistics, layout, design, front office equipment, and guest-relations skills. The course also attempts to find solutions to common operational problems of the front office such as over-booking, late charge, lost luggage, and skippers. Credit units: 3 ECTS Credit Units: 5. Aut (J. B. M. Chafra) Spr (J. B. M. Chafra)

THS 150 Basic Accounting
Familiarizes the students within the area of identifying, recording and communicating economic events. The course particularly focuses on teaching basic accounting skills for operational purposes. Credit units: 3 ECTS Credit Units: 5. Aut (İ. Boz) Spr (İ. Boz)

THS 161 Health Studies
The course provides students with the knowledge and skills necessary to help domestic and international tourists whose first-aid problems have to be addressed prompt and properly. It enhances students' comprehension of theoretical and practical concepts and aspects of health issues routinely encountered in the tourism industry worldwide. Credit units: 1 ECTS Credit Units: 1. Aut (E. Şenol)

THS 162 Behavior and Etiquette
The purpose of this course is to provide basic knowledge and practical guidelines on everyday manners and common courtesies. It also aims at giving a perspective for proper behavior and etiquette acceptable in social and business situations. To sensitize students to the rules of protocol and dynamics of contrasting cultures is another aim of this course. Credit units: 1 ECTS Credit Units: 1. Aut (E. Türel)

THS 200 Summer Training
This program provides students with their first exposure to the tourism workplace. Assignments are scheduled and monitored through the school's Industrial Training Office. The main objective is to obtain practical, real-life experience. The training program, comprised of a minimum of sixty (60) work days, takes place during the summer period. Credit units: None ECTS Credit Units: None. Aut (E. Türel) Spr (J. B. M. Chafra)

THS 210 Selected Topics in Tourism
The course provides students with the opportunity to reinforce their theoretical knowledge by lectures of successful professionals of tourism industry and other relevant areas; to develop their networks, to have a broader perspective of business life; to help make healthier decisions about their future targets. Credit units: 3 ECTS Credit Units: 5. Aut (G. Karamullaoğlu) Spr (G. Karamullaoğlu)

THS 220 Food and Beverage Cost Control
Focuses on the terminology, concepts and procedures of food and beverage planning and cost controlling. Concentrates on cost control tools and their efficient use in food and beverage industry, such as determination of food and beverage standards and sales analyses. Credit units: 3 ECTS Credit Units: 5. Aut (E. Şenol) Spr (E. Şenol)

THS 221 Food Production I
Designed to give a basic knowledge and understanding of food commodities as well as cooking methods applied and food hygiene necessary. Credit units: 2 ECTS Credit Units: 4. Aut (O. Benice) Spr (Staff)

THS 222 Food Production II
Puts the theory of Food Production I into practice. Cooking of menus which will incorporate cooking methods with a wide range of different food commodities. Credit units: 4 ECTS Credit Units: 5. Prerequisite: THM 244 or THS 221. Aut (Staff) Spr (Staff)

THS 223 Food and Beverage Service
Provides students with practical skills and knowledge for effective management of food and beverage services in outlets ranging from coffee shops to room service, banquet areas, and high check average dining rooms. Presents basic service principles while caring for special needs of guests. Credit units: 3 ECTS Credit Units: 5. Aut (A. Ünal) Spr (A. Ünal)
THS 225  Hospitality Industry Accounting  
Provides students with the knowledge of hospitality industry accounting under uniform system of accounts and familiarizes them with industry practices. **Credit units: 3 ECTS Credit Units: 5. Prerequisite: THS 150. Aut (H. Çınar) Spr (H. Çınar)**

THS 228  Housekeeping Operations  
Explores housekeeping supervision comprehensively and concentrates on laundry and linen operations, cleaning of public areas and servicing of guests' rooms. The course further looks into salient aspects of ground and gardens operation and property maintenance stressing energy conservation methods. **Credit units: 3 ECTS Credit Units: 5.**

THS 233  Travel Agency Operations  
Focuses on travel agencies, how to establish, manage and market travel services; legal structures, management functions, office procedures are main topics to be covered. **Credit units: 3 ECTS Credit Units: 5. Aut (G. Karamułaoğlu) Spr (G. Karamułaoğlu)**

THS 239  Tourism Geography of Turkey  
Discusses regional distribution of tourismic activities with an emphasis on natural, historical and archaeological attractions along with their characteristics as tourism products in Turkey. **Credit units: 3 ECTS Credit Units: 5. Aut (P. Öztin) Spr (P. Öztin)**

THS 241  Human Resources Management  
Designed to help students understand and work with human resource managers and also deal directly and successfully with human resource issues themselves. The course focuses on hiring, training and supervision of employees. **Credit units: 3 ECTS Credit Units: 5.**

THS 245  Purchasing  
Covers main topics with regards to initial planning, selection of vendors, importance of a written specification, operational aspects of purchasing control such as clerical procedures, goods receiving, quality control, storing and issuing, and stock control reconciliation. It also covers subjects such as who, in which department is responsible for buying, pricing and invoicing, and the purchasing committee functions. **Credit units: 3 ECTS Credit Units: 5. Aut (E. Şenol) Spr (H. C. Kuchlein)**

THS 256  Marketing  
Lays the groundwork for an understanding of marketing principles and reveals how those principles are applied in the marketing environment for a beginner marketing student. Various case studies are used to support the course helping to present the complex and fascinating world of marketing in a lively and enjoyable way. **Credit units: 3 ECTS Credit Units: 5. Aut (E. Gürel) Spr (E. Gürel)**

THS 258  Legal Aspects of Tourism  
Reviews the concept and kinds of rules with specific significance to legal rules in general and the legal structure of Turkey in particular. The tourism regulations, procedures for tourism certificates, legal aspects related to tourism organizations, investments and operations are analyzed in detail. (This course is conducted in Turkish. International students may take this course by taking a project research on a subject related to international tourism regulations. This subject will be determined by the instructor.) **Credit units: 3 ECTS Credit Units: 5.**

THS 260  Supervision  
An overview of the nature and responsibilities of the supervisor. This course integrates technologies, work environment and leadership qualities. Tools for decision making, supervisory functions, scheduling, directing and controlling are analyzed through cases, exercises and simulations. **Credit units: 3 ECTS Credit Units: 5.**

THS 269  Co-Op Management Application  
An integration of hospitality work experience and classroom instruction along with the practical management application opportunities in the hospitality industry. Completion of 40 work hours per semester and attainment of on-the-job training goals are required. Hospitality position to be secured prior to the start of the semester. **Credit units: None ECTS Credit Units: None. Aut (E. Türel) Spr (E. Türel)**

THS 273  Art of Pastry  
The course introduces the preparation of pastry products using a variety of methods. Lamination, blending, creaming, foaming, and thickening. Students learn to combine these methods into new products to create savory items, and use basic finishing methods by applying glazes, filling pastries, creating simple souces, and presenting products for service. They will also study the fundamentals of heat transfer as applied to pastries by preparing creams, custards, soufflés, and flavored whipped creams. Students will prepare and test products. **Credit units: 3 ECTS Credit Units: 5.**
THS 277 Major Issues in Turkish Tour.
The aim of this course is to evaluate issues deemed to be significantly contemporary and influential in Turkish Tourism. These issues include, but are not limited to globalization, media/technology/promotion, the internet, public policies, European Union, Eco-tourism, ethical marketing of tourism products and tourism planning. Credit units: 3 ECTS Credit Units: 5. Spr (O. Benice)

THS 292 Elective II
Relevant topics concerning Tourism, Travel, Hotel and Restaurant operations are taught with emphasis on total quality understanding. Credit units: 3 ECTS Credit Units: 5. Aut (E. Türel) Spr (E. Türel)
The mission of the Physical Education and Sports Center is to provide the environment and programs through which the students of Bilkent University can participate and attain a healthy lifestyle. By participating in quality health, physical education and sports programs the students enrich their campus lives and develop to their fullest individual capacity. The Physical Education and Sports Center does not offer any degree in physical education. However, the students may take up to three courses for credit over and above their departmental requirements. In addition, grades will appear on transcripts and will affect their GPA and CGPA. Students may choose from a rich selection of physical education and sports courses offered every semester.

ACADEMIC STAFF

Kağan Eynak, Instructor
B.S., Physical Education and Sports, Gazi University, 1984.

Ahsen Küçükdürmaz, Instructor

Hayri Özkan, Instructor

Alper Ulgraş, Instructor

PART-TIME ACADEMIC STAFF

Engin Akgün, B.S., Ondokuz Mayıs University, 2003.

Ömer Mihaliçik, B.S., Physical Education and Sports, Gazi University, 1979.

COURSE DESCRIPTIONS

PE 110 Beginning Tennis
This course involves analyzing and teaching basic techniques (serve, forehand, backhand, volley), rules and strategies of the game. Credit units: 1 ECTS Credit Units: None. Aut (A. Ulgraş) Spr (A. Ulgraş)

PE 120 Badminton
This course focuses on teaching basic techniques including serve, underhand and overhead shots, foot work and movement, rules and strategies of the game. Credit units: 1 ECTS Credit Units: None. Aut (A. Ulgraş) Spr (A. Ulgraş)

PE 125 Table Tennis
The purpose of this course is to teach basic techniques such as serve, forehand, backhand and footwork, rules and strategies of the game. Credit units: 1 ECTS Credit Units: None. Aut (A. Ulgraş) Spr (A. Ulgraş)

PE 130 Basketball
Students learn basic techniques (receiving, passing, dribbling, shooting), rules and strategies of the game. Credit units: 1 ECTS Credit Units: None. Aut (K. Eynak)

PE 135 Volleyball
This course is aimed at teaching the basic techniques (receiving, passing, serving, smash, block), rules and strategies of the game. Credit units: 1 ECTS Credit Units: None. Spr (Ö. Mihaliçik)

PE 160 Strength Training
Students learn basic concept and principles, and benefits of strength training. Major muscle groups, how strength gain occurs, techniques and methods of training will be covered. Credit units: 1 ECTS Credit Units: None. Aut (A. Küçükdürmaz) Spr (A. Küçükdürmaz)

PE 170 Turkish Folk Dancing
Introduction to famous Turkish folk dances (Antep, Adıyaman, Zeybek, Kafkas, Horon, etc.) from different regions of Turkey. Students will become aware of the cultural aspects and appreciate the traditional values of this multicultural society. Credit units: 1 ECTS Credit Units: None. Spr (E. Akgün, M. Koşma)
PE 175  Aerobics / Step
The course focuses on the basic principles of aerobic exercises and fitness. The routines incorporate basic movements from a wide variety of dance form – folk, modern, jazz, ballet, disco – along with other whole body movements, like hopping, stepping up on a bench, arm movements, skipping, running and jumping. The dances also contain stretching and body-toning movements worked into the choreography, so as to provide a total body workout. Credit units: 1 ECTS Credit Units: None.

PE 185  Fencing
The course aims to provide information about basic movements and techniques of fencing. Rules of competition, safety precautions and proper use of equipment will be covered. Students will also develop an appreciation of the sport. Credit units: 1 ECTS Credit Units: None.

PE 205  Orienteering
Student will develop the knowledge and competencies needed to be successful at the orienteerin. Student will develop cognitive skills needed to navigate with map and compass. They will also know and practice safety measures needed to participate in this course. Credit units: 1 ECTS Credit Units: None. Aut (N. Fenmen) Spr (N. Fenmen)
The following courses are not department-specific and are offered across departments and in some cases, across faculties. One of these courses, "GE 100 - Orientation" is required for all university students.

**GE 100 Orientation**
This course must be taken by all students in their first year at the university. It is designed to acclimate them to the university’s academic and social environment. Students are required to complete a minimum number of activities to pass the course. These activities include talks by university administrators and guest speakers, workshops, concerts, and visits to faculty and departments where students get detailed information about the curriculum and meet faculty and staff. Participating in sports activities and using the university’s computing facilities and the library is also part of the orientation program. The complete set of activities is provided and the required minimum indicated in the orientation handbook. Credit units: 1 ECTS Credit Units: 1. Aut (Staff) Spr (Staff)

**GE 101 Engineering Orientation**
This course is required for all the first-year students in the Engineering Faculty. It replaces the GE100 - Orientation course that is taken by the rest of the students in their first year at the university. Part of this course includes all the activities required to be completed in GE100. The course is intended to enable the smooth transition of first-year students from high school to university. It is designed to provide a medium of communication for students among themselves and with their academic coordinators in a small group setting. Through various presentations and activities, the course aims at improving the academic success of students. Credit units: 1 ECTS Credit Units: 1. Aut (Staff) Spr (Staff)

**GE 212 Introduction to Engineering Mechanics**
Introduction to mechanics of solid under tension, compression, shear, torsion and bending. Freebody diagrams, equilibrium, trusses, frames, stress and strain, Hooke’s law, Mohr’s circle. Equilibrium of particles and rigid bodies, moments, couples. The concept of statistics and solid mechanics with the modeling of physical systems and design of simple structure. Credit units: 3 ECTS Credit Units: 5.

**GE 220 Environmental Science**
This course provides students with the fundamental scientific knowledge to understand the natural functioning of the biosphere to relate negative environmental impacts to specific human activities and to identify more sustainable technologies. Fundamental concepts of environmental economics and management are also presented. The course draws attention to how scientific knowledge and uncertainties are used in the political decision making. Credit units: 3 ECTS Credit Units: 5. Spr (V. Paternotte)

**GE 250 Collegiate Activities Program I**
The GE 250/251 two-semester course is mandatory for all four-year students and is to be taken in their second year. GE 250 is non-credit, pass/fail course and is a prerequisite for GE 251. GE 250/251 entails a diverse set of activities outside one’s coursework. It provides an opportunity for students to explore domains of life that they do not necessarily encounter in their daily routines and to broaden their perspectives. This two-semester course is based on the activities of the student clubs; and the students themselves are active in designing and shaping the course as well as monitoring and grading student performance. See http://bilkent.edu.tr/ge250 for information about the course. Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

**GE 251 Collegiate Activities Program II**
This is the second part of the GE 250/251 program. The total of the points earned during both parts is converted to a grade. See GE 250. Credit units: 1 ECTS Credit Units: 2. Prerequisite: GE 250. Spr (Staff)

**GE 301 Science Technology and Society**

**GE 304 Technology Society and Professional Development Seminar**
Seminar course featuring guest speakers from industry, business, government, or non-governmental organizations, as well as academicians. The seminars either contribute to students’ professional or career development or perspectives; discuss current issues, trends, or challenges in technology; or are related to the social, political,
cultural, ethical, legal, economic, environment and sustainability, health and safety, reliability or similar dimensions of technology and engineering. Credit units: 1 ECTS Credit Units: 1. Spr (H. Özaktaş)

**GE 308 Thermodynamics**

**GE 401 Innovative Product Design and Development I**
This senior multidisciplinary course focuses on the fundamentals of design - from the conception of an idea to a marketable end product. A team of students from various departments including engineering, design, economics and business, prepare business plans, do project management, design and implement their product, as well as simulate its marketing. In the year-long process, they take into account standards, quality directives, social and environmental factors and operate in a team environment. The students also benefit from the seminars delivered by experts as well as a stock market experience they get from the virtual stock market at which the stocks of the companies owned by the student teams are traded. By the end of the first semester, concept demonstration of the end-product must be presented. Credit units: 3 ECTS Credit Units: 6. Aut (T. Reyhan)

**GE 402 Innovative Product Design and Development II**
Continuation of the senior multidisciplinary design course, GE401. In the second semester, the companies are introduced to the stock market. The working prototypes of the end products must be presented by the end of the semester. Credit units: 3 ECTS Credit Units: 6. Prerequisite: GE 401. Spr (T. Reyhan)

**GE 590 Academic Practices**
This course aims to contribute to the preparation of graduate students for academic studies and research. It includes practical classroom teaching, practical lab assistance and teaching, and provides practice in conducting exams and grading assignments. Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)

**GE 690 Academic Practices**
This course aims to contribute to the preparation of doctoral students for their academic careers. It includes practical classroom teaching, practical lab assistance and teaching, and provides practice in conducting exams and grading assignments. Students also attend various research seminars or scholarly talks offered regularly at the departments. In addition, students participate in a series of independent modules including workshops, short courses, and seminars in the Fall and Spring semesters. These include "Academic Integrity," "Effective Teaching," and other topics such as doing literature searches and publishing. Credit units: None ECTS Credit Units: None. Aut (Staff) Spr (Staff)
